"Well, Dick, you and I are N. D. C. men; they were all A. K. C. and I suppose had orders from 44 Broadway to peg our dogs back, but all the same Syracuse would not have had 150 dogs only for N. D. C. entries. The Syracuse K. C. are a nice lot of men, and Mr. Ward is a gentleman and a good fellow all round; but such judging is only a farce. They should have men, not boys to handle the dogs; men who know something about the classes they undertake to judge, or at least those known to the fancy as breeders. Mortimer did fairly, but it will be a long time before they see my dogs at an A. K. C. show again."

J. OTIS FELLOWS.

[A communication from Mr. A. C. Krueger, received too late for publication, will be printed next week.]

LESSONS FROM BUFFALO.

Editor Forest and Stream:

The Buffalo show has come and gone. Syracuse followed in quick succession. The former was supported by the N. D. C., the latter by the A. K. C. Boycotted by the officers and some of the individual members of the A. K. C. the Buffalo show has weathered the gale of abuse, misstatements and malignity heaped upon it.

One fact stands out in bold relief: no dog show can in future be a success without the support of the N. D. C. Mr. Belmont, president of the A. K. C. and supreme mover in the boycott, attempted to convince the public that the members of the N. D. C. were secretly plotting to overthrow the A. K. C. He said, "Breeders and bench show organizations will find it to their advantage to give it [the N. D. C.] a wide berth." How false a prophet. His fizzle in this instance is as great and deplorable to himself as was his endeavor to convince the stockholders of the Richmond Terminal that the then and now present Board of Directors were sadly wanting. His outlay of money purchased but a sly laugh and the votes were against him. As to fizzles Mr. Belmont appears a magnificent success.

In the editorial announcement of a New York horse paper, a statement was made predicting that the benches at the Buffalo show would be filled by dogs taken from the streets; in other words, curs. To the 47 entries from Buffalo city there were awarded, 3 first, 6 second and 3 third prizes.

As a matter of fact, at no show ever held in this country have there been exhibited better dogs, all told, than at Buffalo. At the Syracuse show there were 31 entries from that city, while Philadelphia spring show had 463 entries, 174 of them being from the residents.

Here is a comparison which is significant:

	Buffalo (Fall).	Newark (Spring).	Syracuse (Fall).
Entries	524	535	319

The number of champions at these shows according to A. K. C. ruling are as follows:

	Buffalo.	Newark.	Syracuse.
St. Bernards	6	6	4
Mastiffs	2	..	1
Greyhounds	3	1	2
Deerhounds	4	2	1
Pointers	1	3	4
English setters	5	3	5
Irish setters	2	5	2
Gordon setters	3	2	3
Field spaniels	3	2	1
Cocker spaniels	7	3	6
Clumber spaniels	1	1	..
Collies	1	3	3
Beagles	2	4	4
Foxhounds	..	..	1
Pugs	4	1	2
Bulldogs	5	3	1
Bull-terriers	.	2	1
Dandie Dinmont terriers	1	..	..
Fox-terriers	3	2	2
Black and tan terriers	1	..	..
King Charles Spaniels	1	1	1
Skye terriers	1	..	..
Scotch terriers	1	..	..
Italian greyhounds	..	..	..
Yorkshire terriers	..	..	..
Blenheim spaniels	2	1	1
Bedlington terriers	..	1	1
Total	59	46	46

Buffalo, boycotted, had 524 entries made by 184 individual exhibitors. Syracuse was the battle ground chosen to show the strength of the A. K. C., and what was the result? 319 entries! But did that show the strength of the A. K. C.? By no means! Ten members of the N. D. C. had no grudge to settle. Influenced by the same spirit which actuated them from the first, they sent their dogs there and sought to make the show a success. Had they used the weapon of the A. K. C. and boycotted Syracuse, that show would have had 99 dogs less or only 220. Buffalo had two entries (one a litter of puppies) "not for competition," Syracuse had under the same head (in regular class) seventeen dogs. There is but one inference to draw from this.

One word more. I say without hesitation, had the Buffalo show been held one month later there would have been at least 850 entries. I have sufficient evidence to support this assertion, for I have been shown many letters written by breeders who desired to manifest themselves in sympathy with the N. D. C., and yet their dogs were in too poor condition to enter them at this season of the year.

Is there not a lesson to be learned from these facts? The members of the N. D. C. have up to this time acted solely on the defensive. Conscious of their power they have not allowed the "yelping" to move them one hairsbreadth from their original stand. They have shown to the "doggy world" their strength. And what of the future? Will it be wise to push them too hard? Is there not a limit beyond which it is unwise to push one, however just his cause may be, and when forbearance ceases to be a virtue? Let the classical mythologist relate to his associates the story of Phæthon that they, too, may not tempt Fate too far.

A LOVER OF FAIR PLAY.

DOG TALK.

A PARTY traveling in southern Wyoming sent to the Ware (Mass.) *Journal* an account of their adventures; and they have this to say of their dogs, which are described as "a pair of Siberian bloodhounds, a gaze hound and a water-spaniel:" "A word relating to our dogs—they soon became sore-footed, and the larger ones had to be carried in the mess wagon, while their greatest usefulness seemed to be a persistent determination to occupy our beds on frosty nights, to the discomfort, I might almost say exclusion, of humans. Our water spaniel was a curious specimen of his kind, being afraid of the water, and frequently begged to ride over the ford. He had great ability in one direction, however, when we practiced with the rifle while in camp he would invariably find the direction and the very locality of our bullets, even if we were shooting at an object 300 or 400yds. distant. The setter and the gaze hound were death on jack rabbits and cottontails. The spaniel would scent them out and the hound would, as a rule, run them down."

There were but six entries in the three classes provided for collies at the Central Canada Exposition Association's fair, held in Ottawa on Sept. 25, 26, 27 and 28, and a wretched lot they were. Not even a passable specimen among them. The winner in the dog class is a well bred cull, and the first prize bitch is simply awful. The remaining quartette may be briefly described as being a good bit worse than the winners of the premier honors.

Mr. J. E. Stryker, secretary of the St. Paul and Minnesota bench show, anticipates for this year a greater success even than the last show given by his club. Last year they had 400 dogs, the list including about all of the Western cracks and many from the East. The premium list is now ready.

Messrs. J. H. Winslow, of Philadelphia, Pa., and J. B. Ellison, of Bryn Mawr, Pa., have consolidated their kennels of pointers, which will be located at the latter place and hereafter the dogs will be shown and run in the name of the Bryn Mawr Kennel.

Mr. Hugh Dalziel's new book, a monograph on the collie, will be read with interest, for while the author differs in some points from the accepted authorities, and shows now and then a disposition to be finical, he has a deal of hard sense, and collie men who mean to keep up will not miss his work, which is included in our "Sportsmen's Library."

The coursing meeting at Great Bend, Kas., beginning Oct. 15, promises to be the most interesting event of the kind that has ever taken place in this country. Hares are reported to be in great abundance on the grounds and a large entry is expected.

The first meeting this season of the Hempstead Coursing Club (fox-terrier) will take place Oct. 27 on the polo grounds of the Rockaway Hunt Club at Cedarhurst, L. I.

The annual meeting of the New Jersey Kennel Club will be held to-night at Taylor's Hotel, Jersey City.

At a meeting held at London, Ont., during the dog show, the Canadian Kennel Club was formed. Representatives from each province were present. A report of the proceedings will appear next week.

The St. Bernard Club (English) will hold their eighth show at Sheffield, Oct. 30 and 31.

ON TO RICHMOND.

Editor Forest and Stream:

There are evidently great prospects for the Richmond show. It will be a good show, and a fairly big show. But what will interest exhibitors most is the fun in store. The managers are laying deep and awful plans whereby to entrap the quiet and peace-loving dog men of this great country into all sorts of vile pursuits. There will be fox hunting and rabbit hunting, and no doubt bird hunting (this must be done with a "bird dog,") and then there is deer hunting for those who like it, and I have no doubt that coon hunting will be indulged in, and also what is termed painting the town red. (This sport partakes of a somewhat different nature, but is pursued with great gusto at times by the dog men.) There is lots of fun waiting there for us. Now why not all hands meet before starting and go down in a body? A great many have expressed their intention of going down on Saturday's Old Dominion steamer. That is a good plan. Let us meet there and enjoy our trip together. As you said in your last issue, "On to Richmond!" EXHIBITOR.

THE PET DOG CLUB.—New York, Sept. 30.—*Editor Forest and Stream:* I herewith send a letter from the secretary of the American Pet Dog Club, which, without any comment of mine, I am sure your readers will accept as sufficient refutation of Mrs. Wheatleigh's communication appearing in your last issue. I can only add that further comment to me seems unnecessary.—MRS. EUGENE CLARKE. "NEW YORK, Sept. 22.—Mrs. Eugene Clarke, Second Vice-President A. P. D. C. *Dear Madam:* At the inaugural meeting of the American Pet Dog Club, Nov. 15, 1887, you were nominated by Mrs. Wheatleigh for second vice-president. You were unanimously elected. Your resignation, if tendered, has never been seen by me, nor has it ever been presented to the club. Mrs. Wheatleigh, our late president, must have been acting under a spell of forgetfulness when stating that you are neither a member nor a vice-president. The club has the honor to claim you as both. You are both. I must refrain from comment in relation to any statement made by one whom I have for years held in the highest esteem, and whom, it pains me to say, the club, at its last meeting, by resolution, dropped from its roll of membership. With great respect, your obedient servant, C. ORMSBY, Sec."

THE COURSING MEET.—Chicago Ill., Sept. 23.—Mr. H. C. Lowe, of Hutchinson, Kas., reports that he is hard at work training his entries for the October meet of the American Coursing Club. Mr. Lowe has imported several good dogs from England this past summer, and has his eyes firmly fixed on some of the upper moneys at the meet. He writes also that great interest is felt in the meeting for this fall, and the Kansas and Nebraska dogs are now being trained for all they are worth. There will be a great attendance at Great Bend on Oct. 15. The eminently sportsmanlike sport of coursing seems to be growing rapidly in favor.—E. H.

THAT MISSING ST. BERNARD.—Woodstock, Ont., Sept. 27.—*Editor Forest and Stream:* I recovered my St. Bernard dog, Barry, Jr., this week, after a thorough search by the Buffalo Kennel Club. By an error he was sent to a man named Spencer, of Toronto, and two of his dogs were sent to a wrong address. Spencer took the peculiar position that he had better hold my dog until he recovered his own, and although I wired him on the 17th, asking him if he had my dog, he did not reply for nearly a week, and then not until it was found the dog was in his possession. I sent for him on Sunday last when he gave him up.—ANDREW LAIDLAW.

THE CHESAPEAKE BAY DOG.—*Editor Forest and Stream:* I wish to lern fully about the Cheasapeake Bay dog. His origin, color, breeding, and where the best strains can be procured, prices, etc. Will some fellow sportsman who has had experience with them for retrievers, kindly give me the required information either by letter or through these columns, and the favor will be gratefully received and some day reciprocated.—G. E. S.

SPANIEL SPECIAL AT BUFFALO.—*Editor Forest and Stream:* In your report of Buffalo show you failed to state that my cocker spaniel champion Doc was awarded "an extra prize" in class 74. Kindly publish as matter of record, and oblige.—AMERICAN COCKER KENNELS.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Music II. and Carle. By Contoocook Kennels, Peterboro, N. H., for black, white and tan beagle dogs, whelped May 24, 1888, by Cameron's Racket (Rally—Louise) out of Cora (champion Rattler—Sciota).

Boo Peep, Little Dott and Adah. By Contoocook Kennels, Peterboro, N. H., for black, white and tan beagle bitches, whelped May 24, 1888, by Cameron's Racket (Rally—Louise) out of Cora (champion Rattler—Sciota).

Rowena. By Clyde Blackford, Bellefonte, Pa., for black, white and tan beagle bitch, whelped April 10, 1888, by Fitzhugh Lee (Lee—Juliette) out of Belle (Jock—Pigeon).

Verona. By J. H. Winslow, Philadelphia, Pa., for liver and white pointer bitch, whelped February, 1886, by Prince (Day's Prince—Swett's Fly) out of Vandalia (Bang Bang—Zanetta).

Princess. By Contoocook Kennels, Peterboro, N. H., for orange tawny and white St. Bernard bitch, whelped April 8, 1888, by Grimsell (Rex—Alma) out of Yum Yum (Marco—Hermeter).

Lady S. and Brighton Queen. By F. M. Shelley, Sheridan, N. Y., for lemon and white English setter bitches, whelped May 11, 1888, by King Fred (Ted Llewellin—Marcella) out of Lady Brighton (Prince Phœbus—Rosey).

Madam. By H. Turner, Detroit, Mich., for black cocker spaniel bitch, whelped Sept. 30, 1887, by Doctor (Bob III.—Black Bess) out of Jet (Raven—Ready).

Ravamus and Cadeaux. By H. A. Harris, North Wilmington, Mass., for white bull-terrier dogs, whelped May 10, 1888, by champion Count (Marquis—Kit) out of Marguerite (champion Count—Young Venom).

Sandycroft Benedict and Sandycroft Bachelor. By V. M. Haldeman, Milford, Del., for Irish terrier dogs, whelped Aug. 23, 1888, by Dennis (champion Bachelor—Jilt) out of Sandycroft Vim (Benedict—Geesala).

Sandycroft Geesala, Sandycroft Vixen, Sandycroft Virago, Sandycroft Vesta and Sandycroft Vedetta. By V. M. Haldeman, Milford, Del., for Irish terrier bitches, whelped Aug. 23, 1888, by Dennis (champion Bachelor—Jilt) out of Sandycroft Vim (Benedict—Geesala).

Bryn Mawr Kennels. By J. H. Winslow and J. B. Ellison, for their kennels of pointers at Bryn Mawr, Pa.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Passaic—Potomac. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Passaic (My Maryland—Gill) to their Potomac (champion Lee—Countess), Aug. 24.

Jessie—Jupiter. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Jessie (Ranger—Lucy II.) to their Jupiter (champion Lee—Saad), Aug. 19.

Verona—Bang. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Verona (Prince—Vandalia) to his Bang (champion Bang—Salter's Luna), Sept. 8.

Say—Graphic. Reading Pointer Kennels' (Reading, Mass.) pointer bitch Say (A.K.R. 2850) to J. L. Anthony's Graphic (Bonus Sancho—Juno), Sept. 12.

Beech Grove Ben Harrison. Light fawn mastiff dog, whelped March 14, 1888, by Tor (A.K.R. 4882) out of Beech Grove Princess (A.K.R. 4541), by Geo. Jackson, Beech Grove, Ind., to W. O. Taylor, Indianapolis, Ind.

Max, Jr. Fawn mastiff dog, whelped April 26, 1888, by Max (A.K.R. 4268) out of Alpha (A.K.R. 3921), by A. G. Page, Jr., Bath, Me., to C. H. Hichborn, Augusta, Me.

East Lake Mollie. Fawn, black points, mastiff bitch, whelped Nov. 17, 1887, by Leo out of Ashmont Bertha, by Geo. Gillivan, West Jefferson, O., to J. F. O. Smith, Norfolk, Va.

Ashmont Bertha. Fawn, black points, mastiff bitch, whelped Nov. 17, 1885 (A.K.R. 3368), by Geo. Gillivan, West Jefferson, O., to J. C. McClure, West Fairfield, Pa.

Ludwig's Nero. Fawn, black points, mastiff dog, whelped June 19, 1888, by Rex out of Ashmont Bertha, by Geo. Gillivan, West Jefferson, O., to Ludwig Wolf, Mansfield, O.

Rex. Brindle mastiff dog, whelped August, 1886, by Major out of Zanita, by Berkshire Kennels, Hinsdale, Mass., to Lucinda Morgan, Lenox, Mass.

Scot Wilks. Fawn mastiff dog, whelped May 8, 1888, by Berkshire Caution out of Berkshire Zulu, by Berkshire Kennels, Hinsdale, Mass., to Chas. A. Pontius, Canton, O.

Hero. Fawn mastiff dog, whelped June 21, 1888, by Berkshire Caution out of Daisy G., by Berkshire Kennels, Hinsdale, Mass., to A. S. Hain, North Brookfield, Mass.

Beech Grove Jackson. Light fawn mastiff dog, whelped Jan. 25, 1888, by Beech Grove Toby (A.K.R. 4867) out of Beech Grove Queen II. (A.K.R. 4358), by Geo. Jackson, Beech Grove, Ind., to Mrs. Kate Rankin, Riverdale, N. Y.

Bub. White and liver ticked pointer dog, whelped July 24, 1888, by Spot Dash out of Sallie Walker, by Fleet View Pointer Kennels, Lynn, Mass., to Albert Bramhall, same place.

Fleet View Alice. Liver and white ticked pointer bitch, whelped July 24, 1888, by Spot Dash out of Sallie Walker, by Fleet View Pointer Kennels, Lynn, Mass., to F. E. Myers, Stoneham, Mass.

Spot Dash's Boy. White and liver pointer dog, whelped July 24, 1888, by Spot Dash out of imported Belle Randolph, by Fleet View Pointer Kennels, Lynn, Mass., to H. L. Red, Boston, Mass.

Bangle. Black and white pointer bitch, whelped May 10, 1888, by Naso of Kippen out of Delia, by J. H. Winslow, Philadelphia, Pa., to F. F. Harris, Portland, Me.

Verona. Liver and white ticked pointer bitch, whelped February, 1886, by Prince out of Vandalia, by R. G. Hall, Portland, Me., to J. H. Winslow, Philadelphia, Pa.

Silver Shoe (A.K.R. 3753)—Zadie (A.K.R. 3753) whelp. Fawn, black points, pug bitch, whelped May 31, 1881, by Geo. Gillivan, Jefferson, O., to Adam Flaitz, Shelbyville, Ind.

East Lake Minnie. Fawn, black marks, pug bitch, whelped May 31, 1888, by Silver Shoe out of Zadie, by Geo. Gillivan, West Jefferson, O., to J. C. McClure, West Fairfield, Pa.

Cannify's Flossie. Fawn, black points, pug bitch, whelped May 31, 1888, by Silver Shoe out of Zadie, by Geo. Gillivan, West Jefferson, O., to Gilbert Cannift, Toledo, O.

East Lake Trump. Fawn, black points, pug dog, whelped May 31, 1888, by Silver Shoe out of Zadie, by Geo. Gillivan, West Jefferson, O., to F. Searight, Nashville, Tenn.

Monro Flossie. Fawn, black points, pug bitch, whelped May 31, 1888, by Silver Shoe out of Zadie, by Geo. Gillivan, West Jefferson, O., to Peter Monroe, Columbus, O.

Princess. Orange tawny and white St. Bernard bitch, whelped April 8, 1888, by Grimsell out of Yum Yum, by Contoocook Kennels, Peterboro, N. H., to F. L. Bragdon, same place.

Grimsell—Yum Yum whelps. Orange tawny and white St. Bernard bitches, whelped April 8, 1888, by Contoocook Kennels, Peterboro, N. H., one each to Geo. Petterson and P. H. Hurly, Worcester, Mass.

Nirvo. Orange and white St. Bernard dog, whelped August, 1886, by Trip out of Mollie, by Berkshire Kennels, Hinsdale, Mass., to A. L. Fennessy, Springfield, Mass.

Patience. Brindle and white St. Bernard bitch, whelped April 3, 1887, by Laurian out of Lotta, by Berkshire Kennels, Hinsdale, Mass., to P. J. Wynn, Bellows Falls, Vt.

Somerset Mike—Tussle whelps. Lemon and white fox-terriers, dog and bitch, whelped May 7, 1888, by Somerset Kennels, Bernardsville, N. J., to H. D. Spears, Milburn, N. J.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. C. R., Simcoe, Ont.—You had better have an oculist look at dog's eyes. It would not be safe for us to prescribe.

J. G., Newmarket, Ont.—I have a pointer dog coming three years old in December. He was used last year in Manitoba and got very sore ears at the tips. He was neglected in the winter, and the sores have eaten in till they are like a rough gash in tip of ear and they do not heal. The dog is in good health. I want to cure them if possible. Ans. Get the following:

R	Balsam Peru..... 3i.
	Iodoformi..... grs. xx.
	Camphoræ..... grs. x.

Paint sores with camel's hair brush twice daily after cleansing.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NIAGARA FALLS, Ontario, Sept. 26.—The 44th Battalion Rifle Association held their annual meet on Chippewa ranges to-day. Nearly $300 was given in prizes. The weather was everything that could be expected. In the latter part of the afternoon a cloud gathered and threatened a downpour of rain, but the ranges escaped, although it poured down the country around. The following are the scores:

Citizens' Match.—Open to members, 200yds., 7 shots, Snider rifles, position standing or kneeling; entrance fee, 50 cents:

G Wright	30	J Adams	28
C Lamont	29	C Bowen	28
G E Buckley	29	G A McMicking	28

Association Match.—Open to members; range, 500yds., 7 shots, Snider rifle; position, prone; entrance fee, 50 cents:

G Wright	30	C Pratt	26
S Bradley	27		

Welland Match.—Grand aggregate of Nos. 1 and 2 matches; Wright, $10 and D K A medal, 60 C Bowen 51
C Pratt, $5 and O R medal..... 53 S Bradley 50
G E Buckley 52

Volunteer's Match.—Restricted to non-commissioned officers and men of the 44th Battalion. Being the aggregate of the five last shots in the Citizens' and the Association matches. Entrance 50 cents:

M Vandersluys	32	A Cook	25
A Limburner	31	J Bampfield	25

Extra Series.—Open to members, range 200yds., 5 shots; position standing or kneeling; Snider rifles, unlimited entries, 25 cents each, two highest scores to count:

G Wright	46	W Wiley	44
G E Buckley	43	J J Flynn	41
G A McMicking	45	W Parker	41
C Bowen	44		

Extra Series.—Open to members, range 400yds., 5 shots, position prone, Snider rifles, unlimited entries, 25 cents each entry, two highest scores to count:

J Mason	47	J Adams	45
G A McMicking	47	B Thompson	44
C Bowen	47	W Wiley	44

Flynn Match.—Soldier—Presented by Chas. J. Flynn for the best aggregate of the five last shots in the Citizens' and Association matches made by a non-commissioned officer and man of Nos. 1 and 6 Companies of the 44th Battalion:

M Vandersluys	32	Albert Cook	25

Flynn Match.—Civilian—Presented by Chas. J. Flynn for the best aggregate of the five last shots in the Citizens' and Association matches made by a civilian being a resident of the town of Niagara Falls, Ont., since May 1, 1888:

G E Bradley	35	S Bradley	34

The O. R. A. rules governed. A large number of marksmen were present from Hamilton, St. Catharines and Niagara Falls, N. Y., and carried away the most of the best prizes.

SPRINGFIELD, Mass., Sept. 27.—Capt. Lehman's team beat Capt. Werner's team this afternoon at the Schützen Verein range in West Springfield by these scores:

Lehman's Team.											
Lehman	7	15	21	22	10	18	22	10	0	17	—142
Kron	21	10	16	10	15	23	20	25	21	17	—177
Schroeder	8	8	10	5	3	4	15	0	5	15	— 73
Flosdorf	0	0	6	15	0	16	10	15	17	8	— 86
Menzinge	0	17	13	8	13	0	17	13	5	23	—109—587
Werner's Team.											
Werner	10	0	0	15	9	6	0	18	11	16	— 85
Buchholz	16	17	15	5	21	0	18	16	13	0	—121
Halenstein	15	20	13	22	6	15	22	15	17	15	—158
Haag	15	0	17	0	21	5	0	16	18	21	—113
Neidel	0	0	8	13	0	16	18	18	0	12	— 85—562

These scores were made in regular shooting:

Schroeder	22	19	15	18	20	—94	Haag	25	10	8	8	10—61
Werner	17	20	10	18	18	—92	Owens	7	19	8	0	23—57
Halenstein	16	15	20	22	18	—91	Kron	0	20	10	8	15—53
Buchholz	18	8	10	17	18	—71	Neidel	15	4	0	9	0—28
Flosdorf	24	20	10	0	15	—69						

CREEDMOOR, N. Y., Oct. 1.—The 12th Marksman's Badge Match was shot at Creedmoor, on Saturday, Sept. 29. The day was very cool and the wind unsteady but the scores made were very good. Attendance fair. Following are the winners:

	200yds.	500yds.	Total.
H T Lockwood, Co A, 7th Regt	24	25	49
L J Elliot, Co C, 25th Regt	22	22	44
C E Bryant, N C S, 23d	22	22	44
G L Fox, Staff, 2d Brigade	22	22	44
John Bodine, Staff, S N Y	20	23	43
M E Buruton, Co F, 22d Regt	21	21	42
O W Vatel, Co F, 22d Regt	21	21	42
Medal Winners.			
F L Holmes, Co I, 23d Regt	22	24	46
G F Hamlin, Co I, 23d Regt	21	24	45
T J Dolan, N C S, 12th Regt	23	22	45
T G Austin, Co G, 13th Regt	22	22	44
J McNevin, N C S, 13th Regt	20	23	43

J. MANZ, JR., Asst. Sec'y N. R. A.

SAN FRANCISCO, Sept. 23.—The annual rifle practice of the various regiments composing the National Guard of California, which was begun on Sunday last by the Third Regiment at Shell Mound Range, was continued to-day at the same place, under the direction of Lieutenant George Strong, Inspector of Rifle Practice for the First Infantry Regiment, Second Brigade. The latter-named regiment was represented by Companies A, B, D, F, H, and on the whole the shooting made was excellent and reflected considerable credit upon the individual shooters. The various organizations were very well represented, and the State will be put to considerable expense this year in supplying medals to the successful competitors at the butts. The Third Regiment held its practice on Sunday, the 16th inst., and in this division also some excellent points were made.

BOSTON, Mass., Sept. 29.—The attendance at the Massachusetts rifle range to-day was very large, and all the matches well patronized, though the scores ran rather lower than usual at this place. Everything is in readiness for a large gathering at the fall meeting to be held next week Thursday, Friday and Saturday. Following are to-day's scores:

Rest Match.											
S Wilder	12	12	10	12	10	12	9	12	9	11	—109
W C Johnston, Jr	12	10	10	10	12	10	11	11	9	12	—107

TORONTO, Sept. 26.—There are now some eight clubs belonging to the Toronto Small-bore Rifle Association. It has been arranged that the clubs shall shoot three matches with each other for the championship. Up to the present Bradford has been ahead, having won the last ten matches they have shot. Some time ago they went to Orillia, and were successful there. The second match was shot at Bradford, and resulted in Orillia beating them on their own ground. From the very commencement of the match it could be seen that both teams were bent on making every possible point, but the very best of good humor prevailed. The third match between these two champion teams will, if possible, be more exciting than the one now shot:

Orillia.		Bradford.	
G E Whitten	89	Jas A Neilly	86
T Reid	82	Geo Trimmons	84
W W Wood	82	N A St Clair	82
T Millichamp	80	W Homes	82
J Delaney	78	D Neilly	82
R Strathern	77	S Metcalf	80
H Bingham	77	P Matt	77
C Fortier	73	W Lowery	64
J T Fortier	73	S A Neilly	61
C Wood	69—780	B Kilborn	46—744

BOSTON, Sept. 26.—Quite a number of riflemen visited Walnut Hill this afternoon, but only to find most perplexing weather conditions, a gale blowing part of the afternoon from 12 to 2 o'clock. Late in the day the clock indicated a 3 o'clock wind of moderate strength, and a few good records were made. The scores stood:

Members' Practice Match, 200yds.											
S Wilder	12	11	12	9	12	10	12	10	10	12	—110
E A Jones	10	11	10	8	9	9	11	12	11	12	—103
F Lindsley	10	9	12	9	8	9	11	11	12	11	—102
Off-Hand Decimal.											
S Merrill	10	4	7	6	9	8	7	5	8	9	—73
W S Kendall	4	6	11	4	4	5	9	9	6	9	—67
C W Peters	1	2	3	6	5	10	8	8	8	7	—63
H H Williams	4	3	5	6	7	8	9	9	4	6	—61
A L Parsons	5	5	6	8	6	5	8	3	9	4	—59
W L Balch	3	4	4	6	7	7	4	2	8	6	—51

BOSTON, Sept. 28.—The annual shoot of the Press Rifle Association took place to-day at Walnut Hill, and was the most successful in the history of the organization. In the team match five daily papers were represented, the *Post* carrying off the honors. All the shooting was at 100yds. off-hand, the team match and Class B were at the Creedmoor target, and Class A and the rest match on the standard American target. The Boston Theater cup, for the best score made by any man belonging to one of the teams who had not won it before, was taken by A. Keach, of the *Advertiser*. The second prize, under the same conditions, a field glass from Phelps, Dalton & Co., was not awarded, owing to a protest made against the sights of the military rifles. Dr. Al. Ware was the winner in the Post's match. For the individual matches $600 worth of valuable prizes, the gifts of friends of the association, were shot for. Following are the scores:

Team Match. *Post.*—F. W. Scott 42, J. W. Scott 40, H. A. Newman 39, E. E. Piper 37; one average score 39½; total 197½.

Globe.—J. P. Frost (mil.) 44, J. W. Taylor (mil.) 42, S. Merrill 40, C. S. Howard 35, M. D. Marchesault (mil.) 35; total, 196.

Herald.—F. E. Rollins 36, E. Stearns 39, C. B. Danforth 37, W. H. Hathaway 37, S. J. Byrne 35; total 194.

Advertiser.—A. Keach 43, J. R. Carmichael 39 J. G. Smith 39, D. B. Farwell 37, W. H. Jordan 26; total 184.

Transcript.—H. S. Fisher 40, J. D. Whitcomb 39, W. V. Alexander 33, F. W. Stimpson 32, H. A. Waterman 32; total 176.

Individual Match. Class A—J. P. Frost, Globe (mil.) 150, F. E. Rollins, Herald 153, S. Merrill, Globe 148.

Class B—C. S. Howard, Globe 91, W. H. Hathaway, Herald 88, J. R. Carmichael, Advertiser 83, J. W. Scott, Post 82, W. B. Alexander, Transcript 82, S. J. Byrne, Herald 82.

Class C—J. N. Taylor, Globe (mil.) 85, W. L. Balch, Herald 82, M. D. Marchesault, Globe (mil.) 78.

Rest Match. C. S. Howard, Globe 179, H. S. Fisher, Transcript 175; W. Johnson 173, S. Merrill, Globe 167; H. K. Buchnell, Herald 153; H. P. McNally, Herald 104.

PHILADELPHIA, Sept. 27.—This afternoon at Schützen Park, at the usual weekly shoot of the Philadelphia Rifle Club, Mr. E. Travis succeeded in making the fine score of 67 points out of a possible 75 on the target of honor, which entitles him to the gold medal of the club, the first of this kind won in eight years. Mr. Travis won the silver club medal during July, making 60 points. Mr. Travis made these scores with a Wm. Wurflein special mid-range .32-40 rifle; this rifle was manufactured expressly for Mr. E. Kolb. Mr. G. F. Kolb (the father of Mr. E. Kolb) being one of the best shots of the club, desired to use this rifle, and succeeded in making the fine score of 65 out of a possible 75.

PITTSBURGH, Sept. 29.—Dr. W. F. Carver to-day performed a most remarkable feat in shooting at Exposition Park. He had made a bet of $100 with Adam Forepaugh, Jr., that he would break six glass balls thrown into the air simultaneously before they fell to the ground. The shooting was done with a Spencer repeating rifle in the presence of a few invited guests. Dr. Carver had not the slightest trouble in performing the feat, repeating it four times in succession. The Doctor was not satisfied with this, but threw up seven balls at once, all of which he perforated before they fell to the ground.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ATLANTIC AMMUNITION WINNERS.

NEW YORK, Sept. 29.—*Editor Forest and Stream:* We herewith send you the results of our several trophy shoots of this season, entries for which closed on Sept. 25.

The New England Diamond Badge, value $200, is won on a score of 100 straight, by Hiram G. Wheeler, of Marlboro, Mass.

The Virginia State Championship Trophy, value $50, is won by Dr. E. F. Wayman, of Staunton, Va., on this score:

Dr E F Wayman ..... 1111111011111111101111111—23
1111111101110101110101111—20
1111111111111111111111101—24
1101111111111111011111111—23—90

E. G. Jones, Wm. F. Summerson, Judges; R. W. Hardy, referee.

The championship trophy for Pennsylvania, Delaware, Maryland and District of Columbia, value $50, is won by E. E. Shaner, of Pittsburgh, Pa., on a score of 97:

E E Shaner ..... 1111111111111011111111111—24
1111111111111111111111111—25
1110111111111111111111111—24
0111111111111111111111111—24—97

W. J. McCrickart, Chas. Richardson, judges; John Binder, referee.

The championship trophy of New Jersey, value $50, is won by E. D. Miller, Springfield, N. J., on a score of 98:

E D Miller ..... 1111111111111111111111111—25
1111111111101111111111111—24
11 11111111111 111111—25
1111111101111111111111111—24—98

Frank Duncan, C. H. Johnson, Jr., judges; Geo. Pudney referee.

The New York State championship trophy, value $50, is a tie, there being three scores of 100 straight. These ties will be decided at the New York Suburban Shooting Grounds Association tournament in October, when a lively and interesting contest may be expected.

All these trophies are to be open to challenge for one year.

THE ATLANTIC AMMUNITION CO., LIMITED.

THE TUCKER SYSTEM.

ONE scheme of shooting devised to give amateur shots a show against the experts is that devised by Mr. Tucker. We reprint from our issue of May 17, 1888, this explanation of Mr. Tucker's system; and should like to hear from trap shooters their views respecting this or other systems which have in view the same end:

There are multitudes of men who are fond of the sport and would take part in club shoots if they were not kept back by the presence of one or more crack shots against whom they feel they have no chance. A trial of the "Tucker" system will show that all grades of shooters may enter in the same match and every contestant will get what he wants and has a right to expect, a fair show. The system will be better understood by reference to the following sample score of ten bird match:

		Total.
A	1111111—6	1110—3 9
B	1111110—5	1111—4 9 wins 2d.
C	1111111—6	1111—4 10 wins 1st.
D	1111011—5	1110—3 8
E	1011010—4	1111—4 8 wins 3d.
F	1101104—4	1011—3 7
G	1100001—3	Withdraws.
H	1100000—2	Withdraws.

C kills all his birds and wins first. B wins second over A because he out-shot him on the tie. F wins third for the same reason. A makes 9, the same aggregate score as B, but the latter makes a clean score on ties and so is entitled to the prize. If C had dropped a bird on his ties it would have left him out of the race entirely, and B would have won first, E second and F third.

At the beginning of this race each shooter puts in 50 cents, or any sum sufficient to pay for his birds in the main shoot. At the end of the main shoot G and H, thinking they have no chance to win, withdraw. The other shooters pay into the pool any amount that may have been agreed upon before the main shoot commenced, say $1 each—$6, which amount is divided, 50, 30 and 20 per cent.

When the entries are larger than 10 or 12 it is recommended that the number of birds be increased to 8 and 5—13 as below:

A	11111111—8	11111—5—13 wins 1st.
B	11111110—8	11110—4—12
C	11111111—8	10011—3—11
D	01111111—7	11111—5—12 } divide
E	11110111—7	11111—5—12 } 2d.
F	11111110—7	10011—3—10
G	11011101—6	1 011—4—10
H	11101110—6	11111—5—11 wins 3d.
I	10111110—6	11001—4—9
J	11101010—6	001 1—3—9
K	11100011—5	11111—5—9
L	10110011—5	Withdraws.
M	11000101—4	Withdraws.
N	1010 011—4	Withdraws.

In this example if A had dropped a bird in the last five, D and E would have divided first; H would take second and K third.

The special feature of the system, and that which makes it a new departure, is the plan of dividing the shoot into two parts. In a ten-bird match the first six birds are made to classify the shooters, and the remaining four answer for the birds. The first and second parts added together show the total birds killed. The man who kills straight wins in this, as in any other match. The vital principle in the Tucker system is the value placed on tie birds, and in combining them with those killed in the main shoot to decide the match. The best explanation of this is a reference to above specimen score. B wins second, not because he killed more birds than A, but because he killed his ties straight.

The advantages of the Tucker system cannot be fully set forth on paper, but some of them are mentioned below. "The proof of the pudding is eating the string." Give this plan a thorough trial and you will never go back to the old system. It prevents the working of combinations and dropping birds for place. Makes every man shoot his best when his money is up. Divides the money equitably. No one obliged to enter unless he has a show to win. Encourages all classes to shoot together. Reduces the number of ties and avoids the usual long delays in tie shooting.

LANCASTER, Pa., Oct. 1.—Score shot on Sept. 14, on the grounds of the Lancaster Gun Club, Lancaster, Pa. The match was a return one between the two clubs; the targets were Keystones, bluerocks and Lockport bats. The match was witnessed by a large crowd and thoroughly enjoyed by all. At the preceding match the Mountville Club were victorious; and as the Lancaster Club previous to that had never been beaten, the contest was watched with interest; but the home club won and were happy. After the match the clubs sat down to a splendid banquet:

CLEVELAND, O., Sept. 27.—Rainy weather and muddy roads did not prevent the members of the Cleveland Gun Club from holding their semi-monthly badge shoot this afternoon. Ten members and three visiting sportsmen were on hand at the usual hour, and, notwithstanding that rain fell nearly all the afternoon, the shooting was commenced and finished with only few interruptions. The conditions were 15 single standard targets at 18yds., and 5 pair at 16yds., sprung from 3 traps. Messrs. Field, Arnold and Bell, members of other clubs, shot with the members. Silsby won the first badge, breaking 22; while Messrs. Coggswell and Upson tied for second, each having grassed 20 birds. In the shoot-off the former won. The score follows:

W Tamblyn	1	1	1	1	0	1	1	1	1	1	—11—21
Bassett	1	0	1	0	1	1	1	1	1	1	—10—18
N D Keys	0	0	1	1	1	1	1	1	0	1	— 8— 5
F Wall	1	1	1	1	1	0	1	0	1	1	—10—18

A C Coggswell	1	1	1	1	1	1	1	1	1	1	—10—20
G Smith	0	1	0	0	1	1	0	1	1	1	— 6— 8
A M Allen	0	0	0	1	1	1	1	0	0	0	— 4— 8
M Silsby	1	1	1	1	1	1	1	1	1	1	—10—22
D Upson	1	1	1	1	1	1	1	1	0	1	—10—20
J Held	1	0	1	1	1	1	1	1	0	0	— 8—17
Arnold	1	0	0	0	1	0	0	1	0	1	— 5—10
W Bell	1	1	1	0	1	1	0	1	0	0	— 7—15

The usual team shoot was held after the contest for the badges. Smith and Silby were chosen captains, and the team shoot resulted in the following scores:

Smith's Team.		Silsby's Team.	
Smith	1011111011—8	Silsby	1111111101—8
Coggswell	1100111110—8	Tamblyn	0111010010—5
Wall	1111011111—8	Upson	0111011101—6
Bassett	0110011111—6	Bell	1111111101—8
Held	1111011111—8	Allen	1111111001—7
Keys	1101101001—5—39	Arnold	1111110111—8—42

BROOKLYN, Sept. 29.—The members of the Unknown Gun Club had their shoot at Dexter Park to-day. There was a good attendance of shooters present. J. Rathjen, 26yds.; J. Akhurst, 23yds.; A. Hass, 24yds, and H. Miller, 23yds., killed six birds each and tied for the medal. On shooting off J. Rathjen won, killing 2 out of 4. Seven killed 5 birds each for second money, which was won by Mr. Brown. Four tied, killing 4 birds each, for third money and divided.

O Hillmer (21)	1101001—4	C Plate (26)	0110111—5

Third Class.

A Austin..... .....1001010111—6 R McKay.....1001019111—6
J Fitzsimmons.....1100010111—6 W Beatty.....1101100010—5

Fourth Class.

J Lenox.....1010011110—6

PITTSBURG, Pa., Sept. 26.—There was a live pigeon match today between Miss Annie Oakley and John Lovatt, of Allegheny; it took place at Exposition Park before a few invited guests. Wm. McCrickart, of the Herron Hill Gun Club, acted as referee, and S. S. D. Thompson as trap puller. Miss Oakley won the contest, killing 26 birds out of 30 at 25yds. rise. Mr. Lovatt killed 17 out of 28 birds at 30yds. The wind was strong and the birds good.

W. GRAHAM, the celebrated English shot, and L. S. Carter, of Hammond, Ill., have been matched to shoot at St. Louis, Oct. 6. The stakes will be $200 a side, 100 birds each, with ground traps.

NEWARK, N. J., Sept. 28.—William Greene, of Harrison, and C. Reinhardt, of Newark, shot a 30-bird match at Erb's to-day at 25yds. rise, with O. Von Lengerke as referee. Reinhardt killed 20 and Greene 14.

BROOKLYN, Sept. 28.—The members of the Glenmore Rod and Gun Club had a splendid day's shooting at Dexter Park to-day. Seventeen went to the trap to shoot for the Midas diamond badge and an elegant table decoration in the form of a cake basket given by Mr. Charles Magee as a first prize. The full score of shoot as follows:

T F Edgerton (29).....1111110—6 W Linnington (25).....1111011—6
W Selover (28).....1111110—6 J D Bennett (25) .....1111101—6
J Bennett (29).....1111111—7 C Craft (25)..... .....1111110—6
J Ochs (26)..... ..1111111—7 J Y Van Wicklen (28)..1111111—7
E Holgane (29).....1010100—3 George U Forbell (28)..1111011—6
W Lewis (25)... .....1100111—5 W Bennett (23).....1110 01—5
P Sutter (29)..... .....1110011—5 M J Bourke (25).....1111111—7
J Von Dreele (26).....1101111—6 E Scheillein (24).....0111111—6
C Magee (25).. .....0010111—4

Ties for badge and first prize won by J. Bennett.

SPRINGFIELD, N. J., Sept. 29.—A very pretty little team race between six of the Union Gun Club boys was shot here this afternoon, and although Johnson, Roll and Conover were badly beat in according to the other side, they are still game, and have named next Saturday for the return match, and we hope that our opponents are not so set up they will fail to come to the scratch. Miller, the champion of the Chamberlin 60 class, was on hand, and shot a winning race from start to finish. His new anti-hot hand protector had undoubtedly something to do with his making 47. Sopher, as usual, held up his end in great shape. Sickley's 10-bore Parker, with his little loads of Westminster C, somehow or other seemed to get there just in time to leave only a spot of dust of what was once a full-fledged bluerock. Something was evidently the matter with Roll's Lefever., although he had it loaded with plenty of deadshot and a handful of 6's, but the bell rang long and often. Conover had just come up from the pond after trying his hand at ducks, and seemed to find some difference between the flight of ducks and bluerocks. Johnson failed to catch on the lefthanders once in a while. The conditions of the matches were as follows: Best two out of three matches, the winners to get a bag of shot apiece. First match at 50 bluerocks per man, second, 50 clay-pigeons, third, 50 Lockport bat. Following is the score of the first match, screened traps:

Sopher.....1111101111100111111101111111111111111111111111111—45
Sickley.....1111111101100101111111111111101100111111111111110011—41

T MacKenna (25)..2020102001— 5

John H. Voss wins first prize (a gold medal) for third time, and it becomes his personal property; P. J. Keenan wins second prize for the first time; John Howard wins third prize for first time. 2 means used second barrel.—T. T. MACKENNA.

NEW YORK SUBURBAN SHOOTING GROUNDS ASSOCIATION. Office 29 Broadway, New York, Sept. 29.—*Editor Forest and Stream:* An erroneous impression regarding liability of stockholders in New York Suburban Shooting Grounds Association seems to prevail in the minds of some persons. I therefore wish to say through the medium of your columns that the law under which this association is organized limits stockholders' liability to the amount of their holding, so that after paying in the amount of their subscription there is no further personal liability.—CHAS. RICHARDS, Pres.

THE SOUTH SIDE GUN CLUB, of Newark, N. J., announces for its winter season matches every Saturday at artificial targets, shooting to commence at 2:30 P. M., club rules to govern. Entrance fees are from 15 cents to $1. For particulars address W. R. Hobart.

LOWELL, Mass., Sept. 25, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I used some paper shells on the coast of Maine last week in a heavy fog and rain. We tried Eley Bros. and your Climax shells. Yours were the only ones which did not swell. The primers were effective, no misses, and in every respect the Climax paper shells were superior to the others. Very truly, (Signed) GEO. J. CARNEY.—*Adv.*

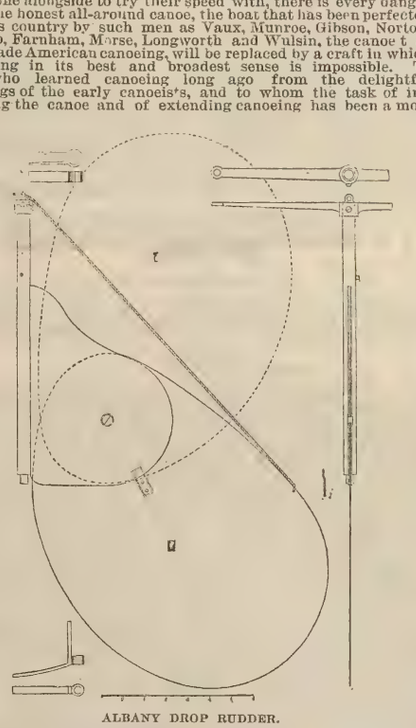
Canoeing.

Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1 50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

THE A. C. A. MEET OF 1888.

(*Continued from page 196.*)

ARRANGEMENT.



NEXT to the model, the most important detail of canoe design is the division of the space in the canoe so as to best fit the boat for some specific purpose. The ordinary Class A or B canoe is usually fitted for one of three ends—cruising only, cruising and racing, or racing only; and each year the dividing line between the second and third is more clearly drawn. The first canoes were arranged and fitted up solely for cruising, the space being divided so as to give plenty of room for life on board as well as for stowage of the necessary stores and clothing. With the growth of sailing and the beginning of canoe racing, new methods of division were introduced, but still plenty of space for man and stores was preserved. Of late years, however, with the increase of racing, a new method of arrangement, or, more properly, a lack of any method, has come in; making of the racing canoe nothing but a sailing machine. In these canoes the first consideration is a light hull, to attain which everything is sacrificed—no bulkheads, no mast tubes, not even a ring in the stem or a cleat on deck. The main feature in these boats is the centerboard, unlimited in size and placed where it is most easy to obtain a good balance of hull and sails, regardless of crew or stowage space. Added to this the well is either so ridiculously small as to prevent the man from sitting below or paddling in comfort, or, on the other hand, it is large, but unprotected by hatches, subjecting the boat to the danger of swamping in rough water. We do not mean to say that all or even a majority of the racers at the meet possessed all of these bad points at the same time; some had one and some another, while some had two or three; but these features were the prominent ones in the canoes present in the races.

CANOE FITTINGS.

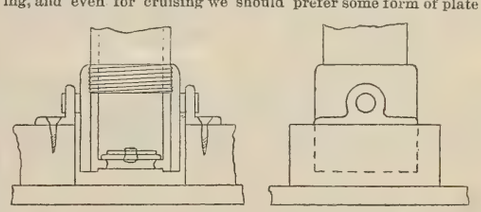
1. Western Deck Seat. 2. Curved Deck Seat. 3. Barney Mizen Block. 4. Rushton Rudder Brace. 5. Butler Mizen Sheet Traveler.

There were a number of canoes whose owners kept them solely for racing, canoes with standing rigs that must be stepped carefully beside a float, as the boats would not stand up under sail unless the crew was aboard, and that when afloat could be used for no purpose save fast sailing. In some cases the owners of these boat were men who had absolutely no conception of canoeing as it was first made known to the older canoeists through the writings of MacGregor and Baden-Powell; to whom the charms of cruising, camping and canoe life were a sealed book, and who have taken up the canoe because it was the most convenient form of racing machine for their purpose. As long as canoe racing remains in the hands of the men who love cruising, there need be no fear of a dangerous over-development of the sport, no matter how keen the racing may become; but in the hands of men who never cruise, who never take an outing in their boats unless with some one alongside to try their speed with, there is every danger that the honest all-around canoe, the boat that has been perfected in this country by such men as Vaux, Munroe, Gibson, Norton, Bishop, Farnham, Morse, Longworth and Wilsin, the canoe that has made American canoeing, will be replaced by a craft in which canoeing in its best and broadest sense is impossible. To us, who learned canoeing long ago from the delightful writings of the early canoeists, and to whom the task of improving the canoe and of extending canoeing has been a most

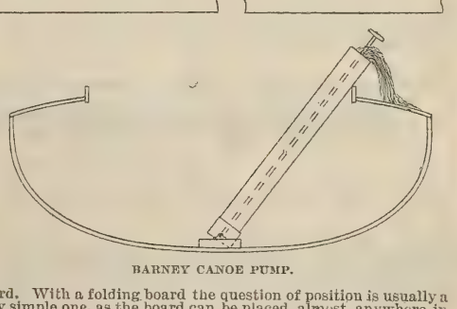
ALBANY DROP RUDDER.

pleasant and engrossing one for years, it is a disappointment to see the entire current of thought and invention turned in the direction of racing, to the neglect of cruising and general canoeing. It would be a good thing for some modern canoeists if they would take up a course of ancient history this winter and read, in many cases for the first time, with what care the first and second Rob Roys were planned over twenty years since, or post themselves on practical details from Baden-Powell's "Canoe Traveling," published seventeen years since.

In those days, and fortunately for many years after, the question of arrangement was an all-important one; how to subdivide the little ship so as to make her perfect in every department. Given a canoe of 15 or 16ft. in length, and the average canoeist of 5ft. 9 or 10in., the first point in a cruising craft is to secure room for the canoeist by day, room to sit or recline in comfort, to stretch one's legs, to cook or fish, if need be. This demands at least 3ft. 9in. of the middle of the canoe, unobstructed by a trunk above the floor. It is claimed on behalf of the new boats that the trunk, 30in. long and 6 or 7in. high, is not in the way, as it is between the man's legs when seated, but however true this may be for an hour's paddle, it is not so when the canoe is used day after day on a cruise. In very short cruises, Saturday night and Sunday or a day's run under sail, the crew is mostly on deck and does not feel the need of room in the boat, but let him be storm-bound for a day in some place where he is forced to find shelter in his canoe and under a canoe tent, and he will be ready to pitch board and trunk overboard before noon. In short, it is easy enough to stow oneself away beside a board for a short time, and when sailing on deck one does not need room below; but for all real cruising the canoe must give ample leg room for her crew, whatever his height may be.



Not only must there be room for sitting in comfort, but for sleep as well, in order that the canoe shall fill all the uses of a cruiser. Many dislike sleeping on board under any circumstances, and in the main it is generally pleasanter to sleep on shore beside the canoe, but at the same time there are many occasions in cruising when a better bed can be made on board under the canoe tent than anywhere else. The minimum length for sleeping is about 6ft., but if the canoe be of good dimensions the feet can go under the deck beside the trunk for a short distance, so that a space of 5ft. 6in. from after bulkhead to the after side of the trunk will be sufficient as economy of length in this point is most important. In addition to sitting and sleeping room, good stowage spaces are necessary at the end, with bulkheads and openings of some kind, so that bedding, tent, stores, etc., can be carried in such places as to be accessible when under way.



Besides the space within the boat, the size of the opening in the deck, the well, is most important. In order to sleep below it is necessary to have movable hatches over the after part of the well, and one is also needed at the fore end. In sleeping the well must be open for a length of 5ft. or more; in paddling or sailing in rough water the well must be nearly covered by a spray cover and watertight hatch; and in shipping it must be entirely covered. The positions of the minor details, mast tubes, deck hatches, foot gear, etc., are all most important when comfort and safety in cruising are considered, and were once matters of serious study and trial. In many boats to-day, however, these details are dispensed with as far as possible, and where they must be retained they are placed solely with a view to speed under sail. It is no easy problem to arrange a canoe so that the fore and aft trim will be correct when the crew is seated in the position which gives him the greatest control of the boat when sailing, and also permits of room for sitting and sleeping, retaining this trim when light for racing as well as when loaded for a cruise, and at the same time to keep the center of lateral resistance of both hull and board in a position where it will give the best results under such a rig as is suitable for a canoe. Whether it is possible to give a canoe the necessary cruising features without in any way impairing her speed, is an open question, and it is likely to remain so as long as men are not obliged to look for a solution of it, but can dodge it entirely by the simple method of ignoring cruising entirely and building boats that are fitted and used only for racing. If a man does not care to cruise there is no power in the Association to make him do so, and if he wants to race it is the duty of the Association to aid him in racing as well as cruising; but not to an extent that will in any way hinder the development of the cruising canoe and the extension of canoe traveling. If it be necessary, let there be races for canoes without any limits save the essential ones of length and breadth, but at the same time the rules should be so framed as to keep the majority of the races open to the canoe that in build, arrangement, fittings and rig is a cruiser as well as a racer. Last winter we spoke strongly on this same subject (FOREST AND STREAM, Feb 16) and what we have seen since only serves to strengthen the views then expressed in favor of further restrictions which shall help the cruising canoes.

In this connection we may note that while there were many canoes at the meet that had cruised to it or that made longer or shorter cruises afterward, they were all "builder's canoes," imperfectly fitted up for cruising; in fact, we cannot refer to one thoroughly and completely fitted cruising canoe. No matter how thoroughly and honestly the builder may do his work, a canoe is never ready for real use until the owner has pretty thoroughly impressed his own individuality upon her in the way of fitting up and furnishing. Some things must be changed, many things must be added, before the canoe is fully fitted and the necessary duffle loaded on board for a cruise. What is necessary will come more appropriately under the head of equipment, and we need not devote further space to it here, though it is a matter of arrangement where and how the various articles of the equipment shall be stowed.

FITTINGS.

The most important item of the fittings of a modern canoe, either racing or cruising, is the centerboard, in its position, form and general arrangement. While convenient in many ways for cruising, the various folding boards have gone out of use for racing, and even for cruising we should prefer some form of plate

BARNEY CANOE PUMP.

board. With a folding board the question of position is usually a very simple one, as the board can be placed almost anywhere in the boat without seriously interfering with the room; but with a plate board it is a very different matter. The average trunk is from 30 to 36in. long, sometimes as much as 42in., and of varying heights, being about 7in. high when placed in the center of the well, and extending from keelson to deck when placed forward. The Ruggles canoes, Eclipse, Narka and Ruggles, had 30in. plate boards, with a trunk of sheet brass so fastened with cam catches that it can be taken out in a few minutes and a flat piece of brass substituted, closing the opening in keel and leaving the well unobstructed. This plan answers very well up to a certain point; if about to start on a river cruise where sails will not be used, the trunk is removed and left at home; or for a tandem paddle it may be removed, and also for sleeping on board, provided the canoe is not afloat. It does not reach the cruising question at all, as the trunk is still in the way, except when temporarily removed for some special purpose. In such cruising as the Class B decked canoe is best fitted and most commonly used for, the boat must be

always in condition for sailing by merely setting sail and perhaps shifting a hatch or a seat, and at the same time, as we have already shown, the man must be able to use the clear length and breadth of the well for sitting at full length, handling clothes bag and cooking kit, and preparing his meals. For such use the movable trunk is practically a fixed one.

In most of the other canoes the well was given up to the trunk entirely, the crew managing as best he could when it was necessary to take a watch below. Giroffa No. 5 had a plate aboard 42in. long, rectangular in shape, the upper edge reaching as high as the deck, and fitted to lower at both ends. Dimple, Fly and several others had boards nearly as long. Guenn No. 3 had a heavy plate board, the same used in previous boats of the name, but fitted as described in the FOREST AND STREAM of March 22, 1887, after a plan devised by the writer, the board dropping aft when lowered, so that any balance of sail and hull may be had within reasonable limits. This plan is perhaps little heavier and more complicated than the common plate board, but it works perfectly and has the great advantage of leaving the well entirely unobstructed. It is essential, however, that the board should be heavy enough to drop freely of its own weight, say of one-eighth inch metal, whereas many boards now are but one-sixteenth inch thick, and move so stiffly that they must be pushed down by a handle fixed to the after end. This offers a very convenient way of working the board, the handle being within easy reach of the crew when on deck; but at the same time there is no trouble in handling a board by means of a line in place of a handle, the cleat rack being as easily reached as the latter. As to the weight of the board, a few pounds will make but little difference in any way, and a moderately stiff board is better than one that springs like a handsaw. With a properly fitted trunk a board of one-eighth inch or less can be made to drop of itself or raise freely by a cord as well as by a handle.

The question of light weight in a canoe is an interesting one, but its advantages are undoubtedly over-estimated by some who sacrifice everything to lightness. Mr. Barney's experience is that with the old Pecowsic, weighing about 150lbs., now, he can easily beat the new Ruggles, weighing about 75lbs., the latter being sailed by his son, and on changing canoes the Pecowsic again beats the lighter craft. A part of this is no doubt due to the model, but at the same time, the new boat is by no means a slow one, and in some points is superior to Pecowsic, and yet the latter carries a handicap of 100 per cent. in weight and beats her. It is the fashion just now to cut down weight and carry no ballast, for no better reason than that boats with several hundred pounds of ballast have proved unsuccessful; but at the same time, there are plenty of canoes that would be improved at times by a little judicious ballasting. Eclipse has carried shot with advantage in some of her races about New York, and the new Guenn has been found to need at least 40lbs. It is a case of that hasty generalization that characterizes many canoeists, and a little time spent in experimenting would prove to them that it is by no means a fixed rule that the lighter a canoe is the faster she will be; but that every boat has a certain trim at which she is best in certain weather, and that this trim can only be found by careful trial, and not by the application of a sweeping rule against weight of hull and ballast.

Except If, which sailed with a deep rudder of mahogany, all the canoes had metal rudders, in most cases with a drop blade. One very good form is shown in the accompanying drawing, the rudder made by Mr. Piepenbrink of Albany. Mr. Rushton had a new rudder, the stock being made of a brass bar, rectangular in section, ⅝×¼in. This is better and stiffer than the round tube formerly used. The lower end of the bar fits into a brace on the heel of the sternpost, the upper end being held by a movable strap, as shown in the sketch. The best method of construction for a drop rudder which we have yet seen is that devised by Mr. Stoddart for his Atalantis in 1883, the rudder being formed from one piece of sheet metal, bent double. Several of this general make were present but none quite perfect, and we hope to get the drawings of a really good one for publication during the winter. The construction is simple and within the power of any good amateur, a very important point when the cost of some drop rudders is considered.

The deck seat was out in full force, but with nothing specially new or good. Notus was fitted with a western made seat, of the form shown, the ends being fitted to fold in, though was not apparent in what way the peculiar joint was superior to an ordinary hinge. If it is desired to make the free end rise of itself as soon as the crew shifts to windward, in order that it may not drag in the water, it can easily be done by tacking a sheet of thin rubber over each end, the rubber contracting and lifting the end a little as soon as the crew rises, leaving it in place for him to sit down again without adjusting it. The size of this seat was 45in. long and 7in. wide, thus projecting 7½in. beyond the side of the canoe. It was held down by the bolts hooking under a crossbar. If had a plain board across the well, held down by a bolt in the center, passing through a crossbar under the coamings. Where the side of the boat is low a seat of this kind can be raised by giving it a curve, as shown, making the center a little lower than usual when used for paddling, and throwing up the ends higher. The sliding seats were well represented, in detail the same as last year. Their use has been prohibited in England and it would be a good thing if the same rule was enacted here before they are generally adopted.

With the large mizens now in common use the trim of the mizen sheet has become a very important matter. With a sail of 25 or 30ft. the driving power was mainly in the forward and larger sail, and the mizen did not require such careful tending, but now, when some canoes are racing with mizens as large as the mainsail (one was seen at the meet with a borrowed mainsail stepped aft and larger than the regular mainsail which was in its place forward) the sail needs to be trimmed with the greatest care. A block amidship, as always used, will not do this, as in flattening the sail it also brings the boom amidship, and to take the place of the ordinary block Mr. Paul Butler has devised a very ingenious leader for the mizen sheet. It consists of a tube 6in. long and ½in. in diameter, pivoted at one end so as to swing freely from side to side across the deck, the mizen sheet being led through the inside of the tube, coming out of the fore end and leading to the well. When hauled flat in, the tube swings off several inches from the center line of the boat, thus keeping the boom down and at the same time at an angle. Mr. Barney had also a handy little block that allowed the mizen to run freely and gave it a little play at the same time.

A good pump is necessary in canoe racing, but one has never been devised until this year, when Mr. Barney fitted one to the Ruggles. The barrel is a plain brass tube 1¼in. in diameter and long enough to reach from the keelson over the well coaming. The lower end has a pipe thread cut on it. The foot valve is in the form of a casting, pivoted so as to swing freely in a thwartship direction, the valve being in the bottom of the casting, while above it an internal thread is cut to fit the barrel. The pump spear is a 1¼in. brass rod with a plain leather on the lower end. In use the barrel is screwed into the foot valve, and when in place it may be swung to either gunwale, so as to be always beside the man, no matter whether he sits to port or starboard. In tacking the pump is swung over to the windward side, within easy reach of the hand at any time. Its capacity is about four strokes to the pailful.

The review of canoe fittings is hardly complete without some allusion to foot steering gear, but unfortunately nothing more than an allusion is possible, as there was little or nothing at the meet worthy of favorable comment. The sailing canoes with very few exceptions, were not fitted with foot gear at all, and where a gear was fitted it was generally of the hinged pedal description, provided by the builders, a poor affair at best. Guenn No. 3 was fitted with the Toronto sliding gear, described in the FOREST AND STREAM of March 22, but the details were not as perfect as they might have been. This gear is so far superior to any other we have seen that we propose to devote a little time to the perfection of its details during the winter. It has one advantage that no other possesses, in that the feet may be used for steering when seated on deck, as long as the crew is not too far out to windward. In setting a spinaker or other work before the wind the steering can be done as easily as with the hands, leaving the latter free for other work. The absolute necessity of a good foot steering gear is known to all who have used a canoe for cruising, but as it is not essential for match sailing all efforts to improve it have ceased and many dispense with it entirely.

[TO BE CONTINUED].

IANTHE C. C., Sept. 29.—The record races of the Ianthe C. C. have proved most successful in keeping up a lively racing interest on the Passaic River during the season, and there is every indication of the fall races being even more interesting than those already held. The entries and finish of the races held on Sept. 29, were: Sailing—Atalanta, L. B. Palmer, Ianthe; Essex, G. W. Cox, Essex; Will o' the Wisp, W. D. Anderson, Essex; Wind, P. T. Hogan, Ianthe, did not finish; Bachelor, B. Fredericks, Ianthe, did not finish. Paddling, Classes III. and IV.—Bachelor, B. Fredericks, Ianthe; Atalanta, L. B. Palmer, Ianthe; Wind, P. T. Hogan, Ianthe. Atalanta won the sailing race by a good lead, and Bachelor was first in the paddling race, winning from Atalanta by less than a length. The record races will be again held on Oct. 6, at 3:30 P. M.

YONKERS C. C., FALL REGATTA.

THE Yonkers C. C. held its fall regatta at its boat house at Glenwood, N. Y., on Sept. 22. The tide being ebb and the wind strong from the north, made it almost impossible for the boats in any sailing event to work up stream sufficiently to round the outer buoy of the triangle; but that is a recognized disadvantage of canoeing on the lower Hudson.

In Event 1., Classes A and B, sailing, H. L. Quick, of the Evangeline, meeting with an accident at the start, withdrew, and the Caona, sailed by Grant Edgar, withdrew after missing the outer buoy on the second round. All the other boats, with the exception of the Stranger, Everett Masten, withdrew after failing at the outer buoy on the first round. The Stranger succeeded in completing the course after being two hours at it. After this experience no further sailing events were attempted.

The single paddling race was won by Harry La Motte, of the Philadelphia C. C., in the Lassie; Talbot Simpson, in the Day Dream, second. La Motte is on his way from the A. C. A. meet, having cruised down with Henry C. Morse, of Peoria, Ill.

In the tandem paddling Gabriel Reevs and Everett Masten won in the Stranger after a close race, second place being disputed between J. W. Simpson and A. B. Pattou in the Goblin and H. L. Quick and L. Simpson in the Evangeline.

In the paddling upset J. W. Simpson won, L. B. Palmer of the Ianthe Club second. Both turned their boats completely over while remaining in them.

In the hurry-scurry L. B. Palmer won, J. W. Simpson second.

In the water tournament Talbot Simpson and Harry La Motte (lancer) beat Gabriel Reevs and Everett Masten (lancer), and Talbot Simpson and Everett Masten (lancer) beat J. W. Simpson and A. B. Pattou (lancer).

Edgar, Smith and Kane of the Newburgh Club reached the boat house on Friday night on their return from a cruise about Sandy Hook in the new 27ft. canoe yawl built for Kane by Fearon.

The boat house was well filled with guests of the club and an abundance of refreshments were served. In the evening the banjos and guitars came out, and songs by the minstrel troupe, yarns and dramatic representions made the evening a bright one for the boys.

THE BOWDISH CANOES.—Skaneateles, N. Y., Oct. 1.—*Editor Forest and Stream:* While your general description of our system of construction is in the main correct, there is one error which we consider of importance to us. We do not use a thin feather of basswood, but a tongue or "filler," as we call it, which is made of white cedar. This tongue is compressed in its dry state to occupy less than one-third of its original width; thus it has a capacity for expanding if the boat planks shrink to allow it to do so. It is very sensitive to moisture, and if water reaches it, is sure to expand and fill every crevice of the seam. Both the grooves in the plank's edges and this filler are cut perfectly smooth by special machines. This filler is prepared from the most perfect samples of cedar, and is continuous from stem to stern, but not necessarily so. If desirable, one half can be placed in each groove; it can be put in in short or long pieces, and if the ends are slightly lapped the seam will be tight. Thus one of our canoes can be repaired as easily as any of carvel build, and far easier than those by some systems of construction. Since the If was built there has been a demand for our canoes, and we are prepared to build lighter and better craft of her class, having made many improvements in details of construction.—BOWDISH & CO.

VAGABOND.—New York, Oct. 1.—*Editor Forest and Stream:* In your report of the Brooklyn C. C. races you referred to the canoe Vagabond, owned by me, as "the old Latona, an Everson Sunbeam." Allow me to correct you. In the first place, she was never named the Latona. She was built for J. F. Newman, of our club, who christened her Snubeam, which name she bore until changed by me to Vagabond. In the second place, the Latona was not an Everson "Sunbeam," but an Everson "Ideal." If you will allow me, I would like to suggest, inasmuch as I am a member of the A. C. A. and the name of my canoe appears in this year's Association Book and also appeared on the B. C. C. club book in February, that you in future refer to my canoe as Vagabond No. 1. In naming my canoe, I was entirely ignorant of Mr. Stevens's intention of giving his canoe the name, but I certainly claim No. 1 in this case, as my boat was named Vagabond last fall.—H. C. WARD.

A. C. A. MEMBERSHIP.—Eastern Division: W. C. Kingsley, Northampton, Mass.

QUAKER CITY Y. C.

WHILE cruising and racing in all kinds of small craft have flourished and prospered on the Delaware River, the many difficulties in the way have kept back the development of the larger classes of yacht until a comparatively recent date. A hundred miles distant from the ocean, on a river but a mile wide and with shoal water on each bank, obstructed by the water traffic of a great city, and with land along the waterfront too valuable for club houses, the earnest and enthusiastic yachtsmen of the Quaker City have had a hard task to place yacht sailing on a permanent and successful footing. At last, however, they have been successful, and though the work is yet far from complete, they are beginning to reap the fruit of their labors. The leading organization on the Delaware River, the Quaker City Y. C., is now established in a very comfortable club house at Gloucester, N. J., four miles below the city, where the best sailing water begins; and it has in its fleet a number of cabin yachts of various sizes, from the flagship, the schooner Helen, down to the smallest cabin sloops. This season has been a very active one with the club, and though the racing has been in a measure disappointing, a great deal of cruising has been done, beginning with the winter cruise of the Monarch, and including the club cruise through Long Island Sound. As a fitting ending of the season the club set apart the latter half of last week for a series of races, the most extensive affair of the kind that has ever taken place on the river; and the result has been successful in every way. The first day was devoted to a new experiment, an open regatta for all sailing craft, from a canoe to a schooner yacht; and the second day was taken by the 13th annual regatta, postponed last June for lack of wind.

Open Regatta, Sept. 27.

The pleasure fleet of the Delaware River is comprised in three division, yachts, open sailing boats and canoes; the second division being the oldest, largest and most advanced. Separated but little in point of line from New York, the yachts of the Delaware are practically isolated so far as water communication is concerned, the lesser distance, by canal and narrow rivers, being 100 miles, and the greater, over 200 miles, being largely on the open Atlantic with a few harbors, besides the long stretch of river from Philadelphia to the capes of the Delaware. As might be expected under the circumstances the course of improvement in the fleet has been less rapid than in New York and the East, but the work has been going on for some time and the yachts are far superior to those of the past, and improving each year. Naturally nearly all are centerboard craft, but the value of ballasting and of the compromise rig is fully understood. Nowhere else in the country is open boat sailing so popular as on the Delaware, the fleet being the largest and races most frequent. Toronto, with its scores of small beach houses and its fleet of open skiffs, comes nearest to Philadelphia, but stands second in point of numbers.

The larger sizes of open boats are merely modifications of the ordinary American catboat; the model, curiously enough, being rather deeper and abler than the same class on salt water. The most noticeable features of these boats is the pair of bumpkins, one on each side of the bow, serving as channels for the shrouds, of which there is one on each side, in addition to a headstay. The strain of the long mast, in the eyes of the boat, is thus better distributed, with a saving in weight both in hull and spar.

The most interesting by far of the open boats are the tuckups and duckers, known to the readers of the FOREST AND STREAM by the descriptions and lines which have appeared in our columns, the tuckup being described in the issue of May 3, 1888, and the ducker in that of April 21, 1887. The tuckup classes are as follows, classes first and second being no longer built: Third class, unlimited sail, not more than 15ft. 3in. in length, 4ft. 7in. beam; fourth class, unlimited sail, not more than 15ft. 3in. in length, 4ft. 4in. beam; fifth class, 50ft. and under around the bolt rope, and not more than 15ft. 3in. in length, 4ft. 6in. beam, and 15in. in depth. The crew is limited to five. The ducker classes are: First class, unlimited sail, not more than 15ft. 3in. in length, 4ft. 2in. beam; first class, 49ft. and under around the bolt rope, and not more than 15ft. 3in. in length, 4ft. 2in. beam, and not to carry more than three men; second class, 38ft. and under around the bolt rope, and not more than 15ft. 3in. in length, 4ft. 2in. beam, and not to carry more than two men. The boats are all cat-rigged, with a boom and gaff or spritsail, the latter having a light tackle on the heel of the sprit to set it up by. The boats are very neatly built and gaily painted, various shades of green being most in favor, while the metal work and fittings are very elaborate. They are of brass, polished or nickle-plated; neat swivel gooseneeks, and well-proportioned rowlocks and hobstay gear. All carry a short bumpkin and forestay, the hobstay being a brass rod with a turnbuckle. Along the keelson are three or four stout screweyes, and in each is hooked a couple of feet of line with a wooden handle about 8in. long spliced to the end. In sailing the crew hang on to these lines, "hiking" as far out to windward as the length of the rope will permit. The rudder of the ducker is a large barndoor affair, similar to that of the tuckup, hung to the curved sternpost. A common brace and pintle are used below, but for the upper fastening two braces and a detached pin are used.

The manner in which these boats, of which there are hundreds along the water front, are housed is no less peculiar than the craft themselves. In the city about the Kensington district are long wharves at right angles to the shore line. On each side of one of these wharves is a long two-story building, divided into small compartments about 10x20ft., the lower story serving as a boat room, while the upper is used for sleeping at times and for stowing the gunning, fishing and racing impedimenta. Races are frequent, besides which the boats are much used for gunning in season and for ordinary sailing. At Gloucester are many more houses, but built on a different plan. Along the beach they are strung facing the water, the beach being sandy and with a moderate incline. The detached cottages are of a neat design, each having a lower part only 5ft. high, in which the boats are stowed, being run up from the water on small two-wheeled trucks; while above are a couple of rooms with a porch in front. Besides the houses facing the beach there is near the ferry slip a space as large as a quarter of a city block covered with these houses arranged in rambling streets. During the season the beach is alive with a fleet of these small craft, each with its club burgee fluttering from the forestay a couple of feet above the bumpkin end.

Canoeing is the latest comer on the Delaware, and as yet the canoes cannot compare either in numbers or quality with the tuckups and duckers. The first canoes were nearly all canvas, of amateur build, and even now there are very few first class cedar canoes in use, while canoe racing is just becoming popular. A few races have been held, the principal ones at the Delaware River meet last spring, but the generous offer of prizes by the Quaker City Y. C. may be put down as the inauguration of canoe racing on the river.

Early on Thursday morning the skippers of the mosquito fleet were astir, mostly clad in oilskins, in spite of a clear sky, as the fresh S. W. wind that whistled up the river told of whitecaps and wet jackets before the lower buoy was safely weathered. Tuckups, duckers and canoes started out from the various boathouses to beat down with the ebb tide to Gloucester, some four miles or so to most of them. With them were the larger craft, catboats and yachts, making an animated picture. The courses were as follows:

For schooners, sloops, cutters, yawls and classes A, B, C.—From starting point to Horse Shoe Buoy, keeping it on starboard hand; thence to and around red buoy at lower end of Chester Island Flats, keeping it on port hand, returning over same course to point of starting; keeping to westward of Block House Bar and Chester Island, both going and returning; 20 miles.

For Classes D, E and Tuckups.—From starting point to and around red buoy at upper end of Chester Island, keeping it on port hand, returning over same course to point of starting; 16 miles.

For Duckers.—From starting point to and around black buoy off Billingsport, keeping it on port hand, returning over same course to point of starting; 10 miles.

The course for canoes was over a triangle off the club-house, the first leg directly across to the west bank of the river, then down to a buoy near the east bank, and home. The starters included the following yachts:

	L. W. L.
SCHOONERS—CLASS 1.	
Helen, Com. C. D. Middleton	62ft.
SLOOPS—CLASS 1.	
Venitzia, Arthur Colburn	53ft. 4in.
Restless, Thos. C. Foster	49ft.
Monarch, Vice-Com. C. L. Work	
CLASS 2.	
Consort, L. B. D. Barth	33ft. 4in.
Anita, Geo. C. Vansant	32ft. 4in.
CLASS 3.	
B. G. Hillman, C. Glasor, Jr.	
Nahma, F. P. Ferry	26ft.
Juanita, E. S. Farson	30ft.
Osceola, Brereton Pratt	
Alva, Wm. S. Allen	
Iola	
CLASS 4.	
Eva	
Lark	18ft.
Agnes	

There were 60 catboats, tuckups and duckers in addition, and 6 canoes.

The start for the decked yachts were given at 10:35, the first over being the Osceola, then Alva, Juanita, Hillman, Agnes, Restless, Eva, Venitzia, Helen, Consort and Nahma. The open yachts were started at 10:40, the tuckups at 10:45, and the duckers at 10:50. The wide reach of the river was soon dotted with white sails of all sizes as the fleet beat down, the little fellows having all the wind they wanted. Restless soon took the lead, holding it all day. The judges, on the steam yacht Volanta, ran ahead to the Chester Buoy, timing Restless at 12:43:59; Venitzia at 12:47:22, the others being well astern. Restless was smartest with her spinaker, having it set before Venitzia, and holding the larger boat all the way home. The times were:

	Start.	Finish.	Elapsed.
Helen	10 39 10	3 06 00	4 26 50
Venitzia	10 37 00	2 31 07	3 54 07
Restless	10 36 30	2 28 30	3 52 10
Monarch		3 15 30	
Consort	10 39 30	3 25 50	4 46 20
Anita	10 40 00		
B. G. Hallman	10 36 05		
Nahma	10 39 41	3 29 30	4 49 49
Juanita	10 35 37	3 40 30	5 04 53
Osceola	10 35 30	3 17 00	4 41 30
Alva	10 35 36	3 20 21	4 44 45
Iola	10 40 09		
Eva		3 56 29	
Lark		4 54 05	
Agnes		3 24 00	

The winners were: Schooners, Helen, sailover; sloops, Class I. Restless; Class II., Consort; Class III., Osceola; Class IV., Agnes; Class C, Coronet; Class D, Mohican; Class E, Active. Of the tuckups Anna won, with George Kilroy second. In first class duckers Jazzie won with Mabel second; and in second class Mayflower won with Mary A. Ivins second. There were several capsizes among the duckers.

The canoe races included one with no limit on sail, one with 75ft. limit, a single and a tandem paddling for Class IV. The first race was started at 11:15, the tide being well down, with a strong wind up the river, making a close reach across the first mark, a freer reach to second and a run home. The starters were:

	1st Round.	Finish.
Malta, Quaker City, J. A. Barten	12 24 50	1 09 50
Juni, Keystone, Fred Noyes	12 29 03	1 11 03
Gracie, Mont. S. C., E. A. Leopold	12 29 59	1 14 59
Bubble, Trenton, F. L. Sigler	12 32 01	1 17 01
Pandora, Trenton, F. B. Yard	12 33 58	1 18 58
Caprice, Quaker City, E. Barten	12 44 21	1 29 21
Starlight, Mont. S. C., L. Palmer	12 58 25	1 43 25
Sadie, Mont. S. C. Geo. Ritter	Capsized.	
Thetis, Red Dragon, D. M. Bond	Capsized.	

Sadie and Starlight were both of the Notus model, built by their owners from the lines in the FOREST AND STREAM. Both were good specimens of amateur work, the former in particular being very neatly put together. She had the Notus rig, Starlight having the sail lately shown in our columns. The skiff Gracie had come from Norristown with the two canoes, expecting to enter with the duckers, but the owners of the latter craft protested against her entry, though she was so much smaller and sailed by one man to their two, so she went in with the canoes. She is decked like a canoe, steers with a light rattan wheel in place of a deck tiller, and carries an 80ft. balance lug sail, with a split-bamboo yard. Sadie took the lead at the start, going well ahead, with Gracie second, Thetis third and Malta fourth. Out in the strong tide Gracie jammed as close as possible, making the mark on the first leg, but Sadie sailed freer, tacked once but turned first, some of the others making several tacks. With sheet off Sadie soon ran away from Gracie, but found some very rough water as she neared the Jersey shore. She reached the second mark with a long lead, ran by it looking for a nice place to jibe, but was caught by a puff and capsized. Gracie came up and turned, having trouble for a time in the squalls, but finally settled away for the run to the third mark. Thetis came next and

also capsized; Malta sailed very well in the rough water, now coming along and soon passing Gracie, taking first place. Juni caught Gracie before the end of the round, taking second place. The up-river sailors were somewhat at a disadvantage, as this was their first experience with the rough water to which the others were well accustomed. At the beginning of the second leg of the second round Starlight broke a rudder brace and was disabled, but her skipper continued the race, steering with a paddle until the second mark was reached, where he lost his grasp on the paddle in the rough water. This did not deter him, however, as he lowered the mainsail, turned the canoe around and ran home stern foremost under mizen only, steering with his deck seat.

The limited race was called at 1:25, one round of the same course, but by this time a very strong flood tide was running, across which lay the first leg, nearly to windward. Nine started, but only the Gracie succeeded in rounding the first mark, the tide proving too much for the limited sail plans of the others, so they withdrew. The paddling race was called at 3:15, with four starters, Valesca, H. M. Kreamer; Malta, J. A. Barten; Mermaid, U. S. Fink; Regina, C. Cunningham. The distance was about ¾ mile. Malta led to the turn, but Valesca caught her there, leading home and winning after a pretty struggle. The times were Valesca, 7m. 25s.; Malta, 7:37; Mermaid, 9:23; Regina, 9:38. Only two teams started in the tandem race, Valesca, Messrs. Bond and Kreamer, Red Dragon C. C., and Malta, Messrs. Barten and Cunningham, Quaker City C. C. Valesca again won.

The various divisions of the regatta were managed by the following gentlemen: A. F. Bancroft, C. L. Wilson, W. J. Thorman, Com. C. D. Middleton, Vice-Com. C. L. Work, S. A. Wood, C. W. Lyon, J. J. Moloney, C. E. Carpenter, R. W. Kerswell, of the Quaker City Y. C.; R. K. Neff, C. W. Davis, Riverton Y. C.; Com. C. F. Baker, Vice-Com. H. S. Anderson, Shackamaxon Y. C.; Com. J. F. Armstrong, W. S. Chandler, Pennsylvania Y. C.; Com. W. G. Cook, Corinthian Y. C.; Com. W. Dressler, G. W. Bateman, Camden Ducker Club; C. S. Austin, A. Butterworth, Keystone Boat Club; L. G. Palmer, Montgomery Sailing Club; Com. J. A. Barten, C. Costello, Quaker City C. C.; H. M. Kreamer, S. Northrop, Red Dragon C. C.; Capt. W. W. Norgrave, Keystone C. C.

Annual Regatta, Sept. 28.

Only yachts entered for the annual regatta in June were allowed in the race of Friday, so the list was the same, with the loss of Anita, Hillman and Iola in the fourth class, and the addition of Minerva in the third. The day was clear, the wind being fresh from N.W., with the tide favorable over both legs of the 36-mile course, from the club house around a markboat off Marcus Hook. Besides the regular prizes, there were the Middleton challenge cup for the best corrected time in Class I., the Vallette challenge cup for the best corrected time in Class II., and the Ellis challenge cup for the best elapsed time in any class. The start was given from the Volante at 10:45, the fleet going over in a string close under her stern, all on starboard tack. The order was Alva, Juanita, Monarch, Minerva, Restless, Consort, Helen, Osceola, Venitzia, Nahma. All except Minerva carried working topsails, she sailing with housed topmast. The first long leg on the wind brought them down nearly to League Island, then all were obliged to tack. Restless very soon took the lead, she and Venitzia leaving all the others astern. A long stretch on starboard tack brought them down to Chester, where they were obliged to make several tacks, finally laying a course for the turn off Marcus Hook. Restless was timed at 12:46:50; Venitzia, 12:49:39; Helen, 1:05:00; Juanita, 1:13:25; Osceola, 1:14:56; Nahma, 1:16:00; Monarch, 1:16:16; Consort, 1:18:20; Alva was not timed.

Restless set a jibtopsail at the mark and began to travel very fast with the wind off the port quarter. Venitzia also set a jibtopsail, and when off Chester, the wind coming well aft, dropped her spinaker boom and ran up her spinaker. She was gaining on the leader until she broke her sprit-sail yard, but she carried it only a minute before the halliard parted and it was taken in. Venitzia also had some trouble with hers, and after a short time took it in as well. Off the upper end of Tinicum Island the wind drew ahead, and with boom in a little more Restless began to gain again on her rival. Venitzia was carrying a large jibtopsail that drew very well, but Restless had a jibtopsail with a very high clew, so that it could not be properly trimmed with the main boom off, thus hurting her considerably. With boom in and topsail sheet led further aft she promised easily to repeat the victory of the previous day, but about 2 P. M. there came a little rain with some heavy puffs, in one of which her topmast went just above the cap. The jibtopsail was quickly cleared, but no attempt was made to lower the wreck and she sailed home with the topmast and topsail hanging to leeward from the gaff end. Venitzia at once took warning and lowered jibtopsail, also dropping the head of her topsail for a time.

Off the mouth of the Schuylkill the puffs were very heavy and at first Restless hardly missed the extra canvas, but near home the wind was steadier and Venitzia, with jibtopsail set, began to overhaul her very fast. Minerva was passed here, coming home under two reefs and the remains of her jib, but a hard puff cruelly robbed her of the last rag of headsail, leaving her to work in under mainsail only. Off League Island Venitzia caught Restless, and as the wind dropped and the course opened freer at the same time, she rapidly left her rival. In the last couple of miles Venitzia increased her lead, but still was enabled to save her time off of Restless, in fact only the loss of her topmast prevented Restless from winning on elapsed time and taking the Middleton cup, which now goes to Venitzia for the second time. The result of the two races has been to show that the alterations to Restless have improved her very much indeed and given Venitzia a more dangerous rival than she has ever had before. The full times were:

	Start.	Finish.	Elapsed.
SCHOONERS.			
Helen	10 47 42	2 46 57	3 59 15
FIRST CLASS SLOOPS.			
Venitzia	10 48 22	2 39 30	3 51 08
Restless	10 46 58	2 40 28	3 53 30
Monarch	10 46 13	3 12 07	4 25 55
SECOND CLASS SLOOPS.			
Consort	10 47 11	3 19 09	4 31 58
THIRD CLASS SLOOPS.			
Nahma	10 49 07	3 17 14	4 28 07
Juanita	10 45 57	3 12 06	4 26 09
Minerva, Trenton	10 46 42	Disabled.	
Osceola	10 48 13	3 13 46	4 25 33
Alva	10 45 47	Not timed.	

The winners are: Helen Restless, Consort and Osceola.

MIGNON.—Mr. Babson's cutter will be altered this winter by an addition of 14in. freeboard amidship and 8in. at each end, a flush deck being laid in place of the present cabin house, a small steering cockpit being retained. A ton of lead will also be transferred from inside to the keel. Mr. Babson now offers to make a match with Saracen for three races, to be sailed in June or July next, for $500 per side.

ADELAIDE.—The wreck of the Adelaide was examined by a diver last week and a contract was made with the Chapman Wrecking Co. to raise her for $1,000. On Tuesday she was hoisted by Chapman's derrick and beached opposite to where she sank. She will be repaired so as to allow her to be towed to City Island.

THE GRAYLING-SACHEM MATCHES.

UNLIKE the owners in some of the other classes, Mr. Fish of the Grayling and Messrs. Metcalf and Owens of the Sachem were not content with the flat and inconclusive events of this season, but proposed to settle the question of the superiority of their yachts by a series of three private matches, the stakes being $1,000 per side. The arrangements were made a few weeks since, Newport being agreed on as the location of the courses, the first 12 knots to windward and return, the second a triangle of 12 knots on a side, and the third, if necessary, the same as the first. The dates were set for Oct. 1, 2 and 3, both yachts hauling out in the meanwhile for a thorough overhauling. On Oct. 1 the weather was cold and rainy, but with a strong S.E. wind. The tug B. T. Haviland was sent away to log off the course, while the judges were on the torpedo boat Stiletto.

Shortly after 10 A.M. the racers worked out to the start, off Brenton's Reef Lightship, where the gun was fired at 11:25, the start being at 11:40. During the quarter of an hour interval the two yachts maneuvered for place, Grayling finally coming out ahead, crossing at 11:40:42 to windward on starboard tack. Both carried working topsails, Grayling having also a baby jibtopsail, Sachem was timed at 11:41:35, 53s. astern of Grayling. The first tack was a long one, Grayling gaining steadily. At 12:20 she went on port tack, soon after crossing Sachem's bows, the latter tacking to windward of Grayling at 12:23:30. Another long tack followed, Grayling going on starboard tack at 1:18, followed by Sachem at 1:21. The markboat was turned as follows:

Grayling	2 21 15	Sachem	2 23 03

Grayling had thus gained nearly a minute. She jibed her boom to port and started on the run home, being a little slow with her spinaker through something fouling aloft. She had it drawing in about four minutes, and then began to leave Sachem, the latter, using an extension spinaker boom, being nearly a quarter of an hour setting the sail. Both carried main clubtopsails and balloon jibtopsails on the run. Sachem gained a little but was beaten by 2m. 30s. corrected time, the summary being:

	Start.	Finish.	Elapsed.	Corrected.
Grayling	11 43 42	3 39 20	3 58 38	3 57 02
Sachem	11 41 35	3 41 07	3 51 32	3 59 32

Mr. Burgess sailed with Capt. Hansen on Sachem, while Mr. Fish and Capt. Terry handled Grayling.

Tuesday morning was hazy, with a strong S.W. wind, but by 11 o'clock both yachts were beating out to the start, off Brenton's Reef Lightship, carrying both working topsails. At 11:45 the preparatory gun was fired, with the start at 12 o'clock. Grayling led over the line by 56s., on port tack, setting her baby jiptopsail, while Sachem set her maintopmaststaysail. For nearly half an hour the pair held on port tack toward Narraganset Pier, Grayling laying closer to windward, with Sachem gaining ahead faster. At 12:25 Sachem tacked, Grayling following soon after, and then lowering foresails and running for harbor under mainsail and headsails, having sprung her foremast.

Sachem continued the course alone, the sea being very high and the wind strong. As it is too late to replace Grayling's mast this season the match will be abandoned.

CATBOAT RACING AT NEWPORT.—On Sept. 29 a race was sailed off Newport over a 20-mile course, for prizes given by Rear Com. Morgan, the wind being quite light. The times were:

	Start.	Finish.	Corrected.
FIRST CLASS.			
Dove	10 41 20	2 33 35	2 59 45
Rhode Island	10 43 41	2 37 05	3 00 18
Gluckauf	10 42 02	2 34 54	3 01 45
SECOND CLASS.			
Annie	10 45 55	2 46 11	3 04 17
Greta	10 49 10	3 18 39	3 32 59
Quitts	10 45 55	3 16 41	3 55 28
THIRD CLASS.			
Jerboa	10 51 50	3 01 19	3 04 11
Julia	10 52 00	3 06 14	3 08 08
Rebecca L	10 52 05	3 23 51	3 28 52
SECOND CLASS SPECIAL.			
Lizzie	10 47 30	2 33 55	2 50 19
Fixia	10 48 13	2 42 05	2 58 58
Alice	10 46 50	2 44 20	3 00 36

Twenty-one boats started, but the others were not timed. The judges were F. P. Sands, Max Agassiz and Woodbury Kane. Rear Com. Morgan has bought the fast catboat Mucilage of Monument Beach.

MIRAMICHI Y. C., SEPT. 20.—A race was sailed over a 20-mile course, from Chatham to Newcastle, in a light east wind, the tide being foul both ways. The starters and times were:

	Start.	Finish.	Elapsed.	Corrected
FIRST CLASS.				
Fisherman, C.B. sloop	12 42 50	3 54 20	3 11 30	3 11 30
Kilbride, C.B. sloop	11 42 25	4 22 35	3 40 10	3 36 55
Kittock, cutter	12 43 00	4 30 45	3 47 45	3 43 50
Bloody, C.B. sloop	12 43 40	4 38 45	3 55 05	3 47 13
Welcome Home, C.B. sloop	12 43 27	4 42 40	3 59 13	3 56 10
Fedora, keel schooner	12 44 20	Withdrew.		
SECOND CLASS.				
Lottie, keel sloop	12 26 30	6 17 30	5 51 00	5 51 00
Annie, keel sloop	12 28 30	6 43 00	6 14 30	6 11 30
Mackerel, keel sloop	12 29 10	Withdrew.		

Kilbride led at the start, but was soon passed by Fisherman, the latter gaining steadily, especially on the windward work down the river on the second leg. In second class Mackerel gained to the turn, where she was passed by Lottie. Later on she ran into a calm and did not finish. Another race will be sailed soon by the first class for a championship pennant given by Vice-Com. Stewart.

PACIFIC Y. C., ANNUAL REGATTA.—On Sept. 15 the annual regatta of the Pacific Y. C. was sailed over a 33-mile course, from Mission Rock to a markboat off Hunter's Point, thence to a markboat off Oakland Pier, thence around a markboat off Fort Point, and return, to be sailed in six hours. The starters were: Annie, sloop, Com. Caduc; America, pilot boat, schooner, Capt. Turner; Volunteer, sloop, J. Engle; Lolita, yawl, Thomas & Engleburgh; Magic, sloop, R. Gibson, and C. H. White, schooner, J. C. White. The wind was very light and fluky. The times at Fort Point were: America, 5:38:06; Volunteer, 5:52:06; C. H. White, 5:55:00; Magic, 5:58:02; Annie, 5:59:07; Lolita, not timed. America finished at 7:30:20, just inside the time limit, the others being becalmed. After the race a challenge was issued by the C. H. White to the America to sail to San Diego and back for $1,000, but the following agreement was finally signed: "SAN FRANCISCO, Sept. 19, 1888.—It is understood and agreed between C. H. White, owner of the schooner C. H. White, and I. Gutte, on behalf of the owners of the schooner America, that the two above-named vessels shall sail over the same course and under the same rules and regulations that governed Lurline-Aggie Farallone race, on Saturday, Sept. 29, 1888; to start at 10 A. M., for $1,000 a side; all rules and regulations of the Pacific Y. C. to apply to the race. Boats to sail three days in succession until the specified time of the Lurline-Aggie race is performed, but not to exceed three days.—C. G. WHITE, I. GUTTE. Witness: Philip Caduc, Commodore Pacific Y. C."

CHRISTINA., schr., built this year by Lawley for the late J. B Meer, has been sold to Mr. J. Shaw of Boston.

CLEVELAND Y. C. FALL REGATTA, SEPT. 22.—Course, N. by W., 7 miles to windward and return. Weather, clear. Wind, N. by E. ½ E., steady:

	Length.	Start.	Elapsed.	Corrected.
Sylvia, George Wells	35.00	10 59 00	2 13 30	2 13 30
Unique, Ernest Radder	20.02	10 55 10	2 10 40	1 54 40
Rover, Joe Kerbel	26.06	10 54 45	2 22 45	2 16 31
Ida, Chas. Kelly	26.02	10 52 20	2 11 10	2 03 30
Eole, Rob Richter	22.08	10 56 15	2 26 15	2 14 23
Lady Ida, F. Smeade	19.00	10 51 30	Distanced.	

Postponed race of Sept. 10.—Wind was fresh, Lady Ida being reefed and most of the other boats under standing canvas. The course was only about 6 miles to windward and return. Unique is the first boat under 25ft. L.w.l. that ever won the pennant. Winners of prizes, first, Unique, champion pennant; second, Ida, small flag; third, Sylvia, pair side lights; fourth, Eole, C. P. Kunhardt's sook on small yachts. Regatta committee, P. A. Mettling E. Radder, W. Sly, A. Anderson, F. Smeade. Judges, Harry Gardner and Orville Root.

TORONTO Y. C.—A race was sailed by the Toronto Y. C. on Sept. 29, a handicap for second and third class, from the club-house to Oakville piers, the starters being, White Wings, Rivet, Verve, Escape and Sea Bird. The wind was light and fluky from N. to N.W. The corrected times were:

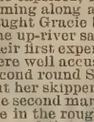
White Wings	5 40 12	Escape	6 58 22
Rivet	5 46 28	Sea Bird	7 23 20
Verve	5 49 55		

A match was sailed on the same day over the club course between Molly, Mr. L. V. Percival, Christobel, Mr. Sutherland, and Whisper, Mr. Garrett. Whisper won by 6m. 30s. with Molly second.

SMALL CRAFT IN NEW YORK WATERS.—The number of small sailing boats of various kinds, canoe yawls, Whitehall boats, sneakboxes and other craft, has increased very rapidly within the last three years, and there are now a great many about New York, Staten Island and the end of Long Island Sound. An effort is now on foot to gather as many as possible from the latter part into a club, under the title of the Huguenot Mosquito Fleet, the headquarters being near New Rochelle. Any one desirous of taking part in the movement may learn more of by addressing J. W. Gibson, 757 Broadway, New York. A meeting for organization will be called soon.

Answers to Correspondents.

T. K. L., Red Bank, N. J.—A canoe 15×28×10 will answer best for your use, a model with nearly flat floor. Such a canoe will be too heavy to carry alone for any distance; but for ordinary handling and paddling a few pounds more will make no difference. The Shadow is no longer used and the Rob Roy is but little used.



W. W. L., Minneapolis.—Please give me a (1.) list of the best works on practical trout culture. I have Stone's "Domesticated Trout," Green and Roosevelt's "Fish Hatching and Catching," and J. H. Slack's "Trout Culture." 2. Would a spring brook three miles long, ten feet wide, average brook depth (four or five feet in the holes and as many inches on the rapids) a natural trout stream, on which I can fill a 12-pound creel any day, support without being fed fifty thousand quarter-pound trout? 3. Is Livingston Stone's address Charlstown, N. H.? 4. Does he still operate the hatchery there? Do you know of any trout stream stocked and operated for market purposes exclusively, and are they a pecuniary success? Ans. 1. You have the best already. 2. No. 3. He may still have an interest there, but is superintending a hatchery for the United States at Clackamas, Oregon. 4. No, but there are streams which yield a revenue from the fishing. We know of a man who sells spawn and lets anglers fish in the stream, gets up trout suppers for city parties and lets his grounds for picnics, and by all this makes a living. We have had practical experience in trout culture, and would not encourage any man to try to breed trout for market, if he has to feed them, and it requires unusual facilities in the way of natural food to make it profitable to let the fishing. Your stream seems to be a good one, and to keep it up to its present standard should be stocked with fry every year. The price for fishing in New York State is usually one dollar per pound for the catch.

H. F. H., Ontario.—While sailing in my yacht in Lake Ontario a few days ago, I noticed that several eels, on the average of about two feet in length, kept clinging to the iron rudder. They seemed to attach themselves by the head and throat in some way and would not let go their hold until struck with a stick. At least a dozen must have done this at various intervals. It was in the afternoon toward evening that this occurred. Is not this unusual? Ans. They were lampreys; creatures somewhat resembling the eel in general appearance, but belonging to the *Petromyzontidæ*, a family of fishes so very low in the scale that some naturalists are unwilling to have them classed among true fishes. They are semi parasitic in their habits, fastening themselves on sturgeon and other large fish, and sucking their blood. The arrangement of the mouth gives the clue to this peculiar habit, it is perfectly circular, with a fleshy lip covered with tentacles and supported by a cartilaginous frame work. The whole interior of the mouth is covered with strong teeth arranged in concentric circles, and even the tongue has serrated teeth, the whole structure constituting a powerful sucker. The lampreys are known in Europe, and several species are common to our Atlantic coast, the New England rivers and the Great Lakes; some of them are migratory. They are born blind, and bury themselves in the mud as soon as they escape from the egg, and they are said to be four or five years in reaching maturity. As a food fish they have a good local reputation in Connecticut, where the lamprey fishing is still carried on and the fish salted down in barrels. They are a rich, oily fish, and were formerly very highly esteemed in Europe. King Henry I., of England, is said to have died of gorging himself with stewed lampreys, a dish of which he was inordinately found. The term *Petromyzon* is ascribed to the order from their peculiar habit of adhering to stones. They are supposed to do this in swift currents to prevent being carried away. It is probable that when thus engaged they are generally feeding on the minute organisms adhering to the stone. But it appears that they are able to transport stones with which they fortify their hiding places.

TOURISTS seeking rest and recreation during the hot summer months can obtain valuable information from the illustrated guide books entitled "A Summer Jaunt" and "Summer of 1888" issued by the Wisconsin Central Line. These books are descriptive of the summer resorts in Wisconsin and Minnesota, reached by the Wisconsin Central Line, and will be sent free to any address upon application to JAMES BARKER, General Passenger and Ticket Agent, Milwaukee, Wis.—*Adv.*

ANNAPOLIS, Md., Sept. 19, 1888.—*U. S. Cartridge Co., Lowell Mass.:* Gentlemen—I am glad to be able to inform you that I have found your Climax paper shot shells perfect, and the only shell I have yet found in every respect equal to the Eley shell for use with Schultze powder. Yours very truly, (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

ANSWERS TO CORRESPONDENTS.

JEKYL ISLAND.

THE successful propagation of fish is now an old story, having passed beyond experiment; and the restocking of rivers and streams from which fish were nearly extinct has proved a boon and a blessing alike to the sportsman and the consumer. The propagation of game should now be taken up seriously and become a branch to be fostered and encouraged in the same manner as the methods of the fishculturists. That game can be successfully restored to depleted portions of the country is not a question of doubt. Experiments have shown that under proper conditions perfect success is sure to result from the effort.

As an instance of the good results, we can quote the satisfactory efforts of the Jekyl Island Club, which owns Jekyl Island, off the coast of Georgia. Capt. R. L. Ogden, one of the prominent originators of the club, which is composed largely of representative men of this city and Chicago, was chosen to superintend the erection of the magnificent club house, now completed, and to carry out the general improvements, and to take steps to restock the island with game. There were already a goodly number of deer on the island when purchased, some wild turkeys, 400 head of wild cattle, 200 head of wild horses, and a large number of wild hogs. The cattle and horses were removed; and the work of extermination of the hogs was carried on systematically and their number considerably reduced. Last fall and winter 5,000 native quail were procured and placed on the island. One hundred English pheasants were procured from England; seventy-eight arrived in good order and were immediately placed in small lots in the pens prepared for them, under the charge of a gamekeeper versed in the care of this bird. In the early spring of this year they began laying, and each day the eggs were carefully removed and placed under common barnyard hens, as the female pheasant is proverbially an indifferent mother and rears but a small percentage of her hatch. From the seventy-eight birds over 1,200 eggs were gathered and from 1,000 eggs there were hatched 900 young and healthy pheasants, of which over 850 have come to maturity and are past all the exigencies of bird raising. These have been turned loose, after retaining a couple of hundred for brood purposes the coming season. It will thus be seen that the introduction of that beautiful bird, the English pheasant, is comparatively an easy matter; and wherever the poacher can be excluded they can become plentiful. By the simple rule of three as illustrated, if 850 healthy birds can be raised from seventy-eight, what will be the result of a continuous system of propagation by the club? If 200 are reserved for next season, their laying should at the same rate result in producing over 2,000 birds, so that at the end of two years from the start the club will have a matter of 3,000 birds to begin with for limited shooting; and as the shooting will doubtless be regulated to moderation, they never will need to resort to artificial or hand raising thereafter, as the percentage of natural product of the wild birds will keep up the supply. The club has provided largely for food for its game by the cultivation of fifty acres in various parts of the island, the crops consisting of maize, oats, sunflower, small peas and other cereals, all of which are left unharvested and must prove ample for the birds, aside from the supply of natural food.

The quail placed on the island have given equally satisfactory results, it being estimated that in their undisturbed condition they will produce two broods in the season, and already, as the superintendent writes, the woods are full of them, and the season will open with probably 20,000 birds—a pretty good result for the first year. The turkeys have also greatly increased, the removal of the horses and cattle leaving them undisturbed, greatly facilitating their increase.

The Jekyl Island Club is to be congratulated on the great success it has met with in the outset in its plans of a grand game preserve.

The Jekyl Island Club opened late last season, but it was so overwhelmingly popular that, we learn, new accommodations are being added for the approaching season, which will open this year about December 1.

THE DIVISION OF FORESTRY.

THE annual report of the Division of Forestry for 1887, issued by the United States Department of Agriculture, covers a hundred and forty-seven pages of closely printed matter, in which the writer evidences the facility of the expert in dealing with a problem which, although of not immediate moment to the people of this country, is of vital importance to its future progress and well being.

This is the first professional report submitted by Mr. B. E. Fernow since he entered upon his duties as the chief of the Forestry Division, and no one will be more ready than he to agree with us that this report is something very different from the annual reports submitted by the heads of the forest departments in countries in which there is a forest administration, and very different from what an annual report in our own country should be, in view of the steady diminution of the timber supply of this continent. A forest report should be primarily a record of the administration of the State forests, but unhappily the work of forest administration has not yet been entered on in this country, and from year to year our apprehension is deepened that it never will be entered on as long as there is any compact area of virgin forest which may be administered at a profit from the outset.

At the same time the report before us, emanating as it does from a man whose professional learning and special qualifications insure his comprehensive grasp of the whole problem, leaves some room to hope that he will yet succeed in overcoming the inertia, both of Congress and the people, and securing an appropriation adequate at least to the inauguration of the work. Meantime Mr. Fernow, wanting the opportunity for the display of his abilities as a forest administrator, is doing very valuable work in his contracted sphere. This report is perhaps the most valuable contribution to the forest literature of this country yet published. It embodies a vast amount of valuable information conveniently tabulated, and while it gives very little space to broad generalizations, it gives a mass of statistics, which can hardly fail to set the reader generalizing.

We have had so many warnings that the timber supply of the country will be exhausted in a few years at most, and the fatal day has been postponed so frequently, that no more attention is paid to the warning; but when, along with the statistics of the annual consumption of pine timber in this country, we find statistics of the yield of all the European forests, and of the extent to which England draws upon them for their surplus, we can hardly help feeling very sorry for our children when we reflect on the prices they will probably have to pay for imported timber.

Mr. Fernow's report deals mainly with facts or with figures which are as near an approach to the facts as are at present available. There are detailed and apparently reliable accounts and statistics of the forest area, avail able supply of timber, and general condition of the forest area in every State of the Union, together with accounts of the area reported as having been planted to forests by private persons. The principal forest trees of the country and all exotic trees which have been successfully introduced into the country are described, and instructions are given for their planting and treatment in the nursery. The report further deals with the more abstract problems of systematic working plans, and their scientific, economic and practical basis, in which the writer asserts little, but evidences a broad grasp of his subject, such as is to be expected from a man trained to the profession, and from no other, however brilliant his natural capacities.

We can do no more than indicate the general character and principal branches of the report, and commend it to every one interested in the forest question as the work of a man capable of imparting a great deal of valuable information and very eager to indulge in systematic experiments to aid in the tabulation of further precise and reliable data respecting rate and conditions of growth, and other subjects, a knowledge of which is of first-class importance as affording a sound basis for forest management.

We may confess to some little measure of disappointment that the chief of the Forestry Division does not urge upon Congress either the desirability of taking up some suitable area of still virgin forest, say for example the forests of the Yellowstone Park and adjoining region, for systematic administration on an economic basis, or the assumption of a suitable area of exhausted forest or of forest denuded of its pine timber for restoration; but he appears to encounter so much difficulty in persuading Congress to treat the subject seriously that he is content to limit his demands to the few thousands necessary for scientific experiment and investigation in forest matters.

There is little reference in the report to the importance of conserving such forest areas as still remain in the hands of the Government, but in the bill submitted to Congress by the American Forestry Congress, the principal provisions of which are embodied in the report, the subject has been treated in practical detail.

NOW THAT NEW YORK has a chief game and fish protector, whose province it is to direct the district protectors and give them aid and encouragement, those persons who are interested should communicate with that officer. His address is Frederick P. Drew, Mechanicsville, N. Y. Information should be furnished to him; and if the man who sends the information has the backbone to come out and assist the protectors, so much the sooner will the good time come. There is always an abundance of anonymous evidence, and there are hosts of people who will give limited information when they can do so without making themselves known. Now that the State has appointed officers to execute the game laws, well-meaning citizens should have no more squeamishness about giving their assistance openly in this direction than they would have in matters pertaining to other branches of law and good morals.

THERE ought to be a better way to reduce the surplus of dogs than the brutal shooting on sight in the public streets, in vogue in numerous more or less civilized communities. Fort Hamilton, New York, has a constable who shoots valuable sporting dogs, in the presence of women and children, at that. He does it under cover of an outrageous town ordinance, and this same ordinance is shamefully perverted in its execution. The curs belonging to voters are unmolested; they go loose in the streets, and may go mad for the matter of that if they want to; but this constable with a shotgun takes good care to murder the dogs of people who have no votes to cast for the local justice, whose name is Church.

The Sportsman Tourist.

THROUGH OKEECHOBEE TO THE GULF.

HELLO! What's the matter? Harry and I stuck our heads out of the cabin window, and to our dismay the conductor informed us that he had orders to side-track our car as the yellow fever was raging in Tampa, and they could not run our car in. Great smoke! We were speechless for a moment.

Here we were at Kissimmee, Florida, our steam launch on top of a flat car, and freight already paid to Tampa, our destination. We had bought her at Norfolk, Va., and it had taken about our last dollar to fit her up, load her and pay freight to Tampa. And now what were we to do? We had bought the steamer, thinking to run from Tampa down the southwest coast along the islands and reefs of the Gulf, with sportsmen who come down there in winter to bask in the land of perenineal sunshine, shoot 'gators, fish, and pick up shells. We had finally hoped to pick up good solid dollars in that way, as well as to enjoy the sport of that famous coast in hunting and fishing. The man we had bought the steamer of said she was as good as new. So she was, after we had paid for her and put in a new steel boiler, new parts of the engine, new pumps, new wheel, new paint—new everything. Did you ever buy an old wagon and fix it up? Well, it cannot begin to compare with fixing up an old steamer. We just "went broke" on her, found ourselves with a white elephant as it were.

Here we were, only 100 miles in a direct line from our destination; and we couldn't go on, on account of the yellow fever. What could we do? There was only one thing to do, unload and go through the great unknown swamps and lakes down to the coast, then up the gulf to Tampa, about 600 miles by water.

The Dot weighed sixteen tons, and it was just about as easy to move a brick block as it was to get that steamer off the cars to the lake, 600ft. away. We counted our remaining cash; and after allowing for 75lbs. of flour, 30lbs. of cornmeal, a piece of salt pork, canned tomatoes, corn, beef, and last but not least, twenty-five boxes of matches, and a supply of wood, we had just ninety-six cents left to get the steamer off the cars and run 500 miles. Nothing for it but to take off our clothes, put on old duds and go for it. The mercury was about 90° in the shade and about 300° in the sun. The natives, always very kind, were especially good to us. We stated our case and they promptly pitched in; and in four days we had jacked up the steamer, got her down on the ground and to the lake; and by working three days in water from 6in. to 4ft. deep we floated her, and started never a seam. We were happy, as you can imagine. At length, with plenty of food aboard and ammunition for our guns, we were ready to start; and we knew we could not starve, for south Florida abounds in game of all kinds, fish and birds without end.

One bright October morning Harry had steam up by daylight, and after a hasty cup of coffee, some corn bread and fried trout (they call bass trout down here), we were off long before the people were up. We gave a long blast of the whistle; and away we went, steering a south course, to an unknown waste of swamps of far south Florida.

Harry was engineer and cook; I was pilot and deck hand. We bitterly regretted afterward that we had not another companion with us, for on such a long cruise two get so worn out and lonesome. Neither of us had ever had any experience as pilot or engineer, and never had seen the great desert of swamps through which we were going; but we had been in many a tight place before and did not hesitate now. We had it to do. All I had to steer by was my compass and an ordinary pocket map of the State. The natives had given each his opinion, and each one differed except on one point, that all the waters north of Lake Okeechobee ran into it. So we felt confident that by keeping with the current we should eventually get into the great sea, where our journey would commence in earnest. We were bound to find the proper outlet into the Caloosahatchee or we could never reach the coast; and again, we knew there were no lighthouses, buoys, nor anything after reaching Okeechobee to show us our course, no human habitation to be seen after leaving Fort Bassinger, seventy-five miles north of Okeechobee, until Fort Thompson was reached on Lake Flirt, nearly 300 miles by water from Fort Bassinger. Nevertheless, we were happy with visions of beautiful plumed birds, of wild turkeys in countless droves, bands of deer, strings of fish a mile long; and then the lord of that great waste of waters, the alligator. We were in high spirits that morning as we dashed the waters of Lake Tahopekaliga aside, and our little steamer drove her sharp bows through them at the rate of eight miles an hour. With my double breechloader loaded with No. 6 for birds, and the trusty Marlin .40-60 for snap shots at 'gators and deer, to say we were in high spirits would be putting it mildly.

On we sped, until in the afternoon we passed out of Lake Tahopekaliga into a swamp, and ran hard aground on a mud bank. That was nothing; all we had to do was to push off. Yes, but we could not; so overboard we went and pushed, and said disrespectful things to each other. Harry wanted to know if I couldn't see where I was going, etc.; and of course as soon as the engine stopped, the steam ran up and commenced to hiss, and I asked the engineer if he was trying to blow us up. We finally got off and found our channel, and just at dark entered Cypress Lake. We dropped our mud-hook and thus ended our first day of the cruise. A hot cup of coffee, with corn bread and a piece of fat pork, finished supper; and the bed felt good that night.

Daylight found us off again. Passing through Cypress Lake we ran into a dead river (these dead rivers look like any other river, the same size and a swift current; but after running a few miles it disappears in the dense weeds. There is nothing to do then but turn round and steam back against a swift current and try it over again. We were all the next day going from Lake Cypress to Lake Kissimmee, a distance of only about fifteen miles in a straight line, but we got into at least ten dead rivers. Besides our propeller would ball up, by picking up the wild sawgrass and wild lettuce and lily pads that grow in such profusion in those waters. Just at sunset we saw Lake Kissimmee and were jubilant, when all of a sudden we ran hard aground with such force as to pitch me clean overboard through the cabin door into a swift current. I climbed on board with my jaw banged out of shape, and heard Harry muttering in some foreign tongue, and it was just one o'clock in the morning when we got out of that scrape. In these waters there is always a mass of drift lettuce and water plants; and the moment you get stuck on a mud bank or bar, the lettuce and drift grass begin to catch and hang on to the boat, and in less time than it takes us to tell it, there are tons and rods of the infernal stuff piled up against you, making it almost impossible to push the steamer through it against the current. Of course in such a place the propeller would ball up and be useless in ten minutes. By one o'clock that night we managed to get adrift and in the right course into Lake Kissimmee.

The next day we ran clear through that lake into Kissimmee River and anchored that night. We thought we had now overcome the worst of our blind crooked rivers, but in reality we had not yet begun. Kissimmee River runs in every direction, but south, and dead rivers—it makes me shiver at this distant day. We would run out of a short river into an open place with sixteen outlets, all alike, all of the same size and the same depth. We did not know which to take. Each one would run east for a mile, north ten miles, west forty miles, southeast twenty miles, etc. Sometimes we would pass a large cypress on our left and five hours afterward we would pass the same tree on our right. The further south we went timber began to get scarcer, the country to open, the swamp to widen, until the woods were seen only in the distance. Ahead of us, to the south, there was nothing but desolation, nothing but a swamp of immense and short, slender bushes, with 8ft. of water under them and 6ft. of mud. One could not push a small boat through, nor walk. All we could do was to try each opening, each river, each lake, and try to keep the one going nearest southeast toward the great sea.

Finally, after a week's fearful toil, we arrived at Fort Bassinger, some 175 miles by water from our starting point, and the last human habitation we would see until we had passed Okeechobee and reached Fort Thompson, nearly 175 miles by water. Fort Bassinger consists of one log cabin. No signs of a fort are visible. We rested one day there, and dropped down stream a few miles to wood up. We were one whole day cutting and lugging wood on our backs. The timber was a half mile from the river, and a stick of fat pine would grow to weigh about a ton when you have to back it a half mile. But all things have an end, and at last we were wooded up and ready to start.

From that point there were not so many dead rivers, our spirits began to rise, and we made a run that day of sixty miles; and just at sundown our little steamer began to rise and fall as a boat will out in an open sea. Harry and I knew we could not be far from some large body of water; and sure enough, as we rounded a bend an open sea was before. Far as the eye could see to the south, east and west there was nothing but a waste of water; and from landmarks described to us we knew that this was the Great Okeechobee, the inland sea of Florida, which is sixty miles wide, any way you go. We ran our steamer right up to the trunk of a large cypress; as we only drew 3ft. of water we could easily do this. We made fast to the roots, and the moss hanging down over us to the water completely hid us from view. Some of the moss was more than 20ft. long and hung in bunches larger than a small man's body. An Indian could have paddled by within 20ft. of us and not have seen the steamer. We ate a hearty supper of fresh fish, which it only took a moment to catch, and were soon in the land of dreams.

ARTHUR LOVEJOY.

ATLANTA, Ga.

[TO BE CONCLUDED.]

THE CRUISE OF THE PELICANS.

"LET'S all go down to Pelican to-morrow," says the Doctor, suddenly, as he rolls himself out of the hammock, and assumes the perpendicular. For a moment none of us speak. Who cares to leave this *dolce far niente*, in which our souls are lapped, to try the terrors of an unknown journey? Better far to remain a dweller in this castle of indolence than to venture outside its gates, and meet the buffets of a cruel world. Then—

"R-r-ats!" growls Dixie from behind the last *Pioneer Press*.

"Pelican? Pelican? Where and what is Pelican?" murmured Heart's Delight, as she snuggles down more luxuriously in her own particular corner of her own particular hammock.

"Hurrah for Pel-li-can! Hurray for Pel-li-can!" chants the irrepressible Broncho, as she dribbles a handful of sand down upon the bald pate of the Governor, over whose camp chair she is leaning.

"Oh! yes! Let's go! Let's go!" calls little Blossom from the dock, where she is vainly endavoring to catch some of the minnows which are flashing their white sides through the shallow water.

"That will be just lovely!" sighs Lulu, as she sits with folded hands and a far-away look in her soft blue eyes.

"Pelican be—hanged!" quoth the Governor, as he mildly but firmly twists the Broncho's ear in revenge for the sand with which she has sprinkled him.

"What fools these mortals be!" barks Tip, with his nose between his forepaws, and his large brown eyes gleaming from out his fore-top of cream-white hair.

Only Chaperona is silent, and all eyes are turned to her expectantly, and all ears open to hear her decision. Slowly she speaks, and we bend forward to catch the voice of the oracle. "I think it would be nice, and we'll start early in the morning," she says at last, gravely.

"That's a good girl!" says the Doctor.

"Humph!" grunts Dixie, under his breath, while Heart's Delight strokes her cheek caressingly, the Broncho catches her in a wild and tumultuous hug, Lulu smiles serenely, Blossom executes a wild dance of joy, Tip gives a "woof" of disgust, and marches off to resume his work of digging out an inoffensive chipmunk, and the Governor, with a resigned "That settles it!" seeks consolation in his pipe. For has not the oracle spoken, and shall mortal man presume to gainsay her words? Chaperona is young—Chaperon is fair—but she rules this outfit with a rod of iron. The Governor may growl, Lulu may plaintively protest, or the Broncho rave and storm, but a glance from her hazel eye brings them to subjection, and they are again her abject slaves. She is not only our guardian, guide and friend, but the *Hausmutter* as well, and it may be that her control of the commissariat accounts more or less for the slavish deference which we all show her.

"What is Pelican, Doctor?" queries Heart's Delight.

"It's a lake, about fifteen miles from here."

"How do you get there?"

"By boat, across this lake, through the millponds, down the river, and through Little Pelican."

"How long will it take to go down?"

"Three or four hours."

"*Facilis decensus Pelicani, sed revocare gradum,*" growls the Governor from behind his pipe.

"What does that mean?" demanded the Broncho, as she yanks the Doctor backward out of his hammock and smashes Dixie's hat down over his eyes.

"It means pulling the 'spinal backbone' out of you, coming up that blamed river. Current twenty miles an hour, channel full of boulders, river as crooked as—as—as Chaperona's strategy when she wants me to go to church."

"Never mind my strategy, what's the matter with Pelican?"

"Just told you. It's the worst beast of a river in seven countries."

"Oh! well, if we can't row back we can walk."

"Hanged if I don't believe you would. As Barney McPhee says, 'It's little I'd be afther putting past the likes of ye.' But in that case, what would you do with the boats?"

"Oh! we'd get them home somehow," with that sublime scorn of details which marks the genuine woman.

"Suppose the Mugwump should come while we're gone?" puts in the Broncho.

"Put a note on the door telling him to follow us."

"Think he'll do it?"

"Well, if he follows the Broncho a hundred miles down here he'll probably be willing to follow her fifteen miles further."

"Humph!" grunted Dixie, "if you think he's following the Broncho you're mistaken. I'm the attraction. He'd go a hundred miles any day for the chance of a political discussion with me. Learns something, you know."

"Conceit is as good as a physic," drily comments the Doctor.

Meanwhile the seven devils which were cast out of Mary Magdalene seem to have entered into and taken possession of the Broncho, and she makes life a burden to all around her. Lulu, who has a horror of all creeping things, is sent shrieking into the cabin by a big fat worm dangled in her face. Heart's Delight, whose special detestation is cats, is roused from a peaceful dream of Eden by finding a squirming bundle of black fur neatly tucked away in the bosom of her dress. Dixie is made the residuary legatee of a small but particularly lively frog, deftly insinuated between his shirt collar and the back of his neck, and even the Governor, of whom she usually stands a trifle in awe, finds his pipe stolen and his easy chair full of pins. But at last Nemesis overtakes her.

The Doctor's wrath has been slowly smouldering all the afternoon, and at last, when he has to retire to the tent to extract a piece of ice from between his shoulder blades, it breaks out into flames. He threatens, if she does not quit, to duck her in the lake. This threat she laughs to scorn, and defies him to carry it out. Venturing too near, he seizes her, and despite her struggles picks her up, carries her grimly to the edge of the dock and drops her full length into two feet of water. Thence she emerges like a dripping Naiad, and seeks "the seclusion which the cabin grants," where she lies *perdu* till her wet garments have dried, when she joins us again, repentant and subdued.

Next morning, bright and early, the flotilla leaves the dock, bound for Lake Pelican. The Doctor and Heart's Delight, called from their looks of cherubic innocence and their general roly-poly appearance, the Babes in the Wood, lead the way into the Alta, with little Blossom for ballast; Dixie, Chaperona and Lulu, watched over by Tip, follow in The Tub, and the Governor and the Broncho bring up the rear in the Wa-Wa. Every available inch of space is packed with blankets, hammocks, eatables, tent paraphernalia, and other conducers to comfort, for our party are firm believers in "smoothing it" rather than "roughing it." So we push off, and soon the red cabins and white tents of Camp Comfort fade from sight, as the stiff ash breeze sweeps us over the level bosom of the lake and into the millponds, among the intricacies of the floating islands. Extricating ourselves from these, with much loss of time and patience, another obstacle presents itself. Tradition, in the person of the Doctor, supplemented by the Governor, avers that somewhere in these same millponds is to be found the sacred lotus of the Hindoos, and wide and far is the search made therefor, till each boat is filled with a mass of fragrant bloom, but whether the lotus or the white waterlily, none can definitely tell. Finally the dam is reached, and the boats and impedimenta portaged around. The Alta and Wa-Wa present no difficulty, but The Tub, huge and unwieldy, calls for more exertion. The ladies, though, bless their souls, lend willing hands, and, by the united efforts of all, the task is finally accomplished. Then down the rushing Pelican flowing swift and strong between high walls of wild rice and bullrushes, slipping under an overhanging bluff where graceful birches, hanging over, touch the grasses on the further shore, rolling smoothly between level meadow banks where the green turf comes down to the water's edge on either side, now flashing swift and straight as a Chippewa arrow down long chutes where huge boulders lift their mossy heads, their sharp edges grinning like shark's teeth as we flash past, and now turning a sharp corner, followed by another, and another, and another, till the steersman's brain grows dizzy, and, like a wise politician, he knows no north, no south, no east, no west. The Governor and the Doctor, old hands at this business, lay down their oars, and using the paddle, take their double-ended boats down canoe-fashion, deftly cutting sharp corners and avoiding threatening rocks, but The Tub, huge and cumbersome, swings hither and thither in the rushing current, bumps her nose into the bank at every sudden bend, placidly slides up on a shelving rock and balances there like a contented mud turtle, or, despite all efforts to guide her, floats crabwise at her own sweet will. But Chaperona and Lulu are both good at the oars, and coming to the relief of Dixie, they manage to keep The Tub well up with the procession. Five miles of this and Little Pelican is reached, where Chaperona calls a halt for lunch. And now, as we are all strangers in a strange land, comes the question, "Where is the outlet into Big Pelican?"

Gravely the lake shore is scanned and various are the opinions expressed. At last the most likely looking place is selected, and we set off on our search, the Babes in the Wood leading and their consorts leisurely jogging along in the rear. Stringing out across the lake, the leaders reach the supposed outlet in advance of the others, and after investigating for a moment call out, "No thoroughfare!" We spread out as skirmishers and make the circuit of the lake, closely examining every likely spot, but no outlet is found, and we meet once more at the place of our first search. Here we take a reef in our jibboom, splice the main brace, and hold a council of war.

"This blamed lake has an outlet somewhere, and I know it," quoth the Governor.

"So do I," says the Doctor; "but where is it?"

"Pretty outers you are!" says the Broncho, as she vindictively slaps at a mosquito on the end of her nose; "can't find the outlet to a lake as large as this!"

"Perhaps it's a subterranean one," suggests Chaperona, but is laughed to scorn by the rest.

"I can't help thinking," puts in Heart's Delight, timidly, "that this is the place."

"So you said before, Mrs. Solomon," answered the Doctor, "but this is one of the times when even your intuition is at fault. There's no outlet here, that's certain."

"What do you suppose those stakes there are for?" asks Lulu.

"What stakes?"

"Why that one you're holding on to, and those others further in."

"To fasten gill-nets to for catching whitefish," answers the Doctor promptly.

"Seven years have I lived on these lakes," breaks in Dixie, "and never saw I gill-nets set in the rushes before. There is more here than meets the eye. Give a bowse on thy peak halliards, Chaperona, and let's investigate. Shrewdly do I suspect that the outlet lieth hereaway."

As The Tub swings slowly around, the Doctor, rising in his place, calls out, "There's no outlet there, I tell you. I—" He stops, sinks down, gives a pull on his oars, and shoots past the lumbering Tub. "I—I guess I lied," he says, meekly; "here is the outlet, sure enough."

And now happens a thing so wonderful, so unprecedented, so past all belief, that the truthful chronicler of this veracious narrative fears to record it, knowing that it will be received with scornful incredulity. Heart's Delight, who had twice asserted that this was where the outlet ought to be, not only does not say "I told you so!" but does not even look it, only curls down in the stern sheets with a gentle "I'm so glad we found it." We are awe-struck by the magnitude of this self-sacrifice, all but the Broncho, who sweetly asks, "Does it hurt much, dear?"

"Does what hurt?"

"Not to say 'I told you so.'"

But here the Governor sweeps down on her with such an avalanche of wrathful objurgation that she is silent for the full space of five minutes; something, so family tradition avers, never known to have happened before.

Half an hour brings us into Pelican Lake, and by this time the clouds, which have all day been threatening us, mass their forces and let fall the rain. Another council of war is held.

"Shall we pitch the tent here or shall we try to find a farmhouse and seek shelter there?"

Here Dixie comes nobly to our rescue.

"Some four miles down the lake is the old Burbank place, occupied, I am told, by a family named Nye, who were never known to shut their doors on any in distress. A barn is there also, huge, capacious, vast, wherein repose tons upon tons of sweet-smelling hay. Thither, O comrades, let us wend and test the kindness of this unknown friend ——"

"O rats!" breaks in the irrepressible Broncho. "Is this a time for silly rhyme? Let us arise and climb!"

A dash of water from the Governor's paddle silenced her, and, as soon as waterproofs could be donned, we started down the lake. Drip, drip, drip, falls the rain; but the faster it fell, the higher rise the spirits of the party till even sedate Lulu catches the infection, and rolls out stave after stave of rollicking college songs, while little Blossom fires off pun after pun, and conundrum after conundrum, in her quaint childish way, till the Doctor grows weak in the back with laughter, and begs her to quit.

So the four miles to Nye's is quickly passed, and on arrival there, Dixie is sent to the house as an envoy to beg for hospitality. Returning with a beaming face, he announces that all is right, and the barn is at our disposol. Thither we quickly transfer our luggage, and by the help of a pot of hot coffee from the house, make a comfortable supper. But motherly Mrs. Nye cannot bear to think of our going to sleep in our wet clothes, and insisted on our coming into the sitting room, where a roaring fire soon dries us out. The Governor, old campaigner that he was, has made himself comfortable on a blanket in the corner, when the Broncho, coming in, looked around for a seat, and Mr. Nye rising says, "Take my chair, madame, unless you would rather sit on the blanket by your husband."

"By my what?" gasps the Broncho."

"By your husband," repeats Mr. Nye.

A roar from the rest drowns any answer she may make, and as she turns bewildered she catches sight of Dixie's face, wherein guilt shines confessed. In charity we draw the veil over the punishment which that unhappy man receives, but we confess he only meets his deserts, as he had represented to the Nyes that they were a newly married couple on their bridal tour, which, as the Broncho was a school girl of "sweet sixteen," and the Governor a grizzled, cynical old bachelor of thrice her age, as he looked upon her as a child and she upon him as a grandfather, it was, to say the least, putting it rather strong. Bedtime comes at last, and an adjournment is had to the barn, where beds are made in the capacious haymow, and we all lie down to sleep, after the singing of the "club lullaby":

> "Run away home, jump into bed,
> Say your little prayers and cover up your head.
> This very same thing I say unto you,
> You dream of me and I'll dream of you."

But Lulu and the Broncho, who are sleeping together, are seized with the demon of mischief, and they out-Macbeth Macbeth in murdering sleep, till at last the Governor rises in his wrath and gropes his way over to the part of the haymow where they lie, drives one this way and the other that, as the hawk drives the frightened quail before him, and reduces them to a terrified silence, which lasts till the first rooster crows in the morning. But space and time fail us to tell of the high jinks cut up in the old red barn the next day, while the rain still falls outside, of the frolics in the house watched with a benignant smile by Mr. and Mrs. Nye, who, though grandparents, are gray-haired lovers still; it warmed the frozen cockles of even the Governor's old bachelor heart to see it; of our being joined by Jersey, who had at first expected to be of the party, but had been disappointed, and had finally been able to come; of the row home the next day, and the pull up that deadly river; of how Jersey took charge of the lunch basket and ran off from the rest, so that we had nothing to eat till we caught him and Lulu at the dam; of how the wicked Broncho said that "if she had been in Jersey's place we wouldn't have caught her by a dam site;" of the long, lovely loiterings in shady nooks where the winds whispered in the trees overhead and the rippling water lapped against the sides of the boat, and the dragon-fly swung back and forth from the arrow-head's spike of snow to the cool white waterlily's chalice with its heart of gold; of the row homeward in the gathering dusk, with the changing lights in the western sky and the shifting colors on the bosom of the lake, the silence broken only by the loon's far cry, the plash of water from the lifted oar, or a tender song crooned low by Heart's Delight; of how the spell of the hour held us all in its mysterious embrace till it seemed as if Eden's gate were only just beyond that further green-topped hill; of how Camp Comfort was reached at last and how glad, yet sorry, we were to be home again; of the ride to town and back through the stillness of the night to see the Doctor start for home; of the ghost the Governor saw, and the way he exorcised it; of the thousand things that happened to make this trip to Pelican an event to be remembered all our lives.

Note by the Doctor. It isn't true that I couldn't find the outlet. I knew where it was all the time, but the Governor always puts on so much "side" about his woodcraft that I just decided to let him find it himself.

P. S. by the Broncho. I don't think it fair to make out that I was so much worse than the rest. If the Governor hadn't been trying to boss me all the time I'd behaved as well as any of them. I think whoever wrote that is just horrid, so there, now.

P. S. by Chaperona. It's hardly fair to say that I ruled the party with a rod of iron. That's one of the Governor's exaggerations. He was always grumbling because he couldn't sit with his feet upon the dinner table and because I objected to his putting his old pipe on the bread plate.

Note by the Governor. It has always been the fate of great men to be misrepresented and maligned, and I shall make no answer to the insinuations above, except to wonder if they do not arise from envy because I caught all the fish on the trip. "How many?" I never answer impertinent questions. H. P. U.

Natural History.

SPOILS FROM A DREDGE.

FROM Beaufort, South Carolina, our correspondent "Piseco" sent us last spring some interesting relics gathered by him from one of the dredges engaged in mining the phosphate beds there. He thus describes his visit to the works:

Since the war, Beaufort has, after a brief resurrection into active business life, fallen back again into quietude, as has its seaport town, Port Royal. Possessed of one of the best harbors, if not the best, on the coast, and in the very center of the Sea Island cotton plantations, it is within easy distance of the rice-growing lowlands, and the uplands from whence cotton and lumber are exported in still large quantities. When in 1860 a railroad was started to connect Port Royal and Augusta, the prospect that Port Royal with its splendid harbor would develop into a city to rival Charleston or Savannah was good. But the war came, and impoverished all who were interested. A second successful attempt has failed also; the certain rivalry aroused the antagonism of the railroads already established to other parts. The Port Royal road became the property of those opposed to Port Royal, and it is now so managed that competition with Charleston and Savannah is impossible. A few ships came to the commodious wharves for lumber, but the great Port Royal elevator has never hoisted a load of grain, and for years the cotton compress has been idle.

Within a few years, though, a new industry has sprung up, one with which competition is difficult. This is the mining of the beds of phosphate rock, with which this section of country is underlaid. The stratum or plate is generally from three to six inches in thickness, in some places a foot, and in occasional "pockets" several feet. The extent of this formation is not known. The present estimated limits are from six miles north of Charleston to thirty miles south of Beaufort, extending inland some thirty miles.

The rock is dug by aid of powerful dredging machines, which give employment to many men. Over 200,000 tons of rock were exported to Europe last year, and probably as much or more will go this year. As each ton pays the State a royalty of $1.05, the industry helps it wonderfully. The fertilizer is prepared by grinding the rock very fine, treating it with sulphuric acid and mixing with it tankage, that is the dried blood, entrails, etc. from the Chicago slaughter houses. There are six or seven companies that mine the rock for export, but two which prepare the fertilizer. Through the courtesy of Mr. Frederick Brotherhood, superintendent of the South Carolina Dredge Co., I have witnessed the entire process of dredging and preparing the rock for export.

Starting early in the morning a rowboat ferry carried us a mile to Ladies' Island, thence a five-mile drive through pine forests brought us to Dale's Landing at the eastern end, from which a three miles' row down the Coosaw River brought us to the mouth of Bull River, where a flock of dredges and scows were at anchor and at work. There were five dredges belonging to three different companies. We went alongside and aboard the Kennedy, the largest and most powerful of them all and built upon an entirely novel system, devised by Mr. Brotherhood. The other dredges were the ordinary river and harbor dredging machines, fitted with the Johnson grab or Osgood bucket, principally the former. The apparatus consists of a four-clawed clam-like "grab," suspended by chains from a derrick, dropped close to the bottom, then closed and with its contents hoisted, swung over a chute, opened and a stream of water played on the contents as they slide into the single lighter alongside. Apparently in this system the weight of the grab determines its power of sinking through the mud, which often overlies the rock several feet deep, and breaking through the stratum or plate of phosphate, it must be well filled by mud before it gets any rock, and coming up closed, very little has chance to escape. The Brotherhood dredge is built and worked upon an entirely different system. It consists of a large seaworthy vessel of about 700 tons burthen, about 138ft. long, 34ft. wide and 16ft. deep. Along the center is a well like a centerboard well, 80ft. long, 16ft. deep and 5ft. wide. Through this, supported upon a frame in such a manner that the series can be adjusted to work in any depth less than 43ft., are 38 steel buckets, each of ⅜ ton capacity, which travel on an endless chain, somewhat resembling in action the buckets of grain elevators. Each bucket is armed on its upper front edge with four large steel claws. Directly beneath the point where the mouth of the bucket discharges its load is a pair of heavy toothed steel rollers running across the hull. Beneath these "crushers" are the inner ends of two revolving steel cylinders placed also athwartship, the outer ends reaching to the center of the beam of the lighters, which, one on each side, are hauled beneath them. These washers are placed at a slight incline, the outer ends being higher than the inner, extending the entire length. The interior of these cylinders are fitted with a spiral knife edged partition about 6in. high called the "flight." This acts as a carrier. A heavy stream is driven through the cylinder from the outside, which thoroughly washes the rock; the mud, sand, etc., escaping through many inch holes in the sides.

The dredge is moored with a long chain ahead, and a shorter one on each bow and quarter. By means of independent engines, these chains are hauled on or slackened, so that the desired position, as determined by range-beacons on shore, can be obtained, and constantly slightly changed. This position brings the claws of the buckets, as they revolve, in contact with the lower side of the edge of the plate; and as the bucket tears its way upward, driven by the full power of the engine, it fills with the rock, leaving little space on top of the load to hold mud or other foreign matter lying above the phosphate; and of such as it does take, most is washed away as the bucket rises, at constantly changing angle through the water. The entire process is automatic.

Standing upon the upper deck of the Kennedy I timed for comparison the working of the two systems. The nearest dredge was about 100yds. away, and from dump to dump of her grab, three timings gave average of 45 seconds, the depth being 21ft. at the Kennedy's moorings. So far as I could judge, the loads were not so large as that of each bucket of the Kennedy, certainly not larger. The 38 buckets of the Kennedy made a complete revolution in 3m. 10s. or 5s. each. Assuming the loads to be equal, say ¼ ton each, the Kennedy thus brought up 9½ tons while the other brought one, and it is more than probable, that of clean rock delivered into the lighters the disproportion was still greater. By another timing the Kennedy put into the lighters 13 buckets or 3¼ tons of clean rock in 1 minute. A lighter has been loaded in two hours. At times, especially when working in thick rock, boulders from five to fifteen hundred pounds weight are brought up. The general character of the rock is much smaller. Many pieces called rolling rock are no larger than one's fist. The lighters carry 120 tons each and frequently from 4 to 6 are loaded in a day and towed to the drying sheds on southwest side of Port Royal Island about thirty miles from the "mine." There the company has commodious wharves, at which the largest steamers lie and load, and the rock, in fragments from the size of one's head down to pieces big as eggs, is here resorted and piled. Sorting brings out the pieces of marl, stone, ballast-rock, quartz and other kinds of rock brought down from the highlands by glaciers, and most of the fossil specimens. On the decks of the lighters the pile of rock grows too fast under its steady stream, for close work.

The phosphate is piled in great sheds over a series of hot air flumes, by which it is thoroughly dried; this is very necessary, as much of the best rock is porous and carries about 10 per cent. of moisture, on which it would not be profitable to pay freight. Porous hardly describes the condition, for the so-called pores, the work of myriads of extinct fiddler crabs and sea worms, are from ¼in. to 1in. in diameter. Some of it is very hard and smooth, some seems decomposed and can be broken easily, revealing in its internal structure a conglomerate of shells, bones, teeth and coprolites. This is the character of the best rock, some of it containing over 75 per cent. of phosphate.

Not only did the reptilian and Eocene periods contribute, but in turn, as the land and water changed places, fish and animals in great variety added their quota to this long hidden wealth. Even the present age contributes, for among our finds yesterday was a battered sardine box and a beef bone.

I can imagine nothing which would more interest a student in geology than to stand, as I did, on the deck of the lighter and watch the rocky stream depositing its strangely mixed specimens, relics of past ages—Eocene, Pliocene and later—especially if given, as I was, the assistance of two men, who with hoes sorted and trimmed boat, and the privilege of retaining our finds. Many valuable specimens, such as elephant and mastodon teeth, are broken in the crushers, but enough remain to pay the watchers and to prove that in olden times, ages before Father Adam made his début, the neighborhood was very lively.

The dredges are great levelers; old families have no precedence over new; nor are there class distinctions; the bones and teeth of animals and fish of the present day, sharks, whales, bear, deer and elephants tumble out, mingled with those of long extinct species.

The watcher must not expect to find many specimens. The collection of these is a work of time. My hour on watch was rewarded by one shark's tooth, one clam, one small spiral shell and one bit of rock, on the surface of which was a most beautiful impression of a very small bivalve shell, and several small spiral shells were imbedded.

But there are many collections by many collectors, and some of them have been shown to me, and through the generosity of Mr. Brotherhood and other friends I have been supplied with a quite valuable collection, which I shall send to the office of FOREST AND STREAM as a temporary "loan exhibition," and from which I propose to enrich its cabinet of curios.

The most abundant of the finds are shark's teeth, some of great size. I inclose outline sketch of one that has been given to me. Its dimensions are: Length 6in., breadth 5in. I have seen one a third larger, and the late Professor Holmes had in his collection one 10×8in. I am informed that Professor Holmes estimated that the owner of this tooth was over 150ft. long, a great beast quite capable of swallowing my little fellow, which could not have measured over 80ft. I have been shown a fragment of about two-thirds of an elephant's tooth. It weighed 14lbs., and the crown is 8in. in longitudinal diameter. Also a plate from the shell of a *Glyptodon*, which is nearly 2in. thick; that turtle must have stood 7ft. high. Also a number of teeth of the *Bathygnathus borealis*, the great biped reptile of the *Dinasaur* family. These were supposed to be boars' tusks, but studying up on David's "Text-Book of Geology," I found on page 250 an engraving of the tooth of this reptile, which in every respect corresponds. Hence to the paragraph, "Found at Prince Edward Island, bones were also found near Springfield, Mass., Leidy," the FOREST AND STREAM may add, "also in the phosphate beds of Coosaw River." Also, a number of teeth and bones of the cloven-footed horse of the Pleiocine period; also the tooth of a *Megatherium*, a very rare find, and several of the mastodon. Also the teeth, bones and vertebræ of sharks, icthyosaurus, tapirs, deer, bear and whale; pieces of antlers of deer, of petrified wood; and no end of shells, of many varieties, echidnæ, and pieces of the rock retaining impressions of the same; many *copriolites*, big and little, of unknown origin, an Indian arrowhead of stone, and fragments of pottery—all but the two last named turned into rock.

The arrowhead may have been shot during historical periods at some animal in the water. Which would seem likely from the fact that several 12-pound howitzer shells with Borman fuses, have been brought up; they were undoubtedly fired from boat howitzers during the Civil War. But the finding of the pottery in the same vicinity would seem to indicate a submergence since the advent of men. I have also seen a single vertebra of something, which in sectional diameter is 12×14in.; this is not transformed, and is still bone, for it was not found on the phosphate bed, which rests on marl, but in proximity. Who can say what great creature it may have been part of?

PISECO.

NOTES ON SNAKES.

Editor Forest and Stream:

The interesting communication in your issue of Sept. 27 concerning blacksnakes, large and small, recalls to my mind the largest snake of that kind that I ever saw. It must have been about 1870. I was driving with my mother along a narrow mountain road near Farmington, Connecticut. We were advancing at a walk when a blacksnake crossed the road in front of us. He was so long that his head was well among the weeds on one side of the track before his tail left those on the other side. I pulled up the horse at the place where he had crossed, and by standing up in the buggy discovered him lying along the base of a stone wall. I had some difficulty in persuading my mother to consent to my alighting to kill him, but on representing that he was really large enough to be dangerous to children, she agreed to let me put an end to him if I could.

This I succeeded in doing, and, having effectually broken his back, I drew him into the roadway and straightened him out. I had nothing to measure with but an ordinary carriage whip, and he was longer than that. I marked the overlap carefully on the whip handle, and on reaching home made out his length to be 7ft. 6in. I could not straighten him properly, for his muscles contracted as he lay and shortened him perceptibly. I was so conscientious as not to allow for this contraction in making the measurement, but I quite believe that if I could have straightened him out properly he would have measured fully eight feet.

I have often regretted that I did not *caché* his remains and secure them for preseveration. He was certainly one of the largest of his kind. I remember noticing that he was a brownish rather than bluish black, commonly noticed in smaller specimens.

CHAS. L. NORTON.

NEW YORK, Oct. 4.

BELLIGERENT MUSKRATS.

INDIANAPOLIS, Ind., Oct. 2.—*Editor Forest and Stream:* I was interested in reading Dr. Shufeldt's article in last week's FOREST AND STREAM, and in the incident of his encounter with the muskrat. I had an experience somewhat similar several years since, when a boy, and visiting at my grandfather's farm in Maine. On the farm was a pond of several acres, dammed at the lower end to obtain power for a saw mill. There were many large pickerel in the pond, and I used to spend a part of each day in fishing, having only a coarse line, large hook baited with a frog, and a pole cut from the woods near by.

One afternoon, walking through the meadow toward the pond, and when a few feet from the water, I saw a muskrat running to reach the water. Bringing my pole down from over my shoulder, where I had been carrying it, I struck him with it as he was running. The blow did not kill him, but he turned over on his back with his feet struggling in the air, and giving small cries of pain or anger. I started toward him, when from the loose stone wall making part of the dam I saw five muskrats coming for me, with their mouths open, and giving every appearance of rage and desire to avenge the injury to their companion. Without stopping at the place where he was still kicking, they came past him and at me on the run, and after the first astonishment was over I concluded that discretion was the better part of value, and started for the house as fast as I could go, glancing over one shoulder to see if they were gaining in the race. Although they chased me for only a few rods, I did not feel safe near that locality until the next day, when I returned and found the pole where I had dropped it, but no muskrats, even the wounded one being gone. I have always believed that the one which I struck was not severely injured, but that his cries of rage brought his companions to his aid and to fight for him.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 50 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

ANOTHER MAN ASTRAY.

CHICAGO, Ill., Oct. 3.—*Editor Forest and Stream:* I am thinking of leaving this community. The atmosphere is wrong. I do not wish to expose myself to the danger of injection with the moral obliquity which seems to be generally prevalent among the sportsmen here. I have been tenderly reared, and if this thing is "catching," I am going to leave.

Now, there is Mr. Holt—G. M. Holt—called "Sam" for short. I thought he was all right. The boys on the road said he was all right. He has sold sporting goods for Montgomery Ward & Co. for so long that everybody thought he was all right. He looks all right. He has an honest sort of eye, and looks too fat and comfortable to be anything but a strictly responsible sort of man. If Mr. Holt should come in from a hunting trip with a lot of ducks, you would be willing to take affidavit that he had with his own gun killed all those ducks, and that nobody else had done so. You would swear to that. You would contend that Mr. Holt was above suspicion.

That would show your innocence. Quite to the contrary of all this, Mr. Holt not only is not above suspicion, but is so amenable to that charge that he can hereafter only be regarded in the most entirely cross-eyed manner, to say nothing of being looked at askance. The facts which warrant this statement are as follows:

Some friends of Mr. Holt's, among them Mr. Ward, invited him to join them on a shooting trip to Grass Lake. Mr. Holt readily acquiesced, and the party was duly made up. Mr. Holt was fond of rowing, and since he declared he needed outdoor exercise, the others kindly allowed him to pull the boat up the lake six or seven miles, against the wind. When he at length grew weary, he calmly announced his intention of stopping and going ashore.

"All right," said Mr. Ward, "you can just step out there on the grass, anywhere, and after a while you'll get good shooting."

Mr. Holt accordingly stepped out on shore. He was not aware that the "shore" of Grass Lake is at that point mostly composed of weeds and grass, resting on a veneer of terra infirma. When, therefore, he launched his 290lbs. trustfully forth from the boat, he sunk straight down to a level with his chin, and there remained, piteously begging to be taken on board.

But that isn't what I started out to tell, and it has not, really, anything to do with the case. One would think that, after such a narrow escape from burial as Mr. Holt had here experienced, he would be very circumspect as to his conduct during the remainder of that day at least. Such, however, was not the case, and this was what I started out to relate.

Mr. Holt was fished out, put in a boat and safely hidden away among the rushes, with the careful injunction not to shoot any more mudhens for ducks. The remainder of the party went further on up the lake.

All the afternoon Mr. Holt's gun was heard merrily banging away, but nobody was jealous of him. They all knew he was shooting mudhens in spite of the caution against it. Along toward evening Mr. Ward came down the lake with fourteen good ducks he had killed. In his company was a native with a boat.

"Here, you take these ducks," said Mr. Ward to the native, "and pull over to where you see that fellow blazing away, over there in the weeds. Tell him you're a market-hunter and have got some ducks to sell. You sell him these ducks, and come back here and I'll give you a dollar for your trouble. Hold on. Wait till I fix the ducks so I will know them again if I see them. There, all right; go ahead now."

So the native pulled on over to where Sam was blazing away, and came back and got his dollar.

That evening Mr. Holt came into camp with his game pockets fairly bulging out. His face, however, was as guileless and innocent as usual, and he wore an air of easy unconsciousness. He didn't say anything about his luck. Evidently he was going to show the crowd that he was no empty braggart, nor given to vaunting himself before his fellows.

"Did you get any, Holt?" asked somebody after awhile.

"Naw! Awful slow shootin'. Never had such hard luck in my life. Did you fellows get any?"

"Not very many. Why, we thought from the way you were letting into 'em that you had a boat-load down. We only got four or five altogether."

"Well," said Mr. Holt, solemnly shifting his chew of tobacco to the other side of his countenance, "of course I did get a few, but not to say what I'd call anything to amount to much, and not anything like what I usually get when I go out. I guess I must have knocked down a dozen or so. Let's see."

Everybody gathers about him in respectful admiration as he nonchalantly—nay, almost scornfully—began to empty his pockets. One after another he laid out upon the ground his ducks until he had twelve fine ones displayed.

"Great Scott! That's a nice lot, isn't it?" said somebody. "Is that all you've got?"

"Oh, maybe one or two more layin' 'round somewhere," said Mr. Holt, "a duck or two aint anything to me. I hardly ever count 'em, anyhow. Didn't you fellows get any at all? Well, now, I pity you. You'd better stay close to me next time."

"Yes," said Mr. Ward, "I think you would stand watching." And then Mr. Ward bent over the pile of ducks and began intently to examine them.

"Look here, Holt," he said at length, "you aren't giving us a square deal. You're holding back something on us. Where's that mallard with the skinned neck? Say, where's that bluebill with two toes off his left foot? Hey?"

"W—what? H—how in star-spangled blazes do *you* know anything about the landscape on my ducks? Say, look here now—I—I—"

A rush was made on him, and the two ducks he had shrewdly concealed were pulled out and identified. Then there was a large, dense silence on which you could have hung your hat.

"Boys," said Mr. Holt at length, "I really can't explain the fact about those toes and that neck, but I—"

"Oh, no!" said the boys.

"I'll tell you. Mr. Ward must be one of those mind readers you hear about."

"Now, look here," said Mr. Holt, suddenly weakening, "this mustn't ever get out, fellows; it mustn't, indeed!"

"Oh, no!" said the boys.

"You see, it wouldn't do. I'd never hear the last of it in the world. I'll never go back home, unless you promise. Say, aint it enough to drown a fellow in 10ft. of pickerel weed, without comin' along before he's fairly dried off and sellin' him a lot of second-hand ducks with a private water mark on 'em? Surely, fellows, you aint going to spring a game like that on me; say, now, are you?"

"Oh, no!" declared the boys.

But somehow or other it got out. I don't know how it escaped, but in some way it did become known. And since then people about here don't trust an innocent exterior so much as they used to. And that's why I feel as if some day I should have to leave this place.

E. H.

IN BRITISH COLUMBIA.

CACHE CREEK, British Columbia.—I fancy that those of your correspondents who take delight in hunting squirrels and crows would be doubly pleased were they so situated, that, upon any idle day, they could go hunting with a prospect of seeing almost every kind of game, from a bear to a willow grouse. In nearly every part of British Columbia such a prospect is among the probabilities. It is not, however, of the larger game I have to speak of this time; but of two days spent among the ducks and geese.

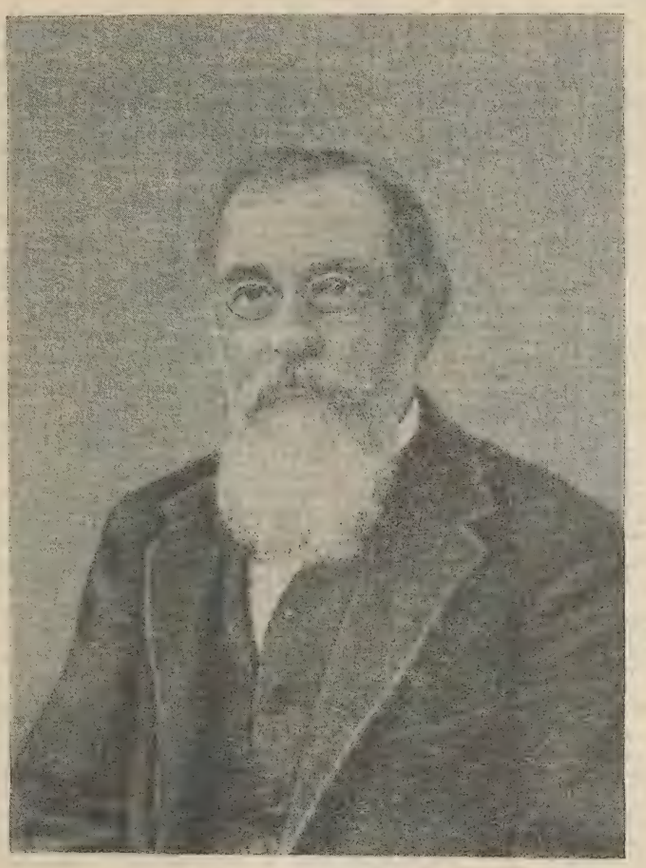
Leaving Ashcroft station about 9 o'clock P. M., Messrs. Burr, Carey and myself passed up the Thompson about two miles to the ranch of Mr. Evans, who was intending to join us. We found him all prepared, so we struck out without delay. We traveled in an easterly direction up the ridge of the mountain, expecting to bag some blue grouse; but in this we were unsuccessful. As soon as we reached the timber we struck to the right about a mile, until we reached a small mountain stream, where we proposed cooking up lunch. While Evans and Carey went fishing, Burr and myself lit a fire and began getting the cooking utensils ready. The fishermen soon returned with about two dozen fine-looking trout, and then everything was lively in camp. Evans proved himself an adept at cooking, Burr and Carey made excellent assistants, and I—well, after the meal was over, they said I was a success at keeping mountain trout from spoiling.

After lunch we set off in a northeasterly direction toward Nesbit's ranch, where ducks and geese were reported plentiful. On the way we passed a small lake, and Burr succeeded in bagging a fine mallard on it. Reaching within a short distance of our camping ground, Evans took the pack horse up to camp, and Burr, Carey and myself started off to prospect what is known as Goose Lake. Coming in sight of it we were tickled to find about a dozen geese sitting on the bank, and about 75yds. away quite a mound of rocks for the hunter to creep up behind. We soon reached a small gully, tied our horses, and commenced sneaking up to the pile of rocks behind which the geese were. We had agreed that Carey and myself, who carried rifles, should each single out a goose, then Burr was to give the word so both could fire together. I reached the rocks first, and taking aim, it seemed an eternity waiting for the others. My mind was busy, though. In imagination I was just enjoying a savory meal of roast goose, when "Ready!" came with such a suddenness that I sprang to my feet, the gun went off and so did the goose. As I watched those geese go over a neighboring hill I thought of more "cuss" words than I had done for the past month, but kept quiet, feeling that I had nothing fit for the occasion. My companions seemed to be in the same predicament, so we decided it was a clear case of goose fever, and made solemn promises, then and there, never to mention to any one on the outside that we had seen a goose. On the way back to camp we passed some small lakes in which we secured some half-dozen ducks. Our friend Evans had a tasty spread awaiting us, and after partaking of it the evening hours were pleasantly whiled away listening to Messrs. Burr and Carey narrating hunting adventure in Arizona and Montana.

The next morning we set off for a lake about a mile to the south of our camp, and on it captured three fine ducks, Evans making an excellent long-distance shot at one on the wing. Crossing the mountain there, we got a splendid view of Lavonia to the north, while to the west lay the fertile valley of the Bonaparte, whose ranches loom up splendidly in the distance. Quite a number of ducks were bagged during the day, but no deer were seen, it being rather early in the season for them. In about another month this will be an excellent hunting ground for deer, geese and ducks, and the boys have decided to pay it another visit. The ground is pretty open, the lakes plentiful and the climbing very easy, which serves to make hunting a real pleasure. Our party reached home about dusk, after having one of the most pleasant trips it has ever been the lot of the writer to enjoy.

C. C.

BROOKLYN'S SUBURBS.—*Editor Forest and Stream:* Where is the game protector for Brooklyn, and what does he do with himself? Surely there is enough Sunday shooting and illegal shooting of song birds near the city. The Parrayot wood, in the town of Flatbush, was once the home of several bunches of quail. In the spring the English snipe used to light at its edge in the loamy meadows, and the fall flight of the woodcock touched its borders, and one could sometimes find all these game birds and have a chance to work a dog and get pure air into his lungs without going hundreds of miles away. Now all is changed, rarely if ever does one see game. Last year local Flatbush gunners shot the quail that remained long before the law was up. Not a woodcock or English snipe can light on the tract without being gobbled up before it folds its wings; and all day long Sunday the once quiet woods resound with the fusilade from the guns of the small boy and the little hoodlum from the slums of the city. Yesterday I took a walk out through this spot, and the "game protector," who don't seem to protect, had he been there could have found several grown men with old muskets and several small and inoffensive song birds in their pockets. Here is one field at least for our game protector. Where is he?—ELK.



NATHAN S. HARRINGTON.

EX-PRESIDENT OF THE WORCESTER FUR COMPANY.

AMONG the sportsmen of Massachusetts there is probably not one more widely known or more universally respected than the gentleman who is the subject of this sketch, and I have so often had occasion to mention his name in my correspondence with the FOREST AND STREAM, covering a period of ten years, that possibly your readers may like to become better acquainted, for such as he elevate sportsmanship. I have known him from my boyhood, and for the last twenty years there has been an intimate and unbroken friendship, during which he more than any one man, has been my shooting and fishing companion.

"Uncle Nathan"—for by that familiar title he is known and addressed by young and old alike—is seventy-three years of age, a living example of a temperate, thrifty life, with a generous sprinkling of days by the stream and in the field with rod and gun. Leaving his humble home at the tender age of eight years to earn his living as chore boy on a farm, he saw very little of the sunny side of life, until at the age of sixteen he engaged as an apprentice to learn the gunsmith's trade with the late Ethan Allen, the inventor of one of the first revolvers known as the "Allen pepperbox." This was the beginning of better days. A few years later, at the breaking out of the California fever, there was a great demand for the then famous pistol, and he took a contract in the fitting department; this proved very profitable, and the proceeds he invested in the real estate which has ever since been his home. Being pleasantly and centrally located, this estate has greatly increased in value and with the improvements he has made now yields a handsome income. His love of field sports, especially shooting, developed very early in life, and this passion has been indulged generously throughout all these years, and yet he has always been an industrious, thrifty man. Firmly believing that, with enough to supply every rational want, there was something in life to enjoy besides the accumulation of wealth, at the sacrifice of health and all recreation, he has followed his inclination, and who shall say he is not a winner? After he had secured a comfortable home he conceived the idea of a shop of his own for the manufacture of jointed fishing rods, which at that time were just coming in fashion. In those days anglers were content with a common bamboo, but with commendable enterprise he kept pace with the times, and in later years his fine fly-rods would have been creditable to an establishment of greater pretentions. Uncle Nathan's shop is a model of disorder. There are just three articles that are always in their place, his work bench, forge and lathe. Ask him for any tool except the one in his hand and it means a general hunt, and as a rule his visitor can find it first. For years it was the trial of his life to keep track of his glasses, but at last he found a remedy in the purchase of a stock, which is distributed about the room. For many years his shop has been a general resort for sportsmen, not only of Worcester and vicinity, for so extended is his acquaintance he has many visitors from all over New England. His hospitality knows no bounds, and many sportsmen who read this sketch will remember with pleasure their delightful call on Uncle Nathan, with the inevitable pitcher of cider and dish of apples.

He has always been a firm believer and advocate of strict game laws and their enforcement, and strict integrity, courtesy and respect for the rights of others has marked his life as a sportsman. Possessing a genial, happy temperament, he has for years been a general favorite, and consequently his company is in great demand by his friends as a fishing and shooting companion. Appreciating the privileges granted him by farmers and land owners, he is always careful of their interests, and is therefore a welcome guest; and those who would have his companionship must do likewise.

"UNCLE NATHAN."

The story of his painful accident, eleven years ago, while fox hunting, was told in FOREST AND STREAM, but so long ago that many of your readers may have forgotten the particulars, and I will briefly repeat it. There had been a light fall of snow on this eventful morning, and the day was about perfect for fox hunting. Uncle Nathan was out early and soon had a fox started on Burncoat Plain, about four miles from the city. In hurrying down a hill to reach a runway he caught his toe and fell headlong, discharging one barrel of his gun, the muzzle of which was within a few inches of his foot, literally tearing the front part to shreds and necessitating its amputation at the instep. After crawling a long distance through the snow to a pile of rails, he climbed upon them and was then able to make himself heard at a farmhouse about a fourth of a mile away. The man quickly harnessed his horse and was soon on his way to the city, but the old gentleman was rapidly growing weak from loss of blood, and fearing he should faint he requested his friend to stop at the door of an acquaintance and ask for whisky. A tumblerful was brought him, which served to brace him up to a degree that he retained consciousness till he reached his home. Three skilled physicians were called and detecting the odor of the stimulant, inquired at once if he was addicted to its use. Being informed that he was a strictly temperate man, they replied that they were very glad to know it, as otherwise his chance of recovery would be very small. It was a very difficult and painful operation, and he was confined to his room for many months, but his correct habits and robust health told to his advantage and resulted in his complete recovery.

It is always great fun for the boys when they can get a good joke on Uncle Nathan, and his habit of forgetfulness furnishes many an opportunity. Perhaps heedlessness would be the better word, as it is not the forgetfulness of age, but a confirmed habit. His friends have learned that it is always safe to look him over carefully before starting off for a day's shoot, for on more than one occasion he has been known to forget his gun, to say nothing of articles of less importance. It was a great trial to give up his muzzleloader which had served him faithfully more than thirty years, and which he called the "old umbrella." He considered the matter carefully and finally concluded he could kill a fox further with a chokebore, and purchased a breechloader of fair quality, but in bird shooting he occasionally takes the old gun. On one of these occasions he finished the day at a cover about ten miles from home, meeting his friend at the team which was hitched by the roadside. He set the "old umbrella" up against a tree, put on his overcoat, and then located himself in the wagon. His friend, who was busy unhitching the horse, didn't notice it, and when some six miles from the spot the old gentleman broke out with, "Is my gun in the wagon? No. I left it standing against the tree. Never mind, drive on, let's go there shooting again to-morrow and we shall find it right there." They found it next morning all safe and dripping with the morning dew, but the affair leaked out and furnished fun for an evening at the rendezvous.

One morning in woodcock flight the writer called early for Uncle Nathan and drove twelve miles to a famous cover. It was a most delightful October day, and we found birds quite plentiful. He was using the "umbrella," and whenever a bird flushed I would hear a "click," the cap would explode and that was all. "What's the matter, old man?" "Oh, I don't know; that was a beautiful shot, guess I'll prick in a little powder." Having fixed it all right he went on, only to get another shot with another miss-fire, and so on till about 2 o'clock in the afternoon, when he concluded "that it was about time to investigate," and very deliberately drew two charges of shot from each barrel.

As a wing shot he has ranked far ahead of the average, especially in woodcock shooting, which is his favorite bird. I think, however, that there is no sport that he enjoys quite so much as fox hunting, and in that he has no superior. I fully believe there is no man in central Massachusetts who has killed as many foxes ahead of a hound, who has confined himself strictly to the open season, viz., from Oct. 1 to March 1. Possessing great powers of endurance, and with courage and tenacity, he would always stay as long as the daylight lasted and improve the last chance to kill a fox.

On one occasion, a few years ago, he had worked hard all day, the dog having driven his fox from early morning, and at about sunset was playing him beautifully on a line of ledges, while Uncle Nathan was covering a runway on a road at the foot of the hill. A gentleman driving by invited him to ride to the city. "Thank you," said the veteran, "but I guess I won't leave the old dog." It was almost too dark to shoot when the fox attempted to cross the road, but he didn't get by, and the old gentleman walked nearly five miles to the city by moonlight with the brush hanging from his coat pocket. A true sportsman, a genial friend, a worthy citizen and honest man. May he live to enjoy many days in the chase, in the field and by the stream in years to come.

E. SPRAGUE KNOWLES.

WORCESTER, Mass., March, 1888.

GEORGIA GAME.—Liberty Hill, Ga., Oct. 1.—The shooting season is fairly opened. Partridges are very plentiful, having been left untouched last season. We had the earliest frost ever known in this part of the State (Sept. 29), and predict an early fall. Rabbits are also very numerous and are doing considerable damage around the swamp lands. Dove shooting is over, the sportsmen have made unusually good bags this season.—T. L. F.

HUNTING THE GRAY SQUIRREL.

Editor Forest and Stream:

In your last issue "Von W.," of Charlestown, N. H., says, "I know 'Iron Ramrod' will support me in saying that it requires some woodcraft as well as gumption to successfully circumvent these wary and nimble climbers; and what makes a better dinner than a squirrel stew or pie?"

The novice that goes forth from the city or town that is unaccustomed to the haunts and habits of this beautiful little rodent may perhaps get an occasional glimpse of him as he waves his "brush" to him in a derisive kind of way, and bids him good day in the distance. He has taken his gun for a short trip to the woods and thinks it easy enough to shoot a few squirrels, and so he rambles around on one of these fine October mornings with but an occasional sight of a squirrel and returns home with an empty bag. The writer prefers a small-bore rifle for squirrel shooting, as he usually hunts them without the aid of a dog; but as most sportsmen like a shotgun then I would say that a chokebored 12-gauge gun is the best gun for squirrels that the writer has tried. As all who have shot gray squirrels can testify, they will "stand a good deal of killing" before they will give up, and I have used small shot on them with such poor effect that I at once dropped to No. 4 chilled, and even with No. 4 there will be some of the shot lodged inside the skin on the opposite side. Many a squirrel have I shot with No. 7 or No. 8 and had them crawl into some hole or crevice where I could not find them, or if I did, would find it impossible for me to dislodge them from their lofty hiding place. When struck with the coarse shot, however, they at once give up and come tumbling to the ground without catching on limb or crawling away out of sight.

To successfully hunt the gray, of course, "requires some woodcraft," but the great secret, if any there is about, is to sit down and keep still. Don't keep running around in the woods and through thick underbrush where a squirrel would never think of going, but look about for "signs" of their work. Hickory nuts, chestnuts, acorns, beech nuts and maple seeds are what the squirrels eat mostly in this part of the country, and generally speaking the oak trees give the best returns for a squirrel hunt. Two persons can hunt the gray squirrel more successfully than one, as he is full of "ways that are dark and tricks that are vain" for eluding the eye of the hunter. Choose a trusty companion and go to the woods. If the squirrels are about you will see their "signs," which are these: branches with a few nuts on them will be found lying around under the trees, showing that they have been gnawed off by them and dropped from above; hulls and shells will also be found that have been bitten and partly eaten, and many other signs will show that the trees are being "worked" by them. If a large single tree standing out alone away from the woods, take your position—your companion on the opposite side from you—where you can command a view of the whole of the tree. Sit down and keep still, do not speak to each other or make any noise, but keep both eyes wide open, the chances are that within ten minutes you will see first a head with two shining black eyes, then his body, and perhaps if you should happen to wink he will give one grand flourish with that monstrous tail of his that will make him look as large as a common house cat as he whips around to the opposite side of the old oak; his intention was to have gone down on the opposite side of the tree to the ground, and then keeping the tree between you and him he would have left for the woods, saying as he went, "Well, good day, I'll see you later." But your companion has taken in the situation at a glance, and just as Mr. Gray shows up on his side of the tree a sharp report rings out on the clear frosty air, and there is a dull thud as the squirrel comes to earth. Gather him in and put him carefully away in the bag, but do not think that this little racket that you have made will end your sport. Sit right down again as before, and the chances are that in a few minutes you will see another one come out to look and see what all that fuss was about. Many a time I have shot two squirrels that way without leaving my seat. In the groves or woods where there are many trees the "signs" are to be looked for in the same way as before, but your companion will take his station further away, and you will not watch the same tree. If a squirrel seems to take fright and attempts to run away from you don't chase him—for you never can catch him—but sit still, his curiosity will not let him stay long, and he will probably soon be back again to the same place he started from. I remember once while watching one that had slipped down the outer side of the tree and ran away from me, of seeing him go clear around a large pasture on the wall, and it was nearly an hour before he returned; but he came back again to his death.

Regarding the squirrel being considered as game, I see no reason why he should not be, and if he has not been so considered heretofore, let us henceforth and forever give him a rating among our list of game animals. He is handsome, smart, cunning and tricky, while as "Von W." says, what makes a better dinner than a squirrel stew or pie? There is one thing, however, that should not be overlooked when preparing the gray squirrel for the table. There is a kind of gland under the forelegs that should be removed or else the squirrel will be "strong" and unfit to eat. Soak the meat awhile in salt and water to remove the blood clots, and then parboil. The cook will then take care of them until they are on the table ready for you, and if you are fortunate enough to have an appetite such as the writer is blessed with, you will say that the gray squirrel is game in every sense of the word.

Gray squirrels are ripe now, and I wish every reader of FOREST AND STREAM might have a sample of good squirrel shooting. IRON RAMROD.

SOMERVILLE, Mass., Oct. 6.

A DAY'S SHOOTING IN MY MARYLAND.

I.—MORNING.

HOW these lovely autumn days recall the bright "long ago," when with the impatience of youth we looked anxiously for the time when the first frost with its icy finger would touch the green foliage of the trees and clothe the woods with a coat of many colors; when the woods and hedges would present the beautiful, in rich abundance, and the pure air, breathed in long draughts, would send the rich blood coursing impetuously through our veins. In the fall of 186–, having purchased from John Krider, Philadelphia, a new Moore & Harris 12-gauge gun, I was of course very anxious to try it, and made overtures to my good friend Thos. B. (than whom a better sportsman, a kinder friend or a more perfect gentleman never lived) to join me in a day's shooting, to which he assented pleasantly. I then hunted a white and tan English setter bitch named Flora, imported and presented to me by Mr. Mr. John F. Orne of Philadelphia; and a large mottled brown and white pointer dog Sport, and a better team never entered a field. They worked like machinery on birds, but the temptation to Flora to run a rabbit was, like toddy to the toper, perfectly irresistible. She would break shot and run away as if the devil were after her; and to see the look of shame and repentance on her face when she came back, was too much for me, so that I often failed to correct her through pity; for who has not fallen from grace? My friend had a native-bred dog Dash, but I think he was misnamed, for although he could trail a covey and pick up scattered birds with the best of them, he poked and would never back; but when he found birds would stand firmly. I then drove a large roan horse Joe, sixteen hands high, and very spirited, one which could knock off ten miles an hour, over our hilly roads, without exertion. Oh! could I again have such a trio of animals! Joe lived to be thirty years old, when he fell in the stable and was choked to death, through the carelessness of his groom. Flora, whom I lent to a friend to breed from, was stolen, and poor, dear old Sport died of old age. Both he and the horse were buried, and over their graves, I do not blush to own, I shed many a tear, and why should I not? For they were connected with the best, brightest and happiest days of my life.

Everything was made ready the night before and stowed carefully in the Jäger wagon. The dogs fed heavily in order to give blood and strength for to-morrow's work. Dogs should not be fed much the days they are hunted, for it affects their scent. After a substantial breakfast we started about 4 o'clock in the morning for our eight-mile drive. How those dogs loved the ride! no trouble with them, but at a snap of the finger they would jump into the wagon and stow themselves away and give no more care but sleep like majors until we stopped. How pleasant was that drive! Years loaded with care and grief have since passed over our heads, leaving deep traces of their march in furrowed cheeks, bent forms and general wear and tear, but the remembrance of that drive lives in its pristine joy, never to be forgotten. Joe excelled himself, and the pleasant chat of my dear friend made the ride seem very short.

Arrived at the house of our country friend, who was just out feeding his stock, which, of course, we had to admire (and some of it well merited all the praise we gave it), we went into the house, saw the good wife, gave the candy to the children, talked a few minutes, ate a buckwheat cake, took a cup of coffee for sociability and then started for the fields.

Our host told us where every covey of partridge on the farm could be found; we mapped out our route, entered the meadow, crossed the run and struck for a wheat stubble field. When we had hunted about one-half of the stubble, Flora, who had rather the keenest nose, began to draw, while Sport, with head up and all attention, followed her closely; no jealousy on his honest face, but rather a look of congratulation that Flora should have first honors. Each was the perfection of its race, and each showed its peculiarities completely. Flora couched as she trod gingerly over the heavily scented grass; Sport with his head and tail erect, and now that he had struck the trail, was all animation. How beautiful they look, as they stand fast fixed, every nerve quivering with excitement, their inclination to spring upon the game suppressed by perfect training. There they stand for a moment or two, with Dash close up to Flora, and Sport a little back. When we step forward, the old cock partridge, the patriarch of the bevy, rises with a chirp and a whirl, but is beautifully stopped by B., killed in mid-air, riddled—no half miss about that shot. Now whirl, whirl, up they all get. B. drops another, while I, though in the end as fortunate, did not kill my birds as clean, for he was the better shot of the two. We mark them down in the bushes along the run, some fifteen or eighteen of them, loaded our guns, spoke to the dogs (who had dropped at shot and remained at charge) to seek dead. How lightly they tread! They point the birds, which we pick up, and are on again. We go to where the birds lit, but although we hunt never so carefully, we raise but few. Whether it is from the birds' fear or power to hold their scent, it is certain that dogs, even the best ones, fail to find the partridge or quail that is too closely followed. So we let them rest for the time, and go up the hill, along the edge of a thicket, into a buckwheat stubble.

The morning is now glorious, and we drink insatiate great draughts of pure, fresh air. How good we feel, and as we look around over the beautiful landscape, think how good God is to us poor mortals and how poorly we repay Him for all his kindness; but we are out gunning, and there is no time to moralize, especially as the dogs are trailing a running bevy. Dash is in the lead now, trailing being his strong point, while old Sport, a little jealous this time of the family prestige, like all good Southrons, presses closely upon him, but none too fast. Flora, who has struck another trail, is called in to follow and back the other dogs, which she does with tolerable good grace, though with a strong protest; but the birds are wild and rise out of range, but I get the one Flora was trailing on a long and risky cross shot. A risky shot? Bosh. To the fellow who will never take a risky shot, but must have it open and almost sure. Give the birds chances and take chances yourself, say I.

We marked the covey down in the meadow and now returned to our first find, and hardly touched the ground before all three of the dogs stood staunchly, and this on the same ground we had hunted so carefully before. The birds had been running and now the scent was strong. How splendid the dogs looked! Let us enjoy the scene for a moment before we flush the birds. Look at Flora, how beautiful is her poise, with her left foot raised, her head rigid, her silky ears cocked forward, her back bent downward, her tail straight, quivering at the end. Sport, with head erect, eyes seeming double their usual size, the nose twitching nervously, as he drinks in the sweet aroma of the birds, tail at an angle of twenty degrees upward, feet firmly planted. Dash, crouching low with head, back and tail all in line. Who would not enjoy it? I step to Flora, the bird rises near me, but flies to B., who stops him in midflight, but misses the second bird, which rose from Dash's point and flew behind the bushes. I killed Sport's bird, which gladdened his soul and he looked his delight. We loaded, moved on, and have eight or ten birds down before we retrieved, but they were all in the open and killed dead, so we lost none.

Now, in regard to the first bird which rose to me, but which B. killed, simply because it flew toward him, I may remark for the benefit of the novice, that if I had shot I would have committed a great breach of sporting etiquette, by shooting across my companion, which should never be done, as it is considered unsportsmanlike and ungentlemanly. In shooting at a rising covey, the left man should take a bird on his side and the right man on the right side; never shoot into the middle of the covey, for you often hurt birds badly and never get them, and it is seldom you kill more than one at a shot. By observing the above rules you will never both shoot at the same bird, and consequently never both claim the same dead bird. This rule is inviolable among good sportsmen. Thus we went on from one covey to another until the dinner horn called us to the house. We counted heads, and B. had six more birds than I, while I had one bunny, which I shot near the house, ahead of Flora, who was having some fun to herself and a jolly good time in the race. How pleased she looked when it turned end for end.

After changing our coats and taking a good wash we felt much refreshed; the summons to dinner soon came, and such a dinner! Oh, ye dainty gourmands, who must coax the appetite to enjoyment, could you have been with us at that meal! After a quiet, though deep, thanksgiving for the things before us we surveyed the table. At the head sat our host, and in his front a large roast of beef, whose delightful brown and juicy appearance, told that it was done to a turn. Before our hostess were two Brahma chickens, roasted and garnished with parsley, weighing at least 6lbs. each, fat and plump and cooked to perfection. Potatoes, mashed and worked almost as light as eggs; parsnips, lima beams, stewed tomatoes and celery for dessert; peach pies, apple dumplings, both boiled and baked. Now, imagine our enjoyment of these good things, when we were so hungry after our violent exercise; and oh, ye poor fellows who "dine sumptuously every day," and upon whose appetites good things pall for want of zest, enjoy it in imagination. I give this bill of fare, for nine times out of ten you will get such a country dinner in Maryland, when gunning among our best farmers. After enjoying to repletion we smoke our cigars, have a good talk, tell our host the news of the outside world, and hear his gossip. JOSEPHUS.

THE PINES, Cecil County, Md.

CHICAGO AND THE WEST.

OCTOBER 1.—The weather is growing slightly colder, with frosty nights, raw winds and occasional cold rains. A storm is predicted from the north. On Sunday last there was a heavy snowfall in the Michigan peninsula; a gentlemen just in from that country says the snowballing was good. We expect at any time a cold wave that will drive the ducks down from the north in a skurry. The flight in the districts adjacent to this point is scattering and irregular, though there have been a few good days, and it is probable that during this week sometime there will be a good flight in. One gentleman of the Kankakee Cattle Company club last Wednesday bagged forty ducks out of one corner of their grounds. Numerous small bags are also reported, and members of different clubs here are now from day to day slipping off to the shooting grounds, presumably in response to information received as to the flight.

In order to obtain what data I could as to the present location of the duck supply, I yesterday made a systematic visit to South Water street, the great produce and game market of this city, and made diligent inquiry among the dealers as to where their largest shipments were coming from, and what varieties of ducks were now most plentiful. I asked a frowzy German boy in one market what kinds of ducks they were getting in, and he told me "Teelse an' mullets."

"Mullets?" said I, "what's a mullet? Do you think I mean a sucker, or do you think I'm a sucker, or how?"

"Yaas," said the boy, smiling blandly, and for the life of me I could not tell what he meat by a "mullet." I sat down and thought about it for a while, but it was too much for me, and I had to ask the boy to show me one.

"Dese is mullets," he said, picking up one of a pile of goodly mallards. I then made my escape, and forgot to ask where the "mullets" came from.

In another market I found a number of blue-winged teal and a few mallards, and inquiry elicited the rather unsatisfactory fact that they came "mostly from Milwaukee and St. Paul." They were bought of local firms in those cities, I presume.

At Mr. Sloan's house I found a very good assortment of game, and arranged with that respect to comeliness which it seems to me wild game ought to command, far above all vulgar turkeys or commonplace barnyard fowls. Mr. Sloane informed me that his supply, mostly teal and mallards, was coming chiefly from Dakota; that a few came from Indiana and other local country, but that so far the flight was greatly scattered and highly unsatisfactory. He was of the opinion, however, that there would be a good flight and good shooting on our marshes this fall, and that the reason of the dilatoriness of the ducks was the lack of any settled cold weather behind them.

A dealer who displayed a tempting bunch of jacksnipe said that they came principally from Indiana. A few plover had also accidentally strayed into the fold.

Another dealer had some sandhill cranes from Minnesota. The breast of this bird is not bad eating, but I never knew they got into the market as a saleable supply.

Smith & Co. had a fat Michigan bear trussed up. A splinter thrust direct into the fat on his back held up a placard, which made the announcement. The bear was skinned, and not everybody would know what it was.

Another dealer had a bunch of lathy and gaunt marsh rabbits, with feet as big as dinner plates. They didn't look very good to eat.

Yet another man had up a grand bunch of woodcock, and I never saw a prettier or more nicely handled lot of these beautiful birds. They came from Indiana.

No wild geese were displayed on the market, no grouse and no quail, the latter speaking well for local observance of the law at least.

One Hebrew dealer announced to me oracularly that there would not be any shooting this year, either in the Fox Lake system or on the Kankakee. "De ducks is all killed off," he said, "it's ben dwo years alretty sense we hed any shooding of gonsekwendze." Other dealers were more hopeful.

Dakota is reported to be full of market-shooters this fall. The ducks don't get much rest.

I heard that Mr. Roll Organ, of the Maksawba Club—and of divers other clubs also—has started to Minnesota for an extended shooting trip, and that he knew where he was going.

Mr. E. C. Cook and Mr. A. Montgomery Ward have effected some kind of an armistice, and departed on Monday for their Kankakee grounds. Mr. Cook told me confidentially before he left that he "would get even with Ward, if it cost him a thousand dollars." Mr. Ward, just before leaving, remarked to me, in a swift aside, that he "would do Cook up now, if it took his last dollar." Something may drop down at the club house. Mr. Ward said to me, soberly, "Now, in regard to that fish story, we have had our joke about it, and that's all right; but, honestly, it's true, every word of it!" A few moments later Mr. Cook casually remarked to me, with a face notable for its stern gravity, "Now, in regard to that fish story, we have had our joke about it, and that's all right; but, honestly, it's true, every word of it!" It is from reasons such as these that I conclude an armistice has been arranged, to last at least during this particular shooting trip; but I fancy there is a scheme up somewhere. Both gentlemen have added to their life insurance. I cannot see why both these gentlemen should express a deliberate intention to waylay and murder that jolly salesman of sporting goods, Mr. G. M. Holt (alias "Sam"). All that Mr. Holt has ever done, so far as I know, is to expose a few of their nefarious plots against the peace and dignity of sportsman's morals; and I feel sure that this was done not through any wrong motive, but simply for the public good.

I am much interested in watching the progress of amateur photography in connection with field sports. There is yearly increase of perfection in the instruments offered to sportsmen, and I had recent ocular proof of the excellence of the amateur field work which can be done. Mr. Burt Crane, of this city, carries a small box (a "Kodak" camera) in the pocket of his shooting coat. He shows some singularly interesting little negatives of setters at work in the field. He repeatedly made photographs of his dogs while on a point, and then killed the birds afterward. These negatives are delightfully fresh and breezy.

Mr. Fred D. Foss took a complete amateur outfit with him when he started, last week, for his trip to Honduras.

Mr. C. O. Baring, of J. V. Farwell & Co., carries a camera slung to his coat by a clip, and when fishing or shooting never forgets this machine.

Mr. Chester Gurney took his camera to the North Woods of Michigan this past summer, and now shows about one hundred fine camp scenes, landscapes, etc. A number of camp scenes were made by the magnesium light, after dark, and while the boys were sitting by the fire. They are unique and interesting.

General A. C. Ducat, of the Home Insurance Company, shows his novel negatives of himself in his blind, shooting ducks. His camera was adjusted upon the bank, and the shooter in his boat shot the slide by means of a string. The results are clear and lifelike. This is indeed bottling Nature for household use.

Oct. 2.—Heavy rains last night and to-day. Some ducks are reported on the "Sag," about fifteen miles from the city. Heavy storms on the lakes are reported by craft coming into this port.

The meeting held yesterday by the members of the Cherokee Strip Live Stock Association in conjunction with Chief Mays and other leaders of the Cherokee Nation, was one of considerable importance to sportsmen as well as cattlemen. The lease of the association of the lands of the "Strip" has expired, and the present discussion is over its renewal. By the old lease, which was made for a period of five years, the association held possession of 10,000,000 acres of the finest grazing lands, at an annual rental of $100,000. The Cherokees now want $200,000 per year. They should easily command it, and doubtless the cattlemen will be glad to give it. Should they not do so, the question would confront them of finding range for over 200,000 head of cattle; and this they cannot now do. If, however, the cattlemen and Indians should ultimately fail to agree, it is probable that the ousting of the former from the Territory would be followed by an increase of game, since at present nearly all the shooters who go into the Nations do so under the cover of being cattlemen's friends. The preservation of the game supply of the Indian Territory to the very last instant is a matter of importance to every sportsman, even though he should not be favored with a military pass. The game has been literally butchered off in that region in the past few years, and this altogether contrary to and in spite of the stringent military regulation.

Oct. 3.—Mr. S. W. Roth, of the John Wilkinson Co., last week bagged twenty-three jacksnipe and three teal in a day's shooting in Indiana.

Reports come from Michigan of Chicago parties who in September had good mascallonge fishing and deer shooting in the same locality. It might have been better had they waited until later for the latter.

Oct. 5.—Heavy rain has prevailed here all day, and colder weather is predicted for points northwest of us. We may reasonably expect ducks down in good flights soon. E. H.

THE WILD PIGEONS.—Grand Rapids, Mich.—Last June while trout fishing on the Pentwater, Oceana county, this State, I saw quite a number of those now rare and beautiful birds. They were usually in pairs and seemed to be nesting. This was in the vicinity of the great nesting of a few years ago.—S. P. A.

DEER ON LONG ISLAND.—The Long Island deer hounding season extends from Oct. 1 to 10, exclusive of Sunday. An army of hunters have turned out, and the Sayville *News* reports as many as 100 sentinels being on the track at one time. It is the all-absorbing topic of the day. Everybody is talking deer, and nearly every man has seen one, so that it can safely be estimated that several hundred deer have "been seen," but not shot. Four were killed on Monday, Oct. 1, two at Bay Shore and two on the North Side. Ex-Supervisor Robbins shot one and John J. Smith another. Whitman Overton also proved to be one of the "favored few." Wm. Cook and a party of twelve were prospecting in the rear of the Cutting place, when Cook's dog sighted a splendid buck. Another party of forty from Babylon also entered the chase, some in wagons and others on horseback. Thos. Muncey, of Babylon, finally fired the fatal shot, brought down the deer and wounded Cook's dog at the same time. Cook secured half of the buck, which weighed over 200lbs. The balance of the carcass was put up at auction and sold for $10, the money being divided among the forty brave hunters. In another instance Town Clerk LeCluse secured a shot and the wounded deer jumped toward him a distance of 30ft. The animal then bounded away and was lost in the woods. Hunters were plentiful the first few days, but the inexperienced ones lost interest later on, and the old-timers were left to get up in the morning at 3 o'clock and "go it alone."

ARKANSAS.—Little Rock, Oct. 4.—The season for quail shooting opened on the 1st and I tried my hand. We found birds plentiful, but not well grown. The summer has been wet and the cover is simply immense. Some wretch poisoned our reliable dogs Bob and Rip, and reduced us to pups, so we had more trouble than satisfaction with our trip. It is rather aggravating to wade through grass and weeds to your neck and then have a pup chase the birds to the next township. We killed a few, however, and the medical man of the crowd, known as Dan for short, shot Dick in the hand while shooting at a bird. He missed the bird. Turkeys are reported as fairly plentiful, but I have not looked for any yet. Deer have been dying of the black tongue in the western part of this and Perry counties. The mast is good and there is every indication of good duck shooting a little later. It has been too warm for them as yet. There will be but little pleasure in the fields until a heavy frost falls and kills the grass and weeds. The season on quail opens too early. The birds are not grown and rise up like butterflies. I like to hear them when they get up. Do quail breed twice? I have seen full-grown birds and little ones in the same covey. Evidently they were two broods or two coveys mixed together. Last winter I saw in a cage on the street a white quail.—CASUAL.

MASSACHUSETTS.—Whitman, Mass., Oct. 8.—Local sportsmen who have been at Brant Rock during the last two weeks report coot shooting the poorest for several seasons. The flights of black coot have been few and far between and only a few birds together. In previous years when there has been no shooting the fishing has been excellent, but this year there has been no fishing to speak of. Expectant gunners hope for large and numerous flights of coots in a couple of weeks. Gray squirrels are said to be plentiful in the woods of this immediate neighborhood and Hanson. Last year was a large year for partridges and quail, but present prospects promise little shooting in this line. The cedar swamps in this part of the State furnish excellent rabbit shooting and the fun will soon commence. Several sly old foxes have encountered their unexpected quietus at the hands of local nimrods this fall, and more are coming. Much rain has left swamps and woods in rather bad shape, but we look for a drying up season before cold weather.—CHOKE-BORE.

CANVASBACKS FOR BISMARCK.—A game dealer on Walnut street has two interesting telegrams on file. One is dated Berlin, Germany, and is signed by Prince Bismarck. It is not a state document, but a carefully worded order for twelve pairs of canvasback ducks. This is only one of many orders that have been received from the German Chancellor. Alongside of Bismarck's order is another from Wilkie Collins, the English novelist. He has been sending orders to this country regularly for several years past, and it is asserted that during the time he was composing "The Woman in White" he dined exclusively on New Jersey snipe. The dealer has many prominent customers in this country, including a member of the Cabinet, two United States Senators, and several members of the National House of Representatives. Near-by patrons include A. J. Drexel, George W. Childs, ex-Gov. Leon Abbett and Judges Wilson and Arnold.—*Philadelphia Inquirer, Oct. 4.*

MOOSE IN NOVA SCOTIA.—New Glasgow, Nova Scotia, Oct. 4.—*Editor Forest and Stream:* A large moose was killed by the night express near Riverdale station one evening last week. Riverdale is thirteen miles from here on the Inter Colonial-Railway. I had been calling; left home on Sept. 18, was gone a week and killed one very large bull moose, and saw two more; but as the weather was warm and we were a long way from the settlements we did not kill them. I find that the scarcity of snow for the past few winters has had a wonderful effect on the number of moose; they have increased rapidly, mainly owing to the fact that they have not been crust-hunted for several winters. Another fine moose was called up and shot by two hunters, Ross and Cruckshanks, at Sunny Bear last week; this moose had an extra fine set of horns; they were sent to St. John, N. B., to be mounted. More anon.—GLOBE SIGHT.

THE CONNECTICUT ASSOCIATION.—The cases of D. S. Weeks and George A. Baker, of Ashford, prosecuted by the C. A. S. F. P. G. F. S., were tried last week, and the men were fined $20 each for having shot game before Oct. 1. The Association means business from the word go.

A GAME LAW POSTER has been prepared by the Utica Fish and Game Protective Association, giving a digest of the New York laws. It is sent free on application. This is one very sensible way to forward the work of making the law understood, so that it may be observed.

CONNECTICUT QUAIL.—Having spent last week near Lyme, Conn., I found that the quail was very scarce and only to be found in the small swamps that abound in great numbers there. The farmers say that they have seen very few, and lay the blame on the blizzard. With a well broken dog I found it impossible to get many birds, as I was unable to make headway. There were no birds in the open at all; I covered every place there was the slightest chance of finding them in.—A. C. K.

"RED DOG" CAPTURED.—Philadelphia, Oct. 3.—A dispatch received here from Sheriff Dixson, of Rawlins, Wyoming Territory, announces the capture of "Red Dog," the murderer of S. Morris Waln, of this city, and Charles Livingstone Strong, of Rondout, N. Y., the young men who were killed while asleep in camp near Rock Springs, Wyoming, while on a hunting expedition. The dispatch says the murderer is in jail and will be given a speedy trial.

LAKE MINNETONKA.

KANSAS CITY, Mo., Oct. 1.—We had listened to the Major's marvelous stories of catching immense quantities of immense bass and pickerel for a period of some three years. Our own catch occasionally of half a dozen or a dozen 2, 2¼ and sometimes a 3½lb. bass, a few pickerel and forty or fifty croppies seemed to grow more and more insignificant. We were forced, actually forced, this season to accompany the Major to Minnetonka. There was no excuse. Rates were nominal and fishing tackle cheap. For had we not had a big fire, by which one of the best sporting goods houses in the Far West was laid in ruins? And Ed. Menges was selling the salvage at almost any price; and, by the way, I guess Kansas City boys, as a rule, have now the cheapest lot of fine tackle ever picked up in one season. We supplied ourselves with ten years' fishing rations of lines, flies, hooks, reels, sinkers, and all manner of boxes and paraphernalia. Round trip tickets were bought for Major, wife and daughter, Geo. C., Sam and Tile, Kansas City to St. Paul and return, good until Sept. 30, via Albert Lea route. Rods, telescope, trunks and boxes "all aboard," and the 3d of July we rolled out of the depot for the north fishing. The 4th of July morning found us in Minneapolis hungry and tired, Tile sick with nausea, and all more or less cross, for we did not have the smoothest trip on account of necessity of changes en route and poor sleeper accommodations. A rainy morning and crowded cars from the city to the lake; but once on board the steamer St. Louis we all felt better, and enjoyed the ride to Chapman's at the upper lake. Visions of big bass and 15lb. pickerel were not lost in the magnificent scenery which it was my privilege to enjoy for the first time. The Major hugely enjoyed pointing out the different spots where he had "walloped out" these mighty denizens of the deep; off Crane Island he had been very successful, and what he could not catch with a line had accommodatingly jumped into the boat for him. At Chapman's we found good rooms well screened from mosquitoes, good table, good boats, and plenty of bait of all kinds.

The first afternoon's fishing was light, and more for reconnoiter of the ground than anything else; fears were well grounded for poor fishing on account of the extreme high water in the lake, it being some four feet above ordinary height. My record book is mislaid, so I will have to give the detail of our various catches from memory.

The next day Sam and Tile started early, having Dewey to row. Dewey has to use hooks in place of one arm, but we found him a rattling good oarsman. After a fair afternoon's work we returned to the hotel with a long string of fine bass and pickerel. Our hopes ran high, but that catch proved the best, a 4lb. bass by Sam and 8lb. pickerel by Tile being the largest one. We remained at the lake about eight days; in the forenoon we would all fish for the big bass, and in the afternoon anchor about three hundred yards from the hotel to toy with croppie and sunfish. It was in the afternoon we had the most sport; the sunfish and croppie averaged ¾lb., and gave our light 8oz. rods quite a tussel at times, for we would occasionally hook a good bass or large pickerel, and one especially good afternoon gave a return of nearly 100lbs. of fish, one pickerel of 7lbs., one croppie of 1¼lbs.; and George Case beat the record by taking about twenty fine hornpout or bullheads. These are a specialty with George on all occasions.

The Major and George added zest to our amusement by a discussion as to the wind; it never was and never will be settled by them which way the wind must blow to get the best results a fishing. At night we always knew what was the matter. "I told you we could not get a bite with the wind in the east," and "you was all the time pulling that anchor up and down; do you suppose fish will bite with such a racket?" The Major has many a time informed us that "those little poles are no good." We have at last succeeded in his reform and everything now is a rod, be it seven pounds and twenty feet long or seven ounces and ten feet long. A reel he has no use for, neither for a float. His majestic form of six feet three standing very erect in the bow of the boat casting a frog of a quarter-pound weight at the end of a twenty-foot line, it being at the end of a twenty-foot pole, (I mean rod) was the cynosure of all, but the grandest of all sights was the infinite grace with which he administered the *coup de maitre* and "walloped" the unfortunate fish into the boat, "There, didn't I tell you so?" when our poor little rods were nearly bent double by having to pull up some seven or eight cubic feet of bass weed besides the fish, and all but the weeds would get away. The Major is about right; light tackle is good for clear water, but when bass and bass weeds and pickerel and pickerel grass become one great floundering mass then it needs poles, clothes lines and a derrick to safely land the lot.

Taken altogether, the early fishing at the lake this season was bad; further north it was good but the reports of those who tried it were that the mosquitoes ruined the pleasure, and judging from the knots on the boys' noses and cheeks I guess they tell the truth. One reason for poor fishing was the lateness of spawning; I presume the high water and cool weather had more or less to do with this.

George C. distinguished himself by having the longest tussle after a fish "struck." It took him thirty-five minutes to land a dog fish, a "beauty," but George swore it was a "California simon."

We had a nice time and all the fish we could eat, the weather was all that could be desired and as a trip I am ready to go it again. Since our return we have put in the summer variously, I spent some five weeks catching trout in the Colorado, Sam has kept score cards and been shouting for the cowboy baseball team, but the Major and George C. have beguiled their time at Cooley Lake, a nice resort close to home where a few years ago were plenty of fine bass, but this season they had to content themselves with bullheads and bass weeds but no bass.

Teal, (bluewing) are now plenty and the boys are having much sport; the fall croppie fishing is just commencing, chickens are numerous in the Territory and quail plenty near home, our season is open for the latter the first of November. TILE.

P. S.—Particular attention is called to the Major's idea of landing big fish, he invariably refers to it as "walloping out;" and the Major can do it, for he has a specimen head of a seventeen pound pickerel which he "walloped." T.

DAYS IN MICHIGAN.

"LET'S go to Old Mission for a month." This from the Dominie's wife as we sat on the porch watching the Fourth of July procession. All the night before firearms had made the night hideous. With the first flush of day the din had taken on a still more diabolical character, and we fully realized what all sensible people know, that the country's natal day is getting to be a grand nuisance, to the delight of the unterrified small boy and the man who deals in death-dealing fireworks.

"Certainly," said the Dominie without a moment's hesitation, ready to go anywhere out of the endless din.

The first of August found us hurrying northward toward Old Mission, which lies, half village and altogether rural, at the end of the long shaft of land reaching northward into Grand Traverse Bay. I had supposed all that region to be wild and full of game. But alas! for my anticipations, it proved to be a well-settled farming country. There is a fairly good supply of partridges on the peninsula, but the open season for these does not begin until September, the time we came away, so I had little use for my new Daly three-barrel gun. From the western shore of the peninsula we could look across the west arm of the bay to the hills, only four miles away, which skirt the bay shore and behind which lies Carp Lake, where "Kingfisher" and his party have fought black bass and mosquitoes. I wanted to go on to the scene of their conflicts, but instead went over to Elk Rapids and fished in the lakes and streams east of there.

One of the most delightful of these trips was up to Rapid River. Taking the little steamer Morley at 11:30 in the morning, I was in Elk Rapids at 12:30. The Ida, a mite of a boat, soon after had steam up, and we ran up the river to Elk Lake. Crossing this beautiful sheet of water and running through Round Lake we entered Torch River, and I left the boat at the bridge, about two miles up. From here I was to walk to farmer Clemmens's house, four miles east. The bridge keeper's wife, a good-natured, talkative old body, gave me directions and then groaned a good deal as she took her place beside her husband at the pole end to swing the bridge back into place. No wonder! A big strong man who makes his wife a beast of burden ought to be shot.

My walk was one which brought strange feelings. I had never been before in the dense Michigan woods. The road plunged into the heart of the forest. The sombre hemlocks and giant maples touched hands and locked fingers far up the narrow roadway, which wound on I was not certain whither, for the directions given me were not very clear. A wagon load of Indians had gone down the road an hour before, and I wondered how civil they would be if come up with. Night was coming on, and in the silent forest the rain began to fall with a melancholy whispering among all the leaves. The place seemed more solitary than ever, when I came out into a little clearing, where three houses with boarded up windows stood silent and tenantless. Here a new perplexity arose. There were three roads running in decidedly different directions. I had forgotten which I was to take. But fortune favored me, and the one I chose proved the right one. Farmer Clemmens's wife came in from weeding the garden and said they could give me bed and board, such as they had; and they treated me well while I staid. I could hear the water roaring down out of the mill dam not far away.

At daylight the next morning I was casting my line out on the stream. This stream is Rapid River, and strikes the angler at once as an ideal trout stream. The water is as clear as crystal, spreading out in places under the roots of countless trees, and affording innumerable and splendid-looking places for the shy fish. The fish themselves are moderate in size, with now and then a few ranging from 1 to 3lbs. These last are not as numerous as the angler might wish, but the smaller fish are gamy and the sport is very fair. I spent the time the first morning fishing just below the race, where the waters rushed out from the sluiceway. Here they took the hook freely, and by 7 o'clock, when breakfast was to be ready, I had thirty fair-sized fish in my creel. There seemed to be two kinds, one with all the brilliant gold and white and vermillion of *Salmo fontinalis*, the other had no yellow or golden color; the belly was whitish gray and the vermillion spots were less brilliant.

After a plain but hearty breakfast, I returned to the stream and fished down the current. There was not much chance for long casting. Overhanging trees made it necessary to crawl out on the logs, which every few yards lie across the stream or just under the surface of the current. Wherever the current burrowed under a log there was sure to be a fish. I did not travel over a quarter of a mile during the day and at night I had in all a hundred fish. I had what in that region is considered the standard day's catch for a good fisherman, and this was my first experience in trout fishing save a few hours the week before further down the same stream. Farmer Clemmens praised me as a skillful fisherman while he

showed me how to pack the fish down for safe keeping until I got back to Old Mission.

The next morning I had that saddest of all experiences, the losing of my largest fish. I stood on a log lying lengthwise in the stream and made several casts toward the end of another log under which the current dashed with a swirl. At length the line straightened out as if I had hitched on to the log itself. But the log, or whatever it was, suddenly seemed alive. There was a surge and a bending of my bamboo and then the upward spring of the rod brought what I believe to have been a 3lb. trout out from his lurking place. At length he was within reach of my hand, but my footing was not very secure and before I could secure him the hook broke out, my fish was gone and I was very near sliding into the water myself. One who has never been in a like position and has never suffered a similar loss can not realize how dismal and worthless this world seems at such a moment. I shall go back after that fellow some day. During the day and in an hour's fishing the next morning I brought my total catch up to 210. In a very comfortable frame of mind I mounted a load of tan bark with Mr. Clemmens and rode back to Torch River bridge and caught the boat for Elk Rapids. There is very good bass fishing in Elk Lake which I subsequently tried, the best being just where the lake runs into the river. Fishing from the channel bank in water from 20 to 30ft. bass can be caught running from 3 to 5lbs. in weight.

RICHARD GEAR HOBBS.

MORE MAINE JIGGING.

Editor Forest and Stream:

The New England trout season is over and the rods and lines are put away till the snow and ice are thawed again. In Maine the season closed mid snow and rain. Indeed the rain had prevailed nearly every day for a month. Such weather is poor for trouting, as fishermen have generally found to their displeasure. Snow in September is nothing uncommon on the last days of that month in the north woods of Maine, but the freezing of ice to the line is not common in fly-fishing, even on the 29th day of that month. But such was the real fact this year. Mr. N. C. Manson, with his friend Mr. Young, both Boston iron merchants, were fishing on the Little Diamond Pond, on the 29th of September with their fingers so cold that gloves came in play, and ice actually made on the lines. In spite of the weather they caught trout, a fair share of them. But generally the fall fly-fishing has not been satisfactory, the weather probably being the chief cause. The trout have evidently sought the spawning beds early, and hence they have not been found on their usual fall feeding grounds. Generally the lakes have been very high, especially the Rangeleys, Richardson and Moosehicmaguncic being full to the brim. On the last days of the season the superabundance of rain raised the ponds and streams almost to the spring snow-melting pitch, and this nearly destroyed the late trout fishing. But the hopeful angler can console himself with the idea that more of the trout will be left for the spring next year. Certainly they have not suffered badly during the fall campaign.

But again there are dark stories about trout being jigged at the Upper Dam. It is certain that in some instances the gates have been started to please such sportsmen as had the money to pay for the privilege, but in every case these sportsmen have pretended that the trout caught were always with the fly. The story reached Warden Huntoon of Rangeley (so I hear, but did not see the warden) that trout were again being illegally taken at the Upper Dam, and he came down there about Sept. 29 and made some of the sportsmen produce their trout for inspection. The report has it that the warden found no signs that the trout had been taken contrary to law, and he returned the fish. I was at the Upper Dam myself, on Sept. 27, for a short time in the morning only. There were then only three or four sportsmen there, and they were legally throwing the fly below the dam. Among them was Dr. Jones of Norway, Me., an old time visitant to this celebrated trout resort, and a gentleman who would scorn to take a trout other than in a legal way. But it is a pity that there should be even a suspicion that trout are taken with the jig at this point, the home and breeding ground of the largest *Salmo fontinalis* known, and the State of Maine should station a warden there all the season. This warden could also look after the interests of the deer in the Richardson and the Beaver ponds, where it is certain that jacking out of season has been tried many times this summer, but generally without success. The latest report that will interest the sportsmen, who flock to this region, is that the Union Water Power Co. is not to keep open house at the Upper Dam next season. This is only a report, however, and may not be true.

SPECIAL.

STRIPED BASS NEAR NEW YORK.

THE season for this fish about New York city has been a good one, better than for some years. This is credited by many anglers to the efforts of the Shellfish Commission in enforcing the law against the pollution of the waters by the sludge acid from the oil refineries, and the law against dumping refuse of all kinds in the harbor and up the East River. The season for this fish has held on later than usual, and some are still taken. On the North River side they have been captured along the river front of the city from Eighty-ninth street up to Croton Point. The best catches have been down in Prince's Bay, where some have been taken that reached twenty pounds. Fish of three or four pounds have been plenty in the Bay, and also up the Sound.

On the 2d of this month Mr. Oliver T. Hewlett took a striped bass in Davison's mill pond, East Rockaway, which weighed 24lbs. The fish was taken with rod and reel and was on exhibition at Mr. Blackford's for a day or two. It is some time since such a fish has been taken in that locality, which is well fished by the city anglers.

Shedder crab, sand worms, and shrimp have been the usual baits, the latter being used where only the smaller fish are looked for. The striped bass fishing may hold good for two weeks yet, according to all appearances, but the fish will soon cease biting and go elsewhere. Years ago the vicinity of High Bridge, Harlem, was a famous place for striped bass but, they were driven from there by the refuse from the oil works at Hunter's Point, and if the practice of dumping this vile stuff in Newtown Creek is suppressed, the East River may again become a favorite resort for the fish as it was in the days of Genio C. Scott, who made the locality famous.

CHICAGO AND THE WEST.

OCT. 2.—Mr. J. M. Clark, in charge of the angling department of the well-known John Wilkinson Co., accompanied by Charley Porter, of Blomgren Bros. & Co., spent a day last week at Silver Lake, trying to round out the fishing season. They found frogs of no use; fishing with minnows they took half a dozen fine bass, although the lake was too rough for successful work. Mr. Porter hooked a small-mouthed bass—locally known as the "tiger bass"—which was thought to weigh 5lbs. It escaped after a long fight.

Mr. McFarland, a South Water street merchant, took seventeen good bass in Lake Maria last week. Mr. Shepherd a week ago, at Lake Maria, took a 7¾lbs. large-mouth bass. I believe the tackle used in their last two catches was not orthodox in fineness, and this detracts from the interest of the record. We ought to have a law regulating the weight of rod and fineness of line. People should be legally instructed that they are missing all the fun there is in angling when they use a cod line and a pole. Moreover, no self-respecting bass wants to be caught that way. It's all a mistake.

Mr. Watson of this city, Mr. Hogin of La Crosse, Wisconsin, and a friend, lately concluded a grand fishing trip on the Mississippi, at La Crosse. These gentlemen took 127 bass in two days' fishing, using only fly-rods and flies. The flies used were the raven, the bluebottle and the "Read," the latter much like the Seth Green, except for a heavier body. Sixty-five of these bass came to Chicago, and some of them were glorious fellows. At certain stages of the waters the river at La Crosse affords wonderful sport.

Wild brook trout are displayed in large quantities on the market here—another obvious shortcoming of the law. No man ought to be allowed to eat a brook trout he has bought. If he can't catch him or isn't a good friend to a man who can and will, he ought not to eat him. It is a shame.

In passing by a west side butcher shop last week I noticed at the window the mounted head of a muscallonge, the largest I ever saw. He was so old he had false teeth. On making inquiry I found that this monarch was taken six years ago in the St. Lawrence River and weighed when caught a trifle over 82lbs. The effete East has the record, I fear. The largest muscallonge I have personally heard of from the Eagle waters this year was 39½lbs.

There is on Wabash avenue of this city a very gaudy window display of a millinery store, which shows a great assortment of many colored feathers, plumes and bird breasts in hat trimmings. I was amused in passing there yesterday by the comment of a slightly exhilarated individual who seemed to be a sportsman or kin thereto. "S-say, Bill," he exclaimed, as he stood before the window, "g-get on to ze s-salmon flies, wontche!" And the remark was apt.

Oct. 6.—Messrs. Sutherland, Hoge, Tiffany and Thompson have just gotten back from their trip to the Eagle waters. They report an eventful and pleasant outing, with plenty of results. They took a number of muscallonge, and I hear that some scaled between twenty and thirty pounds, though I have not seen the catch, and believe that a great part of it was necessarily left behind, owing to imperfect packing facilities. Bass also were abundant.

E. H.

THE TOBIQUE MANSLAUGHTER.—As intimated in our last issue the jury at Andover, N. B., in the case of Phillipine and Trafton, brought in a verdict of manslaughter for the killing of Mrs. Howes. They added to their verdict a strong recommendation to mercy. Phillipine and Trafton were each sentenced to fifteen years in the pentitentiary.

Fisheulture.

WORK OF THE WISCONSIN FISH COMMISSION.

BY JAS. NEVIN, SUPERINTENDENT.]

[Read before the American Fisheries Society.

THE work of artificial propagation of fish in the State of Wisconsin is no longer an experiment in the minds of the people of our State. When the good work of restocking our streams and lakes with their native fish was first attempted we did not meet with much encouragement from many parts of the State. But with perseverance and successful operations the old feeling has vanished, and the cry from all over the State is "more fish," until now we are unable to supply the demand, even to that of German carp.

First in rank comes the pride of all waters, brook trout, and of these fish, most every county in the State has received a portion of the 2,255,000 fry that have been distributed this present season to 200 applicants, and the supply was insufficient to fill the demand, which at the first of the season was 4,720,000 fry, which were asked for by 286 applicants, and now we have nearly 100 orders on file for next season's distribution, and I dare say this number will swell to 350 orders before the shipping season begins next season.

Next comes California mountain, or rainbow, trout, which have done remarkably well in some parts of the State, and are prized even as high as its rival in beauty and delicacy, the brook trout, while in other parts they rank inferior. These rainbow trout seem to abandon the small streams and seek the larger ones, and the rivers, where they appear to thrive wonderfully. A gentleman of good authority, from St. Croix county, informed me that he caught a two-year-old that tipped the scales at just 4lbs., and I could relate several instances where they have been taken at that age weighing 1½ to 3½lbs. We have just begun the distribution of these fish, and out of the 183 orders now on file I hope to be able to fill 150 of them with about 1,750,000 fry. All orders remaining unfilled will be filled first the following season.

Owing to the extreme high water in the Fox River this spring, where I collect my supply of wall-eyed pike eggs, I have been unable to procure a full quota, but have now in the hatching jars at Milwaukee enough to bring forth about 8,000,000 fry, which will be eagerly captured by the 220 applicants whose names are now on file. Since we have begun restocking our numerous lakes we have met with success, and now reap the harvest of our endeavors, by reading confirmed reports of success from different part of the State, and still continue to sow.

The present season I placed in several inland lakes 800,000 Mackinaw, or lake trout, the eggs of which were collected in Lake Michigan, and were hatched at the Madison Hatchery. I do not approve of this method of stocking lakes with lake trout hatched in spring water, for I think it can be done with less labor and expense by collecting large quantities of eggs and carefully spreading them on the shoal reefs of the lakes intended to stock, and let them hatch and take care of themselves.

Our work on whitefish has not been as extensive the past season as formerly, for we were unsuccessful in getting a full amount of eggs, on account of the stormy weather on the lakes last fall, and a few of what we did get were touched by the frost, but have succeeded in hatching 16,000,000 fry, which have been deposited in the waters of Lake Michigan and Green Bay.

It is very interesting to know that the Wisconsin Fish Commission has at last got the good will of the fishermen around the lakes, and that they are beginning to realize the benefit of the work done by the Commission. There has been more whitefish taken during the past winter and spring than any season in the last ten years. I heard a fisherman remark the other day that fishing for whitefish was beginning to look like olden times. Ever since the pound net has been in existence the fishermen have taken out the small whitefish faster than the several hatcheries could put them in. I have seen as high as 2,400lbs. of small fish taken out of one pot, and there were not ten fish in the lot that would weigh a pound each. It is now unlawful in Wisconsin for a man to have in his possession a whitefish of les than 1lb., dressed, or 1½lb. undressed, and I am proud to say that the law has given entire satisfaction. The fishermen have always said that whitefish would not live after being caught in the meshes of a net, but last fall, while collecting spawn, I saw thousands caught that had the marks of the net on them, which proves that whitefish are not the delicate little fellows they have been represented to be.

The value of the lake fishing industry, as reported by the fish wardens to the president of the Board, for the year of 1887, are as follows:

Number of pounds caught	4,460,015
Value of fish	$271,269 78
Number of nets	12,750
Value of nets	$161,860 00
Persons employed	1,300
Number of boats	700
Value of boats	$177,285 00

Which shows that the fishing interests of the State of Wisconsin are worth protecting.

In conclusion, I will say a few words on carp and carp ponds. Of all fish I ever tried to catch by seining, carp are the most difficult; for when they find themselves surrounded by the net, if they can't get under it they will leap over it. As the temperature of the water at the hatchery was too low to successfully raise carp, the Commission leased a breeding pond, located about two miles from the hatchery and covering about two acres. In the spring of 1887 I placed in this pond our large carp, and in May had a lot of willows cut and placed in the pond for the fish to spawn on. One day I went to the pond for some large fish for an aquarium, and as the pond could not be drawn down, I thought I could soon catch them by seining. But we seined two days and did not get a large fish.

Another day, later in the season, we went to the pond for some fry to ship, and my two little boys, aged five and eight years, went along to pass the time away playing around the pond. Before beginning to fish, I had all the willows taken from the water and placed upon the bank, and, to amuse themselves, the boys rolled some of the willows back into the water. After some time we came to where the brush was to make a haul, and as we began removing it, were surprised to see numerous small fish dart from under the branches. Without taking out any more of the brush, we carefully surrounded it with the net and were very much surprised when we drew it in to take out of it 5,000 small and fifty large carp. After taking care of the fish, we soon replaced the brush at about a dozen different places around the pond, and in this way we could catch all the fish—either large or small—we wanted, as they seemed to seek the brush for shelter and to hide.

I do not think there would be the large losses of carp in winter, if in the fall people would place a lot of brush in the center, or deepest part, of their ponds, as the fish would naturally seek the brush and not the shoal water, and thus avoid being frozen in the mud. People who have carp ponds that cannot be drawn down, will find this experiment beneficial in catching their fish as well as serving as a protection.

MADISON, Wis.

RAINBOW TROUT IN ENGLAND.

IT is a singular fact that the California rainbow trout, which our Eastern fishculturists are abandoning, seems to be a greater favorite in England than our beloved *fontinalis*. In our Eastern States the complaints against this fish are that it will stray off down stream and seldom come back, and that its eggs do not yield anything like a fair percentage of impregnation.

Mr. W. Oldham Chambers, Secretary of the National Fishculture Association, London, writes to a fishculturist on this side as follows:

"I am delighted with the rainbow trout, *S. irideus*. There is no trout grown in England that can compare with them in the rapidity with which they attain flesh; they are easily cultivated and tamed. I can at any time bring 800 yearling rainbows around the edge of the pond and make them feed from my hand and follow me like chickens. My three-year-olds are the same. They are non-migratory, rise to the fly, and are particularly gamy and excellent eating. Prof. Baird did a good turn for this country in sending me over these lovely fish. They are far superior to your Eastern brook trout, *S. fontinalis*."

Mr. Chambers would be a long while in convincing our American anglers and fishculturists of his last statement, yet, as is often the case, transplanted animals often do better or worse in their new homes, so it is possible that in English waters the rainbow trout may be the better fish. He is not alone in condemning our brook trout in English waters, for it has not found favor over there, because it is said to be tender and to leave the streams where it is planted. We will be glad to learn what success he has in impregnating the eggs of the rainbow trout, and it will be curious if this fish breeds better there than in our Eastern waters.

UNCLE LISHA'S SHOP.—The Montreal *Star* says that "Uncle Lisha's Shop" is the "best book of American humor since 'Tom Sawyer.' Sketching the characters who nightly assembled at an old cobbler's shop in rural Vermont forty years ago, describing their sport and relating their yarns, Mr. Robinson has written chapters of delicious fun. That he has command of a rare vein of pathos is shown in his accounts of the search for a lost child and of Uncle Lisha's removal to the far West. One of Uncle Lisha's friends is a certain Antoine Bassette, from this Province, who managed even in Yankeeland to keep his end up, and he tells tales of raccoons, of deer and other game quite as wonderful as any of his neighbors' stories. Mr. Rowland E. Robinson is a welcome addition to the band of American humorists, most of whom, truth to tell, seem to be pumping very hard, where the only tolerable performance is to let a natural spring have its way."

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

DOG SHOWS.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 15.—Third Annual Meeting of the American Coursing Club at Great Bend, Kan. F. K. Doan, Secretary, 1210 Olive street, St Louis, Mo.

Oct. 23 to 27.—Meeting of the National Coursing Association, at Hutchinson, Kansas. M. E. Allison, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6578.**

BEAGLES.

Editor Forest and Stream:

Controversies are to me detestable and I seek them not, but avoid them on all occasions if such avoidance does not conflict with my sense of right and justice. Undeserved and bigoted attacks on either dogs or owners deserve the condemnation of every right-thinking lover of the canine race. Cowardly, to say the least, are such attacks if hidden under the cover of a *nom de plume*, showing the lack of moral courage of the writer to express his views publicly under his own name.

In your issue of Sept. 27 "S. Reicnaf" tells your readers what little he knows and what a great deal he does not know about beagles, and especially champion Bannerman. It is perhaps not in good form that I, as the owner of the little champion, should take up the cudgel for him; in fact, this is unnecessary, as Bannerman is too well known to the beagle fraternity proper to require any defense. Yet for the benefit of those who are constantly being added to the ranks of beagle admirers and who are not fully acquainted with the ways of the beagle world, I think it my duty to defend my dog and correct the misleading statements of "S. Reicnaf."

What his opinion is of Bannerman and the different strains of beagles I care not, and deem his criticisms unworthy of comment. Only to champion Bannerman's record as a stud dog shall I refer. "S. Reicnaf" credits Bannerman with having "produced but one really good dog and this one has since gone to pieces." Royal Krueger, I take it, is the dog referred to. Yes, he is a good one, and many more such has the little champion produced. Royal Krueger, as far as quality is concerned, has not "gone to pieces," and he is to-day as good, if not a better dog than he was when he made his illustrious debut at Philadelphia, and only to lack of care and judgment of his owner were due his subsequent defeats. At the late Buffalo show one of our most prominent and reputable beagle exhibitors, who himself had an entry in the open dog class there, said, "Royal Krueger should have won first hands down." This does not look much like "gone to pieces."

There is a son of Bannerman's on the Pacific coast who has been shown twice at San Francisco and who won first on each occasion, and of whom the popular judge, John Davidson, who, I think, judged him on both occasions, said "he is one of the best beagles I have ever seen." So he must be "a really good dog" also.

My own Krueger's Dot, winner of first and special at Cleveland, 1886, and second and brace special at Newark, 1887, thus beating a large field of grand bitches and only beaten by one or two points by beautiful champion Lou, is a daughter of Bannerman. On more than one occasion have I refused to put a price on this bitch. Surely she is "a really good one."

Sweet Venus and promising Adonis, two of Bannerman's get, and winners of first in puppy classes, Pittsburgh, 1887, could not have been bought at any price from their owner, and would have made their mark on the bench, but grim show-distemper cut their career short.

In my pack there are five or six little Bannerman bitches, which for uniformity, quality and beauty will compare favorably with a like number of any other dog's get.

And so I might continue to enumerate "really good ones" which champion Banner has produced, and there are lots of others of which I have lost sight and of whom their owners can speak best.

But let this suffice. My object is not to seek free advertisement for my dog. He is not for sale, if he were I have a standing offer for him higher than any beagle has been sold before at, as far as I know; nor do I care whether Bannerman serves another bitch outside of my own kennel or not.

As to his beagle quality his record on the bench will speak for itself. According to "S. Reicnaf" such authorities as Dr. Twaddell, Stovell, Sloan, FOREST AND STREAM and other papers are all duffers who are bigoted in favor of anything English, you know They know nothing about beagles; they did not credit the dog with all the good qualities they did because he possessed them, but because he was imported! That's rich and very complimentary and I am somewhat surprised at the editor of the FOREST AND STREAM for admitting such imputations and bosh.

"S. Reicnaf's" assurance that he has not the slightest grudge against Bannerman or his owner is quite superfluous. Such remarks intimating the possibility of any sane man bearing a grudge against an inoffensive animal sounds childish, to say the least. To you, readers of the FOREST AND STREAM, who are apt to be influenced by the effusions of these would-be authorities, let me say not to lay too much stress on any such effusions unless you are convinced of the writer's knowledge of the subject. One writer tells you that show dogs are, as a rule, no field dogs, so beware of show stock and buy my stock which can't win, but are great hunters. The next wiseacre tells you that champion Bannerman, of show reputation, possesses "a grand body, good feet, tail and coat," and that of his thoroughbred beagles a son of Bannerman is the best worker in his pack, but warns you against breeding to this dog because he don't like his head.

Remember, readers, that such are mere individual opinions, and as we often in every day life meet with views contrary and nonsensical, so these which we read, alas, too frequently, through the columns of the sportsmen's press.

I have all due respect for such gentlemen as Elmore and Cameron, etc., because they were judicious breeders, infusing new blood into their stock when needed. Others have bred one strain down until a large majority of gunshy beasts was the result.

Breed your Rowett or other inbred bitches to just such dogs as Bannerman and you will strengthen the nervous system of the progeny, and will bring your stock nearer the original, genuine type of English beagles of good Queen Bess's time. A. C. KRUEGER.

OAKLAND, Pittsburgh, Pa.

COURSING CLUB MEETINGS.

CHICAGO, Ill., Oct. 3.—Through a Western friend I learn that hares are fully as plentiful as ever on the grounds of the American Coursing Club, near Great Bend, Kansas. The range is fed down close, and will afford good running. Fully one hundred per cent. more dogs are entered this year than last, and equal increase in attendance is promised. Barring bad weather, the meet of Oct. 15 will be the greatest of its kind ever seen in this country.

Dr. Van Hummel has arrived at Great Bend, overland from Omaha, with eight dogs. He expresses himself as confident of winning all the stakes easily.

Dr. J. Irwin Royce has twelve dogs in training at Great Bend, and expects three more. Dr. Royce is this week at the Kansas City bench show.

Mr. H. C. Lowe thinks he has the champion in his recent importation, which he has put in rigid training near Hutchinson, Kansas. Mr. Lowe is at present writing at Kansas City in official capacity at the bench show.

There has been a mysterious and deplorable delay in the announcement of the judges for the coursing meet, and there are even hints at an unwarrantable secrecy in the matter. It is due to nominators that they should know the judge under whom they are to run, and no real interest of the club can be subserved by suppressing such information. I have just heard unofficially that Mr. Jos. Holloway has been selected as one of the judges. Mr. Holloway judged at the first meet of the club, in 1886. If the club have really secured him for this year, they certainly need not be ashamed of their choice. A letter from Dr. Royce, dated Sept. 30, says: "We have not settled definitely about the judges yet, but will probably engage Mr. R. D. Williams, of Lexington, Ky., as one of them."

At this date Mr. Doan, secretary of the club, has not spoken definitely as to the choice of judges. There should certainly be two, as the work is quite too much to ask of one gentleman. Doubtless the delay in choice is largely due to natural and unavoidable causes, but once it is made it should be at once announced.

There will be 3,000 visitors at Great Bend for this meet, and the affair will be one of great interest. E. H.

HUTCHINSON, Kansas, Oct. 1.—*Editor Forest and Stream:* Please publish in your notices of field trials the running meeting of the National Coursing Association, at Hutchinson, Kansas, on inclosed grounds, from Oct. 23 to 27, 1888, inclusive. M. E. ALLISON, General Manager.

LESSONS FROM BUFFALO.

Editor Forest and Stream:

In my former letter under the above heading which appeared Oct. 4, you state "Ten members of the N. D. C. had no grudge, etc." It should have read "The members, etc." Kindly correct the error.

In again looking over the catalogues of the late Buffalo and Syracuse shows, I find there were awarded at the latter 97 first and 48 second prizes; in all 145. By comparison I find out of these, 17 first and 7 second prizes were won by independent exhibitors who showed these same dogs at Buffalo. Also that 25 first and 19 second prizes were won by members of the N. D. C., so the division is as follows:

	1st prizes.	2d prizes.
Total prizes awarded at Syracuse.....	97	48
	1st prizes.	2d prizes.
To N. D. C. dogs.....	25	19
To dogs exhibited also at Buffalo.....	17	7
Total.....	42	26
	55	22

The records therefore show that the N. D. C. and independent exhibitors won 68 prizes while the A. K. C. and its exclusive friends won only 77. The true sportsman sentiment expressed by the N. D. C. in showing at Syracuse is in marked contrast with the actions of the boycotters who scorned Buffalo. I have given the above statement solely to convince the public what a laughing stock a certain horse paper has made of itself in predicting the dogs at the Buffalo show would be gathered in from the streets.

I notice at Syracuse show in the setter classes there were 3 champions absent, 3 champions "not for competition" and 10 other absentees. Also that 2 champion pointers were "not for competition" (there were but 4 in all) with 6 absentees in open classes. Why was it?

A LOVER OF FAIR PLAY.

EASTERN FIELD TRIALS.—*Editor Forest and Stream:* I have made application for reduction in railroad fares, and for free transportation of dogs to and from points north and south of High Point, N. C., and hope to receive same in a few days if granted, so that all who are going to attend the trials will upon application to me, recieve a certificate entitling them to said reduction and free transportation of dogs.—WASHINGTON H. COSTER, Sec'y E. F. T. C. (Saratoga Springs, N.Y.). [At the time of writing this, Mr. Coster advises us, he had received 29 setter entries, 27 pointers and 5 champion class,]

DANBURY SHOW.

[*Special Report.*]

HAD the announcement been made that prizes of $5 and $3 for first and second were offered at Danbury, Conn., show, the entries would have been decidely larger than was the case. The classification was full and complete, dog, bitch and puppies for each breed, with the above prizes for the aged classes and $3 and $2 for puppies. As the managers propose duplicating the prize list next year, and no charge is made for entries, it would be well for exhibitors to look out for Danbury dates next October, and support such liberality. Spaniels and collies were the strongest classes, the Ideal and Warwick Kennels dividing the honors and cash in the former breed and Mr. A. R. Kyle making a clean sweep in the latter. The winning collie bitch Adela Doon was looking better than at Buffalo; but if it was not for the accidental deformity of Hebe of Nesseldown's foreleg she would have been an easy winner. She is good in head and ears and has now a much better coat than when shown in the spring. Mr. Mead's mastiff bitches were particularly noticeable for their superb condition. The Warwick Kennels made a vast improvement in the English setter and pointer classes over last year's display, and their young pointer, Tory II., looks like developing into a good one. Mr. R. B. Sawyer's bulldogs are well known, and the other exhibits do not call for particular notice.

AWARDS.

MASTIFFS.—*Dogs:* 1st, G. E. Sears's Kaiser Wilhelm; 2d, C. Island's Raleigh. *Bitches:* 1st and 2d, Herbert Mead's Aydah and Chaplet.

ST. BERNARDS.—*Dogs:* 1st, E. H. Hinsman's Le Roi. *Bitches:* Prizes withheld. *Puppies:* 1st, Miss Lulu Peck's Nero.

NEWFOUNDLANDS.—1st, J. M. Bailey's Nig.

POINTERS.—*Dogs:* 1st, Warwick Kennels' Tory II.; 2d, Fleetfoot Kennels' Spot Dash. *Bitches:* 1st, Fleetfoot Kennels' Belle Randolph. *Puppies:* 1st, Warwick Kennels' Tory II.

ENGLISH SETTERS.—*Dogs:* 1st and 2d, Warwick Kennels' Blue Prince and Warwick Rocket; 3d, C. Knott's Ned. *Bitches:* 1st, Warwick Kennels' Princess. *Puppies:* 1st, Warwick Kennels' Warwick Rocket.

IRISH SETTERS.—Prizes withheld.

GORDON SETTERS.—*Dogs:* 1st, H. Hull's Nep; 2d, F. M. Robinson's Mose. *Bitches:* 1st, F. M. Robinson's Snipe.

FIELD SPANIELS.—*Dogs:* 1st, Ideal Kennels' Pearl Lake Obo. *Bitches:* 1st, 2d and 3d, Ideal Kennels' Ideal Black Pearl, Daisy and Brownie.

COCKER SPANIELS.—*Dogs:* 1st, Warwick Kennels' Warwick Obo; 2d, J. Bliss's Don. *Bitches:* 1st and 3d, ideal Kennels' Ideal Diana and Ideal Obo; 2d, Warwick Kennels' Black Countess.

FOXHOUNDS.—*Dogs:* 1st, J. Baldwin's Frank; 2d, T. Bradley's Johnnie. *Bitches:* 1st and 2d, T. Bradley's Slide and Betty.

FOX-TERRIERS.—1st, Withheld; 2d, R. Hennessey's Nellie. *Puppies:* withheld.

COLLIES.—*Dogs:* 1st, 2d and equal 3d, A. R. Kyle's Sir Edward, Sir Wallace and Sir Harry; equal 3d, Lothian Kennels' Lothian Chief. *Bitches:* 1st, 2d and 3d, A. R. Kyle's Adela Doon, Hebe of Nesseldown and Cora Bell. *Puppies:* 1st and 3d, A. R. Kyle's Adela Doon and Cora Bell; 3d, Lothian Kennels' Maiden Queen.

BULLDOGS.—*Dogs:* 1st, R. B. Sawyer's Merry Monarch. *Bitches:* 1st and 2d, R. B. Sawyer's Soudan and Beatrice.

BLACK AND TAN TERRIERS.—1st, John Velzel's Chief.

TOY TERRIERS.—1st, Mrs. B. C. Lynes' Possette.

PUGS.—*Dogs:* 1st, S. S. Banner's Zip; 2d, W. J. Momi's Chip. *Bitches:* 1st, John Leonard's Pink; 2d, R. Bangor's Tiney. *Puppies:* 1st and 2d, R. Bangor's Tiney and Diana.

MEXICAN TERRIERS.—1st C. B. Heathon's unnamed.

CHINESE DOGS.—1st, V. Tiblonitas's Coffee.

BRISTOL DOG SHOW.

[*Special Report.*]

BRISTOL, Conn., Oct. 3.—*Editor Forest and Stream:* The dog show held here in connection with our town fair was quite a success this year, being an improvement on last year's. About 75 dogs were entered and but few absentees, an improvement in both quantity and quality. The dog shows at the town and county fairs are getting to be quite the thing, and in this place the tent under which the dogs were exhibited was kept well filled by the people who came to see the beautiful as well as the useful, showing that it was one of the principal points of interest to say the least. The exhibitors were told that the managers hoped to have a permanent building for the dogs in another year. When we arrived on the grounds all seemed confusion, the dogs looked sour and the exhibitors acted so, but many thanks to Dr. Hair, for he soon made the way smooth, and the dogs began to look pleasant and the exhibitors to smile (some of them took theirs out back of the trees), and everything seemed merry as a dog on a lark or quail either. After the thankless and arduous work of the Doctor, the judging commenced. Mr. E. K. Sperry, of Hartford, acting as judge again this year, and did his work in a very acceptable manner, not a murmur was heard, though the owner of every Spot and Growler expected the first prize. I think the finest class of coon dogs ever exhibited was shown here. I am not sure that the judge understood this class as he ought. In my opinion I think the order of awards might have been, with justice, exactly reversed. Below we give the list of the

AWARDS.

ST. BERNARDS.—*Dogs:* 1st, C. D. Cugle's Dom Pedro; 2d, D. P. Barnes' Chief. *Bitches:* 1st, C. D. Cugle's Lady Catherine.

GREAT DANES.—*Dogs:* 1st, W. F. Smith's Zorah.

NEWFOUNDLANDS.—*Dogs:* 1st, J. W. Skelley's Presto; 2d, T. Leavitt's Help.

ENGLISH SETTERS.—*Dogs:* Dr. J. E. Hair's Blue Prince; 2d, H. W. Barnes' Ned.

POINTERS.—*Dogs:* 1st, J. T. Barnes' Sam. Very high com., W. Barnes' Bang. *Bitches:* 1st, Fair View Point Kennels' Belle Randolph; 2d, E. S. Fish's Blizzard Spot.

BULLDOGS.—CHAMPION-*Dog:* R. B. Sawyer's Merry Monarch *Bitches:* R. B. Sawyer's Soudan.

IRISH SETTERS.—*Dogs:* 1st, F. Kellagher's Trick; 2d, J. Whittier's Don.

COCKER SPANIELS.—*Dogs:* 1st, Dr. J. E. Hair's Warwick Obo; 2d, R. S. Newell's Cubo. *Bitches:* 1st, Ideal Kennels' Ideal Diana; 2d, Dr. J. E. Hair's Black Countess.

BEAGLES.—*Dogs:* 1st, W. W. Muzzy's Victor; 2d, C. W. Parson's Spot. *Bitches:* 1st, D. Tong's Fan.

COON DOGS.—*Dogs:* 1st, J. Fairclough's Spot. *Bitches:* 1st and 2d, W. Barnes's Stub and Twist.

COLLIES.—*Dogs:* 1st, J. H. Smith's Ray; 2d, L. S. Norton's Tuttle. Very high com., E. H. Whalen's Gip. *Bitches:* 1st, J. H. Smith's unnamed. *Puppies:* 1st and 2d, J. H. Smith's Robert McGregor and unnamed.

BULL-TERRIERS.—*Dogs:* 1st, E. Grace's Pete. *Puppies:* 1st, F. A. H. Hubble's Jack.

PUGS.—*Dogs:* 1st, B. S. Evin's Tony; 2d, W. S. Sloane's Uno. *Bitches:* 1st, J. E. Smith's Punch; 2d, W. S. Sloane's Guess.

DALMATIANS.—1st, F. H. Emmett's Spot.

FOX-TERRIERS.—1st, A. H. Norton's Rustic.

SCOTCH TERRIERS.—1st, J. Levitt's Tiny.

SKYE TERRIERS.—1st, E. E. Forest's Malta.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, W. Ryan's Guess. *Bitches:* 1st, J. J. Conlon's Daisy.

FIELD SPANIELS.—*Bitches:* 1st, Ideal Kennels' Ideal Black Pearl.

H.

PHILADELPHIA DOG SHOW.—*Editor Forest and Stream:* The Philadelphia Kennel Club claims the following dates for its seventh annual bench show—April 16, 17, 18, 19, 1889.—WM. H. CHILD, Sec'y.

DOGS OF THE CIRCUMPOLAR WORLD.

WHAT is a dog? Taxonomically, the dog is a representative of the genus *Canis*; but in view of the difficulty among systematic zoölogists in determining what the principal stock was, since varieties are so numerous, it may perhaps satisfy the present condition of biological research to assume that the primitive dog was one of the first animals, if not the very first, to be domesticated to the "service of man" (according to the Scriptures), and that being coeval with Cain the hunter, and his constant assistant and companion, he was deferentially and etymologically called *Canis*. Certainly he is the most widely distributed of all animals, and in fact universal, over the earth. But whatever his origin, there is abundant evidence to make it probable that the primitive dog, like other animals, was not only very different from any of the present canine races, but that it differed structurally and materially from its immediate predecessors, of which possibly the books themselves bear no testimony.

Domesticated dogs, when freed from man's control and association, seem at once to begin founding new races of their own, which thus are trying back again, when left to their mutual selection, as it were, to refound the old primal stock from which they were in remote ages derived. Will they ever succeed? There are now some sixty distinct artificial varieties of dogs recognized on the bench, not to mention feral types, each of them possessing sufficiently marked characteristics to be reckoned as a class, and new varieties are being constantly added. With the multiplication of varieties and species color develops, and a rich diversity of ground tints, with calico patches, piebalds, ticks, spots and splashes, results, varying most agreeably in their arrangement and position on the body. These hues and shades all spring from a primitive germ of color, just as the dogs themselves have been evolved from a primitive germ of form and structure. Now, if we turn all of these recognized classes of dogs adrift and exempt them from all restraints of domesticity, they will in a comparatively short time assimilate one to another in form and color. Typical identity will be lost. Greyhound, mastiff, spaniel, terrier and collie will all be merged and blended into a repulsive mongrel without trace of previous characteristics or character. Pendulous ears will shorten and become erect and pointed, slim tails grow thick and bushy, paws enlarge and splay, and bodies become burly, birsute and bristling. A composite feral race will result, with colors uniformly tawny, gray or brindled, which in North America, for lack of more distinctive designation, is known as the Indian dog—as worthless a brute in the rough as can well be imagined. These creatures will gang together and howl like wolves, adopt nocturnal habits, become cowardly, voracious and predatory, roving far and wide in a sort of aimless quest, with no fixed limits or methods, such as they were wont to show. Wolves, foxes and coyotes are singularly attracted toward them. All eagerly affiliate and sometimes interbreed, and their progeny is fertile, as experimental tests have proven. It is difficult for persons unacquainted with their peculiarities to distinguish a true wolf from some of the gray Indian dogs, the only noticeable difference being that the wolf runs with his head down and his tail between his legs, while dogs carry head erect and tails curled handsomely over their backs. It is a fact, too, worthy of notice, that if a stranger happening to encounter a pack of these renegades should chance to fall prone upon the ground, he is liable to be beset at once by the whole of them, to the imminent danger of life or limb, while so long as he stands erect, he may with anything which resembles a stick keep the crowd at bay, and by vigorous demonstrations actually drive them out of sight.

Out of this composite creature, which is altogether abnormal and typical of nothing unless it be the wolf, it is quite possible in turn to form and establish artificially a strain of serviceable dogs, which in course of time will come to be regarded as a fixed type. By such process, selection, domestication and training, have been obtained what are known in the Northwest as "huskies," much used as sledge dogs for winter transportation; hardy to endure, keen of eye, vicious of disposition and swift of foot; sometimes doing their eighty miles a day with a load of 150lbs. To haul is as natural to them as to point is to a pointer. But so liable are they to deterioration by association with baser dogs that it is almost impossible at the present day to make up a full team of strictly pure huskies in the whole Northwest Territory, individuals readily commanding a price of $75 each. There is but one method by which they can be kept intact, and this is but little practiced except by denizens of the higher latitudes, as related further on.

Environment, food and climate are of course most potential in modifying race types; hence, in the course of natural adaptation, it is reasonable to look for essential variations throughout such a wide geographical range as the generic husky dog occupies. Now, the dogs of the Polar World are almost the counterpart of the huskies of the adjacent country to the southward, and the hypothesis is plausible that, either from close relationship or a general resemblance, the latter are called "husky," the same being a colloquial abbreviation of the word Esquimaux. But while the general cast is maintained, the massive coat, pricked ears, sharp nose, splay feet, bushy tail and sturdy frame being steadfast characteristics of the numerous groups found within the Arctic Circle, a thorough investigation discovers that there are marked differences among them in color, size and contour, all of which might be satisfactorily accounted for if the environment were various. But inasmuch as the latitude, food, climate and physical character of the entire circumpolar area are nearly the same, we have only to conclude that the fundamental type has undergone a change by crossing with the Arctic fox, for instance, which is pure white, or with the coyote, or the big gray timber wolf, both of which may have ventured across the tundri in summer. When such sub-arctic strains are once fully devoloped and definitely located, they are easily protected by their geographical isolation, while they are jealously kept pure by the intervention of such persons as may have domesticated and subjected them to service, and to whom purity of breed and quality of performance are all important, for the dwellers on the Arctic coast depend in great part upon their dogs for their livelihood. It is doubtful if they could even exist without them.

White is the dominant color of the Arctic belt and its fauna, such as bear, fox, ermine, reindeer, owl and ptarmigan, not to mention wildfowl and marine animals. A great proportion of these dogs are white. The pure Esquimaux dog, so designated, is pure white, and scarcely distinguishable from the Arctic fox, though there are also browns, yellows and duns. White "huskies" are not uncommon in the British Northwest, thus showing indubitable evidence of their hyperborean origin. These come from vulpine, not lupine stock, like their ruder and more numerous brindled congeners. The Esquimaux dog has come to be regarded as a representative Arctic type, but it will be found on comparison that he is by no means conclusively such. He is often confounded with the Spitz (or dog of Spitzbergen) by fanciers, both being white and their appearance similar, though their kinship is not close. The dogs of Iceland are white, long-haired, with a thick fur frill around the neck, pointed nose and ears, elevated curled tail, and a restless and irritable temper. They are similar to those of Lapland and Greenland, except that the latter are variable in color. The Lapp dogs are used chiefly for hunting, as the natives use reindeer for draught and not dogs. These fight off the wolves from the settlement in winter, and are most efficient in capturing reindeer. This so-called "reindeer dog" is about the size of a Scotch terrier, but has a wonderful resemblance to the lynx. His hair is long and shaggy and his color various.

The dog does not come into such prominence on the polar coasts of Europe and Asia as he does in North America, because his multifarious services are assumed by the reindeer, or else by the hardy ponies—offspring of the tarpanies of Tartary, which are in use throughout the entire extent of Siberia up to the northern limit where the ice plain meets the forest, and only dogs can travel. Some of them subsist wholly on fish and seal meat for nine months of the year, and adapt themselves to the rigors and vicissitudes of the climate in a most remarkable way. Nevertheless, the dog is an important factor among many of the Siberian tribes, being described by travelers among the Ostalies on the Obi as a "faithful animal." He is used by the indigent Jakuts for draught purposes, being the only domestic animal which they possess. The Tomgusi use him for hunting. On the Kolyma River, in eastern Siberia, they are as extensively employed as they are in North America, and are indispensable to the domestic economy of the people. They are said to resemble the wolf, having long pointed noses, sharp upright ears and long bushy tails. Color black, brown, reddish brown, white and spotted. In Siberia wolves are black, not gray, and the result of the canine and lupine miscegenation manifests itself in the output. These dogs howl like wolves, and dig holes in the ground in summer for coolness, and in the snow in winter for warmth, where they lie curled up with their noses covered by their bushy tails. They live on frozen fish and on this diet will travel 100 miles per day. Sometimes the temperature is so extremely cold that they are obliged to go shod and blanketed to keep them from freezing. It is customary to keep them tied up all night, to prevent their straying off after the scent of some wild animal. They are very sagacious. Unfortunately they are subject to a peculiar disease (not specified) which Wrangell says carried off four-fifths of their number in the year 1821.

Kamschatkan dogs are probably the most sagacious of all feral types, and are employed and trained in the most careful manner for the multitudinous services required of them. Soon after birth they are placed with their dam in a deep pit, that they may see neither man nor beast, and after having been weaned are condemned to solitary confinement for six months, at the end of which time they are put to a sledge with other dogs, and being extremely shy and frightened withal, they run as fast as they can until they become blown and cowed. After this trial trip they are remanded to their pit, where they remain, off and on, until they are thoroughly trained and sledge-broken. This severe education sours their temper amazingly, and makes them anything but companionable. Drivers are frequently obliged to stun them by

A HUSKY.

a blow on the nose before unharnessing them on account of their savage nature. Besides drawing sledges they tow boats up rivers in summer and keep their masters warm in winter nights. They are remarkable weather phophets and discount the Signal Service Bureau, for, if when resting on a jouurney they dig holes in the snow there is certain to be a storm. They are of the husky type, shaggy, with erect curling bushy tails, and not very sharp noses and ears. They live exclusively on fish, which they catch for themselves. In winter their ration comprises forty frozen herrings per day. The Tchuktchi dogs of the East Cape of Siberia are similar to those of Kamschatka, and are used for sledges.

Across the Strait (Behring's) in Alaska the breed of dogs is not highly esteemed, though much used for draught purposes. A team of five will draw 500lbs. They live chiefly on fish, but will eat almost anything. Their winter ration is a dried salmon a day. In color they are reddish brown. Whymper thinks they are as much wolf as dog. From Icy Cape along the entire north coast to Smith's Sound the Esquimaux type prevails. These have been often described by Dr. Kane and other Arctic explorers, and especially by Lieut. Schwatka, to whom sportsmen are much indebted for information regarding matters in which they are specially interested. In the Mackenzie River district there is a variety of dog called Athabaskan, with hair somewhat wavy, which, crossed with the Esquimaux, produces a hybrid with hair so long that the eyes are scarcely visible. I have seen but one specimen. It weighed about 75lbs., and carried a ginger-colored coat studded with yellow and gray. Formerly the Athabaskan dog was small, but subsequently a stouter race was bred, more satisfactory for sledge use. It seems to be a purely artificial breed. The dogs of Smith's Sound are powerful and sagacious brutes. Hall, the Arctic explorer, speaks of them seizing a reindeer by the throat and cutting his jugular like a knife. In hunting bears they go in couples, one interesting bruin by feints in front, while the other teases behind, and so they amuse him until the hunters come up with their weapons. They are very keen of nose and scent a seal under the ice, or a deer track in the snow a quarter of a mile before they see it, forthwith starting for it on a run. In addition to doing sledge duty in winter, they carry saddle bags in summer which weigh fully 20lbs., keeping pace with their master on his journey. They have a thick, furry coat 3 or 4in. long, which is underlaid in winter by a dense fleece of wool, sharp pricked ears, and a tawny or brindled color, with so close a resemblance to a wolf as to be readily mistaken for one. They never bark, but emit a long melancholy howl. The description of these dogs answers to those of Greenland. In Labrador, excepting on the extreme north coast, this specific type is not so well preserved, the stock resembling the stock of the northwest, which is a little better than a nondescript, as I have already stated. They have a variety of dingy colors, dull yellows and dark browns and gray prevailing. The most powerful are so strong and vicious that it is customary to suspend a heavy wooden log by a rope to the neck, which, dangling between their legs, impedes their action, and so gives weaker dogs and men a chance for their lives. The true "Labrador dog," as recognized on the show

SOME TYPES.

From Robinson's "Great Fur Land," by courtesy of the publishers, Messrs. G. P. Putnam's Sons, New York.

bench, and chiefly known along the St. Lawrence River, has no place among the dogs of the circumpolar world, although he belongs to a comparatively high latitude and wilts with the temperature at sixty degrees. He is apparently a combination of setter and spaniel, crossed again by the Newfoundland, a most efficient water dog and retriever.

Having thus cursorily presented some testimony in respect to feral types of dogs by seeking them in their most natural habitats, the conclusion results that in mutual selection there is a persistent conformity to one general law, but that nothing new is produced. In process of time all escaped dogs adopt the habits and appearance of wolves, jackals, foxes, dholes, jungle dogs, or what-not, which animals are all scientifically classed as Canidæ. Now, which of these is the original? Is it the wolf? There are several kinds of wolves; which of them is the original? If no answer is found is it preposterous to assume that the whole lot of them are but degenerate offspring of pre-existant superior canine races? Where are the rudiments?

Dr. Bernard Gilpin, of Nova Scotia, a profound and painstaking observer, tells us how the wild ponies of Sable Island, which are known to be the descendants of a few head of heavy New England stock, introduced 180 years ago and since increased to many hundreds, have during that comparatively brief period become a race of small, big-headed, low-withered, rough-coated animals, very much resembling the tarpany of Tartary, which, according to Col. Hamilton Smith, is the only existing wild stock in the world which has never been tamed. But the tarpany is a much inferior animal to the majestic horse of Job, which flourished 3,000 years ago, and if we are to believe the Scripture, which declares that domestic animals were made for the service of man, and that man was to have dominion over the beasts of the field, a good serviceable horse must have been contemporaneous with man, an equine to which the anchitherium and hipparion of Europe and the other thirty-five tertiary and quaternary species of Marsh and Huxley bore very little resemblance.

Now, nature provides the feral dog with a monotonous and somber garb, not so much to assist a predisposition toward some suppositious primal color as to protect him in his new departure by considerately assimilating his hues to those of his environment. Likewise she modifies his body and temper for economic reasons; makes him fierce to do battle with his enemies, vigilant to anticipate danger, alert and selfish that he may forage for himself, hardy to endure the unremitting tramp of a nomadic life, lean to facilitate locomotion as well as to promote health under the exigencies of meager diet—conditions diametrically different from the quiet dependency of his previous domestic life.

There is every evidence, obtainable from monumental photographs and sculptures and from fossil remains, that hybrids of the domesticated dog must have been as numerous thousands of years ago as they are at the present time. It is easiest to believe that their origin must be referred to several aboriginal species and not to a single primal stock. This is a world of perpetual mutations. Its record is a long succession of fluctuations, of alternate progression and retrogression, of advances and relapses, check and impulses. Land and sea have been transposed; the terrestrial surface has been overturned repeatedly and stirred up like a ploughed field; it has been disintegrated, laid waste and

restored by turns, and by turns made suitable or useless for animal or plant life. Vast areas have been alternately populous and vacant, primitive races have become extinct, and new ones have succeeded; some have survived, some have been transplanted, some have been modified out of all resemblance to their former self. Man has been constantly on the move since he was driven from Eden, migrating from ocean to ocean and continent to continent; and the dog being contemporary with man, and always associated with him, it follows that whenever traces of him are found in uninhabited and waste places, there man must have occupied at some time or another. In this world nothing is constant. Mutations alone are persistent. In all differentiation man under God is the potential agent. Cultivation is the author of outcomes and results, and all gardens left to themselves inevitably run to weeds. CHARLES HALLOCK.

[We are indebted to Messrs. G. P. Putnam's Sons for the accompanying illustrations of Hudson's Bay dogs, taken from Robinson's "Great Fur Land." They represent the true Husky type.]

THAT MITCHELL LETTER.

Editor Forest and Stream:

In your last issue Mr. Anthony advises your readers that he purchased a stolen letter, and I, with a good many others, rest quite content to believe his self-volunteered confession, even if we remember that dictionaries contain such as the following: "Fence, a receiver of stolen goods." "A fence, the person who buys stolen property." It matters little in this connection whether the property was stolen or not; Mr. Anthony says it was, and believing that it was he says he bought it.

When he first referred to this alleged stolen letter in a communication to the Indiana Field Trials Club he wrote: "A stolen letter taken from my possession by fraud and put into the possession of the [Eastern Field Trials] club by James Watson." The plain reading of this sentence is that I was a party to stealing a letter *from him*, and I had every right to feel indignant at such a charge. But Mr. Anthony now explains that he thought he had purchased a letter stolen *from me*.

Going a little further along in Mr. Anthony's confession he says that the person to whom the letter had been intrusted called on him a second time for it, and he then gave it to him with the understanding that *on his word of honor* he would destroy it if I again asked for its return. Here's richness; fancy a man who Mr. Anthony says sold him a stolen letter having any honor to give as a pledge. "Honor among thieves," is an expression we sometimes hear by way of quotation. What could Mr. Anthony expect other than that the man he says sold him a stolen letter sent it back to the person he got it from. A man who would sell a stolen letter would not stop at such a little thing as selling out the man who bought it, and such men as Mr. Anthony who buy stolen letters know that and don't give them back on words of honor.

So far I have been assuming the correctness of Mr. Anthony's statement that he entered into the employment of buying a stolen letter—a letter he says was stolen. The person to whom I sent the letter when he was asked for its return said, to the best of my recollection, that he had been too busy to do anything about it and had mislaid it among his papers. I might or might not have written again for it, possibly I sent a reminder that it had not yet turned up. When it did it was at once returned to the *Sporting Life* editor. That gentleman was beyond doubt made aware at the time as to where the letter had been sent and everything about it, but he has something else to memorize besides recollections of such men as Mitchell. Neither of us knew that the letter had ever gone out of the possession of my trusted friend. I knowingly neither deal with persons who sell letters nor persons who buy them, hence I decline to believe that the letter was ever sold by my friend as alleged, and I further decline to recognize by any further correspondence the man who publicly confesses he bought a letter he says was stolen. All I ask of any one is to apply common sense reasoning to Mr. Anthony's whole confession and he will arrive at the conclusion that for a man so clever as to get everything signed, sealed and witnessed with the addition of stenographers in hiding, he has told a story that is too full of inconsistencies to bear the impress of truth in such parts as it is impossible now to obtain any denial of—the proceedings between himself and the person intrusted with the letter.

I leave him in the congenial company of Mitchell and "Wildfowler." JAMES WATSON.

EASTERN FIELD TRIALS ENTRIES.

FOLLOWING is a list of the entries for the All-Aged Pointer, All-Aged Setter and Champion Stakes, of the Eastern Field Trials Club, to be run at High Point, N. C., beginning Nov. 19. There are 27 pointers, 28 setters, and 3 pointers and 2 setters in the Champion Stake.

POINTERS.

GUYMARD (I. N. Cochran, Philadelphia, Pa.), liver and white dog, 2½ years (Croxteth—Lady Gwendolin).

DUKE OF VERNON (L. Gardner, Mount Vernon, N. Y.), liver and white dog, June 1, 1886 (Glendale—Spotless).

BUCK (W. A. Taylor, East Orange, N. J.), black and white dog, 3 years, pedigree unknown.

GO BANG (O. W. Donner, Beaufort, S. C.), liver and white dog, Feb. 16, 1886 (Graphic—Bloomo).

JOYCE OF HALL'S ISLAND (O. W. Donner, Beaufort, S. C.), liver and white bitch, March 27, 1887 (Lad of Bow—Bloomo).

KING OF KENT (Charlottesville Field Trial Kennels, Charlottesville, Va.), liver and white dog, 2½ years (Priam—Kent's Baby).

PONTIAC (same owner), liver and white dog, 2½ years (Milton Bang II.—Climax).

FLASH (same owner), liver and white dog, 3yrs. (Don Cæsar—Lucky).

GREENFIELD (Dr. H. G. Preston, Brooklyn, N. Y.), liver and white dog, April 1, 1885 (Bang Bang—Bellona).

ROGER WILLIAMS (Col. C. H. Odell, New York), lemon and white dog, Aug. 20, 1886 (Bang Bang—Lalla Rookh).

LALLA ROOKH (same owner), lemon and white bitch, December, 1881 (Sensation—White's Grace).

DOLGOROUKI (same owner), lemon and white bitch, April 20, 1886 (Bang Bang—Lalla Rookh).

CONSOLATION (same owner), lemon and white dog, Jan. 29, 1885 (Bang Bang—Grace III).

OSSIAN (P. T. Madison, Indianapolis, Ind.), liver and white dog, May 8, 1886 (Croxteth—Amine).

MALITE (Highland Kennel, Red Bank, N. J.), liver and white bitch, 5yrs. (Meteor—Dell).

PETRARCH (same owner), liver and white dog, 15 months (Robert le Diable—Malite).

DEXTER (Bayard Thayer, Boston, Mass.), liver and white dog, 2½ years (Nip—Tuck).

BANG GRACE (Jas. L. Breese, Tuxedo, N. Y.) liver and white dog, May 23, 1884 (Bang Bang—Grace).

VANDERBILT (E. W. Durkee, New York), liver and white dog, April 26, 1885 (Dean—Nancy).

DUKE OF HESSEN (F. R. Hitchock, New York), liver and white dog, May 9, 1885 (Luck of Hessen—Blarney).

FLIRT (same owner), liver and white bitch, May 2, 1885 (Graphic—Ina).

LAD OF BOW (Westminster Kennel Club, Babylon, N. Y.), liver and white dog, March 19, 1884 (Graphic—Climax).

LASS OF BOW (same owner), liver and white bitch, March 19, 1884 (Graphic—Climax).

BRAKE (Stanton W. Pentz, Brooklyn, N. Y.), orange and white dog, 2½ years (Bang Bang—Underhill's Jane).

LEBANON (Lebanon Kennel, Lebanon, Pa.), lemon and white dog, Nov. 15, 1885 (Tim—Peg).

FLY (Jas. P. Swaine, Jr., New York), lemon and white bitch, Jan. 29, 1885 (Rush—Eria).

LADY ZEAL (J. E. Gill, Franklin, Pa.), liver and white bitch, 2½ years (Croxteth—Amine).

ENGLISH SETTERS.

DASHING LADY (H. Colquitt, Richmond, Va.), black, white and tan bitch, 4 years (Dashing Rover—Trinket).

FOREMAN'S NELL (L. A. Lockwood, Saylesville, R. I.), black, white and tan bitch, Nov. 6, 1886 (Foreman—Nellie II.).

NAT GOODWIN (I. N. Cochran, Philadelphia, Pa.), black, white and tan dog, 3½ years (Roderigo—Bo Peep).

ROGER (L. Gardner, Mount Vernon, N. Y.), black, white and tan dog, Dec. 13, 1885 (Count Noble—Queen Meg).

RUBY BUCKELLEW (Jas. L. Breese, Tuxedo, N. Y.), orange and white bitch, 3 years (Buckellew—Brimstone).

DAVE R. (Dudley & Fisher, Nashville, Tenn.), lemon and white dog, 2 years (Gath's Hope—Daisy F.).

CINCINNATUS (J. E. Dager, Toledo, O.), black, white and tan dog, May 21, 1886 (Count Noble—Dido II.).

TOLEDO BLADE (same owner), black, white and tan dog, May 20, 1886 (Roderigo—Lillian).

LITTLE GIFT (B. Crane, Chicago, Ill.), black, white and tan bitch, May 12, 1886 (Roderigo—Queen Bess).

LINDO (S. L. Boggs, Pittsburgh, Pa.), black, white and tan dog, June 2, 1887 (Gladstone—Flounce).

JACK MODOC (Charlottesville Field Trial Kennel, Charlottesville, Va.), black and white dog, 2 years (Buckellew—Ida).

JOE B. (Bayard Thayer, Boston, Mass.), black, white and tan dog, Sept. 25, 1885 (Baron—Nellie).

BRANDON (J. O. H. Denny, Ligonier, Pa.), lemon and white dog, 5 years (Royal Rock—Nellie).

FOREMAN'S NOBLE (C. F. Crawford, Pawtucket, R. I.), black, white and tan dog, Nov. 5, 1886 (Foreman—Nellie II).

NOBLE COUNT (H. Merriam, Weston, Mass.), black and white dog, Feb. 12, 1887 (Count Noble—Royal Myrtle).

SADDLEBAGS (E. W. Durkee, New York), black, white and tan bitch, June 25, 1885 (Foreman—Belle of Allendale).

BOB H. (A. J. Crovatt, Brunswick, Ga.), black, white and tan dog, March 31, 1885 (Count Noble—Belle Boyd).

KING LEO (E. F. Thomas, Denver, Col.), black, white and tan dog, 3 years (Count Noble—Ruby).

JOEY B. (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, 3 years (Roderigo—Lillian).

CINCH (same owners), black, white and tan dog, 3 years (Roderigo—Bo Peep).

CASSIO (same owners), black, white and tan dog, 4 years (Count Noble—Lizzie Hopkins).

OLLIE S. (same owner, black, white and tan bitch, 3 years (Paul Gladstone—Lottie)

MISS THOMPSON (same owner) black, white and tan bitch, 3 years (Roderigo—Bo Peep.

JAQUES (C. Tucker, Stanton Depot, Tenn.), lemon and white dog, Oct. 28, 1886 (Fred W.—Queen of the South).

RODERIGO'S BOY (T. C. Eldridge, Knoxville, Tenn), black, white and tan dog, April 9, 1886 (Roderigo—Gipsy Queen).

GALATEA (W. Tallman, New York), black, white and tan bitch, 4 years (Mack B.—Choice).

EFFIE HILL (D. M. Barringer, Philadelphia, Pa.), black, white and tan bitch, 3 years (Prince Bergundthal—Donna).

BOHEMIAN GIRL (W. G. Mellier, Kansas City, Mo.), black and white bitch, 3 years (Count Noble—Mollie Belton).

CHAMPION STAKE.

MAINSPRING (J. T. Perkins, Brooklyn, N. Y.), liver and white pointer dog, 7 years (Mike—Romp).

TAMMANY (F. R. Hitchcok, New York), liver and white pointer dog, Aug. 24, 1883 (Tory—Moonstone).

ROBERT LE DIABLE (Highland Kennels, Red Bank, N. J.), liver and white pointer dog, 5 years (Croxteth—Spinaway).

BOB GATES (Whyte Bedford, Horn Lake, Miss.), black, white and tan English setter dog, April, 1884 (Count Rapier—Belle of Hatchie).

JEAN VAL JEAN (Memphis and Avent Kennel, Memphis, Tenn.), black, white and tan English setter dog, 4 years (Mingo—Twin Maud).

RICHMOND DOG SHOW.

[*Special to Forest and Stream.*]

RICHMOND, Va., Oct. 10.—Three hundred and fifty-six entries. Few absentees. Weather fine. Attendance good. Catalogue out the first morning of the show. Classes all judged by noon second day. Many prominent New York exhibitors here and taking part in the fox hunts. Building well adapted.

IRISH SETTER IMPORTATION.—Mr. E. O. Damon, of Northampton, Mass., has received from Ireland the Irish setter bitch Kate IX. She was whelped May 1, 1887, and is by Dick III. and out of Mr. Mahoney's Jane. Mr. Damon writes that he has tried her on ruffed grouse and that her work is of the highest order.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Sid. By D. C. Tryon, Monterey, Mass., for liver and white pointer dog, whelped July 26, 1888, by Doctor (A.K.R. 6316) out of Guess (A.K.R. 6317).

Frisk. By W. S. Bidwell, Monterey, Mass., for lemon and white pointer dog, whelped July 26, 1888, by Doctor (A.K.R. 6316) out of Guess (A.K.R. 6317).

Duke. By B. N. Cook, Lenox, Mass., for liver and white pointer dog, whelped July 26, 1888, by Doctor (A.K.R. 6316) out of Guess (A.K.R. 6317).

Tu'penny. By Warner & Hamilton, Canaan Four Corners, N. Y., for dark fawn pug bitch, whelped July 7, 1888, by Cricket (A. K.R. 3230) out of Trinket (Dandy—Pansy Blossom).

Becky II. By O. B. Gilman, Boston, Mass., for black cocker spaniel bitch, whelped June 12, 1888, by Sancho G. (A.K.R. 6506) out of Frantic (A.K.R. 6281).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lass o' Glenboig—Scot's Guard. Lothian Kennels' (Stepney, Conn.) collie bitch Lass o' Glenboig (Strathmairn—Young Countess) to H. S. Barnes's Scot's Guard (Dublin Scot—Spoiled Miss), Sept. 4.

Lothian Maid II.—Scot's Guard. Lothian Kennels' (Stepney, Conn.) collie bitch Lothian Maid II. (Montrose—Midlothian Lassie) to H. S. Barnes's Scot's Guard (Dublin Scot—Spoiled Miss), Sept. 7.

Lady Edgecombe—Scot's Guard. Lothian Kennels' (Stepney, Conn.) collie bitch Lady Edgecombe (Laddie—Lass of Edgecombe) to H. S. Barnes's Scot's Guard (Dublin Scot—Spoiled Miss), Sept. 11.

Gypsie—Chief. H. B. Anderson's (Franklinville, N. Y.) Irish setter bitch Gypsie (Tim—Florid) to Max Wenzel's Chief (Berkley—Duck), July 3.

Peg—Tim. M. Costello's (Boston Highlands, Mass.) Irish setter bitch Peg (Prince—Peg) to Max Wenzel's Tim (Biz—Hazel), Aug. 8.

Peggy O'More—Tim. J. Gallagher's (Elmira, N. Y.) Irish setter bitch Peggy O'More (Glencho—Quail O'More) to Max Wenzel's Tim (Biz—Hazel), Sept. 16.

Gyp—Bradford Harry. J. C. Cullen's (Pittsfield, Mass.) Yorkshire terrier bitch Gyp to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Sept. 26.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Bonnie Jean. J. C. Schuyler's (Berryville, Va.) pointer bitch Bonnie Jean (Mainspring—Fairy), Sept. 21, five (three dogs), by Mr. Wanstall's Don (Fritz, Jr.—Hazel).

Blanchie May. J. C. Schuyler's (Berryville, Va.) pointer bitch Blanchie May (Tammany—Bertie), Sept. 28, nine (five dogs), by C. W. Littlejohn's Fritz (champion Beaufort—Spot); one dog and one bitch since dead.

Bradford Midget. J. C. Comstock's (La Gro, Ind.) pug bitch Bradford Midget (A.K.R. 5455), Oct. 1, five dogs, by Leo II.

Topsey. G. P. Wiggin's (Lawrence, Mass.) St. Bernard bitch Topsey (Hector—Messonia), Sept. 30, five (three dogs), by his Winchester (A.K.R. 5179).

Flounce. Brookwood Kennels' (Washington Heights, New York) English setter bitch Flounce, Sept. 20 and 28, two (one dog), by W. B. Pect's Ted Llewellin (Druid—Leonard's Gessie).

Norah O'Brien. F. N. Hall's (New York) Irish setter bitch Norah O'Brien (Chief—Rose Bradwardine), May 21, ten (three dogs), by Max Wenzel's Tim (Biz—Hazel).

Gypsie. H. B. Anderson's (Franklinville, N. Y.) Irish setter bitch Gypsie (Tim—Florid), Sept. 5, five (four dogs), by M. Wenzel's Chief (Berkley—Duck).

Youbé. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Yoube (Elcho—Rose), Sept. 28, eight (six dogs), by his Chief (Berkley—Duck).

Lady Edith. J. H. Ackroyd's (Saylesville, R. I.) Irish setter bitch Lady Edith (Rory O'More—Lady Berkley), May 30, ten (three dogs), by Max Wenzel's Chief (Biz—Hazel).

Nellie. A. B. Tyrrell's (Haverhill, Mass.) Irish setter bitch Nellie (Watts—Romaine), Aug. 3, five (three dogs), by Max Wenzel's Chief (Berkley—Duck).

Blemton Arrow. Beverwyck Kennels' (Albany, N. Y.) fox-terrier bitch Blemton Arrow (Royal—Blemton Dart), Sept. 24, four (three dogs), by Blemton Kennels' Dusky Trap (Dusky Splinter—Spider).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Uncle. Brindle bulldog, whelped July, 1887, by Robinson Crusoe (A.K.R. 2597) out of Carmen (A.K.R. 4971), by Associated Fanciers, Philadelphia Pa., to G. B. Benners, same place.

Hebe of Nesseldown. Black and tan collie bitch, whelped June, 1887, by Glenlivat out of Nellie McGregor, by A. R. Kyle, South Norwalk, Conn., to L. Wey, Bridgeport, Conn.

Royal Monarch. Sable and white collie dog, whelped May 6, 1887, by champion Rutland out of Ruth, by A. R. Kyle, South Norwalk, Conn., to Chas. Sheldon, New Haven, Conn.

Sir Wallace. Dark sable collie dog, whelped Dec. 7, 1888, by champion Rutland out of Heather Bell, by A. R. Kyle, South Norwalk, Conn., to Messrs. Walseck & Yardley, Newtown, Conn.

Dr. Clyde. Brindle deerhound dog, whelped Dec. 24, 1885, by champion Oscar out of Lady Dare, by Miss Ida F. Warren, Leicester, Mass., to Associated Fanciers, Philadelphia, Pa.

Dudley's Hector—Dudley's Belle whelp. Fawn mastiff dog, whelped March 2, 1888, by Associated Fanciers, Philadelphia, Pa., to Chas. L. Dawson, Charlestown, W. Va.

Fleet View Belle. White and liver ticked pointer bitch, whelped July 24, 1888, by Spot Dash out of imported Belle Randolph, by Fleet View Pointer Kennels, Lynn, Mass., to McHenry Robinson, Boston, Mass.

Rapid Bang—Heald's Nancy whelp. Liver and white pointer bitch, whelped Jan. 15, 1888, by Associated Fanciers, Philadelphia Pa., to Richard Gerrans, Park City, Utah.

Duke. Liver and white pointer dog, whelped July 26, 1888, by Doctor (A.K.R. 6316) out of Guess (A.K.R. 6317), by W. S. Bidwell, Monterey, Mass., to B. N. Cook, Lenox, Mass.

Doctor (A.K.R. 6316) Guess (A.K.R. 6317) whelps. Pointers, whelped July 26, 1888, by W. S. Bidwell, Monterey, Mass., a liver and white ticked dog to Geo. W. Shultis, same place, and a liver and white bitch to R. Broderick, Great Barrington, Mass.

Sid. Liver and white dog, whelped July 26, 1888, by Doctor (A. K.R. 6317) out of Guess (A.K.R. 6317), by W. S. Bidwell, Monterey, Mass., to D. C. Tryon, same place.

Tu'penny. Dark fawn pug bitch, whelped Aug. 7, 1888, by Cricket (A.K.R. 3230) out of Trinket, by Warner & Hamilton, Canaan Four Corners, N. Y., to H. A. Allen, Albany, N. Y.

Monarch. Orange and white St. Bernard dog, whelped Oct. 4, 1886, by Filibuster (A.K.R. 1671) out of Terese (A.K.R. 5372), by Rev. R. Walsh, Dushore, Pa., to Associated Fanciers, Philadelphia, Pa.

Winna. Orange and white St. Bernard bitch, whelped April 11, 1888 (A.K.R. 6563), by G. P. Wiggin, Lawrence, Mass., to F. N. Livingston, Haverhill, Mass.

Merta. Orange and white St. Bernard bitch, whelped April 11, 1888, by Winchester out of Topsy, by G. P. Wiggin, Lawrence, Mass., to J. A. Wiggin, Brookfield, Mass.

San Roy III. Lemon and white English setter dog, whelped April 23, 1888, by San Roy, Jr., out of Nell Gwynne, by F. G. Taylor and G. G. Davis, Philadelphia, Pa., to Harry Hurley, same place.

Sheridan. Orange and white English setter dog, whelped April 23, 1888, by MacD. out of Chief's Queen, by F. G. Taylor and G. G. Davis, Philadelphia, Pa., to J. J. Kerr, same place.

Black Bess V. Black cocker spaniel bitch, whelped June 12, 1888 (A.K.R. 6498), by O. B. Gilman, Boston, Mass., to T. Park, Grafton, Vt.

Dictator. White and tan marked head fox-terrier dog, whelped March 27, 1888, by Resolute out of Blemton Arrow, by Beverwyck Kennels, Albany, N. Y., to L. C. White, Jr., Windsor, Vt.

ST. PAUL, Oct. 5.—*Editor Forest and Stream:* In your issue of Sept. 27 you mention in Sales column Duke and Marquis of St. Paul, rough-coated St. Bernards, by Bang II. out of Norma; it should be by Barry II. out of Noma. Please correct.—D. BERGMAN.

DEATHS.

Lady Pluto. Black cocker spaniel bitch, whelped Sept. 1, 1885 (A.K.R. 3313), owned by G. N. Whitehead, Trenton, N. J.; killed by the cars.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE BOSTON FALL MEETING.

BOSTON, Oct. 4.—The Massachusetts Rifle Association's fall meeting opened to-day at Walnut Hill Range, to continue three days. Pleasant weather greeted the shooters that gathered in goodly number from all parts of the country. The high winds prevented good scores in the rest match, it blowing hard from 9 o'clock. Following are the top scores finished:

Thirty shots, rest match, 200yds.

J R Monroe	12	9	11	9	10	10	10	12	11	10—104
	10	9	12	9	12	11	10	12	9	11—105
	10	12	10	9	12	9	11	10	8	10—105—310
W C Johnston, Jr.	308									
J Francis	307									
D L Chase	307									
W V Lowe	296									

Rest Match, 200yds.

D L Chase	10	10	12	12	12	12	10—80			
W C Johnston, Jr.	9	11	10	7	7	12	9—65			

Two matches were shot for the Directors' gold medal, to be won once a year, and it not having been shot for 1887, both matches were shot to-day with the following result: Henry S. Harris won for 1887, and J. N. Frye won for 1888.

Off-hand Match, 30 prizes (five scores to win).

U N Certain	8	10	10	9	10	10	10—67			
	10	9	10	9	9	9	7—63			
	8	8	10	10	8	10	8—62			
	8	10	8	10	8	8	8—60			
	8	9	7	7	8	10	7—56			

Revolver and Pistol Match (five scores to win).

J Brown	8	10	10	9	10—47	Mrs J L Fowle	6	9	9	8	7—41

	9	10	8	8	10—45		9	7	8	6	5—35

Oct. 5.—To-day was the second day of the Massachusetts Rifle Association fall meeting at Walnut Hill. The attendance was good and high scores made in all the matches. The wind blew hard all day from 7 to 9 o'clock. J. B. Fellows's score of 50 in the pistol match is the highest on record in a five-shot match. Following are the best scores finished:

Off-Hand Match—(Five scores to win).

J A Huggins	10	10	10	10	7	9	10—66			
	9	10	8	10	9	8	10—64			
	7	10	10	9	10	8	9—63			
	6	10	9	10	10	9	7—61

*Imperfect lubricant, causing leading.

SAN FRANCISCO, Sept. 30.—The annual rifle-practice of the Second Artillery Regiment, National Guard of California, took place at Shell Mound Range to-day, under the supervision of Lieutenant F. A. Kuhls, Inspector of Rifle Practice. The regiment was represented by companies A, C, D, E, F and H, and acquitted itself creditably, as was expected, it having among its members some of the best rifle-shots on the coast. There was an extra incentive for the men to do their best yesterday, beyond the winning of the medals, in the shape of a gold and silver cup eighteen inches high, beautifully and appropriately engraved. This cup was presented to the regiment to be competed for by the companies, the highest total score of the best six marksmen in each company deciding the ownership. Company C won the cup, and altogether made a higher percentage than any other company this season. To win a medal in the rifle practice it is necessary to make 25 out of a possible 50, which entitles the marksman to a bronze medal, 40 insures a silver medal and bar, and 45 a gold medal and bar.

PHILADELPHIA.—A brigade rifle contest will be held at the Hartranft Rifle Range on Saturday, Oct. 20, and Saturday, Oct. 27, commencing at 9 A. M. The prizes are the gift of Lieut.-Col. Thomas Potter, Jr., A. D. C. to the Commander-in-Chief. The following contests will be held: First, Oct. 20—For company teams of four and one reserve, for marksmen who have qualified this year. Members of the company who have been on previous regimental or brigade teams or their reserves barred. To shoot 5 shots each at 200 and 500yds. First prize, four gold collar badges; second prize, four silver collar badges; third prize, four bronze collar badges. Second, Oct. 27, A. M.—Second class regimental contest, for teams of four and one reserve from regimental battalions or independent companies. To shoot 7 shots each at 200 and 500yds. Those who have been members of previous regimental or brigade teams and their reserves barred. First prize, four gold collar badges, with diamond bullseye. Third, First Class Regimental Contest, Oct. 27, P. M.—For teams of four and one reserve for regiments, battalions or independent companies. To shoot 7 shots each at 200, 500 and 600yds. Prize, the "Potter Trophy," a bronze group, "The Last Cartridge," to become the property of the organization winning it three times, and four gold collar badges with ruby bullseye, the property of the team.

FOR IRA PAINE.—The following letter has been published by the Boston pistol expert: "I notice that Ira A. Paine, of Providence, publishes an apology in New York for his recent appearance in the Creedmoor competitions. He explains that he would not have competed in the revolver shooting at Creedmoor but for the expectation that I would be present. I know of nothing that should lead Mr. Paine to expect to see me competing with amateur marksmen for a prize of $10 or $15, which it costs $12 entrance to win. Whenever Mr. Paine cares to shoot me again for the revolver shooting championship of America, which he lost to me last June, I am ready to shoot him for $1,000 a side. I will renew a match with Mr. Paine on the conditions of the match that he lost, and, furthermore, on a six days' shooting—1,000 points a day—I will give him twenty points on the match. This match is open to be shot in America, England or France; and I will give expenses for privilege of naming the ground, or take expenses and accede the same privilege to Mr. Paine; the Boston *Globe* to be temporary stakeholder. I mention England or France because Mr. Paine has, I understand, arranged his departure for those countries, and I wish it understood that I am ready to cross the ocean, also, if he will afford me another match for money.—FREDERICK E. BENNETT, Revolver-shooting Champion of America."

ST. PAUL, Minn.—At the recent annual meeting of the Minnesota National Guard Rifle Association, held in the range house, the following officers were elected: President, Capt. A. E. Chantler, of St. Paul; Vice-President, Capt. C. M. Skinner, of Minneapolis; Second Vice-President, Capt. Graham, of Wisconsin; Third Vice-President, Sergt. Crossman, of Iowa; Secretary, Capt. Amory, of A.; Treasurer, Lieut. C. L. Williams, I. R. P. The election of vice-presidents from each State was in accordance with an amendment of the constitution making such provisions.

THE DETROIT "JOURNAL" MATCH.—The editor of the Detroit (Mich.) *Journal* is doing what he can to promote rifle shooting in Michigan. He has been getting up a match between the two championship claimants, Damon and Joslin. C. A. Damon is a well-known expert rifle and pistol shot, and the exhibition he gave at the Hamilton Fair showed wonderful precision and confidence. His friends do not think that there is a man in Michigan who can begin to touch him. They think he has a practically sure thing. Mr. Frank H. Joslin has earned a national reputation as a side-hold wrestler, and a photograph of him shows him stripped to the waist for wrestling, with arms of great muscular development. Mr. Joslin is now a locomotive engineer on the logging railroad in the Potts lumber camp, and is an expert with his rifle, disdaining to shoot quail or pigeons with anything but his rifle, and very rarely hitting them anywhere except in the head. The *Journal's* championship badge and a solid pot of money are to be shot for by them at 50yds.

NEWARK, N. J., Oct. 4.—Some of the members of the Newark Shooting Society are talking of organizing a revolver club. A number of fine revolver shots are included in the membership, and a first-class 30 and 50yd. range could be fitted up at a small expense in the park.... The weekly practice of the Newark Shooting Society this afternoon called out but a small number of members. During the afternoon William Hayes made 240 out of a possible 250 on the German ring target. The club will probably give an open-to-all shoot on Nov. 6.... The United Amateur Rifle Association entries close with the Munroe, Howard, Our Own, Excelsior, Oakland, Lakeside and Annie Oakley rifle clubs. The tournament will begin on Oct. 1.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE OHIO LEAGUE.

DAYTON, O., Oct. 3.—The shooters had an auspicious opening of the second annual League contests on the grounds at the north end of Main street yesterday, with crack shots in attendance from all Ohio cities. The day was cloudy, air raw and cold, thermometer registering 52°, strong wind blowing quartering from the northeast into the faces of the shooters. Tents, scorers' stands, gun tables, magazine and target packages and the rattle of the continued bang of shotguns, gave the grounds the appearance of a camp of an infantry regiment. Rules of the League govern all matches, all free for all and programme events class shooting and all at 18yds. rise. Twelve bluerocks each, $1.50 entrance:

Al Bandle ..... 101111111110—10
Rolla Heikes ..... 111101111111—11
Girton ..... 111111101011—10
W Benscotten ..... 111111101110—10
W Pratchett ..... 110011110100—7
Paul North ..... 111110111110—10

Heikes ..... 111111101110111—13
Miller ..... 011111110111011—12
Girton ..... 111101111111111—14
Binkerd ..... 101000101001101—7
Mumma ..... 111011111111001—12
Buntaine ..... 011111111111011—13
Waddell ..... 101111111111111—14
Cain ..... 000111111111101—11
Prill ..... 100111011101000—8

Hart, Benscotten, Girton and Waddell divided first; Bandle, Heikes and Buntaine divided second; Miller and Mumma divided third; Cain took fourth.

Twelve bluerocks, $2 entrance:

Bandle ..... 111111111112—12
Heikes ..... 111111111112—12
Benscotten ..... 111111111112—12
Miller ..... 101111111111—11
Girton ..... 111111111112—12
Ralston ..... 111111111112—12
Hart ..... 111111111111—12
Keenan ..... 111111011111—11
McDonald ..... 011011111110—10
Mumma ..... 111011111011—9
Glassford ..... 111111111111—11
Buntaine ..... 111111111112—12

Benscotten, Ralston and Hart divided first; Miller, Keenan and Glassford divided second; Scott McDonald took third; Mumma took fourth.

Fifteen clay-birds, $2 entrance:

Bandle ..... 111111111101111—14
Miller ..... 111111111111111—15
Heikes ..... 111111111111111—15
Benscotten ..... 111101101101101—11
Girton ..... 111011011111111—14
Cain ..... 111111111111011—14
Mumma ..... 011010111111111—13
Hart ..... 111111111111111—15
Pratchett ..... 111111111111111—15
Glassford ..... 111111111111111—15
Waddell ..... 111111111111111—15
Keenan ..... 111111111111111—15

Miller and Heikes divided first; in the shoot-off Cain broke 5 straight and took second; Girton and Benscotten divided third, Mumma fourth.

Nine bluerocks, $1 entrance:

Heikes ..... 001111110—6
Pratchett ..... 111001111—8
Hart ..... 101011111—7
Waddell ..... 111011011—7
Benscotten ..... 111111111—9
Mumma ..... 110111111—8
Reese ..... 101111111—8

Benscotten and Prill divided first; the eights had a time of it shooting off, but Bandle and Miller tied on 9 birds and divided; Hart and Waddell divided third.

Nine Keystones, $1 entrance:

Girton ..... 111111111—9
Benscotten ..... 101110101—6
Miller ..... 111111111—9
Hart ..... 111111111—9
Waddell ..... 111111111—9
Mumma ..... 110111111—8
Bandle ..... 111111111—9
Glassford ..... 111111011—8
Heikes ..... 101111111—7
Pratchett ..... 111111111—9
Bacon ..... 111111111—9
Penrose ..... 111101011—7

Twelve Keystones, $1.50 entrance:

Heikes ..... 111101111110—10
Ralston ..... 111111111111—12
Benscotten ..... 110111011011—9
Bandle ..... 111111101111—11
Miller ..... 111110111111—11
Hart ..... 101111111111—11
Girton ..... 111111111111—12
Bacon ..... 111111111111—12
Cain ..... 111111111111—12
Mumma ..... 111111111111—12
Glassford ..... 111111111111—12
Pratchett ..... 111111111111—12
Prill ..... 111111101110—9
Hunter ..... 111111111111—12
Binkard ..... 000101110010—5
McDonald ..... 111111111111—12
Keenan ..... 111111111111—12

Ralston won first, Bandle and Miller divided second, Girton and Keenan divided third.

Nine Keystones, $1 entrance:

Bandle ..... 111100111—7
Heikes ..... 111111111—9
Cain ..... 010110011—5
McDonald ..... 111101110—7
Mumma ..... 100001w.
Hunter ..... 0001w.
Benscotten ..... 111111101—8
Girton ..... 101111110—7
Keenan ..... 011011111—7

Heikes took first, Benscotten second, and in shoot off for third Girton and McDonald tied and divided.

Nine Keystones, $1 entrance: First was divided between Miller, Waddell and Bandle, after each had broken 15 in the shoot off; Mumma and Heikes divided second, Penrose third.

Nine bluerocks each, $1 entrance:

North ..... 111011111—8
Girton ..... 111111111—9
Ralston ..... 110111111—8
Glasford ..... 101111111—8
Hart ..... 110111111—8
Bandle ..... 111111111—9
Miller ..... 111111111—9
Heikes ..... 111111111—9

Benscotten, Miller, Heikes and Keenan divided first, North and Hart divided second, Pratchett, Richard, Stuart and Albee divided third.

Nine Keystone birds, $1 entrance:

Bandle ..... 111011111—8
Heikes ..... 111111011—8
Albee ..... 011111001—6
Miller ..... 011011010—5
Glasford ..... 111100001—5
Benscotten ..... 111111111—9
Hart ..... 111111111—9
Keenan ..... 111111111—9
Cain ..... 011011110—6
Girton ..... 111111111—9
Pratchett ..... 111010111—7
Ralston ..... 111111111—9
Stuart ..... 110111111—8

Benscotten, Hart, Keenan, Girton and Ralston divided first money, Bandle, Heikes and Stuart second, Pratchett dropped gracefully into third without a struggle.

Second Day—Oct. 3.

Sun shone brightly, temperature moderated, and the nor-nor-easter was not so strong through the second day's contests in the League tournament in progress north of the city yesterday. Attendance was somewhat larger, and other shooters reported, but neglect to work up interest in the meetings shows its effect in slim attendance. Of the 100,000 shooters in Ohio, it is probable that not a thousand knew that the tournament was in progress until dispatches were published yesterday morning.

The programme opened with a twelve bluerock match, $1.50 entrance:

Heikes ..... 111111111111—12
Girton ..... 111101111111—11
Bandle ..... 111111111111—12
Pratchett ..... 111111111110—11
Benscotten ..... 111111111111—12
Mumma ..... 111001001110—8
Hart ..... 111111111110—11
Prill ..... 111011110111—10
Miller ..... 111111111111—12
Glassford ..... 111111011111—11
Ralston ..... 111110000 w— 5
Bacon ..... 101111010101— 9
Reese ..... 111110101001— 8
Blackford ..... 111111011110—10
Waddell ..... 111111111011—11
C A Dick ..... 001111000110— 6

Heikes, Bandle, Benscotten and Miller divided first money; Girton, Pratchett, Hart, Glassford and Waddell, divided second; Prill and Blackford third; and Bacon took fourth.

Fifteen clay birds, $1.50 entrance:

Heikes ..... 111011111111111—14
Girton ..... 011101111111111—13
Mumma ..... 110111001101000— 8
Miller ..... 000110101111011—10
Bandle ..... 111111011101111—13
Benscotten ..... 111111111111011—14
Ralston ..... 111111111111111—15
Hart ..... 111111101111011—13
Pratchett ..... 111111111111111—15
Glassford ..... 111111111111111—15
Blackford ..... 101111101100011—10
Bacon ..... 100111111101111—12

Ralston won first with 15 straight; Heikes and Benscotten second; Girton, Bandle, Hart and Waddell shoot off for third; Bandle and Waddell tied and divided; Pratchett and Bacon of Miamisburg, divided fourth.

Fifteen bluerocks, $2 entrance:

Bandle ..... 110111111111111—14
Miller ..... 111110111111011—13
Benscotten ..... 111011111111111—14
Hart ..... 111111111111111—15
Pratchett ..... 101101110110111—13
Heikes ..... 111111111111111—15
Girton ..... 111111111111111—15
Glassford ..... 111111111111111—15
Mumma ..... 111000111101— w— 8
Waddell ..... 111111111111111—15
Blackford ..... 101111101100011—10
Bacon ..... 100111111101111—12
Reese ..... 101111110101011—11

Heikes's 15 gave him first; Bandle, Hart and Benscotten divided second; Miller and Girton divided third; Pratchett and Reese divided fourth.

Fifteen clay birds, $2 entrance:

Bandle ..... 011111101111111—13
Ralston ..... 011110010110111—10
Heikes ..... 000111111011110—10
Miller ..... 111111111010101—12
Benscotten ..... 111101111111111—14
Hart ..... 111111111111111—15
Pratchett ..... 101010110101111—11
Girton ..... 111111111111111—15
Glassford ..... 111111111111111—15
Mumma ..... 111111111111111—15
Waddell ..... 111111111111111—15
Bacon ..... 111111111111111—15
Keenan ..... 111111111111111—15

Hart won first; Benscotten and Mumma divided second; Bandle, Girton and Glassford divided third; Miller and Waddell divided fourth.

Twelve bluerocks, $1.50 entrance:

Bandle ..... 111111111111—12
Miller ..... 111111111110—11
Heikes ..... 111111111111—12
Ralston ..... 011111111111—11
Hart ..... 111111111111—12
Girton ..... 111110011101— 9
Binkerd ..... 101000101001101— 7
Prill ..... 100111011101000— 8

Hart, Benscotten, Girton and Waddell divided first; Bandle, Heikes and Buntaine divided second; Miller and Mumma divided third; Cain took fourth.

Twelve bluerocks, $2 entrance:

Bandle ..... 111111111112—12
Heikes ..... 111111111112—12
Benscotten ..... 111111111112—12
Miller ..... 101111111111—11
Girton ..... 111111111112—12
Ralston ..... 111111111112—12
Hart ..... 111111111111—12
Keenan ..... 111111011111—11
McDonald ..... 011011111110—10
Mumma ..... 111011111011— 9
Glassford ..... 111111111111—11
Buntaine ..... 111111111112—12

Benscotten, Ralston and Hart divided first; Miller, Keenan and Glassford divided second; Scott McDonald took third; Mumma took fourth.

Fifteen clay-birds, $2 entrance:

Bandle ..... 111111111101111—14
Miller ..... 111111111111111—15
Heikes ..... 111111111111111—15
Benscotten ..... 111101101101101—11
Girton ..... 111011011111111—14
Cain ..... 111111111111011—14
Mumma ..... 011010111111111—13
Hart ..... 111111111111111—15
Pratchett ..... 111111111111111—15
Glassford ..... 111111111111111—15
Waddell ..... 111111111111111—15
Keenan ..... 111111111111111—15

Miller and Heikes divided first; in the shoot-off Cain broke 5 straight and took second; Girton and Benscotten divided third, Mumma fourth.

Nine bluerocks, $1 entrance:

Heikes ..... 001111110—6
Pratchett ..... 111001111—8
Hart ..... 101011111—7
Waddell ..... 111011011—7
Benscotten ..... 111111111—9
Mumma ..... 110111111—8
Reese ..... 101111111—8

Benscotten and Prill divided first; the eights had a time of it shooting off, but Bandle and Miller tied on 9 birds and divided; Hart and Waddell divided third.

Nine Keystones, $1 entrance:

Girton ..... 111111111—9
Benscotten ..... 101110101—6
Miller ..... 111111111—9
Hart ..... 111111111—9
Waddell ..... 111111111—9
Mumma ..... 110111111—8
Bandle ..... 111111111—9
Glassford ..... 111111011—8
Heikes ..... 101111111—7
Pratchett ..... 111111111—9
Bacon ..... 111111111—9
Penrose ..... 111101011—7

Twelve Keystones, $1.50 entrance:

Heikes ..... 111101111110—10
Ralston ..... 111111111111—12
Benscotten ..... 110111011011—9
Bandle ..... 111111101111—11
Miller ..... 111110111111—11
Hart ..... 101111111111—11
Girton ..... 111111111111—12
Bacon ..... 111111111111—12
Cain ..... 111111111111—12
Mumma ..... 111111111111—12
Glassford ..... 111111111111—12
Pratchett ..... 111111111111—12
Prill ..... 111011110111— 9
Hunter ..... 111111111111—12
Binkard ..... 000101110010— 5
McDonald ..... 111111111111—12
Keenan ..... 111111111111—12

Ralston won first, Bandle and Miller divided second, Girton and Keenan divided third.

Nine Keystones, $1 entrance:

Bandle ..... 111100111—7
Heikes ..... 111111111—9
Cain ..... 010110011—5
McDonald ..... 111101110—7
Mumma ..... 100001w.
Hunter ..... 0001w.
Benscotten ..... 111111101—8
Girton ..... 101111110—7
Keenan ..... 011011111—7

Heikes took first, Benscotten second, and in shoot off for third Girton and McDonald tied and divided.

Nine Keystones, $1 entrance: First was divided between Miller, Waddell and Bandle, after each had broken 15 in the shoot off; Mumma and Heikes divided second, Penrose third.

Nine Keystones, $1 entrance:

Heikes	1111111111—9	Keenan	1111111111—9
Bandle	1111111111—9	Heikes	1101111111—8
Miller	1111111111—9	Miller	1111111011—8
McDonald	1110001101—6	Cain	1011111111—8
Benscotten	1111111111—9	Mumma	0110090100—3
Pratchett	0111110011—7	Prill	1111110111—8
Dick	1111010111—8	Pratchett	1110111111—8
Mumma	0001111111—7	Binkerd	0111011111—7
Girton	1111110111—8	Glassford	1111010111—8
Hart	1111011111—8	Girton	1111110010—7
Penrose	1111011111—8	Waddell	1111111111—9
McDonald	1111111111—9	Ralston	1110111001—7
Bandle	1011111111—8	Benscotten	1110111110—7
Hart	1001011111—8	Buntaine	1101101101—6

McDonald, Keenan and Waddell divided first; by breaking 6 in the shoot off Heikes won second, Binkerd and Girton divided third.

To wind up the day ten of the shooters went into a three-pair Keystone race, $1 entrance:

Bandle	10 01 11—4	Webb	01 10 00—2
Benscotten	11 10 11—5	Girton	01 00 11—3
McDonald	11 10 00—3	Hart	10 01 11—4
Heikes	10 10 11—4	Waddell	11 10 11—5
Cain	11 11 10—5	Mumma	10 10 10—3

The shoot-off in ties for each of the three moneys was decidedly interesting; and especially did Benscotten and Cain have a red-hot time for first. Here is the score:

Benscotten	11 10 11—5	Waddell	11 10 10—4
Cain	11 11 10—5		

And Waddell dropped out.

Benscotten	10 11 11—5	Cain	11 10 11—5

So they tried it again; the guns were getting hot and the crowd and shooters warmed up:

Benscotten	11 10 10—4	Cain	11 11 11—6

Cain is a stayer, and his friends cheered as he finished his three pair straight and won first money.

For second money there were three contestants, and it took two rounds for Bandle to win:

Bandle	11 10 11—5	Hart	10 11 10—4
Heikes	11 11 01—5		

And it was ta ta Mr. Hart.

Bandle	11 10 11—5	Heikes	11 10 10—4

Mumma won third money after two more rounds, three pairs each:

McDonald	11 10 00—4	Girton	11 10 01—4
Mumma	10 10 11—4		

The crowd hung on to see Andy win.

McDonald	11 10 00—3	Girton	11 10 01—4
Mumma	11 11 10—5		

As a special prize the League offers $80 each to be divided 50, 30 and 20 per cent. to the shooters making the three highest class averages in all programme events excepting the championship contest. The averages, including yesterday's shooting of the four who have a show to win a piece of this prize, are as follows:

Benscotten.

First day's events	10 12 13 14 9 11 11 13—93
Second day's events	12 14 14 14 11 14 12 13—104—197

Heikes.

First day's events	11 11 14 13 11 11 11 14—96
Second day's events	12 14 15 10 12 13 12 15—103—199

Hart.

First day's events	12 13 14 15 10 14 10 9—97
Second day's events	11 13 14 15 12 14 12 14—105—202

Bandle.

First day's events	10 10 14 13 11 12 12 15—97
Second day's events	12 13 14 13 12 13 12 14—103—200

Third Day—Oct. 4.

Weather was beautiful, though a little cold for the last day of the Ohio Trap Shooters' League Tournament. An increased number put in appearance at 9 o'clock this morning, and there was a good crowd of spectators all day. The wind blew from the southwest on the backs of the shooters, beat down straightaway birds, and raised and gave longer flight to right and left outgoing birds, but the shooters soon caught on to that.

The programme opened with a 15 bluerock race, $1.50 entrance, more to limber the boys up for the great contest than anything else:

Bandle	1111111111001111—13	Scott	1011011100101011—10
Hart	1010011101111111—11	Miller	1101111111111110—13
Benscotten	1111111111101111—14	Mumma	0010110110300010—7
Keenan	1111111111111111—15	Waddell	1111111101111111—14
Ralston	1111110111111111—14	Taylor	1001111111101111—12
Harman	1011110111011111—12	Girton	1111111010111110—13
Heikes	1111111111111111—15		

Keenan and Heikes broke 15 each and divided first; Benscotten, Ralston and Waddell divided second; Bandle, Miller and Girton shoot their tie off for third, and Girton won by breaking three straight; Taylor and Harman divided fourth.

THE CUP SHOOT.

The next event on the programme was the greatest contest of the tournament, in which none but the best shots and coolest heads dared enter, and it proved to be one of the most thrilling struggles in the history of trap-shooting. It was the match for honor of being State champion, and for custody of the L. C. Smith silver cup. The cup is solid silver, is valued at $500, and, with the championship, is held by Rolla O. Heikes, of this city. This was the second contest for Conditions were 50 single bluerocks each, $5 entrance. Harvey J. King and A. M. Mumma were chosen judges; H. A. Penrose, of Corry, Pa., referee. Three traps were set, 18yds. rise, 2yds. allowance for 12-gauge guns. The first shot was fired at 11:30 A. M., and the match closed at 4:30 P. M., five hours afterward:

Heikes	1110111111111111111111111111101111111111111111111111—48
Bandle	1110111110111011111111111111101111111111111111111111—47
Hart	1111111111111111111111111101111111111011111111111—48
Benscotten	0011111111111111111111111111111111111111111111111—46

Taylor	0111111001111101111111111111111111111111111111111111—46
McDonald	1111111111010111111010901011100111101111001111111—39
Harman	1111111001111011111111111111111111111111111111111111—47
Limber	1110101101111111011111111111111111111111111111111111—41
Cain	1110111111111010101111111111111111111111111111111111—42

Hart was the only man who broke his first 25 straight. Ed. Taylor, after missing his 18th bird, run his score out clean, breaking 52 straight, with matches that he had shot earlier in the day. When Heikes lost his fourth bird, he had broken 37 straight. Heikes and Hart tied on 48; Bandle 47; Benscotten, Keenan and Taylor tied on 46; Waddell and Ralston each scored 45; Girton, Harman and Cain 42 each; Miller and Limberg 41 each; McDonald 39. Bandle won first portion of the 40 per cent. of the entrance money; Benscotten, Keenan and Taylor divided second; Ralston and Waddell divided third. Ten-gauge—Hart used a 10-gauge Lefever; Miller, Taylor, Bandle, Benscotten, Harman, Ralston, Cain and Limberg, 10-gauge Smith; Girton, a Parker; Waddell, a Scott. Twelve-gauge—Heikes, McDonald and Keenan, 12-gauge Lefever. They all load 1¼oz. of No. 8 shot. Keenan loads with 2¾drs. of powder, Heikes 3¼, and others as high as 4drs.

Heikes and Hart agreed to shoot off their tie for the cup and championship with 50 single bluerocks each, and it proved to be one of the most thrilling contests ever known in trap-shooting, for the men are very evenly matched:

Heikes	0011111111111111111111111111111111111111111111111111—47
Hart	1111111111111111101111111111011111111111111111111111—47

Heikes lost his 44th bird by not having his gun cocked, and before he could break it to enable him to cock the bird was too low for him to shoot, and the bird was scored lost. Excitement grew to fever heat and considerable betting resulted, but the crowd was quiet when Heikes stepped to the score for another effort:

Heikes	1111111111111111101111111111111111111111111111111111—49
Hart	1111111111111111101111111111111111111111111111111111—49

As it was growing dark and cool, Heikes proposed to Hart that they shoot a hundred bird race to-day or shoot to a finish, but Hart had to go to his home, Shin Rock, near Huron, O., and they agreed to shoot it off when they meet again. The "cup" remains in possession of the League, and the honors are laid away in lavender until the best man wins. When all were shooting Heikes broke 24 out of his first 25, Bandle 23, Hart 25 straight, Benscotten 23, Miller 18, Ralston 24, Keenan 24, Waddell 21, Girton 21, Taylor 21, McDonald 20, Harman 21, Limberg 20, Cain 21. In the next ten Heikes lost 2 and Hart was one ahead of him, and that time Ralston tied Heikes and Bandle was one back.

The $80 purse put up by the League to be divided 50, 30 and 20 per cent. between the three shooters making the highest class averages in all programme events, excepting the championship contest, was awarded: Heikes 214, first; Bandle and Hart, 213 each, divided second; Benscotten 210, third.

Nine Keystone, $1 entrance:

Heikes	1111111111—9	Mumma	1110001004—4
Penrose	1111111011—8	Waddell	0110111117
Scott	1111111111—9	Girton	0110110w
Miller	1111110111—8	Bandle	1110111101—7
Taylor	1110111118	Harman	0110011105

Heikes and Scott broke 9 straight and divided; Penrose, Miller and Taylor divided second; Waddell and Bandle divided third.

Nine Keystones, $1 entrance:

Bandle	1111011118	Cain	1101100015
J W Prechtell	1010001104	Keenan	1110111118
Harman	0010111015	Benscotten	0111110016
Webb	1100110015		

Bandle and Keenan shot off for first money and Keenan won by breaking a straight, Benscotten took second, Harman, Webb and Cain shot off for third and Harman won.

Among the little side bets on the cup shoot was one of $10 by Bandle and Hart that their combined scores would be greater than those of Miller and Heikes, and the result was 95 to 89, against Miller and Heikes.

At the next League shoot, which is to be at Cleveland next spring, the winner is to get 60 per cent. of the entrance money and 40 per cent. goes to the League.

When the shooting closed at 5 o'clock, Secretary Ed. Taylor had his books and accounts all squared up, bills all paid, and he packed his little kit and skipped out for Cincinnati, ready to come to Dayton again on the slightest provocation.

THE ST. LOUIS SHOOT.

[From our own Staff Correspondent.]

ST. LOUIS, Mo., Oct. 6.—The first annual tournament given by Fred. A. Fodde opened here on Tuesday. It was intended as an amateur shoot, the 90 class being barred. The shoot was advertised for four days, but Friday was a wretched day, with heavy rains, and no shooting was done, consequently many of the events were not run off. This did not make so much difference, as by vote of the shooters present it was decided not to shoot the guaranteed events. $500 had been guaranteed, distributed in $25 and $50 sums in sixteen events, all surplus moneys to be divided for best averages. In order to establish the average shooters were obliged to compete in all these events, and as some objections were raised, it was decided as above. The attendance was very good, both of local shots and those from a distance.

The targets used were Keystone birds and thrown from Keystone traps. The Keystone system of shooting was also followed—from five traps at known angles, six men to a squad. This enabled the management to run off the events promptly. A remarkable character on the grounds was John F. Hoermann, known as the boss trapper of St. Louis. About eighteen years ago he had the misfortune to be in a railroad smash, and was obliged to have both legs amputated close to the body. He makes his way about on a leather bound cushion, using his arms as propelling power, and is really very agile. Notwithstanding his crippled condition he has quite a local reputation as a baseball player, and is also an excellent swimmer, while his staying powers in the water are attested by many St. Louisians. He takes his affliction very philosophically, and in spite of it manages to get considerable pleasure. He is sure to attend all shoots in St. Louis and makes his trappers toe the mark.

The programme called for two live bird shoots, but only one of them was shot. This was from 5 traps at 30yds. rise, use of both barrels.

All purses were divided into four moneys, 40, 30, 20 and 10 per cent.

The tournament was a very successful one, and as Mr. Fodde proposes to make it an annual event, he is sure to have a still larger attendance next time.

A number of private matches were shot to-day, both at targets and live birds, with results as appended. Wm. Graham, of England, and L. S. Carter, of Hammond, were to shoot a match at 100 live birds for $200 a side, but in consequence of Carter not having his 12-gauge gun, the race was postponed, and will be shot at Baltimore within two weeks. Below are the scores in full:

Tuesday.

Shoot No. 1, at 10 singles, entrance $1:

Dreyer	1101111111—9	Taylor	1101111110—8
P Jones	1111011111—9	Solomon	1110111011—8
Purcillia	0100111110—6	Swiggert	1111111111—10
Bauer	1111111110—9	O'Bryan	1010110011—6
Dukes	1111111110—9	McDonald	0110111100—6
Powers	1100111111—8	Hayson	1111111011—9
C Willard	1110111101—8	Benecke	0111011111—8
Firman	1110110111—8	Hill	0101111101—7
Range	1101111111—9	Scott	0111111111—9

First won by Swiggert, ties on 9 shot off and won by Hyson, ties on 8 shot off and divided by Firman, Taylor and Benecke, fourth won by Hill.

Shoot No. 2, at 6 singles, entrance $1:

Jones	111111—6	Hamilton	011110—4
L G Clark	101111—5	O'Bryan	111011—5
Drayer	111110—5	Jones	111111—6

Figure 2 denotes second barrel kills, and o dead out of bounds.

In the afternoon a match was arranged, after considerable banter and just for sport, between C. E. Wells, of Chicago, and Fred A. Fodde, Fodde to stand at 16yds. and have the use of both barrels, and Wells at 25yds., use of one barrel only. The race was at 25 single Keystone targets, and Fodde won by one bird with the following remarkable score, Wells having to stand a deal of good natured laughter over his defeat:

F Fodde	1111110000100110100200010—12
C F Wells	1101010101010000110100010—11

THE TORONTO TOURNAMENT.

TORONTO, Oct. 5.—To-day saw the close of the most successful of the annual tournaments ever held by the oldest shooting organization in the city—the Toronto Gun Club. There were close upon 60 competiors, or a third of the members, and few clubs indeed can make such a showing of actual members. All through the shooting was remarkably good, although the birds were somewhat lively and the light hardly of the best. But the arrangements were perfect, and in the whole three days, thanks to the energy of the officers, there was not a hitch, but everything passed off in the pleasantest manner possible.

To-day the third and fourth classes shot and the consolation match was shot. The weather was a little dull, but the light was good and the wind was slight. A start was made at 1 o'clock. The birds were fairly good and some of the beaten ones, Mr. Worden in particular, showed that had circumstances favored them they might have been anywhere but in the consolation class. Following are the full scores of the whole tournament:

First class, 15 birds, 26yds rise, 80yds. boundary:

J Wayper	111111111111111—15	Wm Villars	010001111111111—11
C C Small	111111111111111—15	J Armstrong	111011011111101—11
D Beldam	111110111111111—14	G Pearsall	111010111101110—10
J R Mills	111111111101111—14	P Wakefield	010011101111101—10
C Milloy	101111111111111—14	Dr N Pearson	110011110110101—10
F Martin	111101111111111—14	E Perryman	010011010111110— 9
A Purse	101111111111111—14	John Bell	011101101010011— 9
G F Smith	111111110111111—14	Robt Hunter	010031110101111— 9
S Staneland	111111111011111—14	W H Pearson	111000000110101— 8
F Quarrie	111111111101111—14	John James	110111000010100— 8
J Worden	101111101111111—13	Thos Taylor	100101110110110— 8
G Rogers	101111111110111—13	Wm Bugg	111011001000011— 9
D Blea	101110111111111—13	J Chambers	010001001100000— 8
J Taylor	111111110011110—12	B Pearsall	01111011110 — 8
D Van Vlack	001110111111111—13	C Sinclair	01111101110 — 8
A Elliott	011111111100110—11		

In shooting off the ties of 15, at 31yds., Josh! Wayper grassed 4 straight and missed his fifth; C. C. Small missed his first, killed the next three and missed the fifth. Mr. Wayper accordingly takes first prize and Mr. Small second. In shooting off the ties of 14, at 29yds., C. Milloy took third prize, F. Martin fourth, A. Purse fifth, D. Beldam sixth, J. R. Mills seventh, G. T. Smith eigth, S. Staneland ninth and F. Quarrie tenth.

Second class, at 15 birds, 26yds. rise, 80yds. boundary:

W McDowall	111111111111110—14	H W Powers	111000010011101— 8
C Riggs	110011011111111—13	H Clay	001101010100100— 6
H M Kipp	111111111110101—13	H Newman	100010101001000— 5
Thos Loudon	001111101111111—12		

Mr. McDowall takes first prize. In shooting off the ties of 13 at 5 birds Mr. Riggs killed 5 straight and takes second prize, while Mr. Kipp hit only his first and fourth, and takes third prize.

Third class, at 15 birds, 21yds. rise, 80yds. boundary:

T S Barber	111111111111110—14	Thos Winfield	001011101000100— 6
R Morrison	101011011111111—12	R Meldrum	111101111100111—12
C A Pearson	100000103010100— 4	J K Leslie	101001111000111— 9
A J Moore	010001010111100— 5		

Fourth class, at 15 birds, 21yds. rise, 80yds. boundary:

H S Percy	111111111—10	Thomas Pells	000101110 10— 4
J S Henderson	1100001010— 4	Charles Barber	101100100— 4

Consolation Match, at 10 birds, 25yds. rise, 80yds. boundary:

J B Armstrong	1110101111— 8	Jos Taylor	1100101111— 7
J Worden	1111101111— 9	B Pearsall	1001101001— 6
Geo Pearsall	1110111100— 9		

At the close of the tournament a match at 15 birds each, 26yds. rise, 80yds. boundary, one barrel, $25 a side, took place between Mr. Jeff. Worden and Mr. J. B. Armstrong. Much interest was taken in the contest. Mr. Worden proved the steadiest and won:

J Worden	111111100110101—11	J Armstrong	111010000001110— 8

THE EASTERN SHOOTING CIRCUIT.

WITH the fine October weather the prospects are good for the twelve days' shooting of the three meets arranged for the Eastern trap circuit. The programmes have all been completed and provide shooting at clay and live birds enough to satisfy any enthusiast. The Jersey City Heights Gun Club, at its Marion grounds, led off this week with a shoot running from Oct. 9 to 12, the full list of events being:

Tuesday, Oct. 9.—No. 1, 10 bluerocks, entrance $1.50. No. 2, 15 bluerocks, entrance $2.50. No. 3, 15 bluerocks, entrance $3, club guarantee $50. No. 4, 20 bluerocks, entrance $5, Hurlingham rules, 21yds. rise die thrown, every shot, guarantee $50. No. 5, 5 pair, entrance $2.50.

Wednesday, Oct. 10 —No. 1, 10 bluerocks, entrance $2. No. 2, 15 bluerocks, entrance $3, guarantee $50. No. 3, 20 bluerocks, entrance $4, Hurlingham rules, 21yds. rise die, thrown each shot, guarantee $50. No. 4, 10 single, 5 pair, entrance $3, guarantee $25. No. 5, 15 bluerocks, entrance $3, guarantee $25. No. 6, 10 bluerocks, entrance $2.

Thursday, Oct. 11.—First event, 10 live birds, entrance $7.50; second event, 25 live birds, entrance $25, guarantee $25.

Friday, Oct. 12.—First event, 10 live birds, entrance $7.50, guarantee $50. Second event, 10 live birds, entrance $12.50, guarantee $100.

The committee having charge of this leading shoot are: A. Heritage, Jersey City, N. J.; M. F. Lindslay, West Hoboken, N. J.; and W. F. Quimby, 301 Broadway, New York.

The shoot of the Middlesex Gun Club, second in the series for 1888, is the regular fourth annual tournament, and will be held on the Dunellen grounds Oct. 16-19. The Committee on Classification and Handicap includes: C. W. Budd, F. A. Peacock, H. McMurchy, R. H. Breintnall and W. Fred Quimby.

The following is the programme of the meet:

Tuesday, Oct. 16.—Sweepstakes: No. 1, 9 single bluerocks, entrance $1, open to all. No. 2, 9 single bluerocks, amateurs. No. 3, 15 single bluerocks, $75 guaranteed purse, entrance $3, open to all. No. 4, 15 single bluerocks, $75 guaranteed purse, entrance $3, for amateurs. No. 5, 9 single and 2 pairs bluerocks, $50 guaranteed purse, $2 50 entrance, open to all. No. 6, 6 singles and 3 pairs bluerocks, $50 guaranteed purse, $2.50 entrance, for amateurs. No. 7, 5 pairs bluerocks, $50 guaranteed purse, entrance $2.50. No. 8, 5 pairs bluerocks, entrance $1.50, for amateurs.

Wednesday, Oct. 17—Sweepstakes: No. 9, 5 pairs bluerocks, entrance $1, open to all. No. 10, 5 pairs bluerocks, entrance $1, for amateurs. No. 11, 20 single bluerocks, 22yds. rise, Hurlingham rules, usual allowance for 12, 16 and 20 gauge guns, $50 guaranteed, entrance $2, for amateurs. No. 12, 20 single bluerocks, 23yds. rise, Hurlingham rules, usual allowance for 12, 16 and 20 guage guns, $50 guaranteed, entrance $2, for amateurs. No. 13, 15 single Ligowsky clay birds, $50 guaranteed purse, $2 entrance, open to all. No. 14, 15 Ligowsky clay birds, entrance $2, for amateurs. No. 15, 10 single and 5 pairs double New York blackbirds, donated by Standard Target Co., of Cleveland, O., entrance $2, open to all. No. 16, 10 single and 5 pairs New York black birds, bluerocks and Ligowsky clay birds, entrance $2.

Thursday, Oct. 18.—No. 17.—10 live birds, tournament rules, $100 guaranteed purse, $10 entrance, open to all, handicap rise. No. 18.—7 live birds, tournament rules, $75 guaranteed purse, entrance $5, open to all, out handicap rise. No. 19.—5 pairs live birds, tournament rules, $10 guaranteed purse, entrance $10, open to all.

Friday, Oct. 19.—No. 20.—Grand $400 guaranteed purse, sweepstakes, open to the world, commencing 9 A. M., entrance $25 and the birds, money divided, 40, 27½, 17½, 10 and 5 per cent., if less than 20 entries, 40, 30, 20, 10, 5 per cent., if less than 10 entries, 40, 30, 20 and 10 per cent. No. 21,—Home, Sweet Match, 5 live birds, entrance $2.

The closing four days of the Eastern Circuit will be at the new grounds of the New York Suburban Shooting Grounds Association, at Claremont, N. J. The new grounds are admirably arranged and this will be the inaugural shoot from Oct. 23 to 26. The committee of classification embrace, W. Fred Quimby, Wm. Seigler and Chas. Richards. The programme is an attractive one and provides events as follows:

Tuesday, Oct. 23.—No. 1, 9 single bluerocks, open to all, entry $1.50. No. 2, 9 single bluerocks, amateurs, entry $1.50. No. 3, Tatham guaranteed purse, $100, the Atlantic Ammunition Co.'s trophy sweepstakes, 15 single bluerocks, open to all, entry $4. No. 4, Winchester Repeating Arms Co., guaranteed purse $100, the Atlantic Ammunition Co.'s trophy sweepstakes, 15 single bluerocks, for amateurs, entry $4. No. 5, FOREST AND STREAM guaranteed purses $100, 10 single and 5 pairs bluerocks, guarantee $50, open to all, entry $2.50 No. 6, 10 single and 5 pairs bluerocks, guarantee $50, for amateurs, entry $2.50. No. 7, S. A. Tucker pool system, 12 single bluerocks, open to all, entry $2.00.

Wednesday, Oct. 24.—No. 8. 9 single bluerocks, open to all, $50 guaranteed, entry $2.50. No. 9, 9 single bluerocks, amateurs, $50 guaranteed, entry $2.50. No. 10, the Atlantic Ammunition Co.'s trophy sweepstakes, 15 single bluerocks, open to all, $75 guaranteed, entry $3.50. No. 11, the Atlantic Ammunition Co. trophy sweepstakes, 15 single bluerocks, for amateurs, $75 guaranteed, entry $3.50. No. 12, 9 single and 5 pairs bluerocks, $75 guaranteed, open to all, entry $3.50 No. 13, 9 single and 5 pairs bluerocks, $75 guaranteed, for amateurs, entry $3.50.

The Atlantic Ammunition Co.'s diamond watch charm trophies, costing $50 each will be awarded, one to the highest score made in events 3 and 10, expert class. The other to the highest score in events 4 and 11, amateur class. Ties to be shot, miss and out.

Thursday, Oct. 25.—No. 14. Grand live bird sweepstakes, open to the world, commencing at 9 A. M. sharp, 25 single pigeons, tournament rules, entrance $15 and the birds, $300 guaranteed.

The balance of time during the tournament will be devoted to impromptu sweepstakes at live birds or artificial targets and individual matches which may be arranged to be shot on these grounds. The scores of 100 straight having been made in competition for the Atlantic Ammunition Co.'s N. Y. State trophy, these ties will be shot off Friday morning, Oct. 26, at 9 o'clock.

MARION, N. J., Oct 9.—The opening of the tournament at the Jersey City Heights Gun Club drew together a score or more of most expert trap shots. The bluerocks were knocked out in one event after another and the management was capital while the weather made the retirement of the shooting house very acceptable. The full scores for the whole meeting will be given in the FOREST AND STREAM of next week.

WALNUT HILL, Oct. 3.—A cloud-obscured sky, a brisk wind and a chilly atmosphere were the weather conditions at Walnut Hill to-day. There was a good attendance of sportsmen, and excellent scores were made. The principal event was the gold coin match, in which fourteen eager competitors strove for supremacy. Following this contest came twenty-three sweepstakes and one miss and out match. The next shoot at Walnut Hill will be held Oct. 17—when the fifth competition for the Climax Diamond Badge will occur—the gold coin will be shot, and the regular sweepstake shooting will follow. The scores to-day in the gold coin match, 10 clay-pigeons from five traps and 10 standard targets from three traps are as follows:

	Clays.	Standards.
Knowlton	1111111110— 9	1111111110— 9—18
Stanton	1111111111—10	1110101110— 7—17
Nichols	1111101101— 8	1111110101— 8—16
Snow	0110111110— 7	1011111111— 9—16
Scott	1011101011— 7	1001111111— 8—15
Bert	1101011111— 8	0111010111— 7—15
Hosmer	1101010111— 7	1011111101— 8—15
Crown	1001111100— 7	1010101111— 7—14
Rule	0110001100— 4	1111011111— 8—12
Swift	1101011100— 5	1111110001— 7—12
Webster	1111011001— 7	1110010110— 6—13
Houghton	1100011111— 7	0111011100— 6—13
Webster	0100101101— 5	0110111101— 7—12
Nelson	1111001010— 6	0010101101— 5—11

Following are the winners in the sweepstake matches:

First event, 5 clay-pigeons, from 5 traps—Knowles and Nichols first with 4, Rule second with 3.

Second event, 6 standard targets from 3 traps—Nichols first with 5, Rule and Snow second with 4, Knowles third with 3.

Third event, 6 Macomber targets—Snow first with 6, Rule and Chase second with 4, Nichols third with 3.

Fourth event, 5 clays from 5 traps—Nichols and Snow first with 5, Rule and Knowles second with 4, Chase third with 2.

Fifth event, 6 standard targets from 3 traps—Bert and Stanton first with 5, Snow second with 4, Swift and Webster third with 3.

Sixth event, 5 clay-pigeons from 5 traps—Stanton first with 5, Nichols and Chase second with 4, Bert third with 3.

Seventh event, 3 pair standard targets—Knowles and Nichols first with 4, Bert second with 3.

Eighth event, 3 pair clay-pigeons—Stanton first with 5, Webster second with 4, Chase and Snow third with 3.

Ninth event, 10 standard targets from the trap—Wheeler first with 10, Nichols second with 9, Snow third with 8.

Tenth event, 10 blackbirds from 3 traps—Scott and Hosmer first with 10, Nichols and Snow second with 9, Bert third with 8. Stanton, Knowles and Webster fourth with 7.

Eleventh event, 10 clay-pigeons from 5 traps—Nichols and Scott first with 9, Rule and Wheeler second with 8, Hosmer third with 7, Stanton fourth with 6.

Twelfth event, 6 Macomber targets—Snow first with 6, Bert and Houghton second with 5, Stanton third with 4, Chase and Knowles fourth with 3.

Thirteenth event, 10 clay-pigeons from 5 traps—Stanton first with 10, Knowles second with 9, Nichols and Bert third with 8, Houghton fourth with 7.

Fourteenth event, 10 standard targets from 3 traps—Snow and Kowles first with 9, Scott second with 8, Bert and Crown third with 7, Chase and Houghton fourth with 6.

Fifteenth event, standard targets from 3 traps—Hosmer and Rube first with 10, Stanton and Knowles second with 9, Scott third with 8, Bert and Nichols fourth with 7.

Sixteenth event, 10 clay-birds from 5 traps—Stanton and Scott first with 9, Bert, Knowles and Hosmer second with 8, Nichols and Smith third with 7, Chase and Snow third with 6.

Seventeenth event, 6 Macomber targets—Rube and Stanton first with 5, Webster second with 4, Nichols third with 3.

Eighteenth event, 5 clay-pigeons from 5 traps—Stanton first with 5, Rule and Lee second with 4, Knowles third with 3.

Nineteenth event, 6 standard targets from 3 traps—Stanton first with 6, Snow second with 5, Nichols third with 4.

Twentieth event, 5 clay-pigeons from 5 traps—Lee and Stanton first with 4, Chase and Knowles second with 3.

Twenty-first event, 3 pair standard targets—Chase first with 5, Knowles and Scott second with 4, Crown and Rule third with 3.

Twenty-second event, 5 straightaway clay-pigeons—Snow first with 5, Scott second with 4, Crown third with 3.

Twenty-third event, 6 blackbirds from 3 traps—Chase first with 6, Stanton second with 4.

Twenty-fourth event, miss and out, 24yds.—Won by Stanton.—J. N. F.

PHILADELPHIA, Oct. 4.—The first of a series of three matches between the Wingohocking Gun Club, of Germantown, and the Wawassett Club, of Wilmington, Del., took place on the grounds of the former this afternoon. The range was 18yds. and bluerocks were used. Messrs. Wilson and Hannaberry were judges, and Mr. Mack was referee. The conditions of the shoot were 15 singles and 5 double bluerocks per man.

Wawassett.		Wingohocking.	
W McKendrick	14	H Thurman	21
T Fox	18	W Greenwood	22
C Buckmaster	23	B Royds	14
H Harlove	21	W Jay	18
W Smith	20	W W Abbott	17
J Ewing	23	J Thurman	19
G Miller	15	J Maxwell	10
W Buckmaster	20	T Greenwood	13
H Buckmaster	19	G Heft	12
H Stout	17	T Pullinger	14
R Miller	21—211	W Garvin	17—177

Maxwell and Heft did not finish. The next match will be held on the grounds of the Wawassett Club, in Wilmington, Del. The third match will probably be shot on the grounds of the Sportsmen's Club, at Fernwood.

TRENTON, Oct. 5.—Miss Annie Oakley, the champion female trap shot, met and defeated Miles Johnson, at the fair to-day, in a match at 50 live pigeons, at 25yds. rise, otherwise Hurlingham rules. Miss Oakley used a 6lbs. Lancaster lamnsless 12-gauge, with 1⅛oz. shot and 3drs. Schultze powder; Johnson stood at 30yds., using a 10-gauge, 9½lbs. Scott, 1⅜oz. shot, Schultze powder in right barrel, and Quickshot black in left. The birds were a good lot. Fifteen thousand persons witnessed the match, and Miss Oakley's remarkable shooting was frequently applauded and greatly admired. Miss Oakley missed her forty-seventh bird, a blue twister, who went from No. 5 trap like a rocket. She turned to Johnson and said, laughingly: "Did you bring that bird from England?" Johnson—"No; I trained that fellow in order to get in one miss on you!"

Miss Oakley	2121221211111111111121112—25
	1111211111111211231201—24—49
Johnson	1112312101111102201201—20
	2101111111111121010111—22—42

The betting was lively, with Miss Oakley as the favorite. The win is all the more creditable because Miss Oakley participated in the match under difficult circumstances, having to fill her engagement the same evening in Philadelphia. She got up at 6 A. M. to go to Trenton.

THE MAN FROM BULLETSVILLE OUGHT TO SHOOT WELL.—Cincinnati, O., Oct. 5.—The young shooter McPhee has caught on immensely here, and one ardent admirer of shooting has placed forfeit money to the amount of $50 at Wick's Wigwam, the shooters' headquarters here that the young shooting phenomenon, C. W. McPhee, of Bulletsville, Ky., who tied with C. W. Carter and Q. A. McClure for the world's live-pigeon championship at the late Bandle tournament, can defeat in a match at 100 birds any of the following gentlemen, live or artificial targets, to be shot in Cincinnati: Shott, $100 to $75; Parker, $100 to $60; Wick, $100 to $25; Keenan, $100 to $75; Glasford, $100 to $70; Girton, $100 to $75; Murphy, $100 to $80; Ed. Taylor, $100 to $90; Mustin, $100 to $85; Verges, $100 to $90; Valentine, $100 to $90; Semple, $100 to $75; Jackson, $100 to $75; Teipel, $100 to $90; Small, $100 to $75; Richards, $100 to $70; and Vincent, Winston, Hill, Heikes, Sheldon, Powers, Gastright, J. E. Miller, Phil Nose, Bandle, each even.

CLEVELAND, O., Oct. 4.—*Editor Forest and Stream:* The twenty-fourth quarterly shoot for the Cuyahoga county badge ended in a victory for the Cleveland Gun Club, R. E. Sheldon bearing off the trophy for the sixth time in as many years. The weather was favorable, excepting that the wind, at times, was strong and carried away the birds from the direction in which they were thrown. But good scores were made by nearly all the contestants. The conditions were 50 single standard targets, 18yds., 5 traps. Peters cartridges were used by Sheldon and Upson. The entrance fee was $3, and seventeen sportsmen representing four clubs, took part:

WILMINGTON, Del., Oct. 6.—The regular monthly clay pigeon shoot of the Wawaset Gun Club took place to-day on the club's grounds, beyond Eleventh street bridge. The men shot at fifteen singles and five doubles:

T Weldon	13 6—19	W McKendrick	14 8—22
P Ambold	11 8—19	W Sillotie	13 8—21
J Ewing	14 6—20	W Cody	11 8—19
A Stout	13 5—18	H Buckmaster	10 8—18
H Kienle	6 3—9		

McKendrick thus holds the first badge for a month, while Ducky Kienle is "cuckooed."

SAN FRANCISCO, Cal., Sept. 30.—The ground of Brid's Point was well attended to-day. Both live birds and asphaltum were in demand. The birds flew well, and were considerably helped by the tail wind. Holtz's work on the artificials was something about impossible to beat. Judge and referee, W. Carr; trapper, Bird. First shoot—$250 sweepstake, 30yds. rise, Hurlingham rules:

Brough.....2221101012200— 8 Banks.....1222100022111—9

Fourth shoot—Match for $20, 10 singles, International:

Holtz.....1111111110—9 Bank.....1101111101—8

WELLINGTON, Mass., Oct. 6.—There was but a small attendance at the regular Saturday shoot of the Wellington Gun Club to-day. The following were the first prize winners of the various events: Six clay-birds, Shumway; 6 clay-pigeons, Chase and Wardwell; 6 bluerocks, Shumway; 3 pair bluerocks, Snow; 3 pair clay-pigeons, Shumway; 6 bluerocks, Wardwell; 6 clay-pigeons, Chase; 6 bluerocks, Sanborn and Field; 6 clay-pigeons, Swift and Stanton; 6 clay-pigeons, Snow, Swift and Field; 6 bluerocks, Shumway, Chase and Sanborn; 6 bluerocks, Sanborn and Wardwell; 3 pair clay-pigeons, Stanton; 3 pair clay-pigeons, Snow; 6 bluerocks, Snow and Wardwell; 3 pair clay-pigeons, Wardwell; 6 bluerocks, Snow; 6 clay-pigeons, Wardwell.

PHILADELPHIA.—The North End Gun Club will have, on Oct. 13, a full afternoon shoot; there will be prize and sweepstake shooting and in the evening a supper for the members and their friends. Targets 2½c. each. All our friends will please consider this an invitation to come and enjoy themselves.—CLUB COMMITTEE.

READING, Pa., Oct. 1.—A pigeon match for $200 was shot this afternoon at Riverside, between Zenas Cooper, G. R. Goodman and John McMillan, a Mahonoy City team, and O. H. Hinnershitz, Fred Ulmer and Jacob Hill, of Reading. The conditions were 100 birds each side, 30yds. rise, 80 boundary, Hurlingham rules. The match was won by Reading, scoring 80 birds out of 100 to Mahonoy City's 78. Cooper, of Mahonoy City, made the best score, 32 out of 34 birds.

THE DRESDEN GUN CLUB, of Dresden, O., will hold a tournament Oct. 17-18, free to all, artificial birds and live pigeons. For full particulars address Capt. Geo. Egan or John Hornung.

KLEINTZ DEFEATED.—J. Frank Kleintz, the champion trapshot of Pennsylvania recently met D. B. Ferguson, of Port Norris, N. J., in a live pigeon match at 25 birds, for $100 a side, and was beaten by one bird. The conditions were 25yds. rise, Rhode Island rules:

Ferguson.....1111101111111101101010111—19
Kleintz.....1111111111011000111001101—18

The birds were a fair lot.

Yachting.

THE LOSS OF THE CYTHERA.

THOUGH all hope of the safety of the missing yawl Cythera has been abandoned for some time, it was only last week that steps were taken to bring Mr. Stewart's will to probate. Mr. Stewart's partner and executor, Mr. E. W. Sheldon, has filed an application in the Surrogate's office, in which the circumstances attending the loss of the yacht are set down as follows:

"On Saturday, March 12, 1888, about 3 o'clock in the afternoon, Mr. Stewart, in pursuance of a plan necessitated by serious ill health, sailed from Tompkinsville, S. I., in his yacht Cythera for Kingston, Jamaica, intending afterward to make a short cruise in the West Indies, and to return to New York by the 1st of May. A voyage between New York and Kingston would ordinarily occupy a sailing vessel from two to three weeks. The Cythera was a yawl-rigged vessel, built at Fairlie, Scotland, in 1874, rebuilt in England in 1884, conspicuous among yachts for her seaworthiness, and staunch and well found in every respect. Her length over all was 104ft., and her gross tonnage was 117⅚ tons. Her ballast consisted of 45 tons of lead and iron inside and 15 tons of lead outside. She carried besides Mr. Stewart and his friend, Cornelius Smith Lee, of New York city, both of whom were experienced in sailing and navigation, a crew composed of Joseph Phipps, of Wivenhoe, England, sailing master; Charles Svenson, mate; six seamen, a cook and a steward, having in all twelve persons aboard.

The day following her departure, at 9 o'clock in the morning, about twenty-five miles east of Barnegat, N. J., the Cythera was sighted, bound south, and was reported. That night, between 11 and 12 o'clock, the blizzard came suddenly upon the eastern coast of the United States. A large number of vessels are known to have been wrecked in this storm, and many others have ever since been missing. On Monday afternoon, March 12, between 2 and 3 o'clock, when the storm was almost or quite at its height, the Cythera, as was afterward reported by the captain and mate of the three-masted schooner Annie E. Conant, of New Haven, Conn., was seen running before the gale at the apparent rate of eight or nine knots an hour. Her course was east to east southeast, and she was then about fifty miles south of the Five Fathom Bank Lightship, or about seventy-five miles southeast of Cape May. So far as could be seen at a distance of 150yds., and through a driving snow storm, the yacht had suffered no damage from the gale, and was weathering it well. No one was visible on her deck.

"Since that time no certain news of the vessel, and no news at all of those on board of her, has been heard. The following month, Capt. Hubbard, of the New York and West Indian steamship Barracouta, reported that on the 9th of April, about 200 miles north of the Island of St. Kitts, he sighted what he took to be a small yawl-rigged vessel bound south. At the distance, however, eight or nine miles, and with a considerable sea, it was impossible to obtain more than two or three glimpses of this vessel, and no intelligence of her has since been received.

"The latest news in connection with the missing yacht was brought by the Leonard, of the bark Josie E. Moore, belonging to Maydell Brothers, of New York. He reported that about March 25, while bound to New York from the West Indies, he passed some wreckage 150 miles south by east of the Highland Lights, which Pilot Joseph H. Nelson, of this city, part owner of the pilot boat Enchantress, says were cabin fittings belonging to that vessel. This pilot boat was cruising off the coast of southern New Jersey on March 11, in the vicinity of the Cythera, and was overtaken by the same gale. From the appearance of this wreckage Pilot Nelson believed that the Enchantress was sunk by collision, and that all on board perished. Acting on this belief, he and other surviving owners have collected her insurance from the Atlantic Mutual Insurance Company, and are building a new boat to take her place. Forty miles south of the place where the wreckage was seen Capt. Leonhard saw the same day a floating fragment, eight feet or more in length, of the deck of a small vessel. From its shape, tapering almost to a point, its narrow planks, the manner in which they were laid, and the opening, he supposed it to be the decking of the bow of a yacht, broken off by collision. Pilot Nelson, to whom this was reported, says that from his knowledge of the Cythera he is convinced that this piece of deck belonged to her, and the same conviction has been expressed by other persons acquainted with the yacht.

"If this conclusion be accurate, it would follow from the position and course of the Cythera when last seen, and the location of the floating deck that she must have collided with some unknown vessel or wreck during late afternoon or evening of Monday, March 12, and immediately sunk. Under these circumstances and in such a storm the survival of any person on board would seem to have been impossible."

Captain Leonard did not report the sighting of the smaller piece of wreckage on his arrival in port, and it is only lately that he returned from a second voyage. In the meanwhile the rumor had reached some of Mr. Stewart's friends, and on the arrival of Captain Leonard from his last voyage they questioned him carefully in regard to what he had seen. The Cythera was a very strongly built modern vessel, copper fastened, and with only fifteen tons on her keel, her length on l.w.l. being 84ft., beam 17ft. 6in. and draft 13ft. She carried a seagoing rig and was well manned and equipped for a long ocean cruise. Beyond what is recounted above, nothing is known of her fate, and it is unlikely that the mystery of her loss will ever be solved; but there is nothing to warrant the conclusion that she foundered in the Gulf Stream, as has been hastily assumed by some; and all the evidence points strongly to a collision with another vessel, the bow of the yacht being cut away, leaving a part of the deck afloat, while both vessels went to the bottom.

THE NORTON SYSTEM OF BALLASTING.

JERSEY CITY, N. J., Oct. 1.—*Editor Forest and Stream:* I have read with pleasure Mr. E. O. Wiener's pleasant letter relating to the Norton yachts, published in your issue of Sept. 27.

In your comments following this letter you remark upon the liability of these boats to leak through the joints of the ballast compartments, and to intimate that these compartments and the connecting pipes may be broken by the freezing of the water in them, if the boats or yachts remain afloat in very cold weather.

In response to the first of these objections, I will say that if the compartments and joints are properly constructed there is no danger whatever of their leaking or being broken; they are much less liable to accident from this cause than the ordinary vessels are from damage to their planking or frames. Moreover, such damage to a Norton boat cannot possibly be followed by any serious mishap to its occupants, as the Norton boat cannot sink, unless, as the Committee on Commerce, House of Representatives, say, "she is broken to pieces." You are at liberty to remove a planking from the bottom or sides, or bore holes in the outer skins, and the water will not rise above the inner floor. This I have already shown several times in Europe and here. As long as a majority of the ballast compartments remain intact the boat will not sink her floor many inches below her ordinary draft. In the case of the Alista, the floor had been entirely removed, that the metal chambers below might be examined. Not one of these chambers was sound, as the manufacturers in riveting them used iron rivets, which were soon eaten up by the yellow metal, and the chambers were rapidly breaking up in their joints.

I have boats now in this harbor which have seen very hard usage during the past two years, usage which no other class of boat could support for an hour without drowning their occupants, yet they have always done their work, and are still perfectly sound and reliable. As regards the freezing of the water in the pipes and chambers I can assert that there is no occasion for apprehension on this point, a boat I now have being in Germany, had all the water in her chambers frozen while she was afloat in the river Elbe and not a joint of pipe was disturbed. Again during the winter of 1887 at Philadelphia the same boat remained in the water until the end of January when I examined her and found all the water in her chamber and pipes was a solid block of ice, yet nothing gave way, as there is ample room through the openings in the bottom, the air portion of the chambers and the air pipes to provide for the expansion. That boat is now in the harbor and has been seen by hundreds of persons sailing about the harbor with "Norton Lifeboat" painted on her mainsail.

In conclusion permit me to remark, that I make no claim that the Norton boats are beyond the reach of accident or damage, but that they are practically non-capsizable and unsinkable, and that they will safely carry human beings under circumstances when any other class of boat or vessel would drown them.

It is beyond the power of man to create or produce a floating body or any mechanism that is not subject to accident and decay, even the planets of this universe, so wonderfully governed by the Great Master, are subject to their storms and floods, earthquakes and volcanic fires; yet these storms and floods will seldom wreck the Norton boat or ship.

I am an old American, and have been a navigator for thirty-six years. I have crossed the Equator eleven times, twice made the circuit of the globe I have hoisted the United States flag upon nearly every sea, and assisted to clear the ocean of the slaves and pirates; I have studied shipbuilding in most of the large seaports of Europe and America, and I know the merits, the strength and the value of the system of naval construction I am offering the maritime world. FRANCIS L. NORTON.

TILLER VS. WHEEL.—The great steamship City of New York is steered only by a short tiller, such as would be used on a 5-tonner, and it is said that at first the steersmen had great difficulty in keeping a straight course, the best steersman on board being an old yacht sailor. The huge balanced rudder is controlled by very powerful steam-steering gear, all below the water level, the valves of the steam gear being operated by a small tiller on the bridge.

LAUNCH OF A STEEL STEAM YACHT.—On Oct. 6 the Herreshoff Mfg. Co., of Bristol, R. I., launched the first steel yacht that the firm has yet built; the Ballymena, owned by Mr. George Brown, of Baltimore, Md. She was designed by Mr. Nathaniel Herreshoff, and is 132ft. l.w.l., 18ft. 6in. beam, 7ft. 6in. draft. The engines are triple expansion, also designed and built by the firm.

SOUTHWARK Y. C.—A match was sailed on Sept. 30 between the fourth class tuckups, J. L. Nobre and Okey, No. 1, for $100; the course being from Mifflin street wharf around Chester Buoy, 30 miles; wind heavy, N.W. The start was made at 12:30, the Nobre finishing at 4:50, and the Okey at 4:51:50; no time allowance.

A CRUISE TO THE SOUTH.

NEW YORK, Oct. 5.—*Editor Forest and Stream:* As the columns of the FOREST AND STREAM are ever open to facilitate the pleasures of yachting and other true sports, will you not give us your kindly assistance in making known the following:

I have a small schooner yacht, under 60ft. in length, in which I expect to make a hunting, fishing and sailing cruise along the coast southward to Florida this winter. Want to start between the first and the middle of November, sailing outside to Cape May, thence to Norfolk, thence inside through Albemarle and Pamlico sounds through the inside passage back of Hatteras, taking plenty of time, shooting and fishing as I journey southward. Date and route subject to change. As many small yachts make this southern trip every winter, can we not multiply our pleasures by joining forces and cruising together as a fleet? Pleasure being the object, we would only sail when wind and weather favored, and the smallest could keep up with the largest, as speed would be no object, while the added pleasure of companionship would assist in making such a voyage ever a pleasant memory. We could rendezvous at Sandy Hook or Norfolk.

If this strikes other yachtsmen favorably, will they not let us hear from them through these columns so that a meeting can be arranged for carrying out the objects above set forth? Speak out, brother yachtsmen. VIDETTE.

COLUMBIA Y. C., FALL REGATTA.—The annual fall regatta of the Columbia Y. C. was sailed on Oct. 6 in a heavy rain and strong N.E. wind, at times blowing very hard. The course was from the club house, foot of Eighty-sixth street, Hudson River, around a stakeboat off Yonkers. Before the start the Midget capsized at her moorings, while Rocket capsized off Yonkers, two of her crew being nearly dead when rescued. The official times were:

CLASS C., SLOOPS AND CUTTERS 30 TO 35FT.

	Start.	Finish.	Elapsed.	Corrected.
Alene	12 00 00	3 51 16	3 45 16	3 45 16
Mergus	12 07 54	3 43 23	3 35 29	3 32 49

CLASS H, OPEN CATS OVER 23FT.

Nina	12 08 09	4 08 26	3 59 17	3 59 17
Henry Gray	12 08 53	4 48 10	4 39 17	4 33 37
Aller	12 08 55	3 55 45	3 46 50	3 49 40
May F	12 07 28	3 55 16	3 47 48	3 38 18
Cora	12 10 45	4 08 44	3 57 59	3 47 14

CLASS J, OPEN CATBOATS, 20FT. AND OVER.

Columbia	12 13 22	4 08 00	3 54 38	3 54 38
Pauline B.	11 14 34	4 26 41	4 12 07	4 12 02
Mystic	12 14 20	4 20 22	4 06 12	4 01 32

CLASS K, OPEN CATBOATS UNDER 20FT.

Henry Fisher	12 08 26	4 25 09	4 16 38	4 16 18
Little Dean	12 11 39	4 42 06	4 30 27	4 24 27
Midget	12 06 35	withdrew.		
Rocket	12 13 30	capsized.		

Mergus wins in class C, Alex. F. in class D, Rambler in class E, Harned in class G, May F. in class H, Columbia in class J and Henry Fisher in class K. The judges were Com. Barnes, K. Y. C., J. C. Summers and T. G. Sullivan.

BRIDGEPORT.—Citizens' Cup, annual regatta, Oct. 3. Course, triangle from Bridgeport Light to stakeboat, to Point No Point, to starting line; 9 miles. Strong breeze from N.W.; cloudy. Tide, ebb.

	Length.	Start.	Finish.	Corrected
Mollie Pitcher, W. S. McNeil	21.06	2 37 30	Withdrew.	
Rival, F. I. Hitchcock	21.00	2 55 50	3 52 30	1 16 40
Tripoli, Geo. Frederickson	19 04	2 36 10	Withdrew.	
Grace L., David Connors	20.04	2 36 10	4 08 50	1 32 40
Coronet, Minot Munson	21.04	2 36 20	4 26 50	1 49 45
Hornet, Chas. H. Morris	20.02	2 37 15	Withdrew.	
Surprise, J. Schultes	20.00	2 36 05	4 50 40	2 14 00
Dawn, C. F. Chew	20.06	2 37 25	Withdrew.	
Gracie, Theo. Leavenworth	21.06	2 36 20	Not timed.	
Dogmar, Geo. Brown	19.00	2 37 00		

All the yachts but the Grace L. and Surprise had reefed sails, some double reefed. Soon after the start, when the fleet were all off before the wind, it came down so heavy that all the fleet except the Rival and Tripoli broached to, and had to be tied down before they could be handled. At the stakeboat the Tripoli had jibed preparatory to rounding. The Mollie Pitcher was close on to her, and between stakeboat and Tripoli she could have luffed out across her stern, but did not, and could not jibe, so struck the Tripoli just abaft the chain plates and cut her to the water's edge and tore her own bowsprit off. Both were taken in tow by the tug Matt Rowe, following with a party of ladies and gentlemen to see the race. Winners: First prize, Rival; second prize, Grace L.; third prize, Coronet; fourth prize, Surprise; fifth prize, Gracie. Regatta Committee—Com. A. C. Hobbs, Capt. Wm. F. Brooks and A. H. Davis. Judges—P. H. Prindle, Capt. Thos. F. Vose and Geo Masters.

SAN FRANCISCO.—The match for $1,000 per side between the pilot boat America and the coasting schooner C. H. White, was sailed on Sept. 29 over a 48.5-mile course, from a line between Point Labos and Point Bonita, on San Francisco Bay, around the Middle Rock, off the Farallones, the same course over which Aggie and Lurline raced in 1886. The America is 91ft. over all, 80ft. 7in. l.w.l. and 24ft. beam, built by Matthew Turner at Benicia. The C. H. White is 80ft. 6in. l.w.l., built by C. G. White at North Beach. The start was made in a light west wind, the White crossing at 10:04:44 and the America at 10:09:26. The White led at first, until the breeze freshened, when she was passed by the America. The latter rounded the mark at 2:01:20, setting her light canvas at once. The White rounded at 2:13:10. America won by nearly 6 miles, the times being:

	Start.	Turn.	Finish.	Elapsed.
America	10 09 26½	2 01 20	4 45 38¾	6 36 12¼
C. H. White	10 04 44½	2 13 30	5 15 43	7 10 58½

Lurline was not in the race, but sailed over the course.

DAUNNTLESS.—About 1 A. M. on Oct. 5 the schr. Dauntless, Vice-Com. Colt, grounded on the rocks on the southeast end of Hart's Island, the wind falling and a strong ebb tide carrying her on. As the tide fell she was left in a dangerous predicament, but at high water she was hauled off by a tug and towed to South Brooklyn. So far as known, her injuries are not serious.

FEARS FOR THE PILOT.—Chicago, Ill., Sept. 28.—Specials from Racine, Wis., state that fears are felt for the safety of the yacht Pilot, that sailed on Sept. 26 for Chicago, bound for New Orleans via Illinois and Mississippi rivers. The Pilot was caught in the heavy northwest gale, and since then nothing can be learned of her. No word can be gained at this port, and captains of large craft coming in to-day state that no small craft could have lived through the gale. Capt. Strain of the steamer Puritan, came from Breton Harbor after the gale had abated, but says that even there the yacht could not have lived in the sea, which was terrific. Capt. Wetherill and Lou Skow were aboard the Pilot. It is hoped they may have survived, but at midnight last night no trace had been seen of them or their boat.—E. H.

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }
Vice-Com. Rear-Com. Purser.
Central Div..W. R. Huntington..E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div..W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div..H. E. Rice, M. D....Maxton Holmes.....H. D. Marsh, Springfield, Mass.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

NEW YORK C. C. CHALLENGE CUP.

THE international races for the New York C. C. cup will be sailed on Saturday next off the house of the New York C. C., at Stapleton, Staten Island, the first race being called at 10 A. M. and the second at 2 P. M. The extra open races will be started immediately after the cup races. Mr. Butler has sent the Fly down and will enter the open races, while Mr. Warder will sail the If.

CHARM.

THE races which will take place on New York Bay this week cannot fail to be interesting, the two competitors being the fastest boats of America and England respectively: but at the same time the contest is less important than that of 1886, in that there is no special issue involved, the boats being of the same type, though of different model. Unlike Pearl and Nautilus, the previous competitors, the Charm was designed to carry no ballast and displace as little as possible, her total displacement being no more than the ballast of the older boats. The races of 1886, both at Grindstone and New York, demonstrated beyond possible question the great superiority of light displacement, fine form, and the deck position over heavy displacement, full and bulky models, and the lying down position, the two English boats being decisively beaten in every race. On his return to England Mr. Walter Stewart, who sailed the two Pearl canoes, at once set to work on the design for a new canoe, on the principles of the American craft, the boat being built under his direction in the winter of 1886-7.

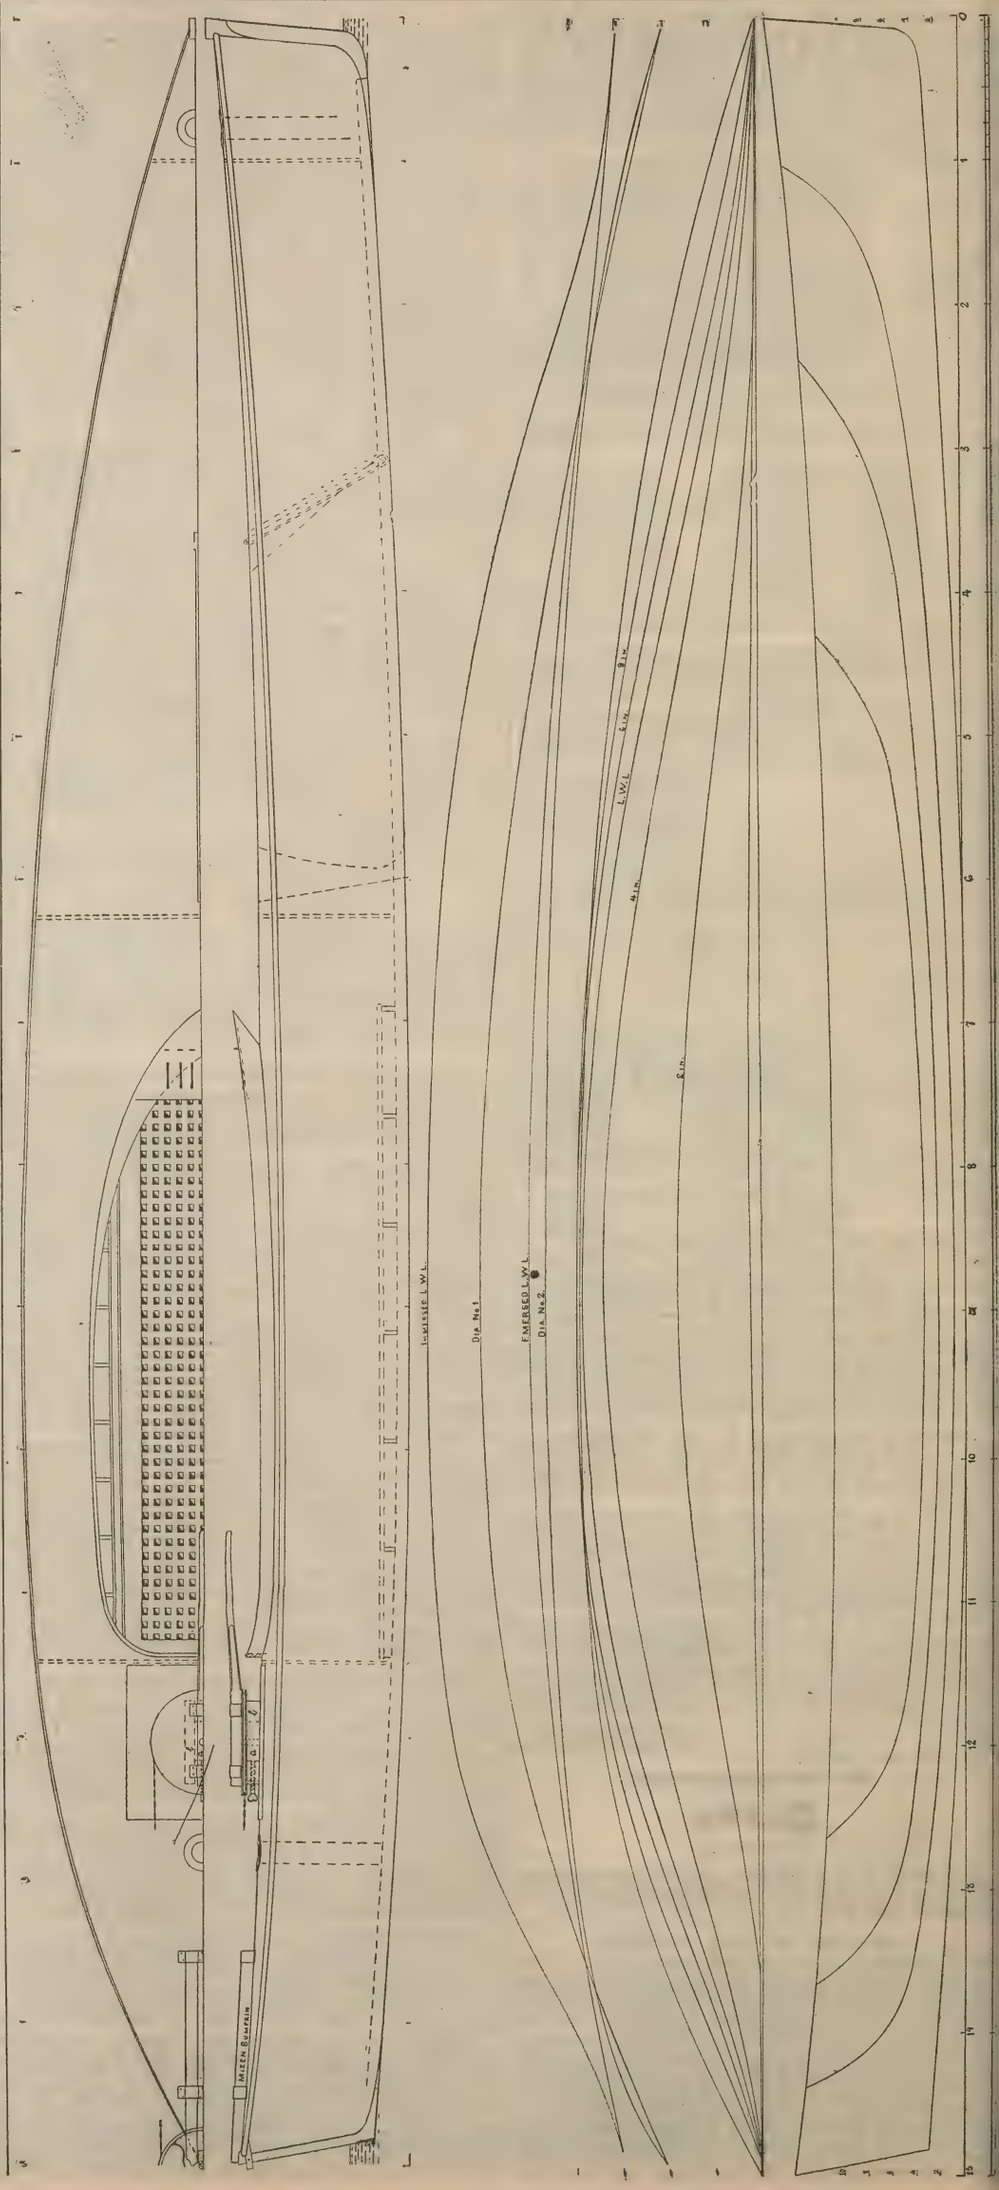
The Charm, as she was named, raced in all the regattas of the Royal C. C. in 1887 and 1888, with great success, winning the challenge cup each year and proving her superiority to the old heavy ballast canoes still used by the R. C. C. In the spring of the present year a challenge was sent to the New York C. C. for the cup offered by them in 1886, and Mr. Stewart also came out in time to sail in the races of the A. C. A. at Lake George. In these the Charm made but a poor showing, being beaten by several American canoes. Since then she has been altered and improved in some respects, and is likely to make a better showing in the matches against one boat than against the fleet, but at the same time she has little chance of outsailing Eclipse after the way in which the latter defeated her at the meet. Eclipse will be sailed by her owner, Mr. Reginald S. Blake, Brooklyn C. C., instead of Mr. Brokaw, who sailed her at the meet, but either is fully capable of doing full justice to the good qualities of the boat.

A comparison of the accompanying lines with the many others published in the FOREST AND STREAM, Notus, Vesper, Pecowsic, Guenn, Vagabond, Snake, Lassie and Sunbeam, will show that while similar to some of them in displacement and general features, the Charm differs very much in model, being unlike any in her midship section and also in the distribution of the displacement. There is, however, a striking resemblance in some respects between her and the Vagabond. The designers of the two boats, though working far apart and in ignorance of each other's work, had each the same ends in view, the reduction of displacement to the lowest possible limit, with a maximum of stability and minimum of frictional surface. The dimensions are different, the Charm (15.2½+31) being shorter and wider than the Vagabond (16×29), but the two drawings have been reduced to the same actual size, so that a direct comparison can easily be made.

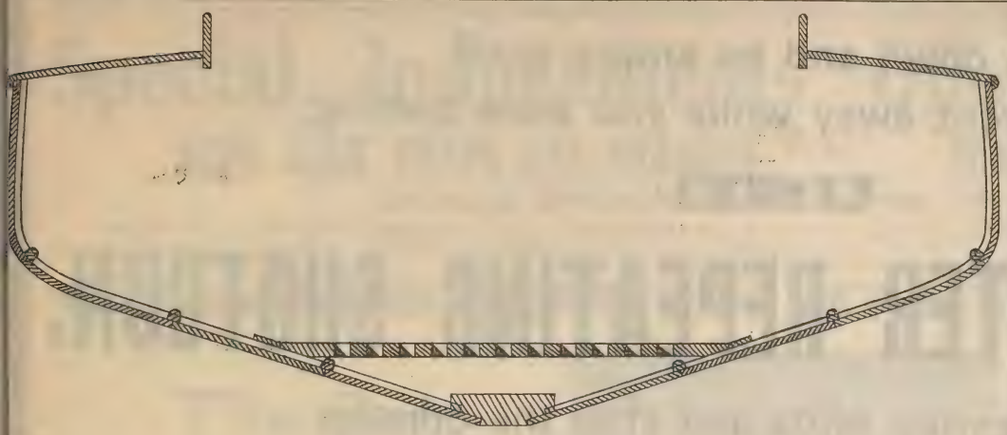
The actual length of Charm is 15ft. 2½in., but she is shown as 15ft. for the following reason: The writer has for some time adopted the plan of making all drawings of ordinary canoes of length of 15ft. to scale, whatever the actual length may be. The lengths of canoes vary within small limits, from 14ft. 6in. to 16ft., an average being 15ft., so for the purpose of comparison all designs are enlarged or reduced, as the case may require, to this length; the beam being unchanged. All stations are spaced 1ft. apart, all level lines 2in. apart, and the three bow and buttock lines are spaced a distance apart equal to one-eighth of the beam. In making a new design the same length, 15ft. is taken, so that a direct comparison may be made with many other designs of the same actual size; the lines of the canoe being first drawn, after which a second drawing is made, showing all details and fittings such as centerboard, masts, bulkheads, etc. In making this latter drawing it is expanded or contracted, as required, to the dimensions of the proposed canoe, say 16ft. instead 15. A little extra drawing is involved, but this is more than paid for by the benefits arising from a more thorough study of the design; a good thing, of which there cannot be too much, as it is always easier to remedy errors in a pencil line than in a plank or timber.

In making a plate for printing from the drawing by the process of photo-engraving, any degree of reduction is possible. In the case of the Vagabond, Aug. 16, 1888, the lines were drawn to a length of 30in., the scale being 2in. to the foot., while the plan showing well and fittings was made 32in. long, equal to 16ft. Both drawings were afterward reduced by photography to the same actual length, that of a column. An inspection of the drawings will show that the arrangement plans are really a little smaller, both in breadth and depth, than the lines; having been reduced a little more in order to make the lengths the same. In practice this makes no difference, as all measurements except the position of bulkheads, etc., in a fore and aft direction will be taken from the lines, especially from the enlarged body plan.

The designed displacement was 250lbs.; hull 100, board 28, fittings 12, and crew 110lbs., but she now displaces more than this. This displacement is distributed as in the Vagabond, according to the wave form theory; but the bow has been made as fine as a curve of versed sines, the run being proportionately full. The midship section is in the same position in each, but Vagabond has a much fuller bow and correspondingly finer stern. The midship section of the Charm is a marked departure from that of American canoes, being a triangle, with a very sharp turn to the bilge, all the sections being triangles, in fact it is practically that of the common "skipjack." As in the Vagabond, all superfluous deadwood has been cut away, the keel being much rockered.

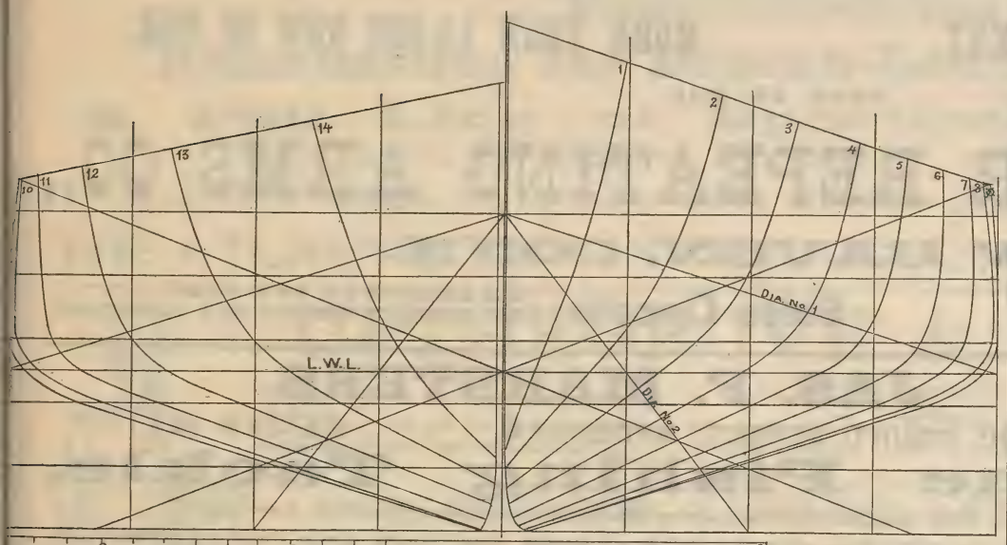


There are three bulkheads, one just abaft the mainmast in the extreme bow. There were originally two hatches in the fore deck abreast the trunk, but they have been removed since the meet, a new fore deck being laid. Abaft the well is a large deck hatch, held down by four thumb screws, one at each corner. Inside the hatch two movable beams are fitted so as to slip into place, each beam having a nut in each end. The thumb screws fit these nuts, holding the hatch down, but in practice it is not watertight, in spite of a lining of felt around the joint. The fore hatches were fitted with screws and movable beams in the same way, but they, too, proved leaky. The original plate, $\frac{5}{16}$in., weighing 28lbs., has lately been replaced by one ⅜in. thick, about 12lbs., while the English drop rudder has been replaced by one of Piepenbrink's, as shown last week, the plate dropping very deep. The upper brace is also slightly different. the slot being omitted. leaving the brace solid. The rudder stock is passed up from below, a key way being cut in the brace to permit the passage of the small stud on the rudder stock. After the rudder is shipped the rudder head, a grooved brass wheel, is put in place on it.



The deck gear consists of a wooden wheel 9in. in diameter, turning on a brass pin. This pin is mounted in a block *a*, which slides between two guides *b b*, screwed to the top of the hatch. A thumb screw on the after side of the sliding block serves to press it forward, thus tightening the tiller chains. The arrangement is ingenious, but as fitted it is rather clumsy and not entirely satisfactory. The floor of the canoe is covered with a handsome grating 4ft. 6in.×1ft. 2in., made of ash and mahogany. It looks well, but is much more expensive than the ordinary thin floor boards, while the added weight is an item.

The Charm is ribband carvel built, but with the ribbands running inside and not outside of the ribs. The former are ⅞in. wide and ⅝in. deep, of oval form, the ribs being but $\frac{5}{16}\times\frac{3}{16}$, spaced 4½in. The ribbands are first fastened to the frame and moulds, then the light ribs are jogged into the ribbands and keel, after which the planks are laid. The keel is of spruce 1in. thick, and 3¼in. wide inside and 1¾in. on bottom. A heavy iron keel band ¼×1½ was used, but was removed prior to the races at the meet. The stem and stern are oak knees. The planking is of Spanish cedar a full $\frac{3}{16}$in. thick, thus making a very light hull. The deck edge is protected by a half-round bead of American elm. The garboards only are in whole lengths, all the other strakes being butted. The deck beams are spaced 9in. The well is open, with no hatches, a cleat board with six cleats being fitted in the fore end of the coaming. The mast tubes are each 1⅞in. in diameter. There is no foot-steering gear and only a small single blade paddle is carried. The workmanship on the boat is very good throughout, though the hard turn to the bilge and the light ribs and planking make a difficult boat to build. The rig, which we will show later, consists of two balance lugs 84 and 16ft., the mizen being trimmed by a bumpkin, as shown.



The dimensions are:

Length	15ft.
Beam, extreme	31in.
Beam, l.w.l.	29¾in.
Draft	5in.
Freeboard	6in.
Sheer, bow	6¼in.
Sheer, stern	3¼in.
Displacement as designed	250lbs.

AMERICAN CANOE ASSOCIATION.

MESSRS. W. L. PALMER and C. V. Winne have been appointed by Com. Gibson a committee to audit the secretary's accounts. The meeting of the Executive Committee will be held at Toronto some time in November. Secretary Mix has received a letter from Mr. D. S. Sanford stating that he had sold the camp lumber to J. W. Harris for $70 and two red lanterns and a camp chair for $2, making a total of $72. Secretary Mix sends the following for publication:

TORONTO C. C. CRUISING AND RACING.

ON Saturday, Oct. 6, seven members of the T. C. C. started in the club sailing race for first and second class canoes. The start was effected at 3 o'clock with a nice east wind blowing, which inside of fifteen minutes blew itself to pieces, at least that is the conclusion arrived at by one skipper, who sat alternately on the edge of a moderately sharp coaming and then on the floor of his craft, trying to get in the way of a few patches of wind that could be seen rippling the water here and there with but indifferent success as the results showed. The wind blew about seven different directions, and gave the lead to all competitors at different stages of the first leg. After the first round the competitors returned in the following order, as the race could not be finished within the time limit: First Hyla, D. B. Jacques, first class; second Vic ('86 Mac), A. Shaw, first class; third Dawn, Wm. Leys, first class; fourth Isabel, R. Tyson, second class; fifth Cecebe, A. H. Mason, second class; sixth Mac, W. G. Mackendrick, first class; seventh Dixie, A. M. Rice, second class. The sailing stands at present Hyla and Mac one win each in first class, and Isabel and Cecebe one each in second class, with the final race Oct. 13.

After the race was retired, four of the hardheads who have been utilizing the time from Saturday till Monday during September for camping and cruising, packed their duffle, and donning two pairs of socks, two pairs trousers, three to four shirts, and with great coats and oilers stowed aboard, laid out to have the last camp of the season. Working on the principle that a meal under the vest is worth two stowed in a camp kit, we disposed of a portion of our edibles where they are easiest carried. Climbing aboard we hoisted mizens, and, lighted by the starry firmament and Tyson's brass lantern, we went bowling merrily over the bay. As we sat holding the floor boards down, lazily smoking our pipes, with nothing more serious to engagge our attention than a foot steering gear, it struck us that the canoeist's lot is worth scratching for, and that the average man doesn't know the fun he can snake out of an October cruise.

Two tents were pitched, as the small camp of four was divided into two distinct parties, termed ventilators and non-ventilators. Isabel and Mac would not sleep in tent without the door left partly open, and as Hyla and Waniska had threatened to whallop the chap who would do such a thing, we divided, be it known that it was not the aforesaid whalloping we were afraid of, but simply a tightness in the money market had left us with hardly sufficient cash to give them a decent burial in case they tried to evict us.

We crawled into our blanket bags about 10 P. M., retaining the three shirts and two pair socks, and with four thicknesses of blankets between the fresh air that ventilation gave and ourselves, we chatted away and again won our races and enjoyed our cruises of the past, until the heavy, labored breathing of the occupants of the next tent advised us that they were rapidly being overcome by the heavy, foul, warm atmosphere that was extoled by the "non-ventilators," but which was rapidly knocking them out. (Probably they'll try a different kind of knock-out on me when they see the above).

We were just dropping off to sleep when we received a visit from a water rat who first visited tent No. 1; but, not being used to such a highly perfumed atmosphere as they bottled themselves up in; he backed out and came bowling in to No. 2 tent with his mien sheet adrift; he commenced to play tag or some such game about my feet till I gave him a hoist in the air and the umpire (Isabel) declared him "out" and a hunt with the lantern failed to find him in. About 3 A.M. I was awakened by a frantic half shout half yell from my partner, "Mac, the rat's at my pillow," and turning over I saw him sitting bolt upright frantically grabbing for his match box, while a poor little mole quietly crawled out of the tent, wondering what the deuce he'd done to cause such a row.

My partner gathered together his wordly goods and after walking all over me retired to the comfortable quarters in his 34in. Pearl, leaving his other half to look after the mole. Tent No. 1 hearing the tramping to and fro and the noise down at the canoes thought some one was trying to do them out of their craft and yelled out, "Who's there?" waking the whole camp. Explanations followed and after a hearty laugh and the bandying about of such puns as don't mole-est me we rolled over.

Breakfast of partridge, bacon, eggs, etc., put us in humor for a good sail, which we indulged in till noon. Waniska being last coming in dropped his sail, and, while monkeying about, fell into about 10ft. of water and weeds, principally weeds. As he was behind a point we did not see him, and his hy-ya-a's did not reach us. He quoted the temperature of the water as being exceedingly cold, so he lost no time in disposing of as much of his 200lb. body as he could above high-water mark; straddling his canoe he paddled her on her beam end into shore, and taking a brisk run to encourage circulation he came across an old oyster can, that answered to bale out the Waniska, and in 15 minutes he had paddled into camp with an appetite for hot tea and bacon that would secure him a place of honor among the heavy eaters of the South Sea Islands.

About 5 o'clock the return trip was made, and as each fellow unpacked his dunnage he hoped that probabilities would favor us with another last Saturday or two. MAC.

TORONTO, Oct. 7.

IANTHE C. C. ILLUMINATION.—Wednesday night, Oct. 3, was a gala night at the Ianthe C. C.; under the leadership of Messrs. Hobart and Farmer, the canoes were formed in a line reaching from the club house to the opposite bank of the river, and at signal the line moved slowly up the river. Before disbanding a series of difficult maneuvers were executed with skill and precision. The canoes were brilliantly decorated with Chinese lanterns arranged with fairy-like effect, and the lights reflected in the water scintillated like many colored gems. Fireworks and different colored lights were set off in the vicinity of the club house, lighting up the wooded banks of the river. Altogether it was a brilliant spectacle, and the favored two hundred who witnessed the carnival will remember the pretty scene as a vision of fairyland. During the maneuvers the strains of an orchestra stationed at the club house were heard on the water, and later dancing was indulged in. Among the visiting canoeists were Messrs. Wilkin, Dunnell, Brokaw, Miller, Snyder and others.

SPRINGFIELD CUP.—The final race for the Springfield cup was sailed on the Connecticut River on Oct. 6, the competitors being Fly, Paul Butler; Eclipse, M. V. Brokaw; Agawam, Emil Knappe; Dimple, G. C. Forrest; Girofle, F. A. Nickerson, the latter taking the place of Drift. The wind was very strong and puffy from N.W., but Fly carried 115ft. of sail and won by 6m. Eclipse was second, carrying 85ft., but sailed badly in consequence of the mainmast being stepped in the after tube by mistake. Agawam was third and Dimple capsized.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

A Splendid Dog Whistle,

Water-Tight Match Box

--AND--

Reliable Compass

COMBINED.

Nickel-plated metal. Sent by mail on receipt of price, $1.00.

WILBUR & CO., Box 2,832, N. Y. P. O.

In the Stud.

AT STUD. FEE $50.

The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ANSWERS TO CORRESPONDENTS.

THE PRESIDENTIAL ELECTION.

IN recalling some of the incidents of journalism the other day, a gentleman related to us how he had given up reading the *Spirit of the Times* when George Wilkes switched about from sturdily supporting Gen. McClellan and came out one week with a savage attack on that leader's course. That was back in the sixties. Readers of the *Spirit of the Times* in that decade and the succeeding one will recall the vigorous political leaders Wilkes used to write. In those days one might take offense at the views expressed in these editorials, but no one thought of questioning the propriety of a "sporting" journal's holding and expressing political opinions. The scope of such publications was wider then than now. The contents of the *Spirit of the Times* included not only matter relating to the turf, the ring, athletics, shooting, fishing, rowing, yachting and other branches of "sport," but market reports, agricultural essays, fiction and politics.

Times have changed. Good citizens who now read "sporting" or "sportsmen's" journals still read political leaders, but they no longer take their politics and their fishing together. No one who buys the FOREST AND STREAM and carries it home to read Thursday evening, after getting through his second political lesson of the day in his evening paper, expects to sit down and turn over the pages to be confronted by arguments to prove that unless Cleveland be elected the country will go to the bow-wows, or that the salvation of the Republic hangs on the election of Harrison. He would strenuously resent any dabbling in politics in these pages, and at the first show of party bias his impulse would be to send word "stop my paper," and no one would blame him if he were to carry out the impulse.

There is an unexpressed and unwritten compact between publishers and subscribers of a journal devoted to the outdoor world that the two topics of political faith and religious creed are not to be made subjects of discussion. This is a natural outgrowth of the development of special or class journalism. The same principle applies to numerous other special journals, but perhaps to none in a stronger degree than to the FOREST AND STREAM.

Under these circumstances, no clear way presents itself in which we may avail ourselves of the offer made by an enterprising and doubtless well-meaning Boston publisher, who invites us to "show commendable enterprise" by buying enough copies of his three-colored folio, containing "over fifty autograph reasons" why Blank and Blank should be elected," to go around to all our readers as a "campaign supplement." To supply them with the flaming folio, this publisher says, "will largely increase the reputation of your paper with your independent constituency;" but for the remainder of the campaign FOREST AND STREAM will have to do without any increase of reputation won by such means.

BY WRIT OF MANDAMUS.

IN the "Topics of the Times," of the *Century Magazine* for last August, a thoughtful paper discussed the necessity of finding some remedy for the lawlessness of law-officers. "The fact is notorious," it was said, "that, all over the land, plain statutes are disregarded by those who are plainly bidden to enforce them; that sheriffs and constables and policemen stand and look on while the laws which they have sworn to execute are dishonored before their faces. This is the feature of our political administration that is most troublesome and discouraging."

The class of laws more specially referred to were those relating to the liquor traffic. These statutes are in many places not enforced; and it was pointed out that among the reasons for their non-enforcement might be reckoned the subserviency of police officers to organized bodies of law breakers, and a laxity of public sentiment expressing itself through the judiciary, which fails to support the police. Again, where public opinion does demand that the laws be executed, it may happen that the executive delinquents cannot be roused from their apathetic or conniving failure to act. To oust corrupt officials and put honest men in their places is a task usually requiring long continued and persistent effort, and the rule is that reformers grow weary before attaining their ends, and official inaction triumphs. One speedy and effective stratagem has been found to compel law officers to do their duty, and it was thus described in the *Century:*

It sometimes happens, however, that public sentiment expresses itself through the judiciary more directly and efficiently than through the executive; and a curious incident of recent history shows how the courts may be used to spur to action a derelict administration. In one of the cities of Ohio, the law requiring the closing of the saloons on Sunday had been flagrantly disobeyed for years, and the public authorities, who had been commanded by the law to see to its enforcement, had never lifted a finger to restrain the transgressors. At length application was made by citizens to one of the judges of the Court of Common Pleas for a writ of *mandamus*, requiring the police commissioners to execute the law. The case was argued, the fact of the entire inaction of the authorities was shown—could not, indeed, be disputed; and the judge promptly issued the writ, commanding these officers to perform their duty. The commissioners met and consulted. "Suppose we refuse," they said, "what then?" "That will be contempt of court," replied the city solicitor. The jail already contained one or two inmates whom the judge had recently punished for contempt, and the prospect was not alluring. "I move," said one of the commissioners, after a solemn pause, "that orders be issued to the men to enforce the law strictly next Sunday." The motion was unanimously carried, and on the next Sunday, for the first time in fifteen years, every saloon was closed.

Any one who has had much to do with the game laws can readily trace a very close similarity between the difficulties encountered in enforcing the statutes for the protection of fish and game and those met in enforcing the laws to regulate the liquor traffic. It is likewise true, with respect to the game and fish laws, that they are not effective because not sustained by a public sentiment strong enough to punish the culprits. Thus, in some instances, we find sworn game protectors and game constables refusing to prosecute law violators because they are indifferent to the law infractions or in league with the offenders. In other cases, where the executive officers do their duty, arrest the guilty parties and bring them before a magistrate or a jury, the ends of justice are defeated because public sentiment, as manifested through the magistrate or the jurors, refuses to inflict the prescribed penalties. This parallel of the two classes of laws and law infractions is so obvious that after reading the *Century's* account of the Ohio resort to a writ of mandamus, a correspondent sent us a suggestion that the same step might be taken to secure the correction of such a condition of affairs as, for instance, the "Adirondack Abominations" described last August.

That the suggestion was a sensible one has just been shown by an amusing case in Connecticut, where recourse was had to a threat of taking out a writ of mandamus to compel a grand juror to do his duty. The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish has been active in bringing to punishment a number of market hunters and grouse snarers; and it secured evidence to warrant the arrest of a violator, who, it appears, is not to be classed as a poor man, which fact perhaps had something to do with the action of the grand juror, when that functionary refused to act. The Association thereupon sent him a letter, the pertinent portions of which are as follows:

HARTFORD, Conn., Oct. 11, 1888.—*Mr. Amasa Johnson, Grand Juror, Eastford, Conn.:* DEAR SIR—Your refusal to sign the complaint "State vs. James Preston," of your town, compels us to say unless you sign the said complaint when it is again presented to you, we shall proceed as follows, to wit: Make an application to the Superior Court for a mandamus. With said mandamus compel you to sign said complaint. The cost of a mandamus will be $50 to $75 for some one to pay, and you can draw your conclusions who will pay the cost of said mandamus. * * * We do not mean that the poor law breaker be used any worse than the wealthy. We prosecuted two persons last week in Ashford, and pray understand we shall prosecute the said Preston. We give you a fair warning, and hope you will do your duty without further trouble, as your oath demands. Awaiting an early answer, we are, respectfully yours, A. C. COLLINS, President.

The effect was speedy; the grand juror signed the complaint, the offender was brought before the justice, and fines were imposed on two counts. The Connecticut Association has the credit of proving the worth of a writ of mandamus as a stimulus to the performance of official duty.

SNAP SHOTS.

THE valleys and the hills and the mountains are aflame with the gorgeous colors of autumn. The October sky arches blue overhead. The eager dogs flash through the cover. The rifle's sharp crack and the booming of shotguns are heard in the land. This is the season of the year when life is worth living. The autumn days are passing, as the leaves fall, and happy are they who can enjoy them in the field to the full, from the frosty gray of morning to the purple haze on the hills at the dying of the light.

Florida has no game law; but there are numerous citizens of the pennisula who are a law unto themselves, and shoot game only in what they consider to be the proper and legitimate season. Some of these people lately adopted a novel device to force folks to conform to their own standard in this respect. The sportsmen of a certain county met and endeavored to hit upon some plan to prevent quail from being killed prior to Oct. 15, the negroes being the principal offenders. They adopted the device of arresting those who were found with game in their possession and severely reprimanding them and threatening dire punishment should they repeat the offense. The plan worked very well until one of the prominent men of the county and a member of the State Legislature began to shoot young quail, and then the scheme "petered out." This method of protecting game was of course illegal, and was adopted only as a last resort. It is a shame that the State has no efficient game laws. The Northern people that are moving into the State will probably endeavor to have game laws adopted that can be enforced.

There are numerous reports of very late broods of quail this autumn; and in several instances nests have been found with the eggs destroyed by the cold weather or with young unable to withstand the rigors of the season. The necessity of intelligent identification of birds when facts relating to them are reported, is shown by one of the communications received by us, which stated that the young birds found killed by the cold were grouse; on examination the specimens sent proved to be quail.

It is reported from Winnipeg, Manitoba, that Major Bedson has sold his herd of domesticated buffalo to a Kansas ranchman for $28,000. The purchaser is supposed to be "Buffalo" Jones, who already has a herd of his own; and the dispatches are therefore incorrect in stating that the Bedson herd is the only one on the continent.

The winninish discussion at the meeting of the Massachusetts Association, as reported in our columns, is an exceedingly interesting chapter of "fish talk."

The Sportsman Tourist.

THROUGH OKEECHOBEE TO THE GULF

II.

WE woke before day, as our little Dot was rolling and pitching, and found a fearful gale blowing from the southwest, and when daylight came the bosom of Okeechobee was white with foam. After breakfast we took one of the metal lifeboats and pulled out into the surf, but were glad enough to get back, as the seas were rolling high. The gale kept us there two days, and we put our time in overhauling the engine, cleaning up and going out hunting; but as there was no shore to get on to, only swamp, swamp as far as eye could reach, we could not see a solitary thing but a few water turkeys. All was solitude, desolation—vast, gloomy desolation. Never have I seen such utter loneliness, such an utter Godforsaken place in my life.

The morning of the third day after our arrival we started across the Okeechobee. After clearing the bar we headed southwest, and by 10 o'clock were just out of sight of land. We could barely make out the tall tops of cypress trees to the westward, and were going along in good shape, when our first serious accident happened. A packing in our steam pipe blew out, nearly scalding Harry. Of course, there was nothing to do but to draw our fire and blow out. Then as the little Dot came broadside to the sea, she did roll. The sea had not gone down from the two days' gale, and she rolled her cabin windows under water. Had we been caught in a gale at that time we must have gone to the bottom, for we were helpless until we patched up the bad place. This we did, and had steam on her in two hours' time; and just at dusk we reached the other side about where we hoped to find an outlet.

There we anchored, and the next day began our search for the outlet to the coast. We steamed around all day until afternoon, when we could see no escape. Then I took a boat and went ashore, or rather, began to row along near the edge. Of course we didn't know where we were. It was all guess. At last Harry said: "Let's try a few miles further south." But I was afraid we were too far south already, and while I was poking around with the lifeboat I ran into a swift, narrow channel, so deep I could not touch bottom with an 8ft. oar. It ran directly west, and I felt as though this must run out. It was very narrow, scarcely 15ft. wide, but terribly swift. We got steam up and made for the opening. In we went, and by turning the engine slowly for steerage way, we shot through the deep, narrow channel at fearful speed for such a narrow, unknown place. On we went, fairly holding our breath, for we did not know what moment we would strike a log or some other obstruction, but we had hit the outlet in what is down in the map as Big Sawgrass Outlet, and before dark we were in what must have been Lake Hicpochee, and anchored for the night.

The next day we found the outlet and got into what finally turned out to be Caloosahatchee River. The following morning we came to the first solid ground we had seen since leaving Fort Bassinger. As it was very early and we had had no breakfast, Harry said he would catch a mess of trout, if I would go get some game. So I took a boat and dropped down stream a quarter mile, and I started to wade toward some high ground. I had got part way and was in water up to my waist, when I stepped on what I thought was a log, but as there was no big timber near there I reached down to feel what it was, and grabbed the biggest alligator by the nose you ever saw. It seemed that I had put my boot on his head, and started him, but when I grabbed him by the nose he meant fight. Well, of course, all this happened in less time than you could count five, and I can only tell you of the fight I had for my life. He was a huge fellow, plump 11 or 12ft. long, for I have shot dozens of them and can guess at sight of one about his length. As I put my hand on his nose, he reared up, knocking me on my back. As I fell the muzzle of my gun ,a double breechloader loaded with sixes, dropped into his open jaws as he was making a lunge and a snap at me. By a lucky accident he shut down on the barrels with a snap and a twist, yanking the gun out of my right hand. He gave his head or jaws a swinging motion, making the stock of the gun describe a circle. The jerk he gave the gun had jerked me back on to my feet. As I saw the butt of the gun coming toward me I made a frantic grab for it, for I knew that without my gun I was "a goner." I clutched the barrels just forward of the hammers, and for about ten or twenty seconds no man who ever lived fought harder for life. Remember I was up to my waist in mud and water, and only had hold of my gun forward of the hammers. The 'gator used his hind feet to push himself, while he clawed at me with those horrible short forearms. One may ask, why did not you shoot him? I could not change my grip on the gun, for it took all my desperate strength to hold on and prod the 'gator. Once he let go and I only saved myself from his jaws by a quick poke, striking him in his eye. His tail flew round toward me, while he threw himself to one side with the pain my barrels made when I punched him in the eye.

During this struggle I had been forced to swallow water and as he threw himself to one side and I saw his tail coming, I whirled and jumped out of the way. Then my first chance to shoot offered, but I knew No. 6 shot, even at such close range, was not a safe charge to shoot a big alligator with. At this time the monster was sideways to me, as the force of his tail in striking at me had turned him round. We were about five feet apart, and with the poke I had given his right eye, he was half inclined not to fight. At any rate all this passed through my mind in a second, and I saw my advantage and whirled and ran as only a man can run for his life under circumstances like those I was in. I don't know what the 'gator thought and don't care a continental. I simply legged it for shore for all I was worth. I ran under a big tree and down I went, weak as a cat.

I guess I lay there a half hour before I had strength to get up. Then I noticed about thirty big wild turkeys looking at me. It seems I had run under a live oak and the turkey were feeding on acorns. They did not seem to be afraid, but were looking at me with necks stretched out. I brought my gun up and knocked down a fine gobbler with each barrel. Then the rest went; and you know how a wild turkey can go when scared. I took a roundabout way to my boat, but this time I had buckshot in, and if I had caught sight of my saurian friend I should have finished him. When I got back to the Dot Harry was cleaning three fine trout. The smallest would weigh 4lbs. After a breakfast of fried trout and young gobbler, and biscuit and coffee, I stripped to see if I had any marks from my fight. My shoulder was black and blue, but I had noticed when I shot the turkeys my gun kicked me nearly over. On examining my gun I found the alligator had put his teeth nearly through the barrels near the muzzle, and the rib on top was creased and marked just as if by steel tools. It did not seem possible that an alligator's tooth could peel iron as it did. I pounded out the dents and the gun now shoots better than ever.

Deer were plentiful; we killed three one day inside of twenty minutes, but our haste to get through to the coast kept us from stopping much to hunt. A party of four went out hunting near Charlotte Harbor, were gone a week and killed twenty-three turkeys and nine deer, but I consider that butchery, as game will not keep there over three days; and turkeys, if fat, will not keep twenty-four hours.

The waters of the rivers and swamps of interior Florida, especially the deep ones, are excellent to drink. It looks black, but it tastes good; in the morning it is cool and good, and a more delightful cruise, climate and hunting considered, does not exist on this earth than a cruise with the proper kind of a boat, the right sort of an outfit, and a half a dozen jolly sportsmen not afraid of hard work. January is a better month than October, and February or March better still. Young plume birds are in full plume in March. There are more different kinds of beautiful birds in that far Southland than we ever hear of in the North.

We got our mudhook up and commenced to work our way toward the coast, I should say southwestward, but we were several days in that section. To get stuck in the mud or on banks was our lot twenty times a day, and it was no small task to carry our 60lb. anchor in one of our boats out to the end of the cable, jam it in the mud, then by reversing our engine at full speed and pulling on our cable until we could see stars, we would get off. At times we had to put all our heavy stuff in the boats, load them down so as to lighten the steamer, then get a strain on the cable, throw the engine wide open, and pile overboard up to our waists in mud and water and pull and tug and sweat. And when it was getting stuck on banks or bars, the propeller would ball up with grass or lily pads. Then we would have to pile overboard with knives and cut the stuff off. But we arrived at Fort Thompson all right. That is another fort without a fort—only a plantation with one or two houses.

From Fort Thompson we had clean sailing. The Caloosahatchee River is a fine, deep, swift river, but fearfully crooked. Along that river for 100 miles lies the finest land in the State of Florida. The high banks are well timbered with oak, cypress and pine. We arrived at Fort Myers, about forty-five miles from the Gulf, in just sixteen days after leaving the railroad at Kissimmee. We had traveled nearly 600 miles by water, for the crookedest rivers on earth run through central Florida. Then we wasted so many days in the dead rivers and in finding the proper routes. Yet with a jolly party and a small sidewheel steamer not drawing over 15in. of water, I should like to go over the same waters again.

We received letters at Fort Myers, dropped down the river, cut wood and wooded up, and soon reached Punta Rassa, at the mouth of the river. We went north between Pine Island and the mainland to Charlotte Harbor. From there we went outside in our little Dot and made a run of sixty-five miles in the Gulf, reaching Sarasota Pass at night. We picked up some beautiful shells along the route on the islands and keys: feasted on oranges, bananas, mullet and rock crabs as big as a lobster. The oysters are small, but make good soup; the clams are excellent. We spent several weeks along the coast. Our bill of fare consisted of baked mullet and roe, clam fritters, oyster soup, banana fritters, orange short cake, pine apple dumplings with wine sauce, coffee and biscuit, corn bread or pancakes. We lived high after reaching the coast. We arrived at Tampa in the last of November. And now good-bye until I get more time to describe the coast and islands of the Gulf and shark fishing.

ARTHUR LOVEJOY.

ATLANTA, Ga.

THAT CAMP.

I CAN see it yet, and its wild surroundings, though more than twenty-five years have elapsed since Will and I camped there. We reached the place about noon, and after a hurried lunch of bread and butter, prepared to erect it. A camp had stood there the year before, or a "shanty," as Will would persist in calling it. This had fallen down, or had been crushed by the weight of the winter snows. Now all that remained were the pieces of its bark roof. Two of these had been crushed and broken, while lying on the damp ground since spring had in no way improved the other pieces.

But the first thing after lunch was to get out the poles and set up the frame. Our plan was to build the camp first, then get everything ready for the night, and then go and catch fish for supper. This we carried out in every particular.

But now the camp, and first its situation. It stood on a bluff (if we may call it that) about sixty feet above the river. That is, the high bank of the river on our side came close to the edge of the water, while the low intervale through which the stream ran was at this place not more than a quarter of a mile in width. The river itself was about 50ft. wide and not over a foot deep, except in places. The intervale was filled with yellow birches, alders and all those trees which go to fill up the bottom lands of a rushing stream in the northern part of New York State. From the place where we stood we could look over the tops of the trees, though of course we could not see the water, and the hills on the other side as we faced eastward were in plain view. They were crowned with spruce, hemlock and fir, the same as the bluff we were encamped on. Of course the view up stream was shut off. There would have been no chance to look down had it not been that the land to the east receded from the river. It was this that made the bluff and opened the view down above the birches and alders. This, too, let the morning sun in on us to dry the camp, and then in the afternoon the place was cool and shaded.

From the camp we caught a gleam of the pool at the foot of the hill below us, and as we looked a little beneath the trees (for there was no underbrush on the hillside) the patches and bubbles of froth were seen hurrying on, soon to be dissolved into water and then again to be churned into foam.

A good deal of this foam came from a large rock that stood amid stream, almost dividing it into equal parts, just above the camp. This split the rushing waters and caught from time to time a good deal of the brush and sticks that floated down from above. It never held on very long, though. The water was too rapid. From behind this rock we took out several nice black-looking trout that were very pink when they were fried. It was this rock that helped to make the plashing sounds that were heard during the still evenings and at night. Not a rippling nor a rushing noise, but a kind of dashing, somewhat as though children were bathing and trying to plash water on each other with their hands. The sound was all the time changing although it was always very much the same. As I heard it that still afternoon of the day of our arrival, while I was stripping twigs for our bed, and saw the gleam of the pool, what pleasant anticipations came into my mind—a place I had never been, a stream I had never waded, a pool I had never fished. How could I wait? But I did.

Around the camp the trees stood thick and large in all their pristine beauty. Great hemlocks that seemed to smell of porcupine even with all their fragrance, and spruces that you did not have to ask "to give you of their balm," and a fir whose smooth bark was swelling out with balsam. Yes, that bluff was a fragrant place, and it almost seemed as though all its fragrance was concentrated around the shanty. Perhaps it was because the odor of the leaves of the small birch that we cut when they were drying added their perfume to the spruce and fir boughs that were used in constructing the sides of the camp. At any rate, there was a pungency and aroma about the place that new-mown hay never knew and that only drying of ferns and wild grasses can produce when they are assisted by the evergreen tribe, with a hot sun to draw out their fragrance.

At the rear of the camp was a fallen monarch of the forest, perhaps the victim of a storm he could not breast or a stroke that no tree could withstand. However he may have come there though, his arms furnished us with a good deal of fuel and saved us considerable labor. The spring was a pretty little rill. It came trickling down the receding bank as it fell back from the river, about 30yds. from the camp. It would have been a good place to have built the camp had it not been that the ground was considerably lower than the site we selected; and then it seemed damp and spongy, and only birches and hard woods grew near it.

It was here that the hermit thrushes sang so sweetly in the evening, and the Canada flycatcher, with a host of others almost as pretty as himself, lisped and fluttered in the morning sun. Then those little recesses in the rock were such cool places to keep fish over night, while the butter jar was almost as cold as though it had been housed in a refrigerator. Ah, that camp, it was a lovely place; trout for breakfast, and trout for dinner and trout for supper, too, if we wanted them. The little pond below furnished some of the best—none though over eleven inches long and very many not over eight. Here the birds sang for us in the early morning, and the owls hooted for us as the daylight closed, or again at dawn. Here we saw the shades of night fall and the reflections of our camp-fire flicker and dance among the dense foliage of the treetops, or lighten up one side of their dark trunks. Here the round moon in all her silent stillness rose upon us, flooding the lowland with her mellow light and bringing out the rising mist in all its softness. Here Will smoked his evening pipe while I played in weird melody the songs of a past day. Here we slept in undisturbed slumber in woods unbroken by the axman, near a stream unconfined by dams, waters unsoiled by sawdust.

STILLABOY.

Natural History.

BREEDING GRIZZLIES IN CONFINEMENT

TO one thoroughly in love with his calling, and in charge of a large zoölogical collection, I know of no more alluring, but delusive, undertaking than the attempt at breeding and successfully rearing wild animals in captivity. So long as one confines himself to what are commonly known as "the hay-eaters," such as deer, camels, etc., there is not so much difficulty; but when he goes a few steps higher in organization and endeavors "to increase and multiply," he will soon find out that "the flesh-eaters," such as lions, tigers, etc., will give him cause for a deal of disappointment and mortification. Lions breed without much difficulty, but many of the mothers either devour or refuse to nurse their progeny. If one happens to have a good mother, he will find that a very large percentage of the young never reach maturity, but die from such diseases as rickets, scrofula, etc. Tigers do not breed so freely as lions, nor does an equal proportion of mothers make any attempt at nursing. It is a well-known fact that traveling menageries are more successful than stationary zoölogical collections in breeding and rearing lions, and the reason usually given for it is, that in the traveling menageries the animals receive much rougher usage and get more exercise, consequently are stronger and better able to bear healthy progeny. My own opinion is, that it is not reasonable to look for natural results with unnatural surroundings; or to put it differently, one cannot expect outraged nature to act naturally. Perhaps what follows will serve to illustrate my meaning more fully. I once had under my charge a pair of grizzly bears (*Ursus horribilis*) which bred frequently, but the following record will show that I never succeeded in rearing a single young one:

Jan. 19, 1876, 2 born; died Jan. 19, 1876.
Jan. 17, 1878, 2 born; died Jan. 20, 1878.
Jan. 14, 1879, 2 born; eaten by mother Jan. 16. 1879.
Jan. 10, 1881, 3 born; died Jan. 13, 1881.
Jan. 13, 1882, 3 born; died Jan. 16, 1882.
Jan. 16, 1883, 1 born; died Aug. 11, 1883.
Jan. 18, 1885, 3 born; died Jan. 21, 1885.

From the above it will be seen that in every instance except one the young ones died, either from the neglect or cannibalism of the mother. As the period of gestation was always within a few days of nine months, I knew just about when to expect the young ones, although the mother did not show pregnancy by any increase in size,

and could make my preparations accordingly. The pit in which the parents were confined was so constructed that the female was able to seclude herself completely, as she could retire into an inner den, built underground, to reach which she passed some six feet through a passageway, turned a right angle, and then went some eighteen or twenty feet before reaching her bed, consisting of a quantity of hay, which she carried in some time before having young.

During the latter portion of the fall of 1879 I determined to separate the male from the female, thinking perhaps she would act more naturally than if he were allowed to remain with her as formerly. A heavy iron grating was built across the pit and the male was placed on one side, while the female remained on the other, having the run of the inner den. I expected she would show some uneasiness after being separated from her mate, but she did not, and acted very quietly for about two months, until the young ones were born. The morning after birth she came outside and seemed very anxious to have his company, but showed no signs of anger. The next morning she again came out, remained but a short time, and the cries of the young were heard several times during the day. On the following morning she came out and lay down, which being contrary to her usual habit, the door leading to the inner den was closed and search made for the young, but they could not be found, consequently the natural inference was that she had eaten them, and I concluded that henceforth it would be best to leave them together. On the birth of the next litter, Jan. 10, 1880, as usual the mother refused to take any notice of them; they were removed and the attempt was unsuccessfully made to rear them by bottle. These were the young ones examined by Mr. Chas. Dury, and the following extract from his short article on them in the *Journal of the Cincinnati Society of Natural History*, April, 1881, gives an exact description of their appearance and measurements.

"At sight, one is impressed with the very small size of the cubs in proportion to the great size of the parents. Shortly after the birth of the third cub, the mother came away from them, and it was decided to remove them and try to rear them by hand. When brought away, and warmly wrapped in Angola goat skin, the little creatures sucked readily from a bottle filled with cow's milk. They were very strong and vigorous, and when chilled or handled, manifested their displeasure with vociferous yells, that in tone resembled the cries of a very young human infant. Measurements and weights were as follows:

"1st. Length from tip of nose to end of tail, 9¼in., circumference of body, behind foreleg, 8¼in.; length of foreleg, from head of humerus to claw, 3½in.; claw of forepaw, ⅞in.; girth of head, 5¾in.; length of head, 2¼in.; weight, 1lb. 3½oz.

"2d Length, from tip of nose to end of tail, 10¼in.; girth, 8in.; foreleg, 3¾in.; weight, 1lb. 2½oz.

"3d. Length, 9½in.; girth, 7½in.; weight, 1lb. 2oz.

"Color.—The body was of a dusky flesh tint, thickly covered with short, stiff hair, of a dirty white color, with a broad dorsal line of ash colored hairs from the occiput to the tail. The face was rich flesh color. The nose reddish pink, as were also the ears. The soles of the feet were bright carmine pink. Eyes, tightly closed."

As remarked by Mr. Dury, the small size of the cubs would instantly attract one's attention, and as the same occurs with the black bear (*U. americanus*) it strikes me that an answer might be easily given to the query of "How is it that a gravid bear is never killed?" As such animals are usually killed by hunters, and not by scientists, and generally at a season when the fœtus would be exceedingly small and imperfectly developed, it would be apt to be overlooked by any one but an expert.

Again in 1882 the mother refused to suckle the cubs, and I began to despair of even making a partial attempt at rearing. On the morning of Jan. 16, 1883, the keeper reported that he had heard the cry of a single one. It was very stormy and cold weather, and the mother did not come out in the open pit for several days, but the cry of the cub could be frequently heard, and I began to hope for success. After the lapse of a week I ventured down to the pit; no one but the keeper having been allowed in the vicinity during the interval, and no opera *habitué* ever enjoyed the notes of a favorite aria with more pleasure that I felt in listening to the petulant cries of the youngster. From that time forward the mother would only leave the cub long enough to get her food, and I noticed that the male had been forced to take up his sleeping quarters just inside the entrance to the inner den. Judging from my experience with the black bear, I supposed that it would be some eighty days before the young one would leave the nest. At the end of that period the female began to lengthen her time of remaining outside, and by using the keeper's passage I approached within a few feet of the nest, with only a heavy oaken partition between me and it. I could distinctly hear the cry receding from me in the direction of the entrance, but the mother would always come in before the cub could get out and bundle it back into the nest. Finally, on the afternoon of March 20, while standing and watching the parents, both of which were sitting on their haunches in the front of the pit, I heard the cries of the young one, evidently making its way toward the door leading to the outer den. At last I could easily see it, partially hidden by the hay of the male's bed, and ultimately it came into full view, with its head within a few inches of the door sill. The mother did not move from her position, but turning her head looked at it for a few moments and then resumed her gaze toward the front of the pit. The male got up, walked across to the door, smelled the youngster, returned to the grating, reared up with his back toward it, gave himself a good rubbing, squatted on his haunches and kept his eyes on the cub. In a few momemts it attempted to pass out, but was stopped by the mother, who trotted up, and after licking it, carefully stepped over it, and gathering it under her chin passed her forepaws around it and gently drew it backward out of sight. In a short time she reappeared and resumed her place at the front grating. As there was a deep basin filled with water in the pit, I summoned assistance and had some large pieces of joist dropped into it, to serve as floats if the cub should happen to fall into the water. At the first splash of the timber the female gave an angry snort and darted into the inner den, slowly followed by the male, but as soon as we had finished and all became quiet they returned, and proceeded with much caution to fish all the lumber out of the tank and strew it all over the floor of the pit. At night, after they had retired, the door of the inner den was closed, the keepers ventured in, removed the lumber, and I concluded that it would be best not to interfere again, but trust to bear wisdom in the future.

The young one again made its appearance the next afternoon, but did not venture beyond the doorsill. Several days elapsed before it made the attempt to come out into the open pit; and when it finally did so, it crawled along to the front grating and nestled between its mother's front paws, who was squatted on her haunches, as was her usual custom. As it gained strength it began to play around her, but she never seemed to give herself any concern about it and allowed it to wander about as it wished. Finally it began to approach the male and attempt to seduce him into a frolic, but the old fellow remained stolid and indifferent until one afternoon it gave him a sharper nip, *en arrière*, than usual, when he whirled with an angry grunt and made a pass at it with one of his front paws. The youngster was too nimble for him and galloped off to the back of the pit, and what I had been anxiously expecting occurred. The tank was placed well in the rear of the pit, with only a narrow ledge between it and the back wall. In hurrying along it the youngster lost his balance and pitched headforemost into the water. At the noise of the plash there was a simultaneous rush of both male and female, and as soon as the cub's head appeared four great paws were passed underneath him and he was gently lifted out of the water. While coughing and spluttering from the effects of his sudden bath his mother thrust her nose underneath him and gave him a toss which landed him close to the door of the inner den. He did not wait for a repetition of the operation, but

A PAIR OF GRIZZLY CUBS—FROM A PHOTOGRAPH.

gathered himself up and darted out of sight. With a spiteful roar the female turned and pitched into the male, giving him a most unmerciful drubbing, and I walked away perfectly sure that drowning would never be the cause of that youngster's death. Henceforth my visits to the pit were not so frequent, and some ten days passed before I again saw the cub fall into the water. Much to my surprise neither of the parents paid the slightest attention to it, but allowed him to scramble out unaided, which he did without much difficulty.

Very naturally the bear pits now became the center of attraction and one of the most frequent visitors was the gentleman who had kindly donated the pair of grizzlies. For some years he never visited his pets without bringing a large parcel of sweets for them. He was a constant source of uneasiness to me, for in spite of my many interdictions, he would persist in climbing over the rail in front of the pits, thrusting his arm through the grating and putting every piece of cake or candy directly into the bears' mouths. As they had caused the loss of an arm to an incautious visitor and have since killed an unfortunate keeper, I am satisfied that my fears were not groundless. Of course the young one learned to know him and whenever the gentleman would present himself he would take his position between his mother's front legs, ready for a bit of candy and a frolic. He allowed himself to be cuffed and tossed about without showing the slightest ill-temper, while the mother would languidly look on, without ever changing her position.

As the young one became older and stronger he proved to be a constant source of irritation to the old male, for he never neglected an opportunity of biting him about the haunches whenever an occasion offered. The old fellow confined himself to mild shows of anger, and never resorted to any severe retaliation, no doubt dreading the wrath of the mother. During July I noticed that at times the young one appeared dumpish and out of sorts, while at other times he seemed as full of life and play as usual, and I began to fear an approaching misfortune. I spent many hours about the pit at night, trying to detect a cough, but never succeeded in hearing any sound like one. He gradually grew weaker, and on the morning of Aug. 11 the keeper found him lying dead. The mother did not seem to be grieved over her loss, and the body passed into the prosector's hands, who reported the lungs filled with tubercles. The taxidermist then mounted it standing upright, holding a salver to receive visitors' cards, and I believe it now serves for that purpose, in the hall of the residence of Madame Materna, Vienna.

FRANK J. THOMPSON.

SERPENTS AND THEIR WAYS.

Editor Forest and Stream:

The writers on the subject of New England snakes in recent numbers of the FOREST AND STREAM have confounded the blacksnake (*Bascanium constrictor*) and the racer (*Coluber obsoletus*). Both species are common in Connecticut. I have never seen a blacksnake of greater length than 5ft., but have seen racers that would measure considerably more than 6ft. in length, or, in local parlance, "as long as a rake stale."

The blacksnake, I am quite sure, does not chase people, but the racer is quite fond of doing so. In order to capture specimens alive I have induced them to give chase in their playful way by pretending to run away and then turning suddenly and grasping any part of the snake's body that I had the good luck to hit. It is difficult to capture this graceful and fleet racer in any other way, as he will surely glide off with the speed of a bird if a step toward him is made after he has elevated the forward part of his body to observe the intruder. Both the blacksnake and the racer bite quickly when seized, but their bites "don't hurt any." The most vicious of the biters among the harmless snakes of New England is the water blacksnake (*Tropidonotus sipedon*), and he usually adds insult to injury by emptying his unsavory cloacal contents on his captor's coat sleeve. ROBT. T. MORRIS.

NEW YORK, Oct. 9.

Editor Forest and Stream:

After reading articles in your paper on snakes, and finding nine eggs in my garden, I thought I would send you four as a proof that some snakes do lay eggs. If you will cut one open you will find a fully developed snake. Will you please make a note of it in your paper, of which I am a subscriber. E. P. L.

HAYDENVILLE, Mass., Oct. 10.

Editor Forest and Stream:

In relation to snakes swallowing their young, let me testify that four of us once saw the act and afterward killed the old one and also thirty-two little ones that were inside of her. The snake was of the striped adder variety.

CHAS. L. SHERMAN.

PHILADELPHIA Oct. 10.

Editor Forest and Stream:

While deer hunting in Sullivan county, N. Y., last week, our guide heard a noise in the brush, and upon investigating discovered a blacksnake, which measured eight feet in length and about as large in girth as the calf of a man's leg. S. V. A.

NEW YORK.

LATE QUAIL.—Elmira, N. Y., Oct. 5.—I send you today two out of eight chickens found on edge of buckwheat field. Boy said they were grouse, and that he saw the old bird fly away and caught the little ones in the buckwheat and put them in the grass, and they were killed by the cold night and snow. Please let me know if they are grouse.—E. B. G. [The birds are quail.]

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—Six hedgehogs (Erinaceus europæus), one common macaque (Macacus cynomolgus), one short-tailed parrot (Pionus brachyurus), one Bauer's parakeet (Platycercus zonarius), two rose-breasted grosbeaks (Guiraca ludoviciana), three scarlet tanagers (Pyranga rubra), one common cuckoo (Cuculus canorus), two European quail (Coturnix communis), two European crossbills (Loxia curvirostra), two European jays (Garrulus glandarius), two radiated tortoises (Testudo radiata), thirty-three salamanders (Salamandra maculosa), and six slow worms (Anguis fragilis). Presented—One ground squirrel (Tamias striatus), one opossum (Didelphys virginiana), one red squirrel (Sciurus hudsonius), one pigeon hawk (Accipiter fuscus), one American robin (Turdus migratorius), one Cooper's hawk (Accipiter cooperi), fifteen spotted salamaders (Diemyctylus miniatus), four garter snakes (Eutainia sertalis), twelve alligators (Alligator mississippiensis), one milk snake (Coluber obsoletus conflnis) nine painted terrapins (Chrysemys picta), one striated terrapin (Chelopus insculptus), three snapping turtles (Chelonura serpentina). Born—One red kangaroo (Macropus rufus), and one sooty mangabey (Cercocebus fuliginosus.)

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

SOME STORIES ABOUT BRUIN.

IT HAS often been asserted that bears are dangerous and will attack man. Though this might have been the case in the early settlement of the country, when bears were accustomed to the simple weapons of the savage, they, as well as other wild animals, soon learned to respect man when the white man came among them with the musket and the deadly rifle. I cannot help thinking that the habits of our wild animals have undergone a great change in regard to their relations to man since the advent of the whites. They may now be considered cowardly, but it is prudence developing which is "the better part of valor." To illustrate, we all know what a shy bird the crow is in the East, and how in spite of the proscription by the farmer, he yet manages to get along well enough, and generally keep out of range of the farmer's gun. He builds his nest on high trees and has developed a great amount of caution during succeeding generations. In fact, his caution and prudence seldom desert him unless when starved out in winter, when he will go to any length to get a meal. Now note the difference. Out here on the Pacific coast where the crows are undisturbed in the Indian country their boldness is surprising. They will even alight on the back of an old Kloochman (squaw) when digging clams and watch for a chance to steal one; but you will never see one alighting on the back of a white man, and in fact, even now near the settlements the crows are becoming shy, though they are everywhere much more tame than in the East. So it has been with our wild animals, and hundreds of cases might be gathered to prove the statement. Even now, however, a bear will sometimes turn at bay when wounded, or will in his fright blunder right on to a man, and there are a few authentic instances where men have come to grief. Hair-breadth escapes, so-called, are not very rare, but they seldom come more than once to the same individual.

Now there is John F., a hunter-naturalist well known in British Columbia. He is a thorough, careful observer, a sure shot and as honest as the day is long. He is rather modest about telling his own experience, but they are many and strange. He has trapped, hunted, prospected and boated all over the Northwest, knows the country and the animals, birds and reptiles like a book; is a good taxidermist, and all in all as fine a man as I ever met. He is enthusiastic over his specimens, and it is a treat to any one who loves the woodland to be present on one of those rare occasions when he warms to the subject, and sitting among his deer heads and wolf skins unfolds to the listeners the treasures of his memory, and relates the tale of stirring scenes through which he has passed from his youth up. Then his eye kindles and flashes, and you are transported in a moment to the mighty hills or the eternal snows, to the dark and somber forest where the wind sighs amid the branches, or the great crags where the mountain goat climbs the beetling rocks. I have been staying with F. for some time, and the other night two of his comrades happened in. Then I came in for a feast as I sat and listened to the conversation, dropping a word here and there, and adding a "that reminds me," to keep the ball rolling.

F.'s friend, whom I will call Joe, with whom he often hunted, always maintained that a bear would no more harm a man than would a deer, and that there was no danger in attacking one. In fact his contempt for a bear was boundless. It happened that they were out in the hills one day when Joe spied a bear some 400yds. off on the other side of a big ravine. It was evident the bear had not winded them. "Now," says Joe, "I'll crawl over there, get up close and wound him severely, and then show myself and see what he will do." "Agreed!" says F. and sat him down to await the issue, while Joe taking advantage of the cover, cautiously crawled toward the bear. Arriving at point blank range, he shot at the bear, but did not wound him so badly as he had intended. As soon as he had fired, Joe sprang one side to get clear of the smoke which hung around him. In doing this, his foot tripped on a creeper, and down the hill he went among briers, nettles and brambles. The bear meanwhile apparently went mad and ran straight at Joe, not knowing where the shot came from. He charged down like a tempest, ran directly over Joe and disappeared in the thick bush before either of the men could do anything to hinder. And, to make a long story short, they never saw the bear again. Joe arose and we kindly draw a veil over the scene. This was a case of panic on the part of the bear, but later on Joe and F. were attacked by a wounded bear, and this is how it happened. I tell the story as F. told it to me, though one should hear him tell it to appreciate it.

"It was up in the inlet," said F. "Joe and I were living alone together in a little house, same as you and I are now. One morning I awoke up early with a sensation of having heard something. You know when you are camping in the woods by a running stream you become accustomed to the sounds of the water and the jumping fish, but let a deer break through the brush and you are wide awake in an instant. Well, I lay and listened, hearing nothing but the hammering of a big black woodpecker on a stump in the edge of clearing, when suddenly there came a rap on the door. Then I heard Joe open the door and begin to talk to some one. This lasted about a minute, and just as I was getting out I heard Joe say, 'I believe all the blamed fools live about this place,' and slam went the door in somebody's face. I went out at once. He was mad enough. He said, 'Here this fool has let a bear take a hog out from under his nose and never called us.' The week before a Frenchman, who lived about ten rods away, had been awakened by a panther in his sheep pen, and instead of calling us, knowing as he did that we both had rifles, he had gone down and fired five shots at him with a little revolver. When he was through firing the panther had walked away in digust; and now this man has been trying to frighten away a bear for half an hour, when he knew we were at home.

"However, I opened the door and called the old man back. He was mad; said he came to see me and not that fellow who tried to be too smart to suit him. Finally, however, he told me his story. He was awakened by a great racket at the hog pen and found a bear trying to get away with a hog. He shooed and threw stones at the bear for half an hour, but no one came. He then undertook to get his boat off shore (where it had 'gone dry') to go for help, and while at this the bear had picked up the hog in his arms and gone off on his hindlegs. Well, I got my gun and we followed the trail, and at last got so close on the bear that he dropped his hog. We found the hog dead just over beyond a big log some 5ft. thick. Thinking to fool the bear I climbed up a tree and sent Joe back home. After waiting an hour I heard a slight crackling in the bushes to leeward, then a loud snort, as the bear broke away through the thick underbrush. He had got my wind, high as I was in the tree, and I did not get even a sight at him. This was discouraging. I knew he would not come back for some time now, so I got down and went home to breakfast. When I got to the house and told Joe of my bad luck, he said, 'Let's trap him.' After talking it over we finally concluded that the best way would be to set a gun for him. Well, we had the biggest duck gun you ever saw—an old single-barreled affair with a barrel about 6ft. long. She would take a whole handful of powder and shot. We got her out and loaded her with eighteen buckshot and the usual charge of powder. Then we took her out on the bear's trail and set her. You see we couldn't tell which way the bear would come, but finally we bound up the gun on the log, with the muzzle pointing so as to hit the bear if he came down wind. While we were testing the trigger line and before the gun was fixed firmly, she went off. I was holding the stock, and that old cannon came back into the middle of my stomach, doubling me up in a heap in the bushes. When I came to I thought a mule had kicked me. I never saw such a time. But finally we got her set and left it.

"That afternoon we heard a distant boom in the direction of the trap. Joe made a dive for the door and I followed, not forgetting, however, to take my Winchester along. It seems the old fellow whose hog had been stolen had been telling the story around, and two young fellows from the East had come down from the hotel and followed us in to see the bear. When we got there, all a little out of breath, I went in first with the rifle, and the two city chaps right on my heels. When I got to the gun on the log there was nothing in sight. I climbed up on the log, which was more than breast high, and dropped over on the other side. As my head rose above the bush in climbing over I saw the bear kicking on the ground among the bushes. I don't think the others saw him at all. At any rate, we were no sooner over than up rose the bear on his hindlegs right in front of us. I think the two fellows from the East were paralyzed for a second, and then they went away. Our parting occurred right there. They did not even stop to say good-by. It is strange how people fade out of our lives. They faded. I found out afterward that they went quickly back to the hotel and went East. I never saw them again. Well, sir, if those fellows were paralyzed at the first sight of the bear, they soon recovered the use of their legs. You ought to have heard the racket they made getting over that tree. I think they must have torn nearly all the bark off. Well, they got over, and then fairly plowed a trail through the brush to the road. The way they broke down the brush and tore up the roots was a caution.

"I supposed by the noise that Joe had gone with them, and I stood up alone to face the bear. I had no time to look around. The log was at my back and the bear upon me. Then as I raised my rifle to my shoulder I heard Joe's voice, as he stood with his back against the log looking over my shoulder. There he was—unarmed, but cool and confident in my shooting—and what do you suppose that fellow said? 'Don't shoot him, Jack; let's pack the son of a gun out alive.'

This brought out a laugh from the party, and some one went on with another bear story. F., after he had told this much, seemed to think that was all there was to it worth telling, but after the others had gone, and we sat alone by the stove, I asked him how he came out with that bear, and whether they "packed him out alive." "No," said he, "I shot him," as if that settled it and was the most uninteresting part of the story. I have noticed, by the way, that these old hunters make little account of the dangers which menace them or of their own prowess. It is the tyro, the dandy sportsman, or the man who "hunts with his mouth," who likes to brag.

I said, "Tell me about it."

"Well," said F., "it was this way. When the bear rose he made things fly. He was one of the largest bears I have seen. His shoulder had been broken by the buckshot and one leg hung helpless. He was covered with blood; and with his rolling bloodshot eyes, his tongue hanging from his mouth and his great tusks gnashing, he was a horrible sight, as he made for us with one paw raised to strike. I don't think I was frightened. I didn't have time to be. And as the rifle came to my eye, and I heard Joe coolly talk of taking him out alive, that settled it. But I shot without sighting the rifle, he was so near. I fired at his head, and the ball struck him on one side of the mouth and glanced on his teeth, breaking them right away. This threw him over a little to one side, but he got up and came on again. Then I steadied myself and planted a ball right in his heart. He gave the most awful yell I ever heard and dropped dead by the poor hog he had slaughtered. His skin was the finest I ever saw. I kept it several years, and finally gave it to a friend who was always begging for it. Joe said afterward that he knew I would miss that first shot, as he was looking along my rifle. He was the coolest fellow I ever saw, but if he got in a tight pinch he would rather depend on me. This is the only time I ever saw a bear attack a man."

F. tells a good story of an old friend of his, a trapper. The old fellow has a shed in which he makes shingles in the summer, splitting them out of cedar logs with an axe. Most of the shingles here are made in this way. One of the neighbors had some sheep which had run wild in the woods, and as he could not get them in he asked F. to shoot them whenever he came across them. One day when hunting he started one of these sheep on a trail in the woods, near the trail which led to the trapper's shingle shed. The sheep being very wild ran down the trail and reached the turn just as F. came out on it. Just at this moment a big bear sprang out on the sheep but missed it,

and the sheep, taking the trail to the shingle shed, ran for its life with the bear in hot pursuit. F., who had just a parting glimpse of the animals, followed on as fast as his legs could carry him. The old trapper was at work in his shed and had just stooped over when the frightened sheep came along, and plunging through the shed, trampled over the old man and rushed madly through and away. As the trapper gathered his long form up from among the shingles he was confronted by the bear, which snorted wildly and bolted into the timber. And as the bear disappeared and the old man rose painfully to his feet, rubbing his sore bones, he saw something else coming through the dust which filled the air. Not knowing what to expect next, he braced himself to meet the next comer, which turned out to be F. on the run. "Oh, it's you, is it?" gasped the old trapper, "well, what the old blankety blank blank is comin' next?"

EDWARD HOWE FORBUSH.

ONE WAY IN NEWFOUNDLAND.

IN reading the columns of your highly interesting journal, I have often wondered why it is that so many of your sporting correspondents residing in the vicinity of New York, who make annual visits to the Southern States, the Rocky Mountains, and other distant places on the continent of America, during the shooting season in quest of large game, do not sometimes visit Newfoundland.

That this country is the very paradise of sportsmen admits of no doubt. Its countless lakes, rivers and ponds swarm with trout and salmon of the finest description, and are the abodes of the wild goose, the black duck, shell and pie ducks, and other water fowl. Finer salmon streams than those of Newfoundland naturally are cannot be found on this side of the Atlantic. The vast number of deer paths to be met with in the interior of the country and also a few miles inland from the heads of Notre Dame Bay and White Bay, go to prove that the whole of the interior is amply stocked with caribou (or deer, as they are usually called by most of the inhabitants). Their migrations from north to south are as regular as the seasons. The winter months are passed in the southern portion of the island, where browse is plentiful and the snow is not so deep as to prevent them from reaching the moss. In a thick wood around the south shore of Red Indian Lake is a favorite wintering place.

Captain Hardy in a special chapter of his book on Newfoundland says: "I know of no country so near England, which offers the same amount of inducement to the sportsman as Newfoundland. Some half dozen or so of regular visitors from the continent, one or two resident sportsmen, and the same number from England comprise the list of those who have encamped in its vast solitudes in quest of its principal game—the caribou—which is scattered over some 25,000 square miles of unbroken wilderness."

Lord Dunraven, an English gentleman of considerable practical experience and a thorough sportsman, has given an interesting account of a brief hunting excursion in the island. He says: "Newfoundland is not much visited by Englishmen, I know not why, for it is the nearest of and most accessible of all their colonies and it offers a good field for mineral exploration and for sport. The interior of a great part of the island, all the northern part of it in fact, is almost unknown; the variety of game is not great, there are no moose, nor small deer, and bears are, strange to say, very scarce, but caribou are plentiful and the Newfoundland stags are finer by far than any to be found in any portion of North America."

From the 15th of September until the 20th of November is the best time for deer shooting in Newfoundland. There are favorite hunting grounds known only to the Micmac Indians and lumbermen living around Hall's Bay and Notre Dame Bay, where deer shooting may be enjoyed to perfection. One of the best of these is on Hinds Plains, opposite the eastern end of Grand Lake. The White Hills, thirty miles west from the head of Hall's Bay, is another favorite hunting ground.

On Friday, Oct. 15, 1887, I started from the mining settlement of Little Bay, Notre Dame Bay, accompanied by my two chums Pat and Sandy, for the White Hills. Pat and myself were armed with .44-cal. Winchester rifles, and Sandy carried a Peabody Martini-Henri. We arrived at Hall's Bay about midnight thoroughly drenched from head to foot, it having rained heavily all day. The next morning it was still raining; however, we were fully determined to push on our journey, but after traveling about four miles our packs became so heavy, and fearing our provisions would be spoiled, we decided to take shelter in a lumberman's camp at the foot of West Lake. We remained in this camp the remainder of Saturday and the following Sunday. On Monday morning, hiring one of the lumbermen to act as our guide, we were soon on the road with the cheering prospects of reaching the "promised land" at an early hour in the afternoon. About 2 o'clock the guide informed us that we had arrived at our destination. I must acknowledge that I felt somewhat disappointed. I expected to see hills, but here we were on a broad, open marsh, or rather a series of marshes, stretching away to the northwest as far as the eye could reach and about a mile wide.

We halted at the first camping ground and had lunch. Here we decided to leave Pat—he being the best shot—in the hope of his getting a deer before night; while Sandy, the guide, and myself would travel a few miles up the marsh to a place known as Hannah's Lookout, and make this place our headquarters. Fortunately our plans were successful. We had scarcely proceeded on our journey more than half a mile when the keen eye of Sandy, on looking back, saw about twenty deer, headed by an enormous stag, crossing the marsh in the direction of the point where we had a few moments before stationed Pat.

As we were in the middle of a broad open marsh, without a bush of any kind to shade us from view of the herd, or to assist us in crawling within range, our only plan was to lie still and watch their movements. Never shall I forget this sight. A number of fawns were among the herd, and how prettily they skipped and jumped over the mud ponds in the marsh, perfectly unconscious of danger.

As the herd approached nearer to Pat we listened breathlessly for the sound of his rifle. In a few moments we were relieved of our suspense. Crack! went the rifle; down dropped the stag. The does and fawns fled terror-stricken for a couple of hundred yards and then stopped suddenly, evidently wondering what had happened to their lord and master. The stag was soon on his feet again, limping off in the direction of his haunt. It was plainly evident that he was badly wounded in the shoulder. By this time Pat had left his hiding place in bush and was now on the marsh, hat off, rifle in hand, fully determined to wind up the earthly career of that stag or perish in the attempt. Crack! went his rifle again. The stag bounded a few yards and then turned off in the direction of the woods. Pat was now within a hundred yards of the stag. Raising his rifle he took a steady aim and fired. The bullet passed through the stag's side, the noble animal plunged wildly forward dead.

Sandy and myself soon appeared on the scene. The stag proved to be a very old one. He measured 7ft. 6in. in length, and we estimated his weight to be not less than 500lbs. The antlers consisted of forty-two points, magnificently proportioned, and measured 4ft. 9½in. across the top. We brought a small portion of the meat to camp with us, anticipating a good feed of venison steak for supper, but our venisonian appetites soon vanished when the meat commenced to fry, and we found it advisable to keep on the windward side of the frying-pan.

The next day, Tuesday, we were all pretty fortunate. I managed to bring down a fine stag at 150yds. off-hand; Sandy succeeded in killing another, and Pat, by way of altering the programme, arrived at the camp a little before dark with the head and antlers of a magnificent stag, a brace of partridge and an Arctic hare.

That night in camp our guide informed us that about five miles further up the country from where we were camped there was a large open barren and a good feeding place for deer. So we unanimously agreed to visit the place next day. At 5 o'clock next morning we started on our journey and walked about two miles when a thick fog set in. Our guide strongly advised us to abandon the idea of proceeding further, stating that his knowledge of the various landmarks to guide us was very limited, and if the fog continued we were very likely to get astray. I had scarcely time to worry over the disappointment caused by the fog when the sudden cry of "Lie still, over there. Four deer coming this way," caused me to settle myself down in a pool of the coldest water imaginable. In a few moments the deer were passing in front of us within range of our rifles. Sandy was ordered to fire at the leader, I was ordered to take the next, and Pat was to take the stag bringing up the rear.

In the excitement caused by the sudden announcement of the deer passing in front of me and the North Pole so close behind me, I forgot the commanding order of Pat, and, rising from my uncomfortable position, fired at the doe opposite me. She ran a few yards off and dropped dead. I glanced in the direction of Sandy. His neck was stretched across the stock of his rifle, his mouth wide open, his features terribly distorted, trying to "draw a bead" on the leader of the herd—as he afterward informed me—with the wrong eye shut. Pat and myself fired simultaneously at the leader, dropping her in her tracks, the bullets from both rifles having passed through her body. The stag ran out on the marsh about 200yds. and stood looking back. We immediately sent a shower of bullets after him, some of them apparently taking effect, when at last Pat sent a bullet through his head and he dropped instantly.

The fog having by this time cleared off we proceeded on our cruise up the country, and arrived at Marks Plains about 11 o'clock. The highest summit of this plain, I understand, is situated 1,700ft. above the level of the sea, although so uniform is the ascent from the sea coast to where we were now standing that the rise is almost imperceptible. We sat down to enjoy the beauty of the scene, which in many respects could hardly be surpassed. Let those who fancy Newfoundland a howling wilderness only stand where we now stood, and their delusions about the island being a big rock to dry codfish on will soon be dissipated. North, south, east and west, as far as the eye could discern, was one continued plain, save here and there a few stunted trees, four or five feet in height, thickly covered at the base with a soft velvety moss. Five magnificent lakes, from two to three miles in length, lent an additional beauty to the scene.

The number of deer that cross over this barren on their journey to their wintering places in the southern portion of the island must be something enormous. We were seated there two hours, and during that short space of time we counted twenty-nine deer all slowly wending their way southward.

It is the united opinion of the Micmac Indians and the lumbermen of Hall's Bay that there are two distinct species of deer in Newfoundland. A dark brown species chiefly to be found on the lofty barrens of the interior, and a light grey species of a smaller size frequenting in summer the peninsulas and low lands of the sea coast. Whether such be the case or not my experience as a hunter is too limited to venture an opinion, but certain it is that all the deer that crossed over this barren during the time we were seated there were of a dark brown color.

The stags fight terrible battles during the rutting season, and it is often a great disappointment to the hunter after killing a stag to find a large and well proportioned set of antlers rendered useless by being split about the brow points.

The limited leave of absence at our disposal was now drawing to a close. So we decided—rather reluctantly—to bid farewell to the charming scene before us and return to camp, to make preparations for our homeward journey on the following day. On our way to camp I shot a fine stag, having rather a clumsy set of antlers; and Sandy, who had gone down to zero in our estimation since the incident of shutting the wrong eye, fully redeemed his character as a sportsman by "knocking over" a full grown stag, on the dead run, off-hand, at a distance of nearly 200yds.

In summing up the grand result of our expedition in camp that night, we found that in three days' shooting we had killed ten caribou, three grouse and one Arctic hare. We started for home on the following morning (Thursday) and arrived at Hall's Bay on Friday afternoon at 2 o'clock, very well pleased with our trip to the White Hills.

There are three families of Micmac Indians living in Hall's Bay. We decided to remain here that night and pay our respects to the celebrated Indian chief Andrew Joe. We found Andrew at home at his magnificent summer residence near the entrance of the famous Indian Brook. We were treated with the greatest kindness by himself and his good lady, and kindly invited to tea, an invitation which we gladly accepted. Andrew is a tall, powerful, broad-shouldered Micmac, and perfect specimen of the noble red man. His knowledge of the country is perfect, having hunted and trapped on the best hunting grounds of the interior from his boyhood. He speaks English pretty well, and his superior knowledge of the rivers and lakes, his daring exploits in hunting the wolf and the bear in days gone by, are really interesting to sportsmen. We remained here that night, comfortable beds having been provided for us by our kind host and hostess, and the following day we set sail for the mining settlement at Little Bay, where we arrived at an early hour in the afternoon. W. W. O. S.

LITTLE BAY MINE, Newfoundland.

CHICAGO AND THE WEST.

CHICAGO, Oct. 5.—As was predicted the cold rain has brought down a telling flight of the ducks. Jacksnipe are plentiful now along the Indiana marshes. The railroads running to the north, into Wisconsin and Michigan, report numbers of parties still going in for hunting and fishing. I start West to-night.

NEWTON, Iowa, Oct. 6.—This is my old home. There are a number of genuine sportsmen here. Jacksnipe have not yet got down. They arrive here later than in Illinois and Indiana. Ducks were formerly very plentiful along the Skunk River, but of late low waters and numerous shooters have closed them out. Great numbers of squirrels have made their appearance in the old "Hen. Phillips Woods," where I used to shoot rabbits and quail. There were no squirrels there then. The quail crop in Jasper county will probably always be killed off by that tireless hunter Cy. Miller. Barring other sport, Mr. Miller is now catching bass in the old Skunk River, and catching plenty of them. This stream is a grand one in some seasons. Ruffed grouse, a very rare bird here until lately, are becoming fairly plentiful in the woods northwest of the town.

COLFAX, Iowa, Oct. 6.—The Colfax Rod and Gun Club are nearly all FOREST AND STREAM men. A good sensible club.

DES MOINES, Iowa, Oct. 7.—This is Sunday. I cannot see the boys. They tell me the bass fishing is good above the dam on the Des Moines River, and that squirrels are numerous along Walnut Creek.

En route to Kansas City, Oct. 8.—On this train I find Charlie Hinsdale, of Newton, Iowa, a notable trap-shot and ardent shooter all around. He tells me that his friend Mr. D. W. Warren, cashier of the Exchange Bank of Buffalo, New York, will next week join them in a big shooting trip to Okoboji, in northwestern Iowa. Ducks and snipe are now there in great plenty.

KANSAS CITY, Mo., Oct. 8.—The bench show, just closed, has been successful. Mr. Lowe and Dr. Roger, visiting dog men of prominence, have started West to complete the fitting of their dogs for the running of the coursing meets in Kansas at the middle of the month.

TOPEKA, Kansas, Oct. 9.—The Topeka Rifle Club are in good shape and making good scores. They have three or four shots who are fairly phenomenal, considering the practice they take. These scores are practically clean, over the mid-ranges. Mr. J. H. Leonard goes on a trip to the Oklahoma country this fall. Dr. Dinsmore, a noted rifle and pistol shot of Troy, Kansas, visits the Topeka Club this week. The weather here is very bright and warm. East of here the foliage seen from the car windows is brilliant with the frosts of early autumn.

HUTCHINSON, Kan., Oct. 9.—From the train numerous flocks of wild geese can be heard going down the Arkansas. At the station a friend tells me the shooting along the river has been fair and is improving.

GREAT BEND, Kan., Oct. 9.—Friends tell me the hares are plentiful, and that the coursing meet of the 15th will be a great affair.

PUEBLO, Col., Oct. 10.—The wondrous purple-colored and white-topped peaks of the Rocky range are all about us. They set one wild with excitement only to look at them. The Arkansas is now a narrow, noisy stream. No trout here. A great many teal are flying up and down the rivers and irrigating ditches. The air is wonderfully pure and bracing, and the surroundings fascinating.

CANON CITY, Colo., Oct. 10.—This is a most beautiful little mountain city, and is inhabited by as grand a set of sportsmen as any town ever boasted. The Arkansas has now become a brawling, sprawling brook. A few big trout are taken here. Twelve miles back in the mountains the fishing is grand. The mountains here are beautiful and enticing, and it is all I can do to pull away from them. A party of three, Messrs. L. E. Franck, J. E. Brown and Dal Deweese, have just got back from a trip of 230 miles back into the range, about thirty miles north of Dotsero, and near the grand Trapper's Lake country. They killed four elk, eight blacktail deer and two genuine grizzly bears. On this last point they insist they are correct, and they are old hunters and should know. One set of elk antlers is said by Colorado Springs taxidermists to be the largest and finest ever killed in the range; they are nine-pointers. This elk measured 9ft. about the chest, and 15ft. 4in. from hoof to nose. These gentlemen tell me they could have killed two carloads of game. Trout fishing in Trapper's Lake is so easy as not to be sport. Elk are numerous. Believing this to be a new country and a grand one, arrangements were made for a full account of this trip, and a description of Trapper's Lake, which must be a wonderful bit of water. Mr. Franck will also tell FOREST AND STREAM some more facts at different times about the fishing and hunting in this fortunate locality, which lies, I understand, on the headwaters of the Middle Fork of the White River, in the heart of the Rockies. This should be something new and of great interest. Mr. G. R. Schaeffer is perhaps as enthusiastic a trout fisher as Canon City has. Mr. Philip, a few miles back from the city, has a fine trout breeding pond, and also raises carp, though I'm sure I can't see what anybody would want with carp, in this country at least. It is pretty hard to leave this place. The mountains pull mighty hard on a fellow who used to live in them. E. HOUGH.

ITHACA, N. Y., Oct. 12.—Shore-bird shooters are not wildly hilarious over the number of ducks that have thus far appeared at this end of Cayuga Lake. The bags that have been taken are small as yet. Wild geese have been hovering about the marshes in considerable numbers. Some good bags of yellowlegs have been shot. Rail birds and English snipe abound, though in somewhat limited numbers.—M. C. H.

GAME AND GAME GROUNDS.

GROUSE shooting in Maine this year is something very irregular and somewhat mixed. In the first place the weather all through the latter part of September was very wet, with a good deal of high wind, conditions not at all favorable to partridge hunting, and the result has been very small scores. Better weather will probably bring better sport, but the birds in the more settled portions of the State, where they were plenty last year, are very scarce this year. A young man living in Hebron, in Oxford county, whose score up to the last of September, 1887, was a dozen birds, told me the other day that he had shot but one this year, and that was all he had seen. The same report comes from several sections in Massachusetts, and the southern part of New Hampshire. On the other hand grouse are more plenty in the further forest sections of Maine this year than usual. In the lake regions they arequite plenty, where in other seasons but few have been found. But it is a curious feature that there are absolutely no berries of the varieties on which these birds feed in the lake regions this fall, and the partridges have early taken to buds and leaves for a subsistence. One which I shot on the borders of the Big Beaver the other day had a greatly distended crop, and being curious to see on what the bird had been feeding, I opened the crop and found it full of the leaves of the white birch and poplar. The season has been so wet that leaves of this sort in sheltered nooks had not then been turned by frost, and the bird had been feeding on them. Further curiosity was awakened, and the crops of other birds were examined, with much the same results, no berries whatever being found. Still the birds we dressed for the camp seemed to be in very good condition.—SPECIAL.

As you invite game reports from your readers, accept an item from a part of the State not often reported, though one in which FOREST AND STREAM is a great favorite. Have lately retured from a week's outing in Herkimer county. I hunted ruffed grouse in the valley of the West Canada Creek and the tributaries and found them in fair numbers. They seem to hold their own very well in this rough country. I flushed but one woodcock, although my companion spoke of getting seven the first day of August and but two during the remainder of the month. I fear the longbill is doomed, as such reports are not infrequent. One strong reason is that the season opens too early: and another that is rarely thought of, the bird raises such a small brood. Gray squirrels are about exterminated in this section, and even reds are a rarity.

Mr. James H. Bucklin, of Little Falls, an experienced fox hunter, with his genial son L. O., gave me a day after the hounds. He had one deep-chested black fellow in particular, I suspect of Virginia stock, that ran a very fast trail and was tireless. We hunted all day and started three red foxes, of which we got two, the third holing. The honors fell to the other gentleman, as luck had it, and I returned home brushless, though they courteously offered me their trophies. I shall try the grouse in this locality over my pointer Beau, son of Beaufort, when the leaves are gone, and anticipate a good time.—H. A. R. (New York, Oct. 15).

Deer hunting in Maine has not yet been much of a success since the season opened, Oct. 1. The weather has been against the sport. From Oct. 1 to the 5th it either snowed or rained every day, and a part of the time the high mountains in northern Maine were white with snow—snow which extended well down into the timber. A couple of hunters from Andover went up Aziscohos, the mountain which separates the Androscoggin Lakes from the Magallaway region, on Oct. 1, and they found snow 2 inches in depth in the ravines on the side of the mountain. In this ravine the tracks of deer were very plenty, but the woods were wet and soon it began to rain. Deer hunting in such weather was next to impossible. It was the intention of this same party to jack some of the ponds in that section every night till they secured a deer, but up to the 5th of Oct. they had not once lighted their jacks. Every night the wind howled, and generally either the rain or snow fell. Two Boston sportsmen have just come out from the Dead River region, where they were on hand when the season opened on deer. But the weather was against them with all the force mentioned above. From the 8th to the 9th of the month they waded in damp snow ankle deep. The woods were loaded, making the tracking of deer next to impossible. After several days' trial, they gave up the hope of getting a deer and broke camp. They were obliged to leave their baggage in camp, to wait better weather for transportation. Such weather in early October is beyond the recollection of those who have hunted the Maine woods. Deer appear to be plenty. The signs are fresh and numerous, but woods loaded with damp snow are not favorable to deer hunting, especially when the leaves are yet on the trees. —SPECIAL.

TOWANDA, Pa., Oct. 9.—A party of sportsmen camping out near this place found game of all kinds scarce. Occasionally a few ducks are seen, one killed on the river opposite this place this A.M. Ruffed grouse in fair numbers but very few as yet brought to bag.—SUS Q. HANNAH.

The farmers in the vicinity of Castleton, Vermont, report the woods as full of grouse; and all who roam around much scare up nice coveys of them. It was too early for them and for gray squirrels when I was there last month, but I hope to have a try at them soon. Foxes are frequently shot.—NESHOBEE.

CONNECTICUT.—I think the Lyme correspondent expressed my views exactly in last week's issue when he says there was no game in the vicinity of Lyme. The season thus far throughout eastern Connecticut has proved a failure, so far as heavy bags of birds are concerned.—A. W. J.

RED HOOK, N. Y., Oct. 15.—The woodcock are moving. I shot some flight birds yesterday; the swamps are full of water from the recent rains, and they are hard to find.—J. W. B.

LINCOLN, Del., Oct. 13.—Quail, rabbits and squirrels are very plentiful in this county (Sussex) this fall, and there is an unusual quantity of ducks, black, sprigtail and teal, on the Delaware Bay marshes, seven miles from this place. Snipe, willet and yellowlegs are also plentiful. This is a first-class section for all of the above-mentioned game.—W. R.

FORT QU'APPELLE, Assiniboin, Northwest Territories, Sept 30.—We have just formed here a boating club, and in connection with it an organization for the protection of fish and game.—F. C. G.

A MASSACHUSETTS LEAGUE.

NEW BEDFORD, Mass., Oct. 12.—*Editor Forest and Stream:* It is proposed to form and organize a society in southeastern Massachusetts under the name of the "Southern Massachusetts Fish and Game League," for the purpose of protecting and preserving the fisheries and game. The object of the League will be to procure such legislation as will be necessary to prevent destructive and exhaustive methods of fishing, and hunting and trapping of birds and animals.

It has come now to be pretty well understood that the present wholesale methods of catching fish in season and out of season is so destructive to the fisheries themselves as to leave but little doubt that, if continued, they will sooner or later be practically exhausted. It is also well known that our game laws are so defective in themselves, or are so little enforced, that our birds and animals are rapidly decreasing in numbers.

The plan is to induce as large a number of persons as possible to join the League, and to support it by a fixed annual assessment. To this end a number of gentlemen of this city have united and now cordially invite others to join them.

It is believed that an annual assessment of $2.00 each will be sufficient for the general objects of the League and to provide the necessary means to procure the passage of laws for protection, and to prevent legislation tending to the destruction of the fisheries and game. It is well known that there is a powerful organization of those who are opposed to any restrictive or remedial measures, and who use money without stint to carry out their own ends.

It is proposed to hold a meeting on Monday, Oct. 22, at my office on Rodman street, under the Mechanics Bank, in the city of New Bedford, at 11:30 o'clock A. M., temporarily to organize, and to discuss a plan of permanent organization.

It is quite time we were doing something to secure the objects herein set forth, and, in so far as possible, more fully to instruct the people upon questions of so much consequence. A hearty co-operation of all the lovers of the fishes and the birds will certainly insure success. The acts of single individuals, however well intended, are not sufficient to meet the emergencies of the situation. In union only is there any strength.

The committee are: Messrs. Geo. H. Palmer, Arthur Ricketson, Leml. LeB. Holmes, Francis Hathaway, Robert Bennett. GEO. H. PALMER, Chairman.

NOTES FROM PUGET SOUND.

LA CONNER, Washington Territory, Oct. 2.—Hunters are bringing in large numbers of pheasants now. Ducks are flying thickly, but very high. The wet season will soon begin, when they will settle down on the bays in myriads. A few young mallards are to be found now on the sloughs, but few have yet been taken. Although the open season for deer begins on Aug. 15 there has as yet been little deer hunting. As they can be hunted with dogs during October, November and December the hunting will soon begin now. Deer appear to be more numerous on the islands than usual. There are only a few elk left in this country.

I am much pleased to note that there are not so many violations of the game laws here as formerly. This is probably partly owing to the fact that the Seattle Rod and Gun Club offered liberal rewards last spring for information sufficient to convict any person or persons of such violation of the law, and partly to the fact that the young men are becoming more sportsmanlike. I am inclined to think that a proper training of the young men to sportsmanlike ideas will do more toward preserving the game than the wisest laws our legislators can frame. JUNE.

THE DROP OF STOCK.

Editor Forest and Stream:

I do not think a straight broom-stick stock is the most effective for good square shooting. The rage for straight stocks did not break out in this country until American shooters adopted the English baby rules, which allow the shooter to stand with the gun against his shoulder and aim at the bird on the ground. A quick shooter can do this after saying "pull" and before the bird starts. Straight stocks were unavoidable in former times for the reason, I suppose, that gun makers did not have conveniences for making them crooked. Most of the shooting done in those days was at still objects. Then the hunter had time to draw his head down until his ears rested on his shoulders. Shooting at still objects is past except in the case of squirrels. Probably a good reason for straight stocks in by-gone days was because they could be used for making an effective thrusting blow when in combat with a dangerous animal. I think the English shooting rules are accountable for three-quarters of the straight stocks made in the three years just past. It does not seem reasonable that all men should require the same drop of stock. H. E. W.

NEWARK, N. J.

VERMONT DEER.—South Boston, Sept. 25.—Will you kindly inform me through your columns as to the protection which the deer have in the extreme northern part of Vermont? Is there a game warden, and if so, who is he? The deer are killed openly through the winter.—F. E. P. [If you have authentic information of this, send it to Hon. Herbert Brainerd, St. Albans, Vt. He is a Commissioner, and means to enforce the game laws.]

THE MAN TARGET AGAIN.—Mr. John R. McLachlan furnishes us particulars of a fatal shooting. On Oct. 6 a party of five hunters arrived at Newberry from Oakville, Mich., for a week's sport. After going into the woods some distance they located camping grounds, when each took a different direction, in quest of game. About 3 P.M. one of the party returned to the place selected for camping, and was gathering dry chips, etc., to kindle a fire, when one of their number, while stealing through the bush, saw him and, mistaking him for a deer, fired, putting a ball through him, and causing instant death. The ball entered about an inch and a half to the right of the center of the unfortunate man's breast, passed clear through and came out between the shoulders. An inquest was held on the remains, and a verdict returned of accidental shooting. The remains were sent Sunday to his late home in the southern part of the State.—*Torch Lake Times, Lake Linden, Mich.*

Sea and River Fishing.

THE WINNINISH DISCUSSED.

[*Reported for Forest and Stream.*]

THE first regular meeting of the Massachusetts Fish and Game Protective Association this season was held at the Hotel Thorndike, Boston, on the evening of Oct. 10, President E. A. Samuels in the chair.

The meeting was a large one, nearly sixty members being present. After the very enjoyable dinner had been discussed and the usual routine work of the Association attended to, the remainder of the evening was devoted to a discussion of the winninish. The discussion was opened by President Samuels, who said:

I had heard so many glowing accounts of the winninish or landlocked salmon of Lake St. John, Quebec, and its contiguous waters; such thrilling stories of their immense numbers and gamy qualities, and had heard so much controversy concerning the identity of the fish that I determined to visit the lake this season, first in the interest of science, to study the fish, and second for the purpose of obtaining material for another chapter for my forthcoming book on fishing.

I did what I could in carrying out my plan and now will present a brief *resumé* of what I accomplished, and note the conclusions I have arrived at.

I will state at the outset that I have, in common with some other students, for a number of years entertained the belief that all so-called landlocked salmon in this country are really distinct varieties, or perhaps a variety of the ordinary sea salmon (*Salmo salar*), that have attained their characteristics as a variety (yet which are not sufficiently pronounced to be specific) by being not really landlocked, that is, prevented from passing to and from the salt water, but which have, in periods more or less remote, lost, or if you prefer, abandoned, the anadromous habit of their ancestors and taken up a permanent residence in fresh water. I have made a very considerable effort to substantiate this theory, and have through many personal interviews with residents of sections where these fish are found, and also through a quite extensive correspondence, obtained many interesting facts which will in due time be collated and laid before those who are interested in our game fish.

Entertaining this belief, my visit to Lake St. John was therefore likely to be of more than common interest to me, for I expected to be able to throw further light on the theory that I held, and I did not regret having lost my annual sea salmon fishing, taking in this trip for study.

On arriving at Lake St. John I found that the descriptions of its great size and picturesque surroundings had not been overdrawn. It is truly a vast body of water, nearly fifty miles in length and from twenty to forty in width. Emptying into it are, I believe, eleven large rivers, besides many smaller streams. I had but little time to explore any of these rivers, and in fact visited but three or four. Two of these, the Peribonca and Ashuapmouchouan, are rivers of great size and length.

The Peribonca has been, as I am informed, ascended by Indians and trappers something like 600 miles. At its mouth it is of about the width and volume of the Connecticut River, at Springfield. It is navigable by steamer quite a distance, and its inflow into the lake is something enormous.

The Ashuapmouchouan River is also a very large stream. At St. Felicienne, which is, I think about ten miles above the lake, I found the river to be of about the size of the Merrimac at say midway between Lawrence and Haverhill, or about the size of the Restigouche at its junction with the Matapedia, perhaps a little larger. Now with this enormous lake and with all these rivers emptying into it, there is practically an unlimited water system, which undoubtedly furnishes the best possible conditions for the preservation, growth and wide and general diffusion of the Salmonidæ that here find a home. Establishing this fact at once in my mind, I of course made inquiries of every one who could give me any information and learned from all sources that the winninish are very abundant in the lake in early June and even earlier if the ice melts about the shores, and the fish are taken readily with bait and even with the fly at that early season. So very abundant are they in fact, that as I was informed even boys and girls, as well as older fishermen, might be seen landing the fish with all sorts of tackle, from the most primitive to the most elaborate. As regards the great, the astonishing abundance of the winninish in the early part of the season, the statements made by all my informants agreed, so that I have no doubt that at the period I have named, this magnificent game fish may be obtained in great numbers. Probably the average fishing would be about the same as that which we used to get at the Schoodic Lakes in the sixties. The fish are so abundant and come to the lure so greedily that the number one may kill is as great as his selfishness may limit.

Later in the season the winninish move into the deep waters of the lake and into the cold streams.

A favorite haunt of theirs seems to be the Grand Discharge, the outlet of the lake into the head of the Saguenay River, where, in the rushing waters of the rapids and wildest of all whirlpools and eddies, the winninish are taken with the fly until late in September.

I regretted very much that my visit to the lake had not been earlier timed; in fact, my arrival Sept. 10 was almost too late, and I had no little difficulty in obtaining even one specimen.

I found that in order to obtain any of the fish I should be obliged to drive either to the Grand Discharge, thirty miles, or to St. Felicienne, eighteen miles from Hotel Roberval—which, by the way, is one of the very best hotels that Canada boasts.

I decided to go to St. Felicienne for the reason that winninish had been taken there at the falls only a few days before, while it was not certain that any were at the Grand Discharge at that time, although local fishermen thought the chances were as good at one place as at the other. However, as the choice lay between a long ride of thirty miles over an execrable road at an expense of $16, and one of eighteen miles over the same kind of a road at an expense of $3, with the chances even for fish, I decided on the falls at St. Felicienne.

This is a small village, the last northern settlement of any size in that northern country. I found a little inn kept by one Alphonse Dionne. He is a Quebec Frenchman, but speaks English. He provides a fair table and a clean bed, and is very anxious—too anxious—to please, as you will no doubt find when you settle your bill, for he charges a little something extra on account of his anxiety to "help you out." If you have a distinct understanding with every one at the outset in your transactions, you will have no after surprises. Dionne will act as guide for you, and will procure teams if you wish.

When we arrived at the inn it was nearly dusk, and too late, therefore, to try the winninish that night, but after supper we prepared for an early start the next morning. Dionne thought we would find "plenty winninish at the falls, two American gentlemen had killed seven a week ago."

"Good!" I exclaimed to my son, who was busy unpacking his flies and tackle, "We will astonish the fish tomorrow."

"I s'pose got plenty spoon," said Alphonse, looking over our fly-books.

"Spoon!" I exclaimed, "spoons! No, we catch our salmon with the fly."

"Um," grunted Dionne, "American gentleman catch with fly one, with spoon four, with bait two!"

"Bait!" exclaimed my son; "for mercy's sake what kind of bait?"

"Worms," sententiously replied Alphonse. We informed him that we were not worm fishermen, neither did we revel with the spoon, and that we thought the fly was about the proper tool for winninish, and that we would take our chances with it anyway.

We turned in early and slept the sleep of fishermen until daybreak. Now right here let me say that the use of the spoon and spinning minnow in taking not only the landlocked salmon but the sea salmon also, is, while being of rather uncommon practice, still followed here and there. You all remember Black's stirring descriptions of trolling for salmon in his fascinating novel "White Heather," and you will find frequent mention of such a practice in the English fishing books. I accidentally took several landlocked salmon at Grand Lake in Maine in 1865, with the spoon, and will read to you the account that I wrote of it at the time:

"In a great part of its area Grand Lake is very deep, sometimes 200ft. In the solitudes of these depths, behind huge rocks in bright sunshiny days, waiting for the shadows of evening to tempt them from their retreats, lay huge spotted lake trout, called by the Indians 'togue.' They are often taken weighing 12 or 15lbs., and occasionally run up to 20 or 25lbs. At this season of the year they will not take the fly, but will sometimes seize a spoon or spinning bait such as our Massachusetts pickerel fishermen use."—Remember, this was written in 1865—"When we had fairly got out into the lake, Leweys, my guide, advised me to troll with a spoon. I took a strong line from my fishing box, and making fast a spoon, let it trail out 40yds. behind the canoe. I wanted to get a togue, for I had heard much of their great size and strength. Soon I felt a heavy tug, and hauling in the line, hand over hand as we do in bluefishing off Nantucket, I soon had my fish alongside the canoe. It was a handsome landlocked salmon, or white trout as we called it in those days, not a togue, and the Indian expressed his surprise at getting it with the spoon, this being the first occurrence of the kind in his experience. Hauling in the salmon I threw my line over again, and soon hooked another and another, and as the lake seemed alive with this fish and the trout would not bite, I gave it up and hauled in my line."

This old account is interesting to me, for it shows emphatically how abundant the landlocks were in the Schoodic Lakes in those days, and it also indicates that I had a fancied grievance in their abundance! and readiness to seize the spoon before the "togue."

Since that time trolling with a spoon for landlocked salmon has become a not uncommon practice with a class of sportsmen, and it causes the destruction of many fish. Sea salmon have also been taken with the spoon. I have in mind now an instance. A friend of mine a few years ago, while fishing on the Margaree River (Cape Breton), saw a large number of salmon and sea trout lying in one of the pools. He tried for two days to take them with a fly, but although he is an old fisherman he failed to move a single fish. Finally he tried a spoon as an experiment, and he said that the instant the lure passed through the pool big fish and small rushed for it, and he never saw such a fish hubbub in his life. The spoon was seized by a large salmon, which after giving lively sport for half an hour finally broke away, carrying the hook with him.

MR. BRACKETT—I have heard of other instances of sea salmon being killed with the spoon in this country.

THE PRESIDENT—I dare say, and doubtless more are killed in that way than are recorded. But to resume my story: Early on the following morning we started for the falls, where we arrived soon after sunrise. We found, really, one of the most promising salmon pools we had ever seen.

The river, which above the falls is an eighth of a mile wide, contracts at the falls to about ten rods width and the water roars and rushes down a ledge of about six or eight feet pitch and makes a large deep eddie below the falls two or three casts wide. It was an ideal salmon pool and I promised myself some exciting sport. Climbing out on a ledge that jutted out almost to the edge of the falls, I took my stand and soon began casting the fly for winninish. To my surprise, although I worked diligently for two or three hours and tried almost every color and combination I could think of, I failed to move a fish, and I came to the conclusion that the pool had been "worked," which conclusion seemed to me justifiable from the fact that in going down to the river from the main road we noticed two long sweep nets hanging on a fence to dry, and a canoe which showed very recent use. I said to my boy who was busy casting, "It's the old, old story, Charles."

"Yes," he replied, "the natives have been netting."

Finally I shifted my quarters to another ledge, below which the river formed a smaller bend and eddy, and casting out into the edge of the quick water, soon struck a nice fish.

It was a winninish, and as soon as it gave its first leap I recognized, as I thought, my old friend of the Schoodic Lakes, and when the fish was landed I felt positively certain that it was identically the same variety.

A MEMBER—Do you really believe the winninish and the landlocked salmon are the same fish?

MR. SAMUELS—Yes, they are in my opinion the same variety. Well, that was the only specimen I obtained, although I made strenuous efforts all that day and most of the next. I was joined on the rocks the second day of my visit—Saturday—by some of the boys of the village, who with spoons attached to lines and birch poles, made things lively all over the pool. But if I did not succeed in killing another salmon, they were not any more fortunate; and the only other fish that was taken was a mascalonge that my boy captured with a sunken salmon fly down in the deep water of the pool. The winninish had probably gone up stream, that is, those which had not been netted; at any rate none were in the pools. Now, I made several capital photographs here for your inspection. This is the winninish in the fall livery, a female fish [showing a photograph and passing it around], and here is another photograph of the winninish in the spring livery. You will notice that the colorations are quite different, the spring livery being silvery white, while the autumn is very dark and the spots are large and decided. I have here photographs of the landlocked salmon of the Schoodic Lake, which I made last November at the hatchery at Grand Lake Stream, and you can compare the two. You will find that the shape, size and markings of the fish correspond almost exactly, and the photograph shows faithfully the great resemblance I found to exist in the fish themselves.

I have here also photographs of the sea salmon (*S. salar*) that I made last November at the hatchery on the Miramichi, and you will notice that the coloration, shape and general appearance of the fish correspond with those of the others. The three fish, the Schoodic salmon, the winninish and the sea salmon, are idential in specific resemblance, and their coloration in the spring and autumn is exactly or almost exactly the same.

Now coloration is, I admit, an unreliable means of determining species, for all the Salmonidæ vary in different seasons in their colors, and, in fact, they change with the color and texture of the bottoms of the rivers and lakes that they frequent. But that the three fish I have described and figured should all change alike from silvery white in the spring to a much darker color in the fall and have the same spots and markings, shows that they are very nearly allied, if not identically the same fish.

Now a few words about this change of color. In the spring and summer, when the salmon (*S. salar*) ascends the fresh rivers from the sea, it is, as we know, a beautiful silvery white. It grows darker and darker, the longer it remains in the fresh water, until finally, late in the autumn and winter, it is an ugly almost black fish; and in the late winter and early spring, when it descends to the sea, the "slinks," as the spawned or spent salmon are called, are about as repulsive as they are attractive when fresh run from the sea. They recuperate in the salt water for a year or more and regain their good condition and color.

Now, the winninish and the so-called landlocked salmon recuperate and change exactly like the sea salmon; but instead of doing it in the sea they probably recover their condition and color in the great lakes, where they reside. I say probably, because it is not yet absolutely proved that they do not visit the salt water, although I am of the firm belief that they do not, and this belief is founded on the great amount of information that I have been able to derive from various sources. Both the winninish and the Schoodic salmon may visit the salt water if they desire, and I am not all certain but that individuals go up and down the Saguenay River. It is a very important point yet to be solved.

MR. BRACKETT—They do, I have no doubt, go down the Saguenay; every one who knows that region knows perfectly well that there is no obstruction between Lake St. John and the ocean, and that the winninish go down to the ocean in the spring there can be no question in my opinion. In fact, I have taken them at Tadousac, where the Saguenay joins the St. Lawrence.

MR. SAMUELS—This is important, yet not conclusive. We know that the winninish are taken about the shores of Lake St. John in May, as soon as the ice melts, and evidently must have remained in the lake all winter or else run up from the sea at the earliest possible moment. It is possible that they may have thus early ascended the Saguenay, for there are many localities where the sea salmon comes into the rivers even earlier than the time I have named.

They are taken in the Port Medway River, in Nova Scotia, very much earlier than May, and I have for several years had records of fresh run sea salmon being taken in the Indian River (N, S.) early in February with the fly, when the shores of the rives were piled high with ice!

Therefore we do not know abolutely that the winninish is not anadromous, for there is nothing to prevent its passage to and from the sea.

I have asked the *habitans* and fishermen if they ever knew of the winninish being taken in the river in early spring, and the reply invariably was no, and in fact I do not find much in the various fishing books to show that it is early found in the river. Hallock in "The Fishing Tourist" says: "In the winter they are scattered through the deep water of Lake St. John, and in June they descend to the series of rapids below to spawn." Now, I regard Hallock as one of the best writers we have on fishing topics, and certainly one of our best observers, and I am therefore greatly surprised that he mentions June as the time of spawning of the winninish, for every well-regulated salmon spawns in the autumn at the approach of cold weather, and not at the beginning of summer.

A MEMBER—How long ago was that written?

MR. SAMUELS—In 1873. Doubtless he has corrected his statement before this. Now, while it is possible that the winninish descends to the salt water to recuperate, it is doubtful if it does so, according to the opinion of those gentlemen with whom I have conversed on the subject. If we knew as much of its history as we do of the history of the Schoodic salmon, we could form better conjectures concerning the identity of the species. We know that formerly, before the huge dams were erected on the St. Croix at Calais and Milltown and elsewhere, the Schoodic salmon were found everywhere on the river. Mr. George A. Boardman of Calais, a gentleman well known as a good observer, writes me: "I do not regard the fish a landlocked salmon, as the water must always have had an outlet to the sea, and the fish could go if they chose; and in fact, when I was a boy, sixty years ago, they were abundant in the river even to the salt water." Now, this is a very important statement indeed, for it shows pretty conclusively to me that at the time Mr. Boardman mentions, the landlocked salmon of the Schoodic Lakes was really the *Salmo salar* pure and simple.

But when I first became acquainted with the fish in the "sixties" it did not go to the salt water; had abandoned the habit entirely. Why, because although it could go down over the dam to the salt water it could not by any possibility watever return up them; they were, in the absence of fishways, absolutely impassable. The query is: Did the fish instinctively know this, and knowing it abandon the trip to the sea? It looks like it to me. But the winninish never had such an excuse for becoming non-anadromous, and if it is really so that they have, why it is so is a very nice problem to solve.

Now about the habits of the fish. Genio C. Scott, in his book "Fishing in American Waters," says of the winninish: "This fish belongs to the genus *Salmo* and tenants the upper waters of the Saguenay, near the outlet of Lake St. John, in Canada. The fish runs from 3 to 9lbs. in weight, and as no very young members of the family nor the spawning beds have been seen by the *habitans* and Indians of that region, it is reasonable to infer that they breed further north. * * * The fins of the winninish being large in proportion to its size render it very gamy. It sails near the surface with the top of dorsal and caudal fins in view, and when it takes the fly leaps, runs and plays more vigorously than a grilse. * * * It takes either the minnow or the fly generously."

Hallock says of the winninish that it is "A fish very nearly allied to the landlocked salmon, though I notice slight points of difference between the two. The dorsal fin of the winninish is longer, and at those seasons of the year when he visits the rapids, he carries it erect and projecting above the surface like a shark's. The spots on the winninish are irregular quadrilaterals, while those of the landlocked salmon are rounder. * * * In general color and appearance he more nearly resembles the grilse. * * * The winninish seems more active than either the landlocked salmon or grilse, often making three successive leaps with great rapidity and without appearing to touch the water except with his tail. I have never seen the grilse do this and their reputation for activity is such that the Indians always speak of them as 'jumpers'."

Now you will notice that both Scott and Hallock refer to the characteristic of the winninish of swimming with its dorsal fin out of the water, and I noticed it myself on one occasion, and remarked that it was the only point of difference that I had detected between the winninish and the Schoodic salmon, which latter fish I had never seen swimming with its dorsal out of water.

The occasion that I refer to was during a trip that I took, while at Lake St. John, on the steamer up the lake to the River Peribonca. We passed over a series of shoals several miles in extent, and there we saw a number of fish at the surface swimming with their dorsals out. I asked the captain of the steamer and one or two of the gentlemen who were present, "What are those fish swimming with their fins out of water like small sharks?" They informed me that they were winninish. Now, if those fish were really of that variety they differed in that characteristic certainly from the Schoodic salmon.

MR. ROBERTS—I wish to state that the fish that were seen swimming at the surface with their dorsal fin out were not winninish but were undoubtedly whitefish.

A MEMBER—If that is the case the only point of difference that Mr. Samuels noticed between the two landlocked salmon is removed.

MR. SAMUELS—They may have been whitefish, possibly, I cannot say they were or were not. I was told they were winninish.

Now, I have not yet decided in my own mind whether or not this fish is identical with the Schoodic salmon, or is really another close variety of the *Salmo salar*. My belief is that they are one and the same fish*.

The specimen that I obtained at St. Felicienne was a female, and nearly ready to spawn. In order that it might be investigated scientifically and compared with a large suite of other specimens, I made a strong effort to have it reach the Museum of Comparative Zoology at Cambridge with the least possible delay, and finally got it through in good time and condition. Mr. Samuel Gar-

*Mr. Samuels writes us: "Since the meeting of the Association my attention has been called to the chapter on the habits of the salmon (*S. salar*) in the Report of the U. S. Commissioners, by Prof. Goode, published in 1884. I regret very much that I had not seen this at the time of the meeting, for it seems to, in so far as it relates to the 'landlocked' habits of the salmon, coincide with my theory."

Prof. Goode says: "All of the family run into very shoal water, and usually to the sources of streams, to deposit their eggs, and all of them seek food and cool temperatures in the largest and deepest bodies of water accessible. I am inclined to the view that the natural habitat of the salmon is in the fresh waters, the more so since there are so many instances—such as that of the Stortmontfield Ponds in England—where it has been confined for years in lakes without apparent detriment. The 'landlocked' or 'fresh warm-water' salmon, known also in the Saguenay region as 'winninish,' in the Shubenacadie and other rivers of western Nova Scotia as the 'grayling,' and in different parts of Maine as 'Schoodic trout,' 'Sebago trout' or 'dwarf salmon,' probably never visit salt water, finding ample food and exercise in the lakes and large rivers. In some regions in Maine and New Brunswick their access to salt water is cut off by dams, and some investigators have claimed that landlocked salmon did not exist until these obstructions were built, some fifty years ago. This hypothesis, however, is not necessary, for in the Saguenay the winninish have easy, unobstructed access to the sea. * * * The habits of successive generations become hereditary traits, and the difference in their life histories seem to justify the claim of the landlocked salmon to be regarded as a variety of *Salmo salar*, though it is hardly to be distinguished except by its lesser size and some slight peculiarities in coloration. It is to be designated at *Salmo salar*, variety *sebago*. Although both originated in the same primitive stock, it is not probable that one changes to the other except after many generations, under the influence of forced changes in their environment."

man of the Museum, who is with us this evening, will perhaps give us the results of his examination of the fish. I have great pleasure in introducing Mr. Garman.

Mr. Garman—Mr. President and gentlemen of the Association: I am glad to be able to report that the fish sent to the museum arrived in good condition. I compared it with other specimens, and can detect no great difference between it and the others. In their visits to the fresh waters, the salmon of our coasts are more or less restricted to particular times, by the winter with its lack of food, by the freshets, and by low waters. Between May and November we can claim some familiarity with them; and it is quite possible they are back and forth, to and from the sea much later. In England, with milder winters, these fish are said to linger off the shores, entering the fresh waters from time to time if not all the year. We know them to run up our streams in June, but it is not till late in the fall the eggs are laid. To spawn is probably not the only reason for their presence in the rivers so early in the season. After spawning the fishes retire to deeper water, fresh or salt, where food is abundant and where winter will not interfere with freedom of movement.

The eggs are hatched, the supply in the yolk sac is exhausted and the young are ready to scatter by the end of the following spring. Starting near the heads of the water courses, in the need of more room as they grow, they naturally are driven downward with the currents to find deeper pools and more subsistence. Supply of food in great part determines their places of resting. Voracious and numerous, appetite sends them from one place to another. In much the same manner our birds are chased about by the English sparrow, not so much by his fighting—that effects comparatively little—as by having everything eaten out of their homesteads. The salmlets may or may not reach the sea in their search for space and enough to eat. If they enter large ponds or lakes they may remain until ready to return to the spawning grounds. Such as do so remain are called "landlocked" salmon, and, although they are offspring of parents from the ocean, they differ little or none from others in streams so obstructed by falls or dams as to be inaccessible from the sea. The obstructed channels allow of downward passage, and thus, as return is not possible, they no doubt supply parent salmon for the unobstructed. In this way differentiation into distinct varieties or species between the progeny raised in the two classes of streams is prevented.

Direct experiments by Sir Charles Maitland, published by himself and by Dr. Francis Day, the great English authority on the subject, proved conclusively that, with abundance of food, the trip to the sea is not a necessity. In the ponds at Howietown young from marine specimens have matured and bred without leaving fresh water. On the other hand all the evidence—and it includes that of such experimenters as Dr. Davy—goes to show that the eggs of salmon invariably die when deposited in salt or brackish water.

All things considered, then, the salmon differs in habit from the common brook trout (*Salmo fontinalis*) mainly in being more addicted to marine excursions. The latter in many places enters the sea, becoming slightly modified in appearance, but is perfectly at home without it. In fact the salmon (*Salmo salar*) is a fresh-water fish, the landlocked form of which represents the species, and the marine form variation in the individual. Possessed of such a liking for the sea, it is not surprising that the species are widely distributed around the North Atlantic; yet the landlock form of northern Europe is to be distinguished with difficulty, if at all, from that of Maine.

Accepting the salmon as a fresh-water fish will deprive the discussion of the landlocked habit of much of its significance, but in reality it is the only view which reasonably accounts for all the facts involved. It obviates the necessity of accounting for inability to breed in salt water, and it is supported by the ability to propagate entirely without access to the sea.

Mr. Samuels—Here, gentlemen, we have scientific authority showing that the theory I have held is substantially correct. Mr. Garman's view of the *S. salar* being really a fresh-water fish and not a sea fish going into the fresh water to spawn is held by some but not all students. A fish that usually spends but six months out of every twenty-four in fresh water would not be regarded by all as a fresh-water fish. Still, the view that he takes admits of discussion, and that of a wide range. We would like to have this subject thoroughly discussed; perhaps Mr. Roberts, who has been to Lake St. John and has taken the winninish as well as the Schoodic salmon, will give us his views as to the identity of the two fish.

Mr. Roberts—I do not think the winninish and landlocked salmon are the same by any means. Why is it we never get the winninish any larger? We get the salmon weighing 25lbs., but the winninish never weigh over 5lbs.

Mr. Brackett—I have seen them weighing 9lbs.

Mr. Roberts—Four and a half pounds was the best we got.

Mr. Samuels—Now Mr. Roberts's statement is interesting. I was told that the fish are taken of as high as 14lbs. in weight. In old times at Grand Lake Stream, and by old times I mean in 1862-5, we never got the landlocks weighing over 3½lbs., never; they were very abundant, so abundant that a fisherman could kill almost any number. I never "fish for count," but to show how numerous the landlocks were in those days I will say that on my last day's fishing there one season I took out of one pool and within a radius of two casts over 200lbs. I was young and foolish then, and sometimes took home a box of fish for friends. I kept enough of the best fish to make a reasonably good sized box and put the rest back into the river; yet out of the whole lot not one would go over 3lbs. weight, and they averaged much less. Now from some cause or other, probably from increase of food, these fish have increased in weight, and I saw there last year in November, at the hatchery, I should think 600 or 700 landlocked salmon in the yards in the river, many of which would weigh as high as 8 or 10lbs. I was astonished, and requested Mr. W. O. Buck, who then was superintending the operations at the hatchery, to give me statistics in relation to the increase of size. Since that time he has kindly sent me a statement which I will read to you:

"Comparison of records show a gradual increase in size of the Schoodic salmon handled at the spawning season, and a marked increase in the yield of eggs per fish. Thus:

	Average. Pounds.	Inches.
235 males weighed and measured in 1877	1.80	16.8
247 males weighed and measured in 1886	3.46	20.3
343 females weighed and measured in 1877	1.90	16.1
505 females weighed and measures in 1886	3.58	20.1

"While the average number of eggs per female was advanced from about 900 to 1,800." Now this is a remarkable showing, and I shall not be surprised to learn by and by that the fish taken in Folly Lake, Nova Scotia, now known as the "grayling," but which is a landlocked (?) salmon, has grown to average as large as the Schoodic salmon, and these latter as large as the celebrated monstrous landlocks of Lake Sebago in Maine. It is in my opinion largely a matter of greater or less abundance of food.

Mr. Roberts—I have heard that they get the winninish weighing six or seven pounds in the spring, and get them in great quantities, but never weighing over six or seven pounds. They are very unlike in appearance to the landlocked salmon of Sebago Lake; these are of a lighter color and have very black spots.

Mr. C. W. Stevens—I have had considerable experience with the landlocked salmon of the Schoodic Lakes, and would say that although we took great numbers in the seventies, we never killed one that weighed over two and a half pounds.

Mr. Samuels—No, they were in those days of a considerably smaller average in size than now. It is to be hoped that our discussion this evening will result in bringing out more light. There is much yet to be learned concerning our Salmonidæ, and those who have any information concerning them should have it "spread upon the records." A number of good observers will give the study of the "landlocks" their special attention next season, and important facts may be obtained.

Adjourned.

HA HA BAY.

Editor Forest and Stream:

Having read a great deal in the Forest and Stream during the last season about Lake Edward and the adjoining lakes and rivers in the country lying north of Quebec, I have thought that perhaps it might interest some of your readers to know something of the fishing in the country lying to the northeast, in the neighborhood of Ha Ha Bay, near the head of navigation on the Saguenay. Ha Ha Bay is a beautiful sheet of water, which branches out from the noble Saguenay about seventy-five miles from its mouth. It is in a direct line about 110 miles north of Quebec, and sixty miles from Lake St. John. At present the only way to reach it is by the R. & O. Navigation Co.'s Saguenay line, which runs four times a week, leaving Quebec in the morning and arriving at Ha Ha Bay the following morning.

Our first visit was made in August, 1887. We found that the fishing was all that we had anticipated. The trout took the fly greedily in the rivers and lakes where the water was not deep. Good sport was had by going from the hotel in the morning provided with a light lunch and returning in the evening. We made a short trip of four or five days into the country, and were rewarded handsomely with plenty of trout weighing from 1 so 3lbs. We learned enough to satisfy us that the very best of fly-fishing could be had near the latter part of August and first of September. We therefore made arrangements to visit this region again this season.

Aug. 20 found Will J. Peck, E. H. Peck (who was with us for a week's outing only) and the writer on board the 9:15 A. M. White Mountain express from the Grand Central Depot, New York, on our way to Ha Hay Bay, fully determined to prove that as large trout could be taken in our newly discovered waters as in any other part of Canada, including Lake Edward. We arrived at Ha Ha Bay on the morning of the 22d, and were met at the landing by genial Peter McLean, who owns the hotel.

After fishing in the vicinity of the hotel about a week with great success, we bade good-bye to Ed. and started him on the homeward journey, business calling him home. We then set about making arrangements for a ten days' camping trip into the Ha Ha Mountains, lying to the southward, in search of large trout. We were fortunate in securing the services of Xavier Delaire and Toby Gannon with their bark canoes, two of the best guides it has ever been my good fortune to meet. Johnnie Blackburn was sent with us through the courtesy of Mr. Charletun, of St. Alexis. Johnnie is master of his art, and the pork and potatoes were always "just to the queen's taste." He was also a perfect Hercules and proved a jewel on some of the long portages. It was surprising to see him strap two enormous canvas sacks together, containing tents, blankets and provisions, sling them on his back, and then pile on camp kettle, dishes, frying-pan, etc., high above his head, until his load was twice as big as himself. Starting off he would sing one of his French Canadian songs, until his load began to slip sideways or Johnnie stepped on a slippery log and then—. We also had Perron, a young trapper, to assist in paddling one of our two canoes. Two days at the paddle and on the portage brought us to the lower end or discharge of one of the most beautiful lakes in this region of lakes. Our camp faced the setting sun, and was situated in the spruces on the edge of a pretty beach, along which the waters ran into the river on its way to the Saguenay. The following day was spent in fishing the river which ran along the base of high mountains and was overhung by the trees and bushes, making it shady most of the day.

This river was literally alive with trout. I shall not pretend to state how many were taken as I do not want to shake the confidence of any of your readers. The trout were not large, running from ½ to 1½lbs., but very gamy. I remember taking two at once three times in succession, and how many more times during the day I cannot recall. We found the red-ibis to be the most taking fly during most of the day. The fish were duly cleaned, split and smoked.

That evening Delaire told us that on the following day he would take us to a river where our expectations of big trout would be realized. Accordingly Will and myself set about selecting our largest and most taking flies after submitting them to the guides for inspection. Their principal thought seemed to be for the largest, and we included a few of Abbie & Imbrie's Jock-Scots (recommended for winnanichi) which we found to be very good for the big fellows.

The following morning at nine found us embarked in the canoes, and after a short paddle down the river they were drawn ashore and we started on a tramp over the mountains to the southwest. We were told it was about five miles, but as neither Will nor I speak French and none of our men spoke English except Johnnie, and he, to use his own expression, spoke it only "little much," we might have been mistaken. Ten o'clock found us still on the way; 11 o'clock found us still crawling under fallen logs, toiling up the side steep mountains or making our way along the slippery banks of some foaming rapid river, now 10ft. now 110ft. above it. But patience and perseverance will accomplish some things; and 12 o'clock found us on a bend in the river at the foot of a long rapids, which seemed to suit our guides. Our rods were jointed in short order, while the men cut back the bushes to prevent the catching of flies in the back cast. For three short hours we whipped that pool and each hour yielded eight of the largest trout we had ever seen. The largest weighed 5½lbs., nine weighed 3¼lbs. Will landed two at once that made the pool lively for twenty minutes before they were brought to the net. At 3 o'clock we concluded that we had taken enough for the day, and having eaten nothing since breakfast we partook of a bit of crackers and cheese before starting on our three hour tramp back to camp.

We remained five days more in camp enjoying the excellent fishing. Vacations will come to an end and we were two days from Peter McLean's, and Peter's was three days from New York.

With the firm resolve to visit that lake next season, we broke camp, Wednesday, Sept. 5, and started homeward. I say homeward because Peter's is beginning to seem like home to us. Peter is as big-hearted as he is big in stature (he weighs 240lbs.), and he cannot do too much for all who are so fortunate as to stop with him a few days in this remote region.

The shooting is capital in the open season, beginning with Sept. 1. Caribou and bear are plentiful. All supplies can be purchased at McLean's at very low prices. The fare from New York is $12 to Quebec and $4 from Quebec to Ha Ha Bay. It is expected that the Lake St. John Railroad will be continued to Ha Ha Bay in a few years, when one can go in a parlor car the whole distance, and save the long and sometimes unpleasant journey down the St. Lawrence. Should any of your readers desire any further information about Ha Ha Bay, I shall be pleased to answer any inquiries that may be asked.

Greenwich, Conn., Sept. 25. H. M. B.

BLUEFISH.

The bluefish season on the northern Atlantic coast has been a fair one, perhaps up to the average of the past ten years. Early in the season there was a scarcity of the smaller fish, of 1 to 2lbs. weight, which are always the advance guard, and many predicted a small run. As the season advanced the fishing grew better, in numbers, for the larger fish always come later, and in August the fishing was very good from Barnegat Bay up the New Jersey coast to Montauk Point, the eastern end of Long Island. The "snappers," as the small bluefish of 6 or 8in. long are called, were plenty in Long Island Sound, and quite a number of large fish, two-year-olds, were taken in the Sound as far west as Sand's Point. In September the fishing was very fair along the south side of Long Island, and in Great South Bay. This month, however, is always the time for the big ones, and on Tuesday last bluefish of 12 to 16lbs., from the east, were plenty in New York markets. Now is the season for big ones, and the lovers of this sport will be glad to know that since the netting was stopped in Great South Bay the fishing has improved. In those waters many fish from 6 to 8lbs. have been taken within a week or two, both off Fire Island and in the Bay. Around the northeastern end of Long Island, about Plum Gut, the fishing is now good. Philadelphians will not miss fair catches now at either Atlantic City or Barnegat.

Nets Seized in Gravesend Bay.—Last week State Game Protector James G. Brown, of Staten Island, procured a tug and seized a net which was being illegally used in Gravesend Bay, just above Coney Island. He is now threatened with a suit for stealing the net, and we learn that a warrant for his arrest has been issued by some local Justice of the Peace. From what we learn of the case the net owner was using his net in direct violation of the law, and therefore he can have no case against Mr. Brown. The average country Justice of the Peace is often moved by considerations of friendship to shield his neighbors when they have violated the game laws, which is usually not much of an offense in his eyes. We will watch this case with interest.

Channel Bass in the North.—This fish, variously called "redfish," spotted "bass," etc., is essentially a Southern sea fish, and more familiar to anglers from Charleston to Florida than to those north of southern New Jersey. Last week a party of bluefish anglers took a 40-pounder off Fire Island and hooked one or two smaller ones. Although this fish has been captured off Long Island before, it is not at all common there, and its appearance is always a surprise.

Lake Bomoseen.—Philadelphia, Oct. 10.—Fishing in Lake Bomoseen, Castleton, Vt., has been grand this fall, large catches of pickerel (properly pike) and large-mouth bass being made. The former were caught weighing 16lbs., and the latter 5, 6 and 7lbs., both with live bait, skittering or still-fishing, and trolling with a spoon.—Neshobee.

Truth Tested.—The popularity and immense sale of Humphrey's Veterinary Specifics show that they provide for every specific of physical distress to which horses and cattle are subject. T. A. Budd, Esq., of the American Glucose Co., Buffalo, writes that his president has found them so beneficial that he has adopted them for use in the stables of the company. Nor is this surprising since Humphrey's veterinary system indicates a very serious modification of the old savage methods of stock treatment by substituting mild and natural measures of relief. No staple is complete without these Specifics and book (500 pages) on treatment of animals. The latter, with chart, will be mailed free upon application to the Company, 109 Fulton street, New York.—*Adv.*

St. Simon's Island.—We call attention to the advertisement on second page of "Shooting to be let on St. Simon's Island." This island is on St. Simon's Sound, about five miles in a direct line from Brunswick and Jekyl Island, which latter place it resembles in its general features. The shooting to be let consists of 5,000 acres at the north end of the island, and about 4,000 acres on the island of Little St. Simons, which is a mile distant from the larger island. Both places have been carefully preserved for the last four years, and are full of game. The fishing is remarkably fine, consisting of sheepshead, bass, drum, etc., which come to feed on the large bed of oysters off the coast of Little St. Simon's.—*Adv.*

Fisheulture.

LIST OF FISH COMMISSIONERS.

FOREST AND STREAM presents its annual list of the Commissioners of Fisheries and fishery officers of the different Provinces, States and Territories of North America, revised and corrected to Oct. 15, from direct correspondence. Those marked with a * have failed to answer, and the States so marked are taken from last year's list:

THE UNITED STATES—
Col. Marshall McDonald, Commissioner, Washington, D. C.
Capt. J. W. Collins, Assistant in Charge of Fisheries Division.
Richard Rathbun, Assistant in Charge of Scientific Inquiry.

ALABAMA—
Col. D. R. Hundley, Madison.
Hon. Chas. S. G. Doster, Prattville.

ARIZONA—
J. J. Gosper, Prescott.
Richard Rule, Tombstone.
J. H. Taggart, Business Manager, Yuma.

ARKANSAS—
H. H. Rottaken, President, Little Rock.
W. B. Worthen, Secretary, Little Rock.
J. W. Calloway, Little Rock.
(This State has never made an appropriation for fish-culture.)

DOMINION OF CANADA—
Hon. John Tilton, Deputy Minister of Fisheries, Ottawa.
(Inspectors of Fisheries for the Dominion of Canada, 1888: W. H. Rogers, Amherst, N. S.; A. C. Bertram, North Sydney, C. B. N. S.; W. H. Venning, St. John, N. B.; Wm. Wakeham, Gaspé Basin, P. Q.; J. H. Duvar, Alberton, P. E. I.; Thomas Mowat, New Westminster, B. C.; Alex McQueen, Winnipeg, Man.)
(Officers in Charge of Fish Breeding Establishments: S. Wilmot, Superintendent of Fishculture, Newcastle, Ont; Chas. Wilmot, officer in charge, Newcastle hatchery, Ont.; Wm. Parker, Sandwich, Ont.; L. N. Catellier, Tadoussac, Q; Philip Vibert, Gaspé, Q.; A. H. Moore, Magog, Q.; Alex Mowat, Ristigouche, Matapedia, P. Q.; A. B. Wilmot, Bedford, N. S.; C. A. Farquharson, Sydney, N. S.; Isaac Sheasgreen, Miramichi, N. B.; Charles McCluskey, St. John River, Grand Falls, N. B.; Henry Clark, Dunk River, P. E. I.; Thos. Mowat, B. C. hatchery, New Westminster, B. C.)

CALIFORNIA—
Joseph Routier, Sacramento.
J. D Harvey, Los Angeles.
(Commissioner T. J. Sherwood resigned March 15, 1888.)

COLORADO—
G. F. Whitehead, Denver.

CONNECTICUT—
Dr. Wm. M. Hudson, Hartford.
Robert G. Pike, Middletown.
James A. Bill, Lyme.
(The State has no official superintendent, most of the hatching being done by Henry J. Fenton Poquonnock.)

DELAWARE—
Charles Schubert, Odessa.

GEORGIA—
J. H. Henderson, Atalanta.
(Superintendent, Dr. H. H. Cary, La Grange.)

ILLINOIS—
N. K. Fairbank, President, Chicago.
S. P. Bartlett, Quincy.
Geo. Breuning, Centralia.

INDIANA—
Enos B. Reed, Indianapolis.

IOWA—
E. D. Carlton, Spirit Lake.
(Superintendent, Ole Bjorenson.)

KANSAS—
S. Fee, Wamego.

KENTUCKY—
Wm. Griffith, President, Louisville.
P. H. Darby, Princeton.
John B. Walker, Madisonville.
Hon. C. J. Walton, Munfordville.
Hon. John A. Steele, Midway.
W. C. Price, Danville.
Hon. J. M. Chambers, Independence.
A. H. Goble, Catlettsburg.
J. H. Mallory, Bowling Green.

MAINE—
E. M. Stilwell, Bangor.
Henry O. Stanley, Dixfield.
B. W. Counce, Thomaston, Sea and Shore Fisheries.

*MARYLAND—
Dr. E. W. Humphries, Salisbury.
G. W. Delawder, Oakland.

MASSACHUSETTS—
E. A. Brackett, Winchester.
F. W. Putnam, Cambridge.
E. H. Lathrop, Springfield.

MICHIGAN—
John H. Bissell, Detroit; term expires Jan. 1, 1889.
Herschel Whitaker, Detroit; term expires Jan. 1, 1891.
Joel C. Parker, M.D., Grand Rapids; term expires Jan. 1, 1893.
(Superintendent, Walter D. Marks, Paris.)
(Secretary, Geo. D. Mussey, Detroit.)
(Treasurer, Wm. A. Butler, Jr., Detroit.)

MINNESOTA—
William Bird, Fairmount.
Niles Carpenter, Rushford.
Robt. Ormsby Sweeny, President, St. Paul.
(Superintendent, S. S. Watkins, Willow Brook, St. Paul.)

MISSOURI—
H. M. Garlichs, Chairman, St. Joseph.
J. L. Smith, Jefferson City.
H. C. West, St. Louis.
A. P. Campbell, Secretary, St. Joseph.
(Superintendents: Philip Kopplin, Jr., St. Louis; Elias Cottrill, St. Joseph.)

NEBRASKA—
William L. May, Fremont.
R. R. Livingston, Plattsmouth.
B. E. B. Kennedy, Omaha.
(Superintendent, M. E. O'Brien, South Bend.)

*NEVADA—
W. M. Cary, Carson City.

NEW HAMPSHIRE—
Geo. W. Riddle, Manchester.
Elliott B. Hodge, Plymouth.
John H. Kimball, Marlborough.
(Superintendent of Plymouth and Sunapee hatcheries, Com. E. B. Hodge.)

NEW JERSEY—
William Wright, Newark.
Frank M. Ward, Newton.
J. R. Elkinton, Pennsgrove.

NEW YORK—
E. G. Blackford, President, New York.
Gen. R. U. Sherman, New Hartford.
Wm. H. Bowman, Rochester.
A. S. Joline, Tottenville.
Henry Burden, Troy.
(Secretary, E. P. Doyle, room 311, Potter Building, New York city.)
(Superintendents: Fred Mather, Cold Spring Harbor; Monroe A. Green, Caledonia; James H. Marks, Bloomingdale; E. L. Marks, Fulton Chain, and E. F. Boehm, Mill Creek.)
(Shellfish Commission: E. G. Blackford, Commissioner; William G. Ford, Engineer; J. W. Merserau, Oyster Protector, 80 Fulton Market, New York.)

NORTH CAROLINA—
Wm. J Griffin, Chairman, Elizabeth City.
J. B. Watson, Englehard.
Wm. T. Caho, Bayboro.

OHIO—
C. V. Osborn, President, Dayton.
A. C. Williams, Secretary, Chagrin Falls.
J. C. Hofer, Bellaire.
John H. Law, Cincinnati.
Hon. Emory D. Potter, Toledo.
(Superintendent, Henry Douglass, Sandusky.)
(Chief Warden, L. K. Buntain, Dayton.)

OREGON—
F. C. Reed, President, Clackamas.
E. P. Thompson, Portland.
R. C. Campbell, Ranier.
(Terms expire in February, 1889.)

PENNSYLVANIA—
Henry C. Ford, President, 524 Walnut street, Philadelphia.
James V. Long, Cor. Secretary, 75 Fifth avenue, Pittsburgh.
H. C. Demuth, Secretary of Board, Lancaster
S. B. Stilwell, Scranton.
A. S. Dickson, Meadville.
Treasurer, W. L. Powell, Harrisburg.
(Superintendents: John P. Creveling, Allentown; William Buller, Corry.

RHODE ISLAND—
John H. Barden, President, Rockland.
Henry T. Root, Treasurer, Providence.
Wm. P. Morton, Secretary, Johnston.

SOUTH CAROLINA—
Hon. A. P. Butler, Columbia.

*TENNESSEE—
W. W. McDowell, Memphis.
H. H. Sneed, Chattanooga.
Edward D. Hicks, Nashville.

UTAH—
A. Milton Musser, Salt Lake City.

VERMONT—
Herbert Brainard, St. Albans.
F. H. Atherton, Waterbury.

VIRGINIA—
Dr. J. T. Wilkins, Bridgetown.

WEST VIRGINIA—
C. S. White, President, Romney.
F. J. Baxter, Treasurer, Sutton.
James H. Miller, Secretary, Hinton.

WISCONSIN—
The Governor, *ex-officio*.
Philo Dunning, President, Madison.
C. L. Valentine, Secretary and Treasurer, Janesville
Mark Douglas, Melrose.
A. V. H. Carpenter, Milwaukee.
Calvert Spensley, Mineral Point.
E. S. Miner, Sturgeon Bay.
(Superintendent, Jas. Nevin, Madison.)

WYOMING TERRITORY—
Louis Miller, Laramie.

NOTES ON THE COMMISSIONS.

IN connection with our revised list of Fish Commissioners, a few remarks on the Boards, as organized in the different States, may be of interest. Some of them issue valuable reports while others have not done so, to our knowledge. In some of the States there are liberal appropriations to carry on the work of producing food from the waters, while others do not spend a cent in this direction. Most of the New England States, where appropriations for this object were first made, long ago realized the benefits to be derived from fishculture and have liberally encouraged it, while the West, and the Southwest especially, have done little or nothing toward preserving the fishes already in their waters.

Arkansas is an example of those where a fishcultural missionary is needed to show its Legislature what has been done to benefit the people of other States, and what could be done there. It appointed a Fish Commission some years ago, but has never given it a dollar to work with, and it is therefore powerless. The Commissioners have been in office for six years and have defrayed all expenses of correspondence, etc., from their own funds. They are earnest, able men who would be glad to serve the people if the Representatives were awakened to the importance of the work.

California has done some work and in former years published reports of it, but of late years we have not seen their records, if any have been printed.

Canada is alive to the benefits of fishculture and supports it liberally, the yearly reports of work are very interesting and valuable.

Delaware has a Commission but the question of politics enters into it and destroys its usefulness. Dr. Shortlidge has done much good work as a volunteer superintendent in charge of a hatchery, but we hear that he has resigned. There is some feeling of rivalry between the upper and lower counties which is fatal to the work, as it has engendered bad feeling which we hope will be overcome.

Illinois has an active Commission and Mr. Bartlett has done much good work in saving the native fishes which are left in pools during the great floods which occur every spring. No artificial hatching is done.

Indiana has a Commissioner who has done work in prosecuting offenders against the fishing laws, but the last Legislature neglected to provide him with means to carry on the work. The former appropriations were small, and our remarks about Arkansas are applicable to this State.

Kentucky is also without means to do any work, although it has a numerous Board of Commissioners.

Michigan has an active Board and liberal appropriations, and is rapidly taking rank as one of the foremost of States engaged in fishculture. The Commissioners take a broad view of things and are especially interested in the food fishes, such as the whitefish and the other important lake fishes. It has three hatcheries and is contemplating a scientific survey of the waters with a view to extended work in this direction.

Minnesota is alive and active in fish propagation and has done much for the people in the way of fish food.

Nebraska is increasing its work and makes a good showing in fishculture.

New Jersey does but little although its shad fisheries are capable of development. It also has fishery interests of other kinds which might be developed. A dozen years ago much more was done in this State than at present.

New York has larger appropriations than any other State and has a vigorous Board of Commissioners. It has, however, paid more attention to trout culture than to the more popular food fishes, a condition which may be changed to some extent when the re-organization, now in progress, is effected. It has five hatcheries to divide its means among, three of which are in the Adirondacks and are mainly devoted to trout. The last one established, at Mill Creek, was done by act of Legislature without consulting the Board.

Ohio is paying great attention to the culture of whitefish in Lake Erie, and has a hatchery at Toledo for this purpose.

Pennsylvania is hatching whitefish, trout and wall-eyed pike, and when this State ceases to remove its Commissioners for political reasons it will be a step in advance, for no sooner does a Board become familiar with the needs of the State than it is changed.

Washington Territory has abolished its Commission.

Wisconsin is doing good work, has an active Board and a new hatchery which is said to be a model one.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensalaer Kennel Club, Troy, N. Y. Alba M. Ide. Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 23 to 27.—Meeting of the National Coursing Association, at Hutchinson, Kansas. M. E. Allison, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6578**

SHORT-HAIRED NEWFOUNDLAND DOGS.

Editor Forest and Stream:

I read with interest the kennel articles and dog talk in FOREST AND STREAM, but I think I have never seen any notice of the breed of dogs above mentioned.

Many years ago, while living in Boston, I knew a shipmaster engaged in the Newfoundland trade; to him I gave an order to buy for me in that island one of the native dogs, and expected to get one of the well-known big, long-haired animals. The captain, however, brought me a female puppy of a smooth, short-haired breed, which he said was considered by gunners in Newfoundland as the best of water dogs.

When a year old Fanny was about the size of a small pointer, say 18 or 20in., with short black hair on body and tail, the latter straight, ears small and rather pointed, and with a wild and somewhat wolfish eye, like that of an Indian dog. She was rather savage in temper, except to myself, and would fight any dog of either sex. When she was about a year old I took her with me to Chicago, and the first time I had her out duck hunting she brought out my ducks like a trained retriever, though she had never before seen a gun fired. She could swim and dive like an otter, and no crippled bird could escape her. She would dive off the end of the Chicago Pier, and bring up a white object from the bottom in 18 or 20ft. of water. In those days plenty of ducks could be found on the river just outside the village, for Chicago was then little more in 1840. On the river banks lived Irish squatters who kept geese, and the first time I took Fan along the river she attacked a flock of tame geese, killed the gander and brought him to me, and I had to pay the enraged old woman who owned the geese.

Fanny had a litter of thirteen whelps by a Newfoundland dog of the long-haired breed belonging to me, and I expected great things of them, but when a few weeks old, Fanny and all her young family died of distemper, and I have never seen one of her breed since, nor have I ever met with her equal as a retriever.

I have often wondered why this breed of dogs has not been brought here for the use of wildfowl shooters; probably they are little known, as I have not seen mention of them in canine literature, except in an English work by Richardson, republished by the Appletons in New York in 1847. Its title is "Dogs, Their Origin and Varieties"—an original and valuable book. Richardson, after describing the large, long-haired dog of Newfoundland, writes: "There is another breed of dog peculiar to Newfoundland, short-coated and sharp-nosed, an excellent water dog." These, it seems to me, may be the native dogs of the island, as I am not of the school which traces all dogs to a parent wolf, but rather believe with Agassiz in separate creations in different lands.

S. C. C.

"PRACTICAL" JUDGING.

REPLYING to Mr. Davey's letter in the Oct. 4 issue affords me unbounded pleasure. The London fancier has, I am told, been in the dog fancy off and on for about ten years, and although he has never owned a first-class specimen, or shown himself capable of distinguishing between good form and bad, he has learned to be "practical," which in his case consists in being able to kill birds and hollow at his dogs.

One hears this word "practical" very generally used by a large number of persons who have not an eye for beauty in form and other points which contribute to the make up of high class dogs, and there is far less in it than many persons suppose. It is the one and only retreat of men who when they discover that an eye for correct form in horses and dogs is not the same thing as steering a horse to victory or judging a dog. Jockeying and judging belong to a different class. Ability to judge and ability to jockey are usually separated by a wide margin. The brilliant player is not as a rule the brilliant composer, and *vice versa*. Hon. Al Smith has forgotten more about pugilists than the Boston champion ever knew. The late Lord Falmouth knew more about true form in horses than a dozen McLaughlins and Garrisons put together.

Nature seldom endows mortal man with great talent in several directions. If she gives him the ability to rise above his fellows in any one thing she feels that she has been sufficiently liberal. This word "practical" is also found to be a very convenient subterfuge for the dog as well as the owner. If poor doggy doesn't get a prize the owner makes it widely known both in the show and out that "Slackback is a smasher in the field. He could run the first prize winner to a standstill in something less than ten minutes. And look at his pedigree! Sire, Croxteth; dam, Jemima, a black bitch imported to North Carolina by Major Judgemen, of the Tennessee riflingmen. I tell you, he's a darling. Didn't bring him here expecting to get a prize; he's put up for field work, and that doesn't do for these men. I offered to make a match with the owner of the first prize winner for $5,000 a side, but the skunk crawled out." And for four solid days those who go near Slackback's bench hear nothing but "field," "practical" and "dollars." If the judge is incompetent and Slackback wins, you will never hear a word about "practical." This is usually about the style: "Didn't I tell you so? He won way off. Coarse brutes those. Look at that spike-nosed duffer squinting past the corner. Wonder men have no more sense than to show dogs like that. Wouldn't have 'em as a gift." Yes, Mr. Editor, this word "practical" is a godsend for both dogs and owners, and I will have more to say about it by and bye.

Mr. Davey takes exception to the statement that Roger was overlooked at New York and that I gave him his first blue ribbon. The first thing that a man should make sure about before he jumps into a public controversy is that he knows of what he is going to write. The New York show of 1888 is not the only one that has been held in this city. There was a show in 1887. "Antwerp," an amateur (pray don't mistake him for a professional, which, in these days means a competent judge), made the awards, or perhaps I had better say raffled the prizes. There were in the open dog class 33 entries. The first to emerge from the sack after it had been well shaken—some vulgar persons said that it had also been soaked, and not in water—was Rollo, the third prize winner at Buffalo. Prince Royal H., who got nothing at Pittsburgh, squeezed through next; and Pride of Dixie, by dint of searing his better looking competitors to the other end of the sack, got out third. Ted's Bang (his name sounded so sweet to "Antwerp") came next and was given the reserve. By this time the other dogs had become so thoroughly exhausted that they made a wild rush from the sack. It was difficult to tell which got to the judge's pants first, so "Antwerp," who is a bit of a racing man, called it a dead heat and placed Forest Planter, Gloster, Ned, Prince Jester, Royal Howard and Cecil v.h.c. It was a terrible finish and the atmosphere was loaded with choice epithets from the bewildered onlookers, who certainly got what they paid for, a "practical" lesson in the art of judging. When the numbers had been hung out somebody discovered that there were other dogs in the sack. The ring steward quietly unloaded these and it was soon apparent that they were scattered about the ring at an equal distance from the winning post and accordingly they were all given h.c. The ring steward was a bit fly. He had heard strange stories about mongrel dogs hiding themselves away in the corners of the sack from fear of beating their typical competitors, and so he gave it another good shake. With a grand rush two beautiful dogs sprang forward and started for the winning post. One was Dashing Rover, the other was Roger. Roger was heavily handicapped, inasmuch as he had never been in such a contest before. Neither the starter nor the judge knew him. His jockey handled him as if he had received "waiting orders," which is not wise unless the track be straight. There are so many sharp corners to get around on the New York course that unless a dog has a good "send off" and is kept in the leading van, he is certain to be shut out at the finish. Dashing Rover was also heavily handicapped, and it was seen in the "preliminary" that his great weight, which consisted of first prize at the Crystal Palace, would in all probability stop him, especially as the starter and judge did not know the extent of his impost. Well, these two made a very exciting and close finish for—sixteenth place!! Roger had a slight advantage because he was not quite so good-looking as Dashing Rover. This told in his favor at the finish and he was placed sixteenth (c.), with Dashing Rover unnoticed. Time, 2 hours, 57 minutes; starter, W. K. C.; judge, "Antwerp." Now, Mr. Davey, was I right or wrong in saying Roger had been overlooked? Is a dog that is placed sixteenth, and behind those that are not his equals in any one point, overlooked? If he is not overlooked, what must we infer? I repeat the statement that I gave Roger the first first prize he ever won, at New Haven. Mr. Davidson gave him second at New York, 1888; Dr. Jarvis placed Dad Wilson over him at Boston, and your humble servant gave him first at New Haven, and will be pleased to have Mr. Davey critcise the awards. I fail to see in these statements anything that is calculated to stir up the ire of the Scotch half of Mr. Davey's letter. Mr. Davey's reply to my criticism of his dog Locksley is a masterpiece of "practical" argument combined with slippery evasion. I wrote of his dog and of Roger as follows:

That good dog, Roger, overlooked by New York judges, but finally placed in the position to which he was always entitled, won well in the open class for dogs. I had the pleasure of giving him the only blue ribbon he ever won. Locksley, a new one, was second. His head, while not bad, is a trifle plain, and his eyes are too light in color. In loin he is strong, but too long, and his hocks are toe close, especially when in motion. Add to these defects a long and not correctly carried tail and a lack of substance throughout, and you have a fair description of Mr. Davey's clean built and racy-looking son of Scottish Chief. In my opinion Mr. Davidson made a mistake in placing him second.

This is Mr. Davey's reply:

With this criticism he passes him over and criticises the second prize winner at Buffalo by saying his head, while not bad, is a trifle plain. Admitting that his head is not perfect, are we to suppose Roger, with his faulty muzzle, to be the correct type? Next, Locksley's eyes are too light in color, while Roger's are much lighter, or yellower, more correctly speaking. Without metioning the good neck, beautiful shoulders, chest and back of Locksley, he passes to his loin, which is "too long"—this must be in your reporter's mind, as he is not a long dog—his hocks are a trifle too close, which we consider a much better form than the opposite, and the tail, if long, is carried much as the dog feels, not invariably in the same position. We must further disagree with your report in the matter of substance, as Locksley is a hardy, stout, muscular dog, or he could never weigh as much as he does in such light condition as he was shown, and he is possessed of more quality than any dog shown in his class. We are pleased to notice that other reporters differ from yours about the merits of the two dogs mentioned, and however good a judge of non-sporting dogs he may be, we would prefer some one else of more practical experience to select a dog for our use in the field, and also as a bench show dog.

I am not averse to criticism, and am willing my dogs should have their share of it, but would prefer reliable criticism, not slight imperfections magnified and fancied ones brought forward where none exist.

What, may I ask, has Locksley's rather plain head got to do with Roger's muzzle. I had previously called attention to Roger's defects, and it was quite unnecessary to do so again. The fact that neither dog is perfect in eyes nor muzzle is no evidence that Roger is not a vastly better-looking setter, although it may be the style of argument that is used by a "practical" man. I doubt if the editors of this paper would feel disposed to let me have the whole of one issue for a dog show report; and Mr. Davey does not pay himself a compliment when he tell us that he is incapable of recognizing the fact that when the bad has been taken from the good only the good remains. It is but a plain subtraction sum and is quite "practical." I drew attention to the dog's defects. That was sufficient. Mr. Davey does not deny the correctness of my statements; he simply tries to dodge them. Note, for instance, what he says about Locksley's loin. He does not realize that a dog may have a long loin without being a long dog, or that a dog may have a long back without being a long dog. How is it when a dog is short in back and long in loin? Is he any longer than one that is long in back and short in loin? Very "practical," isn't it? Then look at Mr. Davey's "practical" allusions to the hocks. In order to prove that Locksley is not slightly cow-hocked, he solemnly assures us that "we" (does it take two "practicals" to make one competent?) consider close hocks "a much better form than the opposite." In other words, Locksley is not cow-hocked because cow-hocks are less objectionable than wide ones. Who dare say that Mr. Peshall has not met his equal at last? Mr. Davey's, or rather "our" next practical argument is a scorcher. Make way ye Terrys, Schellhasses, Peshalls and Horse papers, and let the W. K. C.'s white elephant bow low. Locksley does not lack substance because he weighed—well, as much as he did weigh. If his height were 20in. it would be just the same thing as if he stood 30in., the weight is the substance. Now, Wade, all together—Great Snakes!

How is it Mr. Editor that so many of the practical dog men in this country are wholly incapable of criticising a dog or estimating the value of points when shown to them? "Antwerp" is said to be an excellent sportsman, but a worse judge of a dog never stepped into a ring. Luke White, a field trial handler, is considered one of the worst judges that stands on two legs. Mr. Tracy judged at New York in worse style than many a fifteen year old boy could have done. Then look at the judging of Mr. Seitner at Philadelphia (he has never been in the ring since and will probably never get there again) and Mr. Wilson at Cleveland, to say nothing of the shaky work of Mr. Sterling; or take C. B. Whitford, who has the reputation of being one of the best and trickiest of handlers. Did mortal man ever see a more lamentably ignorant judge. When Mr. Davey was shown Cora of Wetheral he remarked that he thought her a very good one with the exception of her hindquarters, which he considered very defective. It is an acknowledged fact that the bitch's hindparts are nearly perfect and that her failing is in front. These are a few of the "practicals." I have a letter in my pocket from another and he writes me that he feels certain his dog is a good one because it has a sensible looking head, plenty of bone and is "*black on the soles of his feet.*" I don't like italics, but where the information is so intensely "practical," as in this instance, kindly use them.

These are not the only "practicals" or a hundredth part of them. I have a brother who is a splendid shot and a sportsman in every meaning of the word. He has seen hundreds, yes, thousands of dogs, yet all the power in the world could not make him a judge, and I doubt if he would pay $25 for a dog on his own judgment. If he did the odds are that he would get the worst of the bargain. Besides not possessing the requisite qualities to become judges, these "practicals" care not a rap about a dog's appearance so long as he "gets there," and when he does "get there" they never think of asking themselves which points have been the leading factors in bringing about the desired result. It is the same thing in horses. Not one jockey in a hundred knows anything about the make and shape of the animal he rides, and it would be worse than stupid to suppose that because he handled his mount in good style and showed great judgment from the fall of the flag to the finish he must needs be a judge. Yet the man who rarely comes in contact with the pigskin, and then only to jog over his estate on a high-stepping cob, can breed good ones, knows every point and the value of every point, and can tell at a glance whether a horse is truly formed or not.

Let us go into another field. How many of the men who cover the walls of their houses with pictures are judges? How many students of art ever become famous artists? How many of the hundreds of thousands of persons that take lessons in music ever become known as pianists? Not one out of a hundred thousand. Why? An artist is born an artist, a judge is born a judge. Education, surroundings, etc., ripen the green fruit, that is all. Mr. Davey would not be a judge if he lived five hundred years. He has not an eye for beauty and correct form, and if he had he would still not be a judge because he is incapable of estimating the value of points positive and negative. Further than this, he has not a desire to look at any man's dogs but his own. A judge will pay $1,000 or $2,000 for a dog that has never been shown and without anybody's opinion. Mr. Davey would not care to invest $50 until he had consulted the writer of the Scotch half of his letter, and in this he shows common sense.

Mr. Davey wants "reliable criticism." Next week, by your courtesy, I will prove to him that I was breeding sporting dogs before his name had been heard of in connection with the dog fancy, and that I was considered a "reliable" critic before Mr. Davey showed a dog, probably before he owned one, and I will also see that he has some facts to prove that, "however good a judge of non-sporting dogs he (I) may be," I am a vastly better judge of sporting dogs. Mr. Davey will perhaps kindly read the following, just to put him on until next week: "The subject of our illustration this week is Mr. Charles H. Mason's magnificent young mastiff Salisbury, whose success on the show bench has been equaled by few dogs of the same age and breed, he having won seventeen firsts and seven special prizes. * * * At last Mr. Carr sold him to his present owner, who is a *well-known exhibitor and breeder of sporting dogs.* The price paid for him was £200. We heartily congratulate Mr. Mason, who is a popular fancier and true lover of all breeds of dogs."—From the *Fanciers' Chronicle*, April 2, 1880.

CHAS. H. MASON.

EASTERN FIELD TRIALS CLUB.

Editor Forest and Stream:

I am in receipt of a letter from the Southern Railroad Commissioners, stating that all trainers and visitors attending the Eastern Field Trials can, upon application to the ticket agent, procure a certificate entitling them to a return ticket at one-third the regular rate. I have also received an additional entry for the Champion Stake which was delayed in the mail.

SPRING (R. M. Hutchings, Galveston, Tex.), liver and white pointer dog (Mainspring—Curfew).

W. A. COSTER, Secretary.

THE HISTORY OF A MUSHROOM.

ANOTHER CHAPTER.

Editor Forest and Stream:

> Yet let me flap this bug with gilded wings,
> This painted child of dirt that stinks and sings;
> Whose buzz the witty and the fair annoys,
> Yet wit ne'er tastes and beauty ne'er enjoys;
> So well-bred spaniels civilly delight
> In mumbling of the game they dare not bite.
> Eternal smiles his emptiness betray,
> As shallow streams run dimpling all the way.—*Pope.*

The ancient manuscript which narrated some of the characteristics of a parvenu-patrician of Atlantis, had a companion piece, which also is obscure in its application; I send it to you as also being an instructive piece of ancient history. If the labor and pains I have had in transcribing an almost illegible manuscript are rewarded by interesting those who are curious about ancient customs, I desire no greater remuneration. With such conclusive records, no one will have the hardihood to assert that Atlantis is a myth, or that there were not, in past ages, elements of discontent in the noble fraternity of sportsmen. The paper, found in my great-grandpapa's files, was as follows:

A MUSHROOM INTERVIEW.

As was befitting a Lord whose genealogical tree was heavily laden since the days of Adam, and in whose person were united the graces of gentility with resplendent genius, His Lordship, the parvenu-patrician, was possessed of a coat of arms which excited the envy of prince and peasant, for each device was an emblem of personal brightness as well as family unions. The escutcheon had a green field in token of His Lordship's erudition; on the sinister chief point, in spirited relief, was a chestnut rampant; on the corresponding dexter point was a peccary couchant; on the heart point was an ass dormant. Few families could boast such honors in heraldry, since few had the necessary talents and breeding. To interpret each device will redound to the benefit of the astute reader. The chestnut rampant was emblematic of His Lordship's repeated assurances that he was a breeder: the peccary couchant was an emblem of majestic repose, contentment and self-confidence; and unoccupied intervals of time in private life were happily represented by the ass dormant. Never was escutcheon worn with greater pride and merit, in word and deed. As a veracious chronicler it devolves on me to thus describe Lord Jim's just pretensions to true nobility, the more so as he posed as the only genuine tailor-made gentleman of Atlantis.

The fancy was more than fortunate in securing Lord Jim as a volunteer member of the noble fraternity, which was divided into two great divisions, denominated respectively, the benchites and the birdcatchers—the former were devotees of the beauty shows; the latter of the birdcatching contests.

It is related of these men that they had some customs and traits in common which were astonishingly strange. Almost every member of the fancy (a generic term for all) owned a small brass bugle, which was cherished with anxious solicitude. None of these instruments were of the same size or pattern, although they had the same compass, and while the latter was limited to three or four true tones, which were difficult to execute, there was on infinite variety of false, discordant ones. It requires a fine ear and diligent practice to draw four notes of such harmony as would win the approbation of an audience. Custom sanctioned that each one should use his bugle to sound his own praise—philanthropy, victory at the beauty shows or at birdcatching, being the common themes; and a performance on one of these instruments was called "tooting his horn." Each horn was especially constructed to improvise on one subject, and if once blown out of time or tune it detracted from its value or destroyed it; consequently it required no little tact and judgment to become a popular performer. It was universally admitted that no class of men could toot their horns with greater power and volume than the guild of birdmen; but there were only a few who paid due regard to rhythm, cadence, timbre and expression, it is therefore needless to say that many poor and good horns were spoilt daily.

These horns mightily tickled the fancy and vanity of Lord Jim, they furnishing a powerful medium to engage the attention of the multitude to his own powers and deeds. He had a dainty little horn made to blow a wheezy tune, with one hundred tinkling embellishments, which he named his "Free Stud Fee Waltz, composed by Me, LORD JIM." That it might have the desired sensational effect, he blew his horn in the most public places in a trial of the waltz; but the tones were so asthmatic that nobody danced, and the composition was received with derision. His lordship thereafter had several small horns made, and essayed repeatedly to charm the public. Some of them were split by blowing too hard, others were leaky, and none had a true note. Although passionately fond of "tooting his horn," Lord Jim had a horribly dull ear for harmony, and no sense of proper opportunity; he could not distinguish the false from the true notes, blew his horn in all places and companies, the result being that all his attempts were as weird as echoes from pandemonium; still, as the dreadful noises were pleasing to him, they must be pleasing to everybody, so he reasoned. His Lordship ascribed the repeated failures to the diminutive size of the horns he had been using. Proceeding on this theory, he had an immense horn constructed, one larger than any known to the guild, a Colossus among horns. In length it was thirty feet; breadth across the bell, five feet. The smallest pipe was six inches in diameter, and each was reinforced with steel hoops. On the edge of the bell was a pendant chestnut about the size of a cheese, the chestnut being a device of his escutcheon. His Lordship had ample wind to blow this great horn, but, as the intelligent reader anticipates, he made some horrible discords. He composed a piece of music especially for it, which he entitled, "I am a Breeder, Me, LORD JIMMIE." He would pose in public places, blow dreadful blasts, which would echo and re-echo in the very skies and cause great sickness on earth. A variety of sounds would be produced, sometimes it would belch a hoarse or a wild unearthly shriek; but oftenest, when His Lordship attempted his choicest notes, it would bray; and I have heard honest men say that the braying tones were so true that they were not one jot behind Nature. The great vibrations caused the pendant chestnut to keep up a constant ringing on the bell of the horn, and "I am a Breeder" was a failure to everybody but its composer. With an air of the greatest gravity His Lordship would steal near an unsuspecting visitor at a beauty show, blow a blast three hours long in his ear, and then permit him to escape with a broken spirit and a wrecked constitution, with the refrain "I am a Breeder" ringing in his ears for weeks. Lord Jimmie was without a rival in "tooting his horn."

Many of the benchites and birdcatchers had a peculiarity of physiological structure which has no parallel in history, each had a detachable gall. By this strange physiological freak they could leave their galls at home or take them along, as appeared to be desirable or expedient. By cultivation and assiduous care, some galls attained majestic proportions; and Lord Jim's, from an unusually vigorous germ, outgrew all others, then he had a gall in size a happy match for his great bugle. His Lordship would frequent the most public places, roll his huge gall into position for a pulpit, mount it, give a mighty bray on his horn, and harangue the multitude for hours, something after this style:

"Ho! ye *knaves* AND *varlets!* *All* YE rogues, wretches AND

liars, stop! Behold ME, *the* only honest man IN Atlantis. *The* BEAUTY shows are corrupt—*the* BIRDCATCHING contests are corrupter—the *sporting* PRESS IS MOST *corruptest*. I SAY MOST *corruptest* advisedly; I HAVE consulted MY lawyer *on* THE subject. There IS but *one* true sportsman's paper IN Atlantis, it IS *independent*, courageous AND a *defender* OF the *right*. By MY horn and gall, no LIGHT *oath*, I *can* PROVE every WORD I *say* AND I will DO *so* by LEGAL measures IN proper *time*. IF ANY one of ye *doubt* it, *villians* that *ye are*, call *around* at *my* office *for* THE *proofs*. I am one of the few men WHO COULD AFFORD TO FOOT MY OWN BILLS(!). I *own* THE best *dogs*. I AM a breeder. I AM, I, I, I, I."

In this manner he would rant and abuse the multitude for hours together. However, on this occasion there happened to be a young journalist, from the thithermost side of Atlantis, who heard Lord Jim's harangue, and, being of an enterprising turn of mind, resolved to call and interview His Lordship; with this end in view, he might have been seen entering Lord Jim's office, with the modest, deferential air which distinguishes reporters everywhere. Fortunately, Lord Jim was alone and disengaged. The young man advanced and said: "Have I the honor of addressing Lord Mushroom Jimmie?"

"You HAVE," replied His Lordship, with an impressive air.

"Here is my card, please accept it. I represent the *Atlantis Boomerang*, and knowing that you are a recognized high authority on all matters appertaining to the dog and gun, besides being an enviable owner and breeder, I called to request an interview on these subjects. Your statements would have the stamp of authority, and would be both edifying and instructive to our host of readers."

"Ah! I perceive THAT you *are* quite INTELLIGENT for A newspaper MAN. Yes, you're quite RIGHT. I *do* know PRETTY near everything that's WORTH knowing. Villians! Villians! EVERY ONE of them, sir! BUT I AM all ATTENTION, proceed."

"In your masterly speech in the forum, you said you were the only honest man in Atlantis. Being a stranger in your province, you will pardon me if I ask the cause of this lamentable state of corruption."

"I know IT *all* from alpha TO omega. I *have* been FIGHTING against *frauds* AND abuses AT every turn. I TELL you, *sir*, the rascals are ALL *disgustingly* selfish; that IS *the* cause OF THE whole *trouble*. MY DOGS never get what THEY deserve AT any of *the* contests, *but* I'll HAVE the *law o' them* YET, *so I will*. *My thoughts are only for the promotion of field sports; my voice is never raised but to invoke justice; my pen is used to lance* VILLAINY. There is only one birdcatching race where I would run my dogs, *and that* one holds its *inaugural* race *next* winter."

"Does Your Lordship run in the trials every year?"

"I *never* ran *in* any RACE but ONCE. When MY dogs *do* not WIN, I *know* there IS rascality."

"Will this new club be honest *after* you have raced in it?"

Lord Jim eyed the young man for a moment to see if there was any levity in his manner, but observing his grave and respectful demeanor, he answered: "THAT DEPENDS ON WHETHER OR NOT I WIN."

"Your Lordship is right, quite right," observed the young man in a preoccupied way. "I feel that your earnestness is a proof of your sincerity, and that your words are from the fountain of truth. What are the facts relating to the corruption of the press?"

"There *is* only ONE sportsman's journal, all the others are puerile, partial sheets, unsound to the core. Why, sir, THEY CUT OUT SOME OF MY MOST SARCASTIC PHRASES, *and* sometimes REJECT MY *efforts* in bulk. My LANGUAGE IS TOO *vigorous for* this *effete* generation. There *is* only ONE gentleman's *paper*, AND it will *publish* ANY *vulgarity*, *libel* OR *indecency* that I *choose to write*, and NO ONE DARE SAY BOO; *but* IF ANY *one* MAKES a *reply* to ME, *the* said journal SUBMITS *the* manuscript TO ME with PROPER OBSEQUIOUSNESS, and it is accepted or rejected as I am pleased to dictate. Now, sir; THAT *is* what I CALL *impartial* and RESPECTABLE *journalism*. Yes, *young man*, there *is but one* HONEST paper. It *appreciates* ME. The others will IN TIME. I *am* a REFORMER."

"You will undoubtedly be better appreciated when you are dead." Noticing a shadow settling on Lord Jim's Gothic brow, the young man hastily added, "It has been the misfortune of all great reformers to miss the honors due them in life, but the honors never fail to be given by posterity. What kind of men are the reporters?"

"*The* REPORTERS!" His Lordship tried to speak, but he choked, and his face worked convulsively. His rage was so great that dissolution seemed imminent. He could, for a moment, only speak in gasps. "The reporters—are—* * * * * *, sir. A—PACK—*of*—* * * * * * * HOUNDS, sir. How—*many*—OF *the*—*blooming* idiotic—PENCIL knaves—have ANY sense? *Not one*, sir. I have BEEN *four or five* years IN the *fancy*, have had A GLIMPSE *of two bird* catching *races*, *have* seen beauty shows *by the* dozen, and KNOW *more than* the drivelling idiots who have been engaged in it ALL THEIR LIVES. The reporters are * * * * * * *, so they are."*

"It seems to me," said the man of letters, "that you being an honest man, and all your acts and utterances receiving your own popular applause and indorsement, with a good grazing paddock in a horse paper, that you would keep out of such company. Honest men do not seek the company of rogues. But perhaps they use coercive measures to enjoy the sunshine of your presence?"

Lord Jimmie sucked his thumb a moment, and waived the question, but said, "I AM NOT JUDGING ANY TRIALS THIS YEAR."

The *Boomerang* man continued, "Why do not you inaugurate a bird catching contest in Atlantis Park?"

Lord Jimmie brightened up and clapped his hands together in an ecstacy of glee, "O! WOULDN'T that be nice," he exclaimed, "they would NOT get *their hair mussed* or *crossed*, or their feet MUDDY, or their skins SCRATCHED by cruel *thorns*. *How sweet a pretty dog would look* standing on the GREEN TURF near *a terrace of roses* and—and—er—verdure, and a whole lot of ladies looking at them—it MUST be done. YOU *are a shrewd* young man—FOR A REPORTER. That kind of a race is *just what true gentlemen birdmen* NEED. The WAY these *coarse* fellows CATCH birds *is* positively VULGAR. They *go out* IN *the* mud, *and briers*, and horrid fields, *don't cher know*, and haven't a BIT of *high* culchaw."

The *Boomerang* man had a serious, meditative look. He said: "The birdcatchers, the benchites, the press, the reporters, in fact, the whole institution, you assure me, is composed of rogues, liers, libelers and toughs. As I understand it, they agree very well among themselves, excepting a little tilt now and then between individuals; but you are at war with everything and everybody. You condemn the whole thing (in round swinging oaths) in the form of clubs, supporters and sympathizers, yet appeal to the public, which is the same body in an informal capacity, to correct an army of imaginary grievances which you have suffered. By your own showing you were never engaged in a competition but what it resulted in a personal grievance or quarrel, and your record appears to be one succession of uproars, libels, accusations; the record of a chronic fault-finder and brawler. If you were sincere in your professions of piety, you could easily avoid future possibilities of injustice by keeping away from the company of rascals—who evidently do not care for *your* company. As a reformer your style is not correct; for there never was an instance greater than yours where a reformer needed reforming. Why, each succeeding year you have more brawls and wholesale aspersions than all the guild together; and as for selfishness, the term was never so fully saturated with the pronoun "I" and its spirit, as in your own case. With very limited experience, you rush to the front and, without being asked, set up your judgment and gauzy opinions, oftentimes with matters with which you have no concern, against wiser, older, more gentlemanly and skillful men whom you would do well, and it would profit you much, to own as teachers, instead of posing as a transparent upstart authority, and begging for the fruits of victory without its labors. Believe me, when a man in life's journey finds only the dark shadows, his mind must be sadly dwarfed; moreover, none are so prone to make mistakes as those who are ignorant or unskillful in the subject they attempt to teach; and remember that true gentility is always hand in hand with civility of speech and courteous mien. But tell me, me Lord, does every birdman and benchite stand on as big a gall and toot as great a horn as those which you possess? Why do you not get rid of them?"

His Mushroom Lordship was dumbfounded. His ordinary conversations were always a bit choleric, but now he was angry. "MAY the ——— *take* your insolence," said he. "Do *you* think THAT I *do* not KNOW THAT it IS *vulgar* to toot my horn in season and out of season, and troublesome AT *times to have such a big gall*? Supposing, *now*, thou brainless *witling* and DRIVELING hound, *supposing* that I *got rid* of my *bugle* AND my *gall*, what *would* be LEFT? *Nothing*, sir. In a MONTH I WOULD BE FORGOTTEN. Tooting MY HORN is MY LIFE; MY GALL is *my world*. As a BRAWLER I HAVE MADE MY REPUTATION; *I have not aught else to* stand ON. I make *this statement*, RESERVING all *the* rights, titles, good will, benefits, privileges and profits THAT may accrue *now* or *hereafter*, and *without prejudicing the legal proof thereunto appertaining* if I SHOULD TAKE this case before THE courts FOR arbitrament. But I SEE *you are like* ALL THE REST of *your ill-omened*, poisonous and croaking BROOD. YOU ARE * * * * * *. You have called now longer than there was need of."

The *Boomerang* man had already left before His Lordship had half finished, but the latter hurled a spiteful anathema after him. Turning around, he called his stenographer from a hidden recess, and said: "Have you GOT all *our conversation down*?" "Yes, me Lud," replied his stenographer. "*Hurry!* BE QUICK and SEND a COPY *to* my pet *paper so* the *public* will *know* WHAT I said. This will *give me* a SWEET *advertisement*. On *your* life do not *forget* the *italics* and SMALL capitals. They *assist* the readers to *understand* ME, for the readers are asinine. Alas! a feeling of sadness steals o'er me, for I am alone; alone in my knowledge, my probity, my skill, my instincts, represented by a chestnut rampant, a peccary couchant and an ass dormant."

The mushroom has been suffering from foul weather of late. Part of its head has fallen in the dust, and the rest is disordered. The whole structure is shattered. Another storm or two, and the wild winter winds will whistle an anthem over the place where it was, but is not. IT'S ME.

ATLANTIS.

The paper here concluded, and left the reader without any explanation of the moral of so much that is immoral in the utterances of His Lordship; but probably such was the style of the ancients. CORN CRACKER.

*The parvenu-patrician was given to elastic phrases, which partook of a parvenu-patrician character, the vulgarity predominating. Where there is an hiatus in his charming conversation, the wise reader will know that it is there for reason of propriety.

RICHMOND DOG SHOW.

WE give below a list of the awards at the Richmond dog show. We made arrangements for a report and were advised that it would be mailed to us on Monday, but from some unexplained cause it has not come to hand. Following is a full list of the

AWARDS.

MASTIFFS.—CHAMPION—*Dog*: E. H. Moore's Minting. *Bitch*: No entries.—OPEN—*Dogs*: 1st, C. C. Cook's Moses; 2d, E. H. Moore's Alonzo; 3d, Winlawn Kennels' Scipio. Very high com., C. Porter, Jr.'s Brother. *Bitches*: 1st and very high com., E. H. Moore's Duchess and Lady Florence; 2d, C. Porter, Jr.'s Boss's Lady Clare; 3d, W. W. Silvey's Judy.—PUPPIES—*Dogs*: 1st and 2d, D. P. Mygatt's Barnie and Troubadour. *Bitches*: Not for competition.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog*: No entry. *Bitch*: No entry.—OPEN—*Dogs*: 1st and very high com., E. H. Moore's Ben Lomond and Count; 2d and high com., Hospice Kennels' Alpine Chief and Crystal; 3d, Mrs. A. M. Hughes's Marmion. High com., C. D. Cugle's Dom Pedro. *Bitches*: 1st, Hospice Kennels' Gemma I.; 2d, Mrs. A. M. Hughes's Lady Alice; 3d, and very high com., E. H. Moore's Correlle and Recluse.—*Puppies*: No entries.—SMOOTH-COATED—CHAMPION—*Dog*: Hospice Kennels' Hector. *Bitch*: L. Daniels's Flora II.—OPEN—*Dogs*: 1st, W. S. Diffenderffer's Lord Hector; 2d, W. Person's Ivan; 3d, C. H. Evans's Victor Leo. *Bitches*: 1st, J. Keevan's Apollona. *Puppies*: No entry.

NEWFOUNDLANDS.—1st, Meadowthorpe Kennels' Meadowthorpe-Prince George; 2d, E. H. Morris's New York Lass; 3d, withheld.

BLOODHOUNDS.—1st, J. Appleby's Sarchedon.

DEERHOUNDS.—1st, E. D. Morgan's Bevis III.

GREYHOUNDS.—CHAMPION—H. W. Huntington's Cassandra.—OPEN—*Dogs*: 1st, H. W. Huntington's Highland Chief; 2d, withheld. *Bitches*: No entry.

FOXHOUNDS.—1st, E. P. Winston's Wise; 2d and com., M. Durrett's Crocket and Rhet. Very high com. and high com., J. H. Haw's Brilliant and Bender.—ENGLISH—1st and 2d, E. H. Morris's Passion and Warrior.

POINTERS.—LARGE—CHAMPION—*Dog*: C. Heath's Graphic. *Bitch*: C. Heath's Meally.—OPEN—*Dogs*: 1st, Westminster Kennel Club's Lad of Bow; 2d, L. Gardner's Duke of Vernon; 3d, Clifton Kennels' Sachem. Very high com., S. L. Carter's The Dude and T. B. Legare's Meteor, Jr. High com., W. T. Pearman's Sam. Com., G. B. Gaines's Cap and J. R. Purcell's Spottswood's Frank. *Bitches*: 1st and 2d, Westminster Kennel Club's Lass of Bow and Westminster Sal; 3d, Barnes Bros.' Devonshire Countess. Very high com., J. R. Purcell's Joy of Prince William. High com., E. H. Morris's Devon Nelly. Com., W. A. Lewis's Daisy.—SMALL—CHAMPION—*Dog*: Westminster Kennel Club's Naso of Kippen. *Bitch*: Absent.—OPEN—*Dogs*: 1st, S. S. Banks's Ned B.; 2d, F. R. Hitchcock's Glaucus; 3d, H. J. Casey's Echo. Very high com., W. W. Scott's Pocomoke and H. B. Owen's Rob Roy. High com., W. G. Pilkington's Picket and E. D. Christian, Jr.'s Zeph. Com., J. F. Berry's Shot and H. B. Owen's Tom Ochiltree. *Bitches*: Equal 1st, Westminster Kennel Club's Glauca and C. Heath's Bloom; equal 2d, F. R. Hitchcock's Flirt and C. Heath's Lady Norrish; 3d, J. White's Bonnie Doon. Very high com., J. R. Purcell's Ion and Flake of Flockfinder and F. R. Hitchcock's Duchess of Waterloo. High com., G. K. Taylor's Imogen, A. G. Taylor's Eva W., J. R. Purcell's Lady Spottswood and R. G. Southall's Jinks. Com., I. D. Anderson's Flora and F. A. French's Lou.—PUPPIES—*Dogs*: 1st, J. White's Grouse; 2d and high com., J. G. Teller's Macardo and Leo. Very high com., A. Farmer's Sensation. High com., J. E. Leath's Romeo II. and G. Lanzanoe's Sweet. *Bitches*: 1st, J. White's Bonnie Doon; 2d, L. A. Biddle's Cicely. Very high com., Barnes Bros.' Essie B. and W. F. Clark's Maud S. High com., R. A. Wise's Pomps, W. Hoyt's Fancy Free and J. Leath's Juliet. Com., A. Farmer's Gracie.

ENGLISH SETTERS.—CHAMPION—*Dog*: F. Windholz's Rockingham. *Bitch*: F. Windholz's Cora of Wetheral.—OPEN—*Dogs*: 1st, F. Windholz's Count Howard; 2d, L. Gardner's Roger; 3d, J. White's Gloster II. Reserve, E. W. Durkee's Peveril. Very high com., H. A. Wise's Henry V. and J. J. Snellenburg's Count Henricks. High com., J. Adam's Dude A. *Bitches*: 1st, very high com. and com., E. W. Durkee's Haphazard, Calico and Saddlebags; 2d, F. Windholz's Princess Beatrice II.; 3d, reserve and high com., Syracuse Kennel Club's Dot, Lit II. and Di. Com., B. T. August's Trinket II. and B. F. Lewis's Polly.—PUPPIES—*Dogs*: 1st, S. B. Clarkson's Abe. *Bitches*: 1st, J. Adam's Bessie June; 2d and com., P. Miller's Maud and Louise.

IRISH SETTERS.—CHAMPION—*Dog*: E. W. Clark, Jr.'s Blarney. *Bitch*: C. T. Thompson's Nellie.—OPEN—*Dogs*: 1st, E. Maher's Larry S.; 2d, C. W. Allen's Joe Gladstone; 3d, Meadowthorpe Kennels' Meadowthorpe Rover. Very high com. and com., W. F. Pumphrey's Young Punch and Ripple. *Bitches*: 1st, Dr. E. C. Kirk's Berna; 2d, L. De Fernix's Mabel.—PUPPIES—*Dogs*: 1st, C. W. Allen's Hazzard. *Bitches*: No entry.

BLACK AND TAN SETTERS.—CHAMPION—Dr. S. G. Dixon's Little Boy.—OPEN—*Dogs*: 1st, E. H. Morris's Beaumont; 2d, M. A. Jones's Vance; 3d, Benezet Kennels' Pilot, Jr. Com., Meadowthorpe Kennels' Meadowthorpe Laddie. *Bitches*: 1st, S. G. Dixon's Lady Pilot; 2d, Meadowthorpe Kennels' Heather Model. *Puppies*: 1st, S. G. Dixon's Broomclaw.

GORDON SETTERS.—CHAMPION—No entry.—OPEN—*Dogs*: 1st, Meadowthorpe Kennels' Meadowthorpe Heather Boy; 2d, H. B. Owen's Dash; 3d, Dr. J. Whitaker's Don. *Bitches*: 1st, R. Cromwell, Jr.'s, Countess of Devonshire; 2d, Meadowthorpe Kennels' Meadowthorpe Belmont. *Puppies*: No entry.

IRISH WATER SPANIELS.—1st, W. W. Silvey's Duchess III.; 2d, withheld.

CLUMBER SPANIELS.—No entry.

FIELD SPANIELS.—CHAMPION—Oldham & Willey's Newton Abbot Darkie.—OPEN—ANY COLOR—*Dogs*: 1st, Oldham & Willey's Newton Abbot Lord; 2d, 3d and very high com., E. H. Morris's Negro, President and Beau. *Bitches*: 1st and 3d, E. H. Morris's Bridford Negress and Lady; 2d, Oldham & Willey's Newton Abbot Lady II. High com., Miss Marguerite H. Langley's Phyllis II.

COCKER SPANIELS.—ANY COLOR—CHAMPION—American Cocker Kennels' Doc.—OPEN—LIVER OR BLACK—*Dogs*: 1st, Oldham & Willey's Dandy W.; 3d, E. Probert's Roy Obo. *Bitches*: 1st, Oldham & Willey's Chloe W.; 2d, W. Barnes's Hazel Obo.—ANY OTHER COLOR—1st, Oldham & Willey's Goldie; 2d and 3d, C. H. Getzendanner's Ned and Music. Very high com., L. H. Handcock's Darby and Joan.—PUPPIES—*Dogs*: 1st, W. Barnes's Red Doc; 2d, withheld. Com., L. H. Handcock's Snip. *Bitches*: 1st, W. Barnes's Royal Princess; 2d, Miss Marguerite H. Langley's Phyllis II.

COLLIES.—CHAMPION—*Dog*: Chestnut Hill Kennels' Dublin Scot. *Bitch*: Chestnut Hill Kennels' Flurry II.—OPEN—*Dogs*: 1st and 2d, Chestnut Hill Kennels Charleroy II. and Roslyn Sensation. *Bitches*: 1st, 3d and very high com., Chestnut Hill Kennels' Flurry III., Metchly Surprise and Roslyn Torfrida; 2d, Meadowthorpe Kennels' Meadowthorpe Parole. Com., E. H. Morris's Scot.—PUPPIES—*Dogs*: 1st, Chestnut Hill Kennels' Roslyn Bruin. *Bitches*: 1st, Chestnut Hill Kennels' Roslyn Torfrida.

POODLES.—BLACK—*Dogs*: 1st, L. A. Biddle's Barre. *Bitches*: 1st, Dr. S. G. Dixon's Paris.

BASSET HOUNDS.—1st, W. H. Smith's Babette.

BEAGLES.—CHAMPION—*Dog*: Somerset Kennels' Bounce. *Bitch*: W. S. Diffenderffer's Lou.—OPEN—*Dogs*: 1st and 2d, Somerset Kennels' Storm and Stinger. *Bitches*: 1st, Somerset Kennels' Cloud; 2d W. S. Diffenderffer's Belle of Woodbrook; 3d, W. S. Clark's Cleopatra. Very high com., Benezet Kennels' Bonnie B. *Puppies*: 1st, Somerset Kennels' Hope; 2d, very high com. (two) and com., W. S Diffenderffer's Woodbrook Blossom, Woodbrook Fashion, Woodbrook Lee and Woodbrook Clifton. Com., Capt. J. Cusson's Frolic.

BULLDOGS.—CHAMPION—*Dog*: R. B. Sawyer's Merry Monarch. *Bitch*: No entry.—OPEN—*Dogs*: 1st, R. B. Sawyer's Portswood Tiger. *Bitches*: 1st and 2d, R. B. Sawyer's Soudan and Beatrice.

BULL-TERRIERS.—CHAMPION—W. F. Hobbie's Grabber.—OPEN—*Dogs*: 1st and 2d, Sunnyside Kennels' The Earl and Tony; 3d, W. V. Lloyd's Pete. *Bitches*: 1st, W. F. Hobbie's Bonnie Princess.

FOX-TERRIERS.—CHAMPION—*Dog*: Blemton Kennels' Lucifer. *Bitch*: Blemton Kennels' Rachel.—OPEN—*Dogs*: 1st and 2d, Blemton Kennels' Blemton Rubicon and Dusky Trap; 3d, R. S. Ryan's Lindin Splint. Very high com., F. P. Kirby's Little Major. *Bitches*: 1st and 2d, Blemton Kennels' New Forest Ethel and Blemton Brilliant; 3d, R. S. Ryan's Linden Nettle. Com., E. Adelaide Trench's Wax.

WIRE-HAIRED.—1st, W. B. Robinson's Costwold Jacko; 2d, F. P. Kirby's Gough.—PUPPIES—*Dogs*: 1st, Blemton Kennels' Blemton Rubicon; 2d, F. O. Beach's Blemton Grandee. High com., W. T. Levering's Felix. *Bitches*: 1st, withheld; 2d, Blemton Kennels; Blemton Varsoviene. High com., W. T. Levering's Oxford Nora.

BLACK AND TAN TERRIERS.—Absent.

SCOTCH TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Bonnie Laddie; 2d, E. D. Morgan's Highland Laddie.

DANDIE DINMONT TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Reiver.

BEDLINGTON TERRIERS.—1st, E. D. Morgan's Tees Rock; 2d, F. Kirby's Barney.

IRISH TERRIERS.—1st, J. F. McFadden's Dennis; 2d and very high com., Chestnut Hill Kennels' Breda Tiney and Roslyn Dennis.

SKYE TERRIERS.—1st, Meadowthorpe Kennels' Meadowthorpe Coila; 2d, W. P. Sanderson's Jim.

YORKSHIRE TERRIERS.—*Dogs*: No entry. *Bitches*: 1st, W W. Silvey's Fannie.

TOY TERRIERS.—No entry.

PUGS.—CHAMPION—*Dog*: Dr. M. H. Cryer's Dude. *Bitch*: Dr. M. H. Cryer's Bessie.—OPEN—*Dogs*: 1st, A. E. Pitt's Kash; 2d, Dr. M. H. Cryer's Nero. *Bitches*: 1st, Dr. M. H. Cryer's Vesta; 2d, E. Kirby's Daisy; 3d, Pitts & Gilliyan's Belle of the Ball. High com., R. M. Dashiel's Frankie Folsom and C. H. Epp's Beauty. *Puppies*: 1st, G. Gillivan's Peggie II.; 2d, Dr. M. H. Cryer's Mary Ann. Very high com., Meadowthorpe Kennels' Meadowthorpe Beau.

KING CHARLES SPANIELS.—1st and 3d, E. H. Morris' Norwich Jumbo and Mona; 2d R. Crissey's Philadelphia Charley. Very high com., W. Phillips's Rose.

BLENHEIM SPANIELS.—1st and 2d, W. Phillips's Grand Duchess and King Pippin.

PRINCE CHARLES SPANIELS.—1st; E. Probert's Nelly.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid.

MISCELLANEOUS.—1st, Chestnut Hill Kennels' smooth collie Lady Bird; 2d, J. Binford, Jr.'s Russian terrier Casary.

SPECIAL PRIZES.

Kennel mastiffs, E. H. Moore; St. Bernards, the same; foxhounds, Goodloe's kennel; blue-mottled, J. G. Archer's Rapid; kennel pointers, Westminster Kennel Club; pointer that has run at a field trial, Graphic; setter, Blarney; kennel English setters, F. Windholz; puppy, Abe; owned in Richmond, the same; bitch puppy, Bessie June; Gordon setter, Meadowthorpe Heather Boy; Irish setter dog puppy, Hazzard; kennel collies, Chestnut Hill Kennels; best in open classes (Collie Club's special), Flurry III.; bred and owned in a Southern State, Meadowthorpe Parole; race beagle bitches, Cloud and Hope; dog or bitch, Storm; dog (Beagle Club's special), the same; bitch Cloud; kennel fox-terriers, Blemton Kennels; pugs, Dr. M. H. Cryer; spaniel, Newton Abbot Darkie; brace Sussex, President and Lady; brace sporting spaniels, Newton Abbot Darkie and Newton Abbot Don; foxhound dog, Wise; puppy, E. P. Winston's Rappahannock.

BRISTOL DOG SHOW.

BRISTOL DOG SHOW.—Hartford, Conn., Oct. 13.—*Editor Forest and Stream:* I read in your paper of this week the report of the dog show at Bristol, Conn., in which your correspondent "H." says that Barnes's Sam won first in pointer dog class. I hasten to make the correction, for I remember well of awarding the first prize to that very good dog Spot Dash of the Fleet View Pointer Kennels, Lynn, Mass. He is quite a good dog, and might carry off the blue ribbon in excellent company.—E. K. SPERRY. *Editor Forest and Stream:* I notice in your report of the Bristol bench show you bestow considerable praise on the Doctor for his work. Now, the Doctor certainly does deserve peaise, but I think some mention should be made of his assistants, Mr. Robert Leslie and Mr. Crowell. These last named gentlemen worked long and hard to set things right, and I think they certainly deserve a vote of thanks.—EYE WITNESS.

CONCERNING TWO LETTERS.—We have received letters from Chas. Heath and Jas. L. Anthony, containing charges which, we are convinced, are untrue, and we therefore believe them to be malignant libels. As we further understand that one of the parties against whom the charges are preferred is no longer living, it is manifestly impossible that the FOREST AND STREAM should by printing the letters make itself a party to defamation of the dead. There may be other journals perfectly willing to do this. There is in this town a horse paper, which some years ago attacked a man on his dying bed; and doubtless Heath and Anthony will find its editors only too eager to print their charges against a dead man.

SPANIELS AND THEIR WORK.

Editor Forest and Stream:

Your special correspondent, in his remarks on the London show, says that either the standard of the American Spaniel Club is all wrong or it is not followed; that with the very long and low bodies now called for the legs are very defective. The A. S. C. standard is all right, but the judges and public are wrong. I challenge any judge or breeder to prove that I am not right, and I am prepared to prove by the A. S. C. standard that any cocker now prominently before the public cannot score 75 points under the standard.

There is not much use in trying to get the A. C. S. Club to do anything. They are in love with their idols. Like the Hindoos, they worship the crocodile. Now let them change the name of the club and call it the Crocodile or English Non-Sporting Spaniel Club.

I receive many letters on this subject, and now have the names of fourteen, all well known to the spaniel fancy. Nearly all are at present members of the A. S. Club. I know there are many more who would gladly see the true sporting cocker spaniel placed in his proper position at our shows. If they will send me their names we will demand our rights of the A. S. Club. Should they fail to do anything for us, we can easily form a sporting spaniel club.

J. OTIS FELLOWS.

HORNELLSVILLE, N. Y.

Editor Forest and Stream:

In the Buffalo catalogue Hornell Silk is described in his list of winnings as "champion field trial spaniel of America." Now as his owner claims that title for him by default I don't see how he can have won it, and how it can be entitled to a bracket with his wins.

When several years ago Mr. Fellows made his $1,000 bluff, good dogs were scarcer than they are now, and even at the present time no one would stake such a sum on an initial spaniel field trial. It was a bluff, pure and simple, and a safe one. The owner of any brute, no matter how worthless, can say "I'll match my dog against yours for $1,000, and if the "other fellow" has not seen his animal at work he is safe to refuse such a challenge.

Away with such transparent rot. Let us have regular trials for our pets, brother spaniel men, and so demonstrate which is the best dog. Let the entrance money and general expenses be so low as to admit the dogs of our most impecunious brethren. Do not make it possible for the wealthy to "bluff" their dogs into prominence by weight of money or brass.

Surely this is a question of importance! Spaniel lovers let us hear from you. QUESTER.

THAT MITCHELL LETTER.

Editor Forest and Stream:

Two friends of mine have written me to the effect that I hardly made it clear in your last week's issue that the Mitchell letter was voluntarily handed me by Mr. Richter. I certainly did not say so in so many words, but surely no one supposes I had it without his full knowledge and sanction, after reading my last letter, for that is fully implied. The simple facts are that the letter was handed to me for investigation. I forwarded it to a trusted friend in New York, requesting him to inquire into the facts. The letter was by him returned to me. I never had any reason to suspect, nor do I now believe that my friend made any improper use of the letter. If any one wishes to make assurance doubly sure he should read the *Sporting Life* of January 20, 1886, if he is not satisfied with my positive statement that the letter was handed me with the view to my seeing if there was a grain of truth in it.

In order to clear the matter up, I have this day forwarded to Dr. J. Frank Perry a letter of which the following is a copy:

PHILADELPHIA, Oct. 15.—*Dr. J. Frank Perry, President National Dog Club*—Dear Sir: Presuming that you have read the communications which have appeared in the papers with regard to a letter sent by a person named Mitchell to the editor of the *Sporting Life*, and the apparent implication of myself by Mr. Anthony with regard to the alleged theft of said letter, its alleged sale to Mr. Anthony and its recovery from him by an alleged fraud, I respectfully request, as a member of the National Dog Club, that you appoint a committee to investigate the case. If I am guilty of such conduct I am not fit to remain a member of any club of gentlemen and should be expelled from the National Dog Club. Objection may perhaps be raised by some to my seeking this investigation, but I know of no better way, as I am a member of the National Dog Club. Recourse to law, even if the libel was more plain than it seems to be, is objectionable on the grounds that I don't think it right to deprive my family of the money necessary to pursue such a course, and it might be several years before the case came to trial, whereas the remedy should be quickly obtained. I place the matter in your hands with the hope that you will see that the welfare of the National Dog Club calls for the investigation of the record of any member against whom such insinuations are leveled. Your respectfully, JAS. WATSON.

A resort to the law, even if it was a straight out libel, is not an easy thing for a non-resident of the same State, and by the time the case came to trial it would be completely forgotten by all now cognizant of the insinuations. What I want is a speedy investigation, and I court the fullest and most complete inquiry that any body of gentlemen may suggest. I know what I am talking about when I say I want the whole affair unearthed. JAS. WATSON.

PHILADELPHIA, Pa., Oct. 15.

INDIANA FIELD TRIALS.

INDIANAPOLIS, Ind., Oct. 13.—*Editor Forest and Stream:* The All-Aged Stake of the Indiana Kennel Club's trials closed Oct. 1, with 41 and the Indiana Stake with 6 nominations, as follows:

ALL-AGED STAKE.

ENGLISH SETTERS.

BESSIE B. (F. H. Ball), blue belton bitch (King Noble—Elsie Belton).

BEAUMONT (W. R. Huntington), black, white and tan dog (Prince Royal—Nettie).

BOHEMIAN GIRL (W. G. Millier), black and white bitch (Count Noble—Mollie Belton).

BODKIN (E. W. Clark, Jr.), black and white dog (Buckellew—Nellie Druid).

BLUE DICK, JR. (John Bolus), black and white dog (Blue Dick—Nellie Rake).

DARBY (John Bolus), black and white dog (Bridgport—Bessie Belton).

DAISY HUNTER (J. A. Hunter), orange and white bitch (Gath's Hope—Daisy F.).

EFFIE HILL (D. W. Barringer), black, white and tan bitch (Prince B.—Douna).

FLORA TEMPLE (A. J. Gleason), black, white and tan bitch (Zippo—Ruby Buckellew).

JESS (E. E. Pray), liver and white bitch (Dick—Spot Belton).

KATIE NOBLE (L. A. Boli), black, white and tan bitch (Count Noble—Queen Meg).

KING'S MARK (J. I. Case, Jr.), blue belton dog (King Noble—Belle Belton).

LOTTIE C. (J. I. Case, Jr.), lemon and white bitch (King Noble—Vashti).

LARK P (Curtis Wright) black, white and tan dog (Glen—Topsy S.).

MAUD (Bert Crane), black, white and tan bitch (Dog Whip—Juno).

NELLIE T. (A. Smithnight), orange and white bitch (Prince Phœbus—Rosey).

POLLY II. (J. B. Stoddard), black and white bitch (Josh Whitcomb—Polly).

PRAY'S GLADSTONE (J. A. Bolen), black, white and tan dog (Paul Gladstone—Bessie A.).

QUEEN NOBLE (J. I. Case, Jr.) blue belton bitch (King Noble—Belle Belton).

RESOLUTE (J. I. Case, Jr.), blue belton dog (King Noble—Vashti).

ROD GEM (L. A. Boli), black, white and tan dog (Roderigo—Gem.

ROGER (L. Gardner), black, white and tan dog (Count Noble—Queen Meg).

BLACK AND TAN SETTER.

NELLIE DUANE (R. W. Wehrle) bitch (Briar—Fannie).

IRISH SETTER.

SARSFIELD (Kildare Kennel), dog (Garryowen—Currer Belle II.).

POINTERS.

BEAU OF PORTLAND (H. F. Farnham), black and white dog (Graphic—Zitta).

COIN (R. C. Anderson), liver and white dog (Croxteth—Trinket).

CHICAGO CHICK (Chicago Pointer Kennel), liver and white dog (Fritz—Virginia).

CHICAGO SCOOP (Chicago Pointer Kennel), liver and white dog (Fritz—Virginia).

DUKE OF VERNON (L. Gardner), liver and white dog (Glendale—Spotless).

FOWLER (Devonshire Kennel), liver and white dog (Osborn Ale—Vanity).

JOE PAPE (Dr. J. E. Link), black dog (Sambo the Devil—Spot.

KING'S GIRL (J. H. Lewis), lemon bitch (King Bow—Dadish).

LASS OF MAINE (H. F. Farnham), black and white bitch (Graphic—Zitta).

LORD GRAPHIC (J. R. Daniels), lemon and white dog (Graphic—Daphne).

NELLIE E. (P. T. Madison), liver and white bitch (Meteor, Jr.—Mamie).

ROWDY (R. F. Hoyl), liver and white dog; pedigree not given.

TRINKET'S COUNT (G. T. Miller), liver and white dog (Croxteth—Trinket).

THREE UNNAMED (W. B. Stafford), particulars not given.

INDIANA STAKE.

DAISY HUNTER (John A. Hunter), orange and white English setter bitch (Gath's Hope—Daisy F.).

DON'S BOY (P. T. Madison), black, white and tan English setter dog (Don M.—Topsy).

ESTER (J. M. Freeman), blue belton English setter bitch (Doncaster—Eudora).

MINNIE (Curtis Wright), black, white and tan English setter bitch (Royce—Jennie).

NELLIE C. (A. P. Craft), black, white and tan English setter bitch (Troup—Lucy V.).

ROUGH (J. E. Bradshaw), red Irish setter dog (Royal C.—Belle). P. T. MADISON, Secretary.

KANSAS CITY DOG SHOW.

KANSAS CITY, Oct. 8.—*Editor Forest and Stream:* The dog show of the National Exposition held here last week was a wonderful success. From opening to close there was a throng of spectators around the benches and I have no doubt that next year the experiment will be repeated and probably it will become a permanent fixture. There were about 180 dogs shown and many of them were first-class specimens. All of the dog men with whom I conversed appeared to be pleased with the show and its management. The superintendent, Mr. F. B. Rice, worked hard and much of the success of the show is due to his efforts. Below is a list of the

AWARDS.

MASTIFFS.—*Dogs:* 1st, G. B. Ayer's Edwys; 2d, Mrs. J. M. Bruce's Bruce III. Reserve, J. W. Gregory's Alexander IV. *Bitches:* 1st, withheld; 2d, J. U. Rempel's Betsy.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, E. N. Burr's Brunswick; 2d, withheld. Com., D. Lucas's Di. *Bitches:* No entry.—SMOOTH-COATED—*Dogs:* Withheld. *Bitches:* 1st, J. W. Davis's Apajune. *Puppies:* No entry.

NEWFOUNDLANDS.—1st, withheld; 2d, F. Newman's Jumbo.

GREYHOUNDS.—*Dogs:* No entry. *Bitches:* 1st, J. Murdock's Fly.

GREAT DANES.—*Dogs:* 1st, E. Jesserich's Augusta; 2d, H. Weyth's Nero W. High com., B. Losen's Leo. *Bitches:* 1st, withheld; 2d, H. Mueller's Minca.

ENGLISH SETTERS.—*Dogs:* 1st, very high com. and high com., T. Donoghue's Consul's Rock, Druid's Spot and Duke Gladstone's Boy; 2d, J. A. Bolen's Pray's Gladstone. Com., P. R. Scarr's Doune. *Bitches:* 1st, F. B. Rice's Dashing Lavalette; 2d and com., T. Donoghue's Knight's Belle, Consul's Mag and Pembroke Queen. High com., J. Armand's Kyno. Com., L. Kurz's Blue Pearl.—PUPPIES—*Dogs:* 1st, withheld; 2d, G. M. Eaton's Rex. *Bitches:* 1st, F. B. Rice's May Gladstone; 2d, G. B. Orr's Dart Guess.

BLACK AND TAN SETTERS.—Withheld.

IRISH SETTERS.—*Dogs:* 1st, R. C. Van Horn's Patsy D.; 2d, W. G. Eads's Billy R. *Bitches:* 1st, F. H. Perry's Nina; 2d, F. H. Goss's Emma. High com., T. Donoghue's Biddy. *Puppies:* No entry.

POINTERS.—OPEN—*Dogs:* 1st, Detroit Kennel Club's Fleet; 2d, E. E. Dix's Rush. Very high com., N. Donnelly's Sport. High com., H. Weyth's Osborne Ale. Com., J. E Guenotte's Bob. *Bitches:* 1st, A. A. Whipple's Apology; 2d, Detroit Kennel Club's Countess. Reserve and very high com., Kansas City Kennels' Maggie V. and Moll V. Very high com., T. Donoghue's Queen. High com., D. Mark's Dinah. Com., T. Rooney's Croxteth's Jolly.—PUPPIES—*Dogs:* 1st, Dr. C. C. Cole's King Don's Lad; 2d, J. J. Rooney's Bang Bang, Jr. Com., M. W. Drisko's Dexter D. *Bitches:* 1st, M. W. Drisko's Trinket's Belle II.; 2d, H. B. Tetlo's Frankie C. Very high com., J. Donoghue's Bloomo II. High com., H. Weyth's So So.

IRISH WATER SPANIELS.—*Dogs:* 1st, H. W. Hayne's Captain Muldoon; 2d, withheld. Com., E. H. Ormsby's Jumbo. *Bitches:* 1st, 2d and high com., T. Donoghue's Colleen, Little Sioux and Count Bendigo's Duck.

FIELD SPANIELS.—1st, Cook Kennels' Newton Abbot Farmer; 2d, W. H. Haynes's Doc Obo.

COCKER SPANIELS.—*Dogs:* 1st, Detroit Kennel Club's Black Obo. *Bitches:* 1st, W. H. Haynes's Nina. *Puppies:* 1st, F. Jones's Beauty; 2d, withheld.

FOXHOUNDS.—CHAMPION—Cook Kennels' Brave.—OPEN—*Dogs:* 1st, 2d, very high com. and high com, Cook Kennels' Roderick, Whoopey, Drum II. and Dick II. *Bitches:* 1st, 2d, very high com. and high com., Cook Kennels' Spotty, Rose, Wild and Fanny. *Puppies:* 1st and 2d, Cook Kennels' Drummer Boy and Wild's Pride.

BEAGLES.—*Dogs:* 1st, W. A. Alderson's Vine; 2d, withheld. *Bitches:* Withheld.

DACHSHUNDE.—*Dogs:* 1st, G. Schrader's Waldmann; 2d, A. Dore's Waldman. *Bitches:* 1st, A. Dore's Waldine.

COLLIES.—*Dogs:* 1st, Kansas City Kennels' Laddie; 2d and 3d, J. A. Long's Clifton Hero and Blair Athol. *Bitches:* 1st and 2d, J. A. Long's Patient and Miss Sooty Scot.

BULLDOGS.—1st and 2d, Cook Kennels' Dolores and Dreadnaught.

BULL-TERRIERS.—*Dogs:* 1st, J. F. D. Walker's Dundee; 2d and very high com., W. Mariner's Venture and Crib. *Bitches:* 1st, J. F. D. Walker's Dinah; 2d, F. L. Webster's Pansy Royal. Very high com., W. Mariner's Lady in White. *Puppies:* 1st, J. F. D. Walker's Dandy; 2d, W. Mariner's Vexer.

BLACK AND TAN TERRIERS.—Withheld.

SCOTCH TERRIERS.—1st, J. H. Naylor's Lowrie Dunbar; 2d withheld.

DANDIE DINMONT TERRIERS.—1st, J. H. Naylor's Pride of Leader.

YORKSHIRE TERRIERS.—1st, Mrs. Bruno Meissner's Little Sport; 2d and very high com., Kansas City Kennels' Fan and Kansas Beauty.

KING CHARLES SPANIELS.—*Dogs:* 1st, Cook Kennels' Punchinello. *Bitches:* 1st and 2d, Cook Kennels' Nell and Judy.

BLENHEIM SPANIELS.—1st, W. Mariner's Young King Victor.

SKYE TERRIERS.—1st, J. H. Naylor's Drollie; 2d withheld.

ITALIAN GREYHOUNDS.—1st, Miss Chrissie R. Price's Gyp.

PUGS.—*Dogs:* 1st, withheld; 2d, J. H. Murphy's Moxie. *Bitches:* 1st, J. W. Butler's Yum Yum. *Puppies:* 1st, Miss Marion B. Stowe's unnamed.

TOY TERRIERS.—1st, R. D. Arnold's Dixie, Jr.; 2d withheld.

POODLES.—1st, Detroit Kennel Club's Duke; 2d and high com., J. Stettelman's Leddy and Clack,

POMERANIANS.—1st, withheld; 2d, Miss Belle Wilson's Beauty.

MISCELLANEOUS.—1st, Cook Kennels' bloodhound Burniston.

K. C.

AMERICAN PET DOG CLUB.—Notice is hereby given that the annual meeting and election of officers of the American Pet Dog Club will be held Oct. 19, 1888, at 2 P.M., at the residence of the second vice-president, Mrs. Eugene Clark, 111 East 28th street, New York.—H. R. Surles, M.D., Mrs. Eugene Clarke, C. Ormsby, T. J. Daunis, W. Goodenough, Executive Committee.—C. ORMSBY, Secretary.

Secretary Ormsby informs us that the meeting lately reported as having been held by the American Pet Dog Club was actually held by two expelled members and for sympathizers; that Mrs. Charles Wheatley is no longer a member of the A. P. D. C.; that ex-Treasurer W. J. Fryer, Jr., has been expelled from the A. P. D. C: that the self-constituted Board of Trustees who on June 22, 1888, filed a certificate of incorporation in the name of the American Pet Dog Club had no authority to do so; that, finally, in spite of all efforts to bring about the disruption of the A. P. D. C., it is flourishing, has 25 new members, and is on the way to triumphal success.

NEW ENGLAND KENNEL CLUB.—*Editor Forest and Stream:* The annual meeting of the New England Kennel Club was held at the rooms of the club, 6 Hamilton Place, Thursday evening Oct. 11, and the following officers elected: President, F. Blackwood Fay; Vice-President, E. H. Moore; Secretary, J. W. Newman; Treasurer, Geo. A. Fletcher. The Board of Governors chosen were the above officers and Messrs. J. E. Thayer, Jean Grosvenor, Frank M. Curtis, J. H. Long and Dr. J. G. W. Werner. The bench show committee elected for 1889 were Messrs. F. B. Fay, J. W. Newman, E. H. Moore, F. M. Curtis, and J. H. Long. The report of the retiring treasurer showed the club to be very prosperous financially, and the thanks of the club and appointment of a committee to provide a suitable testimonial to the ex-Treasurer, Mr. W. O. Partridge for his long and faithful service, showed their appreciation of his efforts. The club also voted to make application for membership in the American Kennel Club Association.—J. W. NEWMAN, Sec'y

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Minting, Jr. By Geo. P. Jones, St. Louis, Mo., for light fawn mastiff dog, whelped April 12, 1888, by Minting (Maximilian—Cambrian Princess) out of Bess (A.K.R. 2977).

Lewis's Nellie. By Jos. Lewis, Cannonsburg, Pa., for lemon and white pointer bitch, whelped April 1, 1888, by Prince out of Princess Nellie.

Siberian Girl. By Jos. Lewis, Cannonsburg, Pa., for liver and white pointer bitch, whelped March 20, 1888, by Robert le Diable out of Countess Nellie.

Conamara. By W. A. Coster, Saratoga Springs, N. Y., for liver Irish water spaniel dog, age not given, by Count Bendigo (A.K.R. 862) out of Biddy Malone.

Dashing Novice II. and Lady Novice. By Jos. Lewis, Cannonsburg, Pa., for black, white and tan English setter bitches, whelped April 30, 1888, by Paul Gladstone out of Dashing Novice.

Buckellew Kennels (formerly Duke-Rhœbe). By W. A. Coster, Saratoga Springs, N. Y., for kennels of English setters.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Queen of Scots—Guelph. John L. Lincoln's (Chicago, Ill.) collie bitch Queen of Scots (Clifton Hero—Picture) to McEwen & Gibson's Guelph (Gilderoy—Jess), Oct. 3.

Bonnie View—Red Gauntlet. Tower Grove Kennels' (St. Louis, Mo.) collie bitch Bonnie View (champion Dublin Scot—Madge) to McEwen & Gibson's Red Gauntlet (champion Charlemagne—Hasty), Sept. 23.

Merry—Red Gauntlet. McEwen & Gibson's (Byron, Ont.) collie bitch Merry (Scotson—Madge) to their Red Gauntlet (champion Charlemagne—Hasty), Aug. 22.

Portia II.—Mission. Jacob M. Harner's (West Liberty, O.) mastiff bitch Portia II. (A.K.R. 5512) to his Mission (A.K.R. 5912), Sept. 8.

Hazel Obo—Doc. Wm. Barnes's (Manyunk, Pa.) cocker spaniel bitch Hazel Obo (A.K.R. 4097) to American Cocker Kennels' champion Doc (A.K.R. 3795), Sept. 9.

Floss—Bradford Harry. Chas. N. Symond's (Salem, Mass.) Yorkshire terrier bitch Floss (Dreadnaught II.—Maggie) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Oct. 5.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Jess. McEwen & Gibson's (Byron, Ont.) collie bitch Jess (Heather—Madge), Aug. 25, six (three dogs), by their Red Gauntlet (champion Charlemagne—Hasty).

Queen Obo. American Cocker Kennels' (Philadelphia, Pa.) cocker spaniel bitch Queen Obo (A.K.R. 3082), Sept. 18, six (four dogs), by their champion Doc (A.K.R. 3795); three dogs and one bitch black, one dog light red and one bitch dark red.

Midnight II. American Cocker Kennels' (Philadelphia, Pa.) cocker spaniel bitch Midnight II. (A.K.R. 4471), Sept. 17, five (four dogs), by their champion Doc (A.K.R. 6795); all black; all since dead.

Miss Topsy. American Cocker Kennels' (Philadelphia, Pa.) cocker spaniel bitch Miss Topsy (A.K.R. 5968), Sept. 17, seven (four dogs), by their champion Doc (A.K.R. 3795); all black; two since dead.

Lady Pluto. G. H. Whitehead's (Trenton, N. Y.) cocker spaniel bitch Lady Pluto (A.K.R. 3313), Sept. 16, six (four dogs), by American Cocker Kennels' champion Doc (A.K.R. 3795); three dogs black, one dog light red, one bitch dark and one bitch liver.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Portswood Tiger. Brindle bulldog, whelped Oct. 1, 1885, by Paul Clifford out of Hussy, by W. T. Tebbutt, Melton Mowbray, Eng., to R. B. Sawyer, Birmingham, Conn.

Fortress. Fawn, with dark points, mastiff bitch, whelped June 1, 1888, by Mission (A.K.R. 5012) out of Portia II. (A.K.R. 5512), by Jacob M. Harner, West Liberty, O., to Thos. Makemsom, De Graffe, O.

Beech Grove Jack. Light fawn mastiff dog, whelped March 14, 1888, by Tor (A.K.R. 4882) out of Beech Grove Princess (A.K.R. 4511), by Geo. Jackson, Beech Grove, Ind., to Thos. W. Shunk, Bucyrus, O.

Minting, Jr. Light fawn mastiff dog, whelped April 12, 1888, by Minting out of Bess, by E. H. Moore, Melrose, Mass., to George P. Jones, St. Louis, Mo.

Rush T. (A.K.R. 3751)—Patti Croxteth T. (A.K.R. 5450) whelp. Liver and white pointer dog, whelped Aug. 5, 1888, by A. B. Truman, San Francisco, Cal., to R. K. Gardner, Oakland, Cal.

DEATHS.

Yale Belton. Black, white and tan English setter dog, whelped December, 1879 (Belton—Blonde), owned by Dr. J. E. Hair, Bridgeport, Conn.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

F. B., West Hoboken.—Sponge surface carefully with warm water and carbolic or sulphur soap. Apply gently zinc oxide ointment. Give three grains of quinine morning and evening to the puppy and five to the mother. See answer to A. M. in this issue.

A. M., Jersey City.—Give five-grain quinine pill night and morning. Keep bowels open with syrup of buckthorn or oil. Do not feed meat. Keep on with the ointment. If there is no improvement in ten days, give five grains of iodide of potash three times daily in solution. Stop the arsenic.

J. P. D., Charleston, S. C.—Please give treatment for a bad case of red mange, partaking almost of the nature of an eczema, on which all treatments have failed so far for the last four months. Ans. ℞ Ung. zinc oxid..... ℥iss.
Ung. diachylon..... ℥ss.
Mix. Sig., apply lightly night and morning after washing and cleansing. Give five drops of Fowler's solution of arsenic in the food night and morning.

A SUBSCRIBER, St. Joseph, Mo.—I have a Gordon setter pup, 6½ months old, and there seems to be something wrong with her. I took her out a few days ago, and as she is very playful she became heated up, and commenced striking her front feet together as if there was something on them; and at last fell over on her back seemingly in a fit. Ans. Worms are probably the cause of trouble. Give tablespoon of castor oil and in three hours give twenty grains of powdered areca nut made in a large pill with lard. Feed only milk for a day before and after treating. Do not feed meat.

C. W. G., Hinsdale, Mass.—I have a St. Bernard bitch, whelped September, 1886. She whelped ten strong, healthy pups Oct. 1, 1887. She was poor and gave but little milk, and the pups all died. I bred her again to the same dog the following December and in April, and again in August; at each time she has had no whelps. She seems strong and healthy; the dog is all right with my other bitches. Will you tell me what is the matter? Ans. You bred her too young. There may be some displacement of her genital apparatus. It is hard to account for such a result. We would advise waiting over one or two heats and then try again. If again unsuccessful consult a good veterinary and have a thorough examination.

G. L. G., Fitchburg, Mass.—I have a pointer dog that within a week has come out in blotches all over, and watery matter exudes so as to stick the hair together, and the skin seems to thickon up in the large spots so as to be ¼in. thick. Is it mange or eczema? I have been giving him sulphur and rubbing in sulphur and lard. He has been fed on meat scraps and meal boiled together all summer and not exercised very much. Is it liable to affect my other dogs that are kenneled with him? His ears feel as though they were full of large shot where the pimples are breaking out separately. Please advise me what to do. Ans. It is one form of eczema or mange. It may be communicated to the other dogs; keep him separate from the others. Do not feed meat. Exercise regularly. Give two compound cathartic pills hidden in a small morsel of meat, and keep his bowels open thereafter. Get the following ointment:
℞ Ung. zinc oxid..... ℥iss.
Ung. diachylon..... ℥ss.
Mix. Apply to affected parts morning and evening, after washing with sulphur soap and drying.

A SUBSCRIBER, Rockland, N. Y.—I recently bought an English setter, a valuable dog, and whenever one approached the dog he would lay down and turn on his back or side. He still persists in lying down when approached, and usually turns over on his back, often closing his eyes, and when called to his feet refuses to remain standing, but will sit down, and occasionally his hindlegs tremble when standing. When going up-stairs he acts as though it were all he can do to drag his hind parts, and frequently there is a rumbling noise in his bowels. His appetite is good, though he is particular what he eats, and is very playful at times, being only 2 years and 8 months old. His eyes sometimes show matter in the corners, though not to any great extent. Ans. A nervous condition brought on by some morbid condition of the bowels, probably worms. Feed only milk or porridge for a few days, and give tablespoon of castor oil at once. Follow in six hours with thirty grains of powdered areca nut made into a pill with lard. After two days commence giving five grains of quinine night and morning.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE PISTOL WRANGLERS.—Chevalier Paine, the pistol shot, has left for Europe, where he has engagements which will keep him busy for a year or two. Just before his departure he had a chat in the Boston *Herald* office, and reviewed that unsatisfactory match with F. E. Bennett. He says: "I went into the match expecting to shoot a gentleman's contest, but it did not prove as I had expected. In the first place the judges for Bennett perpetrated a fraud from the very start. The articles of agreement for the match called for ammunition in unbroken boxes. This agreement Bennett's judge did not respect, as he calipered or measured all cartridges intended for use by Bennett, and threw out from 7 to 12 cartridges in each box, while I used cartridges without test, under the conditions of the match. I was bulldozed from the very start, and annoyed by both Bennett and his backers by blackguardism. On Thursday, the last day I stayed in the race, a job was put up to forget the trigger pull and delay the match, so that I would be obliged to shoot at dusk, having the last 10 shots of the day to shoot. I could not stand such bulldozing any longer, and therefore decided to withdraw, hoping to get ample justic at the hands of the National Rifle Association, under whose directions I proposed to shoot the match out under the auspices of gentlemen, and under rules of the agreement. Before the final decision was given, Bennett and his backers had sued the *Herald* for the stakes. This act needs no comment from me; it speaks for itself. It is evident that the chances were against me all the way through; for even while the final referee was deliberating on his decision the stakes were under attachment, and would doubtless have continued so, whether the decision was for or against me. Mr. Bennett is now out with a challenge for a match under the same conditions as that match was shot. To him I must say, No, thank you, it isn't necessary. Mr. Bennett and myself have already had 1,000 shots each in actual competition. We shot 600 shots each, one week each, last November and and December, in which I led him 133 points. We shot four days under his bulldozing at Springfield and Providence, and when I withdrew I led him 9 points, making 142 points I led him in 1,000 shots. These shots were all made in publicly advertised performances, and the scores have been fully indorsed by his friend A. C. Gould and the entire Boston and Providence press. The public must now judge who is the master shot of the world. In these matches I made the following best on record: 96 out of a possible 100 and 904 out of a possible 1,000."

BOSTON, Oct. 13.—The shooters gathered in numbers at the Massachusetts Rifle Range to-day, and the matches were well patronized. Following are to-day's scores:

Fifty-shot Pistol Match—50yds.

J B Fellows	10	9	10	9	8	9	10	10	9—91	
	8	8	9	9	9	9	10	9	10	9—90

CREEDMOOR.—The 13th marksman's badge match was shot at Creedmoor, on Saturday, Oct. 15. The day was fine and mild, and all the conditions were favorable for good scores. Following were the winners:

	200.	500.	Total.
F A Wells, Co B, 23d Regt	22	25	47
A W Trotter, Co E, 7th Regt	22	22	45
W W Martin, Co G, 7th Regt	21	23	44
J H Foote, Co B, 14th Regt	20	23	43
R Darling, Co A, 7th Regt	22	21	43
D J Murphy, Co B, 22d Regt	22	21	43
A T Weston, Co E, 22d Regt	18	24	42
H H Tredwell, Co B, 22d Regt	19	23	42

Medal Winners.

F A Wells, Co B, 23d Regt	22	25	47
C F Robbins, Staff, S N Y	21	22	43

Saturday, Oct. 27, and Tuesday, Nov. 6 (Election day), are the last two match days and the last opportunity for members of the National Guard to qualify this season.—J. MANZ, JR., Assistant Secretary, N.R.A.

PENCIL SCORES.—The Miller Rifle Club of Hoboken is one of the strongest organizations of its kind in New Jersey. Its headquarters are at Borner Hall, the proprietor of which is a marksman and a member of the club, named Leon Borner. Leon is in trouble and his name is being mentioned in the sporting resorts in consequence of a grave charge made against him by Shooting-Master Hecker, of the Miller Club, and Mr. Flack, of the Zettler Rifle Club, of New York. On Tuesday, Oct. 9, there was a shooting tournament in Schuetzen Park, at which many clubs in New Jersey were represented. During the shooting Mr. Hecking, of the Miller Rifle Club, was told that a member in good standing was accused of bribing the markers or warners. He told Reither, the head warner, who had charge of all the warners and markers, to watch Mr. Borner while he shot. This man said he was offered $3 if he changed the score. Mr. Flack of the Zettler Rifle Club, was asked to "keep his eye open," and he soon cried out there was trickery in the tournament, and accused Mr. Borner of giving "to work a double-ticket racket." The head warner was then called and he openly accused the marksman of trying to bribe him. The accused did not deny the charge. B. Walthers, president of the Zettler Club, was so pleased with Reither's conduct in refusing the money that he started a subscription for him and a big sum was given him for his honesty. The members of the Miller Rifle Club expelled their offending member and sent his name and the cause of his dismissal to all the rifle clubs of importance in the country. They also changed their headquarters.—*N. Y. World.*

LONDON, Ontario, Oct. 10.—Following are the principal prize-winners in the Western District Rifle Association's matches to-day:

Volunteers' match, 400 and 500yds., 5 shots at each—Quartermaster Ogg, Guelph, 42; Major Wilson, 33d Batt., second, 42; Sergt. Henderson, 25th Batt., third, 42.

Affiliated match, 500yds., 10 shots—Major Wilson, 33d, 44; Capt. Hegler, 22d, second, 44; Sergt. W. Henderson, 25th, third, 43.

Team prizes—Guelph Rifle Club, 192; 33d Batt. Rifle Club, second, 191; London Rifle Club, third, 186; 25th Batt. Rifle Club, fourth, 184.

Aggregate match for highest scores in all-comer's, volunteers and affiliated matches—Capt. Hegler, 22d Batt., 126; Quartermaster Ogg, Guelph, second, 121; Sergt. W. H. Henderson, 25th Batt., third, 120.

Extra match, No. 1, 200yds., five shots—Sergt. Henderson, 25th, 24; Pvt. Hayes, 7th Batt., second, 24; Sergt. Patterson, 22d Batt. third, 24.

Extra match No. 2, 500yds., five shots—Staff-Sergt. Wilson, 33d, Batt., 24; Pvt. Hayes, 7th Batt., second, 23; H. Buchanan, Ingersoll, 23.

At the close of the matches the annual meeting of the association was held, when the following officers were elected: Honorary President, Col. Smith. D. A. G.; President, Lieut.-Col. Fisher; Vice-Presidents, Col. Monro and Capt. Robson; Treasurer, Col. Dawson; Secretary, George Hayes. The other members of the council are Capt. Moore, Capt. Hegler, Corp. Crowe, Col. O'Mally, N. Robson, Major Wilson, Lieut. Elcott, Capt. Denison, Capt. Tracy. It was decided to affiliate with the National Rifle Association of England.

SAN FRANCISCO, Oct. 7.—The shooting matches at Harbor View to-day drew a large crowd of ambitious marksmen. Only one of the monthly holders of the championship medal put in an appearance, consequently there was no match for its possession for the present month. The clubs participating and the medal winners in to-day's contest are as follows:

California Schuetzen Club—Club championship medal, J. Dornheira, 419; first class medal, F. O. Young, 409; second class medal, C. Meyer, 412; third class medal, H. Gumbel, 371; fourth class medal, F. Attinger, 361.

Eintracht Schuetzen Club—Club championship medal, F. A. Kuhl, 404; first class medal, L. Schmidt, 367; second class medal, H. Pratt, 356; third class medal, F. Forst, 364.

Germania Schuetzen Club—Championship medal, F. Hansel, 401; first class medal, J. Utchig, 409; second class medal, P. Faller, 376; third class medal, J. Straut, 378.

The cadet class, composed of boys ranging from 14 to 21 years of age, was the principal event of the day.

PHILADELPHIA, Oct. 11.—At the usual weekly shoot of the Philadelphia Rifle Club at Schützen Park to-day, Mr. Ernest Stees, Jr., made the fine score of 66 points out of a possible 75 on the target of honor, which entitled him to the gold medal of the club, being the second one won in eight years, using a Wurfflein .22cal. mid-range rifle, at 200yds. off-hand.

SAN FRANCISCO, Oct. 7.—The shooting at the Shell Mound Range to-day was not as lively as on other Sundays during the last two months. The first party which took possession of the targets was Company B, City Guard, First Regiment, the members of which held their monthly medal shoot. The following were the winners with their scores for the different classes:
First Class—L R Townsend..... 555444544—45
Second Class—Lieutenant J B Cooke..... 445444544—41
Third Class—Harry Morris..... 433363020—21

The next shoot was that of Company B, Third Regiment, at which the following scores were made, 10 shots per man: W. S. Scudder 27, F. Williams 25, J. Corbett 28, H. Denmaugeon 25, A. B. Bailey 30, C. A. Stimm 42, G. Denmaugeon 32, J. Meberbacher 39, V. Brusher 36, J. McLennegan 24, W. Hammersly 33, Captain Kennedy 35. The Independent Rifles next held their monthly shoot, which resulted as follows, 10 shots per man: H. Gurkon 30, G. Miller 36, E. Lindon 31, P. Eckhoff 32, J. D. Helse 33, J. Schlachman 35, T. C. Hamman 32, J. G. Wintgar 27, Tannemacher 42, L. Goldhammer 27.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

JERSEY CITY HEIGHTS G. C. TOURNAMENT.

MARION, N. J., Oct. 9.—The first tournament in the New Jersey circuit opened at the grounds of the Jersey City Heights Gun Club at Marion on Tuesday of last week. The grounds are handy to New York city, being only seven minutes from Jersey City, on the Pennsylvania Railroad. From the depot the route is across lots filled with stones and tin cans on which herds of blooded Jersey goats peacefully browsed. A grocer's wagon, hastily fitted with two rough pine boards, served as a conveyance for the luxurious shooters and spectators who did not object to being brought into very close proximity to each other on the perilous journey; but when time did not press, Shank's mare was a much more comfortable method of locomotion, which many adopted, reserving their spare cash for pie at the club house.

As will be seen by the scores, the number of contestants was small, and this seems to point a moral to the value of advertising. Had the shoot been properly brought to the notice of shooters, a much larger attendance would have resulted. However, if the crowd was small, it was jolly; every one had a good time and many pranks were played. The bill of fare at the restaurant was sandwiches and pie, and some of the shooters developed a robust appetite for the latter article of diet; but pie alone is rather dry fodder, and some of the unfortunates who were not in on the divides, concocted a scheme whereby the pie might be put in liquid company with out a recourse to their purses. The proprietor of the restaurant added a loan department, and Fred Quimby's cartridge case was "put in soak" for $1.50, which amount was drawn on for beer and cigars by those "on to" the joke; when it came his turn to shoot he was, of course, minus shells, and no one would loan or sell him one, so he was perforce obliged to redeem the obligation. He was not the only sufferer, as Al Heritage's gun was put up for $1.40 and Jake Miller's cartridge case for $2. However, the joke was taken good-naturedly and served to enliven the tedium of the long waits between shoots in the live bird matches. The tournament lasted four days; the first two being devoted to inanimate target shooting and the last two to live birds. The targets used were bluerocks, thrown from 3 traps, at unknown angles, 18yds. rise, 2yds. allowance for 12-gauges.

Geo. Jacobstaff Eaton officiated as referee and scorer on inanimate targets, and Al Heritage in a like capacity on live birds. The birds were supplied by Heritage and were an average lot, some good ones but more duffers. Hurlingham rules, allowing use of both barrels, 21yds. rise for 10-gauges, 19yds. for 12-gauges, governed all bird contests. There was $575 in guaranteed money divided into amounts varying from $25 to $175. All the purses over-filled, and as no average money was offered, the total amounts were divided, after deducting for birds, four moneys in every event with twelve or more entries and three moneys where smaller number than twelve entered. An innovation in two of the inanimate matches was the adoption of Hurlingham rules, allowing use of both barrels, the contestants standing at 21yds. for 10-gauges and 19yds. for 12-gauges. Both races filled well and were very interesting. Below are the scores in full.

Tuesday.

The conditions were very unfavorable for good scores, as a heavy westerly wind blew right across the traps, making the left quartering birds hard ones to hit. That something was wrong will be seen by the scores.

First event, at 10 bluerocks, entrance $1.50, 4 moneys:

R H Brientnall	0111111111—9	Sigler	1000001010—3
S G Smith	1110110100—6	C Smith	1110110001—6
Vogelsang	1111011101—8	Seeley	0101013001—5
Lindsley	1111111110—9	Profane	0110100001—4
Al Heritage	0301010110—5	J E Miller	1111111001—8
M Quad	0111111011—8	E D Miller	1110101111—8
Collins	1011110111—8	C W Budd	1111110111—9

First, third and fourth div.; 2d shot off and div. by J. E. Miller and E. D. Miller.

Second event, at 15 bluerocks, entrance $2.50, 4 moneys:

Brientnall	111111111111111—15	Sigler	010110001110011—8
Budd	111111101000111—10	Collins	011111011110111—12
Lindsley	110110103111110—10	M Quad	111100011011101—10
C Smith	110110010101001— 8	J E Miller	111111101111111—14
S G Smith	110001011101111—10	E D Miller	111011101111111—13
Profane	010101000100001— 5	Seeley	101110111011001— 9
Vogelsang	110101110111011—11		

This match had a singular ending, there being no ties, only one man in each hole.

Third event, at 15 bluerocks, entrance $3; $50 guaranteed, four moneys:

Lindsley	001001100110111— 8	J E Miller	111111111011110—13
Sigler	111101111011110—12	Manitz	000111100101100— 7
S G Smith	011110001010010— 7	Williams	111110000010001— 7

Sigler	1011110110—7	S G Smith	0001110010—4
Peacock	0111111100—7	Quad	1100100100—4

Brientnall won first; all other ties div.

First extra sweep, 10 bluerocks, $1 entrance, four moneys:

Brientnall	9	Budd	7
C Smith	5	Collins	6
Quad	5	Seeley	7
S G Smith	4	J E Miller	9
Vogelsang	8	Lindsley	4
Profane	4	Sigler	1
Heritage	8		

Ties div.

Second extra sweep at 10 birds, entrance $1.50, four moneys:

Brientnall	9	Collins	8
Lindsley	8	J E Miller	7
C Smith	6	Quad	8
G Hagg	4	E D Miller	8
S G Smith	8	Seeley	8
Budd	8	Vogelsang	8
Sigler	8	McAlpin	8

First div., second shot off and div. by Lindsley and Collins, third won by J. E. Miller, fourth by C. Smith.

Wednesday.

The weather was more favorable, the wind having died down considerably, and better scores were the result.

First event, at 10 bluerocks, entrance $2, four moneys:

Lindsley	1000101001—4	R J Carroll	1110111111—9
Heritage	1110111111—9	J E Miller	1101111011—8
Brientnall	1111111011—9	E D Miller	1011111111—9
Sigler	1101111011—8	Franklin	1011101100—6

Extra sweep No. 7 at 9 bluerocks, entrance $1, three moneys:

E D Miller	8	Quimby	7
Jones	9	Capon	6
Collins	8	Franklin	7
Peacock	8	Meyer	4
Lindsley	6		

First and third div., second shot off and won by Miller.

Thursday.

The bluerock traps were taken up and replaced by five ground traps for use at live birds. The birds were a poor lot in the first race, but improved somewhat in the following event. As is usual in live bird shooting, the element of luck was prominent, one very noticeable case in the second event was when R. H. Brientnall had a strong bird which required the use of both barrels; he was hard hit, but managed to carry the load and every one thought it would be a lost bird, but as he neared the fence he became weaker and was unable to get over, falling dead on a cross bar within a foot of the top, where he was easily gathered and scored dead. Another flap of his wings would have resulted in a goose egg for Brientnall.

First event, at 10 live birds, entrance $7.50, Hurlingham rules:

E D Miller	0121111112— 9	Budd	1121111112—10
Sigler	1121211121—10	Malone	2012212122— 9

Capon	2212102212111222211c00012		—20
Headden	2211112121211111222122222		—25

C. W. Budd and C. M. Headden div. first with a straight score of 25. Quinlan won second with 24, E. D. Miller won third with 20, and fourth was divided by Sigler and Class.

Friday.

In comparison with yesterday the birds were a hot lot, and kept the contestants on the anxious seats until scored dead. The morning was wet and dreary, which no doubt kept some shooters away, and small entry lists were the order; later in the day the air cleared somewhat and the conditions were very favorable.

First event, at 10 live birds, entrance $7 50, $50 guaranteed:

Quinlan	1112111221—10	Peacock	11111112o1— 9
Budd	1121121111—10	George	1210212111— 9
Headden	2202102200— 6	Green	2121111021— 9
Sigler	1211111111—10	Davenport	1211121122—10
Penrose	1121111122—10	Class	1111102111— 9

Ties all div.

Second event, at 10 live birds, entrance $12.50, $100 guaranteed:

Quinlan	1011222111— 9	Sigler	2111101211— 9
Penrose	1112121110— 9	Headden	0122222120— 8
Davenport	1111222121—10	Peacock	1012121110— 8
Class	1212111111—10	Green	1202201102— 7
Budd	1212211112—10	Vogelsang	1202020121— 7

First div.; second shot off, miss and out, and div. by Penrose and Sigler; 3d div.

First extra sweep at 3 live birds, $2 entrance, three moneys:

Quinlan	111—3	Peacock	111—3
Headden	111—3	Heritage	011—2
Green	010—1	Penrose	101—2
Budd	111—3		

Ties for first money, miss and out:

Quinlan	11111110—7	Budd	11111111—8
Headden	111110 —5	Peacock	11111100—7

Budd winning with 8 straight; second div.

Second extra sweep at 3 live birds, three moneys:

Quinlan	111—3	Green	100—1
Penrose	011—2	Peacock	101—2
Headden	111—3	George	011—2
Budd	111—3		

Ties for first at 5 birds:

Quinlan	11111—5	Budd	11100—4
Headden	11110—4		

Quinlan wins first, second div., third won by Green.

FRANK MASON.

THE SUBURBAN TOURNAMENT.

THE managers of the tournament to be held at the new Suburban Shooting Grounds, commencing Tuesday, Oct. 23, are doing all in their power to make the programme attractive to visiting shooters. In addition to the events as advertised in their circular, some matches will be shot under the Keystone system of squads of six at five traps at known angles, thus giving Eastern shooters an opportunity to see the practical working of the plan. It is the most rapid system of shooting yet devised, and will eventually be generally adopted. It is better for shooters, keeping them almost continually shooting, with no tedious delays, and better for the managers of tournaments, as it will enable them to run the events off nearly twice as fast as under the present style. It is applicable to any number of target, and the chief requisite is a sharp man who will insist on having his squads on hand and ready to shoot the minute the preceding squad has finished.

We consider it a very attractive feature of a shoot, and advise our readers to be present and try it themselves. M.

MIDDLESEX GUN CLUB.

DUNELLEN, N. J., Oct. 16.—The Middlesex Gun Club tournament opened here to-day under rather unfavorable auspices so far as weather is concerned. Heavy showers prevailed, which kept many of the shooters away. However, enough were on hand to make it lively, and toward noon the weather cleared and those who had braved the storm were blessed with a pleasant, sunny afternoon. The shooting was at bluerock targets, which worked in first rate shape, and from three sets of traps, making a continuous fusilade. Over 4,000 birds were shot, which, considering the comparatively small attendance, shows that the guns were not allowed to grow cold.

Events No. 2 and 8 on the programme were left out, extra sweeps being substituted in their place. The scores of the tournament in full will be given next week. M.

UNKNOWN GUN CLUB.—The Unknown Gun Club had a capital day's shooting last week at Dexter's Park, Jamaica Plank Road, L. I.:

H Behrman (23)	1011000—3	Dr Hopkins (35)	1100010—3
H Knebel, Jr (25)	0111111—6	A Haas (24)	0111111—6

TORONTO, Oct. 13.—The first artificial blackbird shoot of the season took place at McDowell & Co.'s shooting ground to-day. Although most of the contestants had never shot at artificial birds before, they knew how to handle their guns, as the score will show. First sweep, at 10 Peorias: W. Davis 7, H. H. Hodgins 6, W. Donaldson 4, J. W. Macklin 4. Second sweep, at 5 Peorias: W. Donaldson 3, J. Robinson 3, W. Davis 3, H. H. Hodgins 2, J. W. Macklin 2, S. Lowe 2. In the shoot-off, Donaldson first, Robinson second. Third sweep, at 5 Macomber metal flying targets: Hodgins 4, Davis 3, Harris 2, Macklin 2, Lowe 2.

ABERDEEN, Miss.—At a shoot now in progress here there is one peculiar match with a special prize of $100, with no entrance fee and no charge for targets. The only restriction put upon entrance to this match is that all contestants must have taken part in the other events.

BROOKLYN, Oct. 4.—A big pigeon shooting match took place to-day in Dexter Park between the Glenmore Rod and Gun Club and the Coney Island Rod and Gun Club. A good deal of interest was manifested by those present in the match. Four teams of 5 men each shot, darkness setting in the fifth team was unable to shoot. There were 500 pigeons to have been shot at. There was no decision given. The following is the score of the teams that shot, 10 birds per man:

Glenmore Club. First Team.		Coney Island Club. First Team.	
W R Selover	9	C W Wingert	7

	169		166

Referee, Mr. H. McLaughlin; scorers, Messrs. W. Bennett and E. A. Dellar; challengers, Dr. Shields and Dr. Powell.

CONEY ISLAND CLUB, Oct. 10.—The members of the Coney Island Rod and Gun Club held their regular monthly shoot at Woodlawn Park, Gravesend, to-day. The shooting was very good, C. Detlefsen winning the Blattmacher badge after shooting out F. Lanzer, who had tied him with 7 birds. Dr. Shields carried off the second prize, J. E. Lake the third, and the fourth was divided between Mr. H. McLaughlin and E. Ranft. At the meeting held on the ground it was proposed to have the annual club dinner on Wednesday, Oct. 24, at the new club rooms. The full score of shoot is as follows:

H McLaughlin (26yds)	1100011—4	A Rockfeller (25)	0111111—6
Dr Shields (30)	1111110—6	D Monsees (26)	0011110—4
J E Lake (28)	0110111—5	J Schlieman (26)	1111001—5
W A Stewart (26)	0011111—5	H Blattmacher (25)	0111100—4
A Schwartz (29)	0000111—3	F Lanzer (26)	1111111—7
C Carston (27)	1011111—6	G L Ayers (25)	1001111—5
Captain Meyer (24)	0101111—5	J De Fraine (27)	0111111—6
C Detlefsen (27)	1111111—7	G Straub (23)	0111100—4

H P. Donnelly (25)	1111001—5	E Nostrand (22)	0111111—6
E Rockfeller (25)	1101111—6	E Rauft (25)	1111000—4

Ties for medal and first won by C. Detlefsen; Dr. Shields second; J. E. Lake third; fourth divided by H. McLaughlin and E. Rauf. Referee, Mr. H. McLaughlin. Scorer, Mr. Post Van Pelt.

CLEVELAND, O., Oct. 11.—In the contest for the Cleveland Gun Club badge this afternoon C. F. Knight won the trophy, breaking 24 out of a possible 25 targets. The conditions were 25 single standards sprung from 3 traps at 18yds. The weather was favorable to good shooting and some excellent scores were made. Eleven members and two visitors took part in the regular event, making the following scores:

L O Jones	1101011101111111101001110—18
F Wall	1100011111101110000101011—15

Wherry	7—51	J Held	8—45

TORONTO, Oct. 9.—The members of the Owl Gun Club completed their annual pigeon tournament to-day at C. Stark's Athletic Grounds by shooting off the ties made Friday and Saturday, Sept. 28 and 29, the result being as follows: First Class—First prize, H. Elliott; second, R. Humphreys; third, D.L. Van Vlack; fourth, J. Rice; fifth, T. Louden; sixth, J. Douglas. Second Class—First prize, A. J. Timon; second, C. B. Harrison; third, W. Smith; fourth, W. McDowall; fifth, M. J. Stewart; sixth, S. Longbottom. Third Class—First prize, R. McKay; second, T. Fitzsimons; third, A. Austin; fourth, W. Beatty; fifth, T. Chambers; sixth, J. Adamson. Fourth Class—First prize, J. Lennox; second, A. Longbottom; third, J. McGinn; fourth, W. Dymer; fifth, D. O'Halloran.

COLLEGE MARKSMEN.—At the first regular meeting of the Harvard College Shooting Club, the following officers were elected: President, C. Green, '89; Vice-President, M. E. W. Grew, '89; Secretary, R. H. Post, '91; Treasurer, C. C. Barnes, '90; Executive Officer, W. K. Post, '90. Directors—R. M. Ware, '90; P. Marquand, '89; G. N. Lamb, '91. The treasurer's report shows the finances to be in excellent condition, and the membership is unusually large.

BANDLE VS. HEIKES.—Cincinnati, Oct. 13.—The following was agreed to between the prominent Ohio shots named: "We, the undersigned, agree to shoot the following match: 100 single live pigeons each, Hurlingham rules to govern (with the exception of weight and gauge of gun), for $250 a side; Thanksgiving Day, at Dayton, O., 1888. Boundary to be 80yds.; every live bird to be retrieved. (Signed) AL BANDLE, Cincinnati, O, ROLLA O. HEIKES, Dayton, O. (Cincinnati, Oct. 11)."

NORTH SIDE CLUB.—The regular monthly average shoot of the North Side Gun Club took place to-day on the club grounds, at Woodside, L. I. There were 7 birds each, 25yds. rise. The following is the score: Lyons 5, Duryea 6, Helmken 6, Manning 6, Bohmke 6, Bussell 7, Bergen 4, Eberhard 4, Kunnbeck 6, Grau 4, Bullwinkle 5, Siems 5, Meyer 5, Wienholz 5. Referee, Samuel Lyons.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

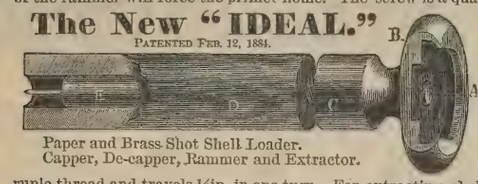
A. L. F., Boston, Mass.—The dog is well bred.

J. J. N.—Hunter, up in the Catskill Mountains.

E. W. H., Newark.—The spreading adder and the milk snake are not identical.

J. M., Colorado Springs.—You can order the rifle through any of the large gun houses advertised in our columns.

B. A. L.—Robins may be shot on Long Island Nov. 1 to Jan. 1, according to the 1887 amendment of the song bird law.

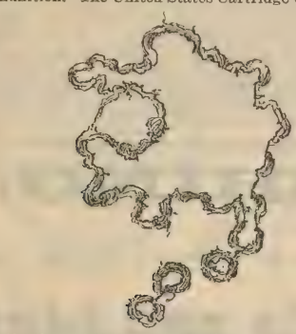


G. G., Tucson, Arizona.—Use a wire scratch brush. There are cleaning rods. Send for the catalogue of some gun house.

F. C. R.—To find good sport with the rifle; if you mean on large game, within 100 miles of New York, is not an easy quest. The nearest deer hunting country is in the North Woods.

G. M.—In northern New Jersey quail, ruffed grouse and rabbit season will open Nov. 1. The bass fishing season in Greenwood Lake will extend to Jan. 1 in the New York portion of the lake, and to Nov. 31 in the New Jersey portion.

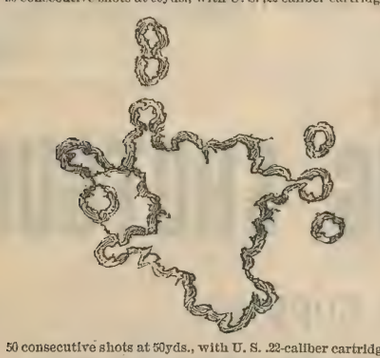
F. N. L., Haverhill, Mass.—I have what I think a very fine female St. Bernard pup. She will be six months old the 11th of this month. She stands 25in. and weighs 75lbs. Is this an average weight. Ans. The weight and measurement of the puppy are rather above the average. It is impossible to give the weight of puppies, as so much depends upon health and food.



"MULTUM IN PARVO."—The latest Ideal. The annexed cut give the reader an idea of a very complete and compact implement fo loading brass or paper shotgun shells. It has just been put on the market by the Ideal Manufacturing Co., of New Haven, Conn. To expel the exploded caps unscrew threaded head C as far as it will go; slip up the rammer D which will project pin at E ready for de-capping. To re-cap, screw the head C down until the point of screw at A is about flush (as in cut). Start primer in pocket of shell, and place head of shell in slot B, and one-quarter of a turn of the rammer will force the primer home. The screw is a quad-

Paper and Brass Shot Shell Loader.
Capper, De-capper, Rammer and Extractor.

ruple thread and travels ¼in. in one turn. For extracting shells that may stick in gun, put slot B over head of shell and use rammer as a handle. When used as a rammer, screw head C down as far as it will go; this will draw the de-capping pin within the rammer, leaving all compact and the end flat. The operations are all simple and quick. Those who have used this pronounce it perfect. For further information we refer to the Ideal Manufacturing Co., New Haven, Conn., who will be pleased to furnish particulars.—*Adv.*



.22-CALIBER CARTRIDGES.—It is gratifying to announce the fact that American manufacturers have considerably improved the quality of the popular .22-caliber rim-fire cartridges, much having appeared in these columns of late showing the excellence of this ammunition. The United States Cartridge Co. has recently

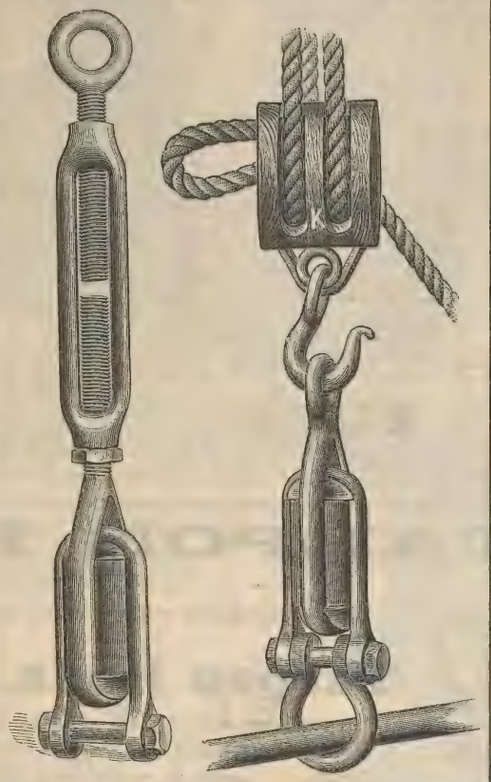
50 consecutive shots at 50yds., with 22-caliber rim-fire cartridges, of the United States Cartridge Co.'s make.

50 consecutive shots at 50yds., with U. S. .22-caliber cartridges.

50 consecutive shots at 50yds., with U. S. .22-caliber cartridges.

shown its ability to produce these cartridges equal to the best, and we present herewith three diagrams of a series of fifty shots each, shot at a distance of 50yds. We have inspected five targets at fifty shots each fired at the above named distance, the two not presented being nearly as good as those shown. The shots were fired from a rest and without cleaning, from a Winchester single shot rifle. There was an entire absence of keyholes or unaccountables in the lot tested, and the uniformity of the shooting was noticeable.

Yachting.



Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

TOM CAT.—An important step has been taken in Boston in the alteration of Dr. Weld's fast open boat Tom Cat by the addition of 8in. freeboard, with a crown of 5in. to the deck. The cat rig has within the last two years been outsailed by the jib and mainsail, and now a further change is likely to follow in hull. Tom Cat was originally catrigged, but was altered jib and mainsail. The addition of more freeboard and fixed ballast will greatly improve the open classes, and lead to a far better type than the old shifting-ballast skimming dish. The latter has practically gone out of use in New York, but with nothing to take its place; in Boston, on the contrary, it promises to be replaced by a safer and better boat, with a renewed interest in the racing.

NEW YACHTS.—At Lawley's yard a centerboard yacht 45ft. l.w.l., and of shoal draft, has been commenced for Vice-Com. C. P. Richardson, of the Southern Y. C., of New Orleans. She was designed by Mr. Burgess, who has also an order for a 53ft. l.w.l. yacht for the Delaware River. Mr. Burgess has also an order for a 40ft. racer for Mr. Newbury D. Lawton, of New York, who has sold his 30ft. sloop Arab to young Mr. Fish, son of the owner of the Grayling. There are also several steamers in contemplation, but nothing definite has yet been arranged. Thus far there is no prospect of any racers over 53ft. for either New York or Boston, but it is probable that a number of boats will be built for the 30 and 40ft. classes.

A NEW SPRING TURNBUCKLE.

IT is an open question with yachtsmen and other sailors as to just how much elasticity is needed in the shrouds and other stays, and how much is given by the ordinary wire rigging and lanyards. The present tendency is toward the use of turnbuckles in place of lanyards as in Thistle and some of the new Burgess boats, thus doing away with all elasticity save that of the wire rope itself. The improved turnbuckle shown in the accompanying cut was devised by Mr. Frank Wheeler, an old yachtsman and ex-commodore of the New Haven Y. C., to provide the

necessary amount of elasticity, and has lately been patented. The idea of a rubber buffer or cushion is not in itself a new one, but in Mr. Wheeler's invention the rubber cylinder is held between large bearing surfaces on top and bottom and also is compressed on four sides, thus making it very much stronger than where a bar is run through the rubber. The amount of spring may be quickly diminished by replacing a part of the rubber by a cylinder of hard wood, or if the rubber itself is too rigid a softer piece may be substituted. The device is adapted to main shrouds, bowsprit shrouds, stays, funnel guys or riding buffers. A special form is also made for the main sheet, shown in the second cut, being placed between the traveler and sheet block and taking the place of the more complicated spring buffers; or the smaller sizes may be used between the gaff and throat halliard block, to lessen the strain when the sheet is eased well off. Mr. Wheeler is making both patterns in various sizes.

A NEW FLOATING ANCHOR.—A compact and convenient form of drogue or floating anchor has lately been introduced in England, being specially adapted to small craft, such as ship's boats and life boats. The frame is like an umbrella, being about 3ft. long and 8 to 10in. diameter when closed. The ribs are of cane, six in number, strongly fastened to a central stick, a small line being run to each rib, thus preventing it from opening as widely as an umbrella. The covering, of strong canvas, is placed inside instead of outside the ribs, thus avoiding all danger of being torn away. In each end of the central stick a rope grommet is spliced, the boat's painter being made fast to one, while a light trip line for hauling in is made fast to the other. The anchor is carried in an oilskin bag lashed to a thwart, and all that is necessary is to bend the boat's painter to it and throw it overboard, when it opens at once of itself, or a separate riding line and a trip line may be kept bent on and coiled away beneath the thwart. It is also proposed to attach an oil bag to the end of the anchor, thus distributing the oil in the best position to calm the seas in front of the boat. The whole device is so compact that it may be easily carried, and so simple that any landsman can use it, as is sometimes necessary in cases of shipwreck where boats are launched without sufficient seamen to man the oars. It is also applicable to all forms of small yachts and pleasure boats.

STOVES FOR SMALL YACHTS.—I am a great lover of FOREST AND STREAM, have bought it for the last four years, and it is through reading it that I knew what kind of a boat to get for cruising, namely, a keel boat with outside ballast. It seems to me that the subject of stoves for small yachts would be a good one to consider during the winter months; and if any of your readers could give a description of a stove that has given satisfaction it would be interesting to many of the cruisers. During the present season, in a little keel boat of 18ft., w. l., we used an oil stove, but it was unsatisfactory. A spirit lamp would probably do nicely, but that is too costly. In the last chapter of the "Cruise of the Coot," the author mentions coke as good fuel for heating the cabin, and it is probable that a compact and good stove for cooking and heating could be designed to burn coke.—BLUE JACKET.

DEATH OF CAPT. FREESTONE.—On Oct. 8, at his home at City Island, Capt. Sampson Walter Freestone, of the steam yacht Nourmahal, died from the effects of coal gas inhaled on board the yacht. On Oct. 3 Capt. Freestone slept on board the yacht, which is laid up at Tebo's Wharf, South Brooklyn, retiring about 11 P. M. Next morning he was found in an unconscious condition by the chief engineer, J. W. Porter. In the adjoining room was a coal stove, and it is supposed that the gas escaping from it was the cause of the trouble. Capt. Freestone was taken to his home, but the best of skill failed to restore him to health, though for several days he appeared to be out of danger. He was a native of Great Yarmouth, Eng., where he was born in 1849. He had followed the sea since 8 years old, being for many years in the employ of Mr. Wm. Astor on the Ambassadress and Nourmahal.

A NEW CRUISING YAWL.—Mr. A. Cary Smith has now in hand a design for a keel yacht of 53ft lwl. to be yawl rigged, her owner intending to cruise exclusively. The beam will probably be about 14ft., with a draft of 9ft. 6in., on which dimensions it will be possible to obtain very good accommodations, while an ample sail plan will be given to secure a fair amount of speed. The new yacht will, of course, be flush decked, and in outline will resemble Katrina. Mr. Smith is also busy with a design for a cruising schooner of 110ft. l.w.l., to be built of steel.

THE SINKING OF THE GLEAM.—The master of the steam yacht Gleam, Capt. Frank Torrey, has appealed to the Treasury Department from the decision of the Steamboat Inspectors at Baltimore, on the grounds of the lack of jurisdiction, and also that the proceedings were irregular, in that he was not furnished with a copy of the charges and specifications prior to the investigation.

A NEW BURGESS FISHERMAN.—Mr. Burgess has completed the design for a fisherman of similar dimensions to the Carrie E. Phillips, for H. D. Story, the builder. The new boat will have a heavier bilge than the Phillips, but is easier in the ends, especially aft, her overhang being an improvement on the older boat. The sail plan will be practically the same.

A COALING STATION AT SANDY HOOK.—The United States Transportation Co. has established a coaling station for steam vessels at Sandy Hook, which will be a great convenience to many steam yachts.

BABOON.—Messrs. C. F. and G. C. Adams have started on a tour around the world, and will be absent about one year, so Baboon is on the sale list.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

NEW YORK C. C. INTERNATIONAL CUP, OCT. 13.

THE house of the New York C. C. at Stapleton, Staten Island presented a lively appearance on Saturday, there being some 300 spectators present to witness the International races for the club's challenge cup, as well as the open races that were set for the same time. Beside Com. Gibson and a number of canoeists from the neighboring clubs, a number of ladies were present, among them several who are well known as members of the Ladies' Camp at the meets. Capt. Ruggles, of Charlotte, N. Y., the designer and builder of Eclipse, was also present. Of course the chief event of the day was the International race, between Messrs. Blake in the Eclipse and Stewart in the Charm, but the result was so much a foregone conclusion that these races were less exciting than the open, in which some of the best boats and sailors in the A. C. A. were entered. The international challenger, Mr. Walter Stewart, is well known to American canoeists, this being his second visit to America, while many made his acquaintance at the meets of '86 and '88. His present canoe, the Charm, was fully described in the FOREST AND STREAM of last week. The American champion, Mr. Reginald S. Blake, of the Brooklyn C. C., is a young canoeist who has this year for the first time come to the front as a racer. His canoe Eclipse, whose lines we will publish in a short time, is well known through her many victories at the late A. C. A. meet at Lake George, though she was not sailed there by her owner, but by Mr. M. V. Brokaw, also of the Brooklyn C. C. Mr. Blake was successful in both of the trial races last month, and was consequently selected by the New York C. C.

Mr. Stewart sailed this year under more favorable conditions than in 1886, as he had already tried his canoe thoroughly for a whole season, 1887; she is stronger and better built than either of the Pearls he brought out, and he has had her in New York long enough to learn the course very well. Since the meet she has been entirely refitted, with a new American rudder and centerboard, while in the international races she carried a 30ft. mizen, borrowed from the Vagabond, instead of her own small mizen. She carried one of her English mainsails in the morning and the other in the afternoon, the area in each being about 84ft. Prior to the race the hull was thoroughly rubbed down, varnished and pot-leaded, being in beautiful condition. Eclipse carried two Pecowsic sails, a total of 95ft. against Charm's 114ft.; her bottom was rubbed off on the morning of the race, but was not pot-leaded, being not quite so smooth as Charm's. Both were sailed without ballast or deck seat, the crews of course sitting on deck but with no special seats. The full list of entries for both events were:

INTERNATIONAL RACES.

Canoe.	Owner.	Club.	Size.
Eclipse	R. S. Blake	Brooklyn	15.9×30
Charm	W. Stewart	Royal	15.2×31

OPEN RACES.

Fly	Paul Butler	Vesper	16 ×30
Essex	G. W. Cox	Essex	16 ×30
Will-o-the-Wisp	W. D. Anderson	Essex	16 ×30
If	G. A. Warder	Jabberwock	16 ×30
Guenn	W. Whitlock	Brooklyn	16 ×30
Vagabond	C. B. Vaux	New York	16 ×29
New York	C. K. Munroe	New York	16 ×30
Sea Urchin	B. H Nadal	New York	15 ×28
Nancy	B. F. Curtis	New York	15 ×30

It was at first intended to sail a trial heat in the morning for the open race, the first five only being admitted to the final heat in the afternoon, the prizes, first and second, being two silver cups. This plan was changed, however, as some who wished to enter could not be present in the morning; so the two races were made separate, two flags being given as prizes in the morning. The tide was a strong flood all day, practically; while the morning, at first foggy and calm, brought only a light wind from the Narrows when the sun came out about 9 A. M. Under these conditions it was not safe to send the canoes out into the full strength of the channel tide, as they never could stem it without a good breeze, while the risk of interference with boats or mark buoys by the outgoing fleet of steamships was also very great, Saturday being sailing day. It was considered best to lay out a short course, the first leg, to windward, being down the Staten Island shore ¾ mile, then out ⅝ mile, and in ⅝ mile to the start, sailing four rounds to make the required 8-mile course. The first leg was almost dead to windward, the canoes working very short tacks in among the piers and docks, dodging the tide, while on the other two legs they had booms well off, with a very strong tide favoring them, so that the time over these legs appears to be very fast.

The first event was the International race, the start being made at 11:01. The wind was then quite light, continuing so through the race. The preparatory interval was 5m., the start being from gunfire, and as usual Charm was first over, leading Eclipse by about 12ft., the pair being on port tack. From the start Charm continued to gain, until at the end of some 10m. there was about 50yds. between her and Eclipse. Before the windward leg was covered Eclipse had made all of this up, taking the lead at 11:20, crossing Charm's bows. The latter had quite an advantage in the cross-tacking, of which there was plenty, as her rockered keel allowed her to come about much quicker than Eclipse. The first mark was turned at 11:25, both rounding together, but Charm being much nearer the mark, Eclipse having overstood a little. Reaching across, Eclipse showed a decided gain, turning the second mark at 11:30:15, with a lead of 30s. The first round was nearly ended when a pilot boat, running up slowly under fore and mainsail, crossed the course between the two racers. Eclipse crossed her bows, being very slightly blanketed, while Charm was forced to ease a trifle to go under her stern. The end of the round was timed: Eclipse, 11:34:35; Charm, 11:35:05. Thus Eclipse's gain was over 30s. in two miles.

On the wind again, Eclipse still continued to gain, sailing better than on the first round. She finished the second round with a lead of nearly 3m. At the beginning of the third round Eclipse turned well inside the flag, but on the first tack weathered a vessel at anchor a couple of hundred yards distant; while Charm, though making a neat turn at the weather end of the line, failed to hold to windward of the same vessel. The last two rounds were far from interesting, the distance between the two being so great. When Eclipse finished Charm was just in the middle of the second leg, being about a mile astern. The official times were:

FIRST RACE—START 11:01:00.

	1st Round.	2d.	3d.	4th.	Elapsed.
Eclipse	11 34 35	12 05 47	12 37 00	1 02 30	2 01 30
Charm	11 35 05	12 08 40	12 41 20	1 10 00	2 09 00

The open race was started at 11:27, or 26m. after the International, the starters being Fly, Essex, Guenn, If, New York, Nancy and Will o' the Wisp. Fly and Guenn led the fleet over the first leg, the former turning ahead, but running to leeward for a short time, as though mistaking the course. She soon bore up, however, and held a good lead through the rest of the race. The official times were:

FIRST OPEN RACE—START 11:27.

	1st Round.	2d.	3d.	4th.	Elapsed.
Fly	12 01 00	.....	Not timed.	1 25 10	1 58 01
Essex	12 04 40	12 39 30	Not timed.	1 34 00	2 07 00
Guenn	12 03 00	12 38 15	Not timed.	1 35 00	2 08 00

If, New York, Nancy and Will o' the Wisp, not timed.

Fly wins by 8m. 58s.

The second International race was started at 2:25 P.M., the wind then being about as strong as in the morning, while the tide was still running a strong flood off shore, the ebb begining in shore toward the close of the race. The start and first leg were exactly as in the morning, Charm taking the lead and increasing it, then being passed by Eclipse before the first buoy was reached. On the second leg the wind fell very light, there being little more than the tide to carry the canoes along. Eclipse steered a good course and weathered the second mark, rounding it and soon after finding enough breeze to carry her safely across the strength of the tide. Charm did not allow enough and went below the mark, being unable to stem the tide, so she lowered mainsail and paddled in, giving up the race. The wind soon freshened and

Eclipse had no difficulty in sailing the course well within the time limit of 3 hours, her elapsed time being, 2:09:45.

The second open race was started at 2:40, the course being but 3 rounds; Fly and Guenn, however, sailed 4 rounds, Fly's time being, 1:56:45. The official times were:

SECOND OPEN RACE—START 2:40 P.M.

	1st.	2d.	3d.	Elapsed.
Fly	3 31 30	3 55 30	4 14 55	1 31 55
Guenn	3 33 25	3 57 00	4 16 30	1 36 30
Vagabond	3 34 20	4 00 00	4 21 20	1 41 20
If	3 37 30	4 02 45	4 25 45	1 45 45
New York	3 39 50	4 04 10	4 28 00	1 48 00
Essex	3 40 50	4 05 50	4 28 45	1 48 25
Nancy	Not timed.			
Sea Urchin	Not timed.			
Will o' the Wisp	Not timed.			

Fly wins by 1m. 35s.

In both morning and afternoon Fly covered the course in less time than Eclipse, but a comparison is hardly fair to the latter, as she was only sailing a safe race, with nothing to hurry her and only the chance of an accident to stop her from winning; while in both races Fly had several fast boats chasing her and in the last race she had more wind, thanks to a later start, than Eclipse.

Fly carried 115ft. in two reefing sails, the extra area helping her very much in the light wind. Her races at the meet, on the Connecticut, where she won the Springfield cup a week since, and now on the New York Bay, show her to be one of the fastest canoes in the country, while at the same time she is in model a comfortable and able cruising canoe, with a handy cruising rig, as far as fitting is concerned. Her light build, the position of her board, and the size of her sails, all make her as now fitted a racer, but at the same time she is in model and dimensions perfectly adapted for cruising. Through Mr. Butler's permission we have taken her lines, and will publish them as soon as possible.

After the decisive defeat of the Charm in all the races at the meet and at New York, the chances of a British canoe competing here successfully seem very small when it is considered that Charm won the challenge cup of the Royal C. C. both this year and last, winning by half a mile from a large fleet in one case. Mr. Stewart, who has made friends everywhere in America by his pluck and good nature, will spend some time in the United States, going to Canada later on, to enjoy the winter sports there. The management of the races was in the hands of Messrs. Norton, Drake and Nadal, of the New York C. C., and thanks to their skill and energy the races were carried through most successfully.

THE A. C. A. CAMP OF 1889.

Editor Forest and Stream:

As the executive committee of the A. C. A. will meet shortly to decide upon the site for the next camp, permit me through your columns to direct their attention to the advantages which Rideau Lake offers as a place for the meet of 1889.

It is pretty well understood that the meet shall be held in eastern Ontario. The Bay of Quinte was spoken of at the Lake George Camp, but that is now out of the race, ex-Commodore Rathbun having stated that there is no suitable place there. Many who were at Grindstone Island became tired of it, and of the St. Lawrence, though some of them now appear disposed to come back. If they want variety and an opportunity to see new waters, they can have it by going to Rideau Lake. Being on the line of the Rideau Canal it can be easily reached by steamer, and the Brockville and Westport Railway leads from Brockville to Newboro at the head of the lake, the Canadian Pacific from Brockville to Smith's Falls at the foot of the lake, and the same line to Perth on the Tay, whence a short canal leads to the lake. For those who wish to cruise to or from the camp there is a great variety of routes—from Ottawa, Kingston, Gananoque, etc., through lake and river scenery unsurpassed in the world for beauty and variety. I submit that the rights of the cruising canoeist should not be lost sight of, and I agree with you in the tenor of some of your recent articles, that cruising has been too much lost sight of in the presence of racing.

When the lake is reached no better camping ground can be found that exists on Long Island, an island of over a hundred acres in extent; now owned by R. G. Hervey, Esq., the proprietor of the Brockville and Westport Railway, and which he has placed at the disposal of the Association, free of charge. On the island, besides a choice of camping ground, there is any quantity of dry wood for cooking and camp-fire purposes. Sailing and paddling courses, equal to any ever enjoyed by canoeists, can be had, while the scenery, like and yet unlike that of the St. Lawrence, offers an attraction rarely met with for those who attend the camp for an outing. And then the fishing! If I was to tell of some of the catches made I would be accused by those who have not been there of drawing the long bow. I may say, however, that the bass fishing is such as is rarely met with, while the salmon fishing is not a whit behind. If good fishing has any attraction for canoeists Rideau Lake should be fixed upon without any hesitation.

Mr. Hervey, in addition to giving the use of a camp site, has kindly offered every facility for transport over his railway and by means of a steamer which he has on the lake.

Commodore-elect Rogers, with Mr. J. Z. Rogers, who is a member of the executive committee, Mr. S. Britton, purser of the Northern Division, and myself, visited the lake the other day and found it in all respects adapted for a camp site. Messrs. Rogers will report fully at the meeting of the executive committee in November. In the meantime the members of the committee can make the necessary inquiries to enable them to come to a wise decision.

Permit me to add that I have no "axe to grind." In drawing attention to this place I am actuated solely by what I conceive to be the true interests of the Association. Personally the St. Lawrence would be just as convenient—in fact, a little more so; but in the spirit of the views expressed by many of the members present at the annual meeting at Grindstone Island in 1885, and with a view to afford the greatest possible pleasure and benefit to those who attend, I would urge upon the committee the selection of Rideau Lake as the site for the camp of 1889. J. J. Bell.

Brockville, Ont., Oct. 13.

WASHINGTON, C. C.—The fall regatta of the Washington C. C. was held on the Potomac, the races being sailed in a strong N. E. wind. The first race was over a course of 2½ miles, the starters being: Iola, F. N. Moore; Mermaid, Mr. Munroe; Windflower, Mr. Flint; Scape Wheel, Vice-Com. Libbey. Iola won, with Mermaid second. The other races were as follows: Tandem paddling—Iola, Cowles and Oertel; Julia, Moore and Marshall; Aloha, Kimball and Randall; won by Julia, Aloha second. Paddling race—Windflower, A. S. Flint; Aloha, A. A. Hassan; Julia, F. N. Moore; Peterboro', C. Marshall; Iola, Mr. Cowles; Wanderer, T. E. Oertel; won by Julia, Windflower second. Upset race—Red Wing, Marshall; Lizzie Mac, F. N. Moore; Iola, J. Randall; Wanderer, A. S. Flint; won by Red Wing, Lizzie Mac second. Tournament—Wanderer, Flint and Oertel, Iola, Moore and Marshall; won by the Iola. Hurry-scurry and go-as-you-please—Red Wing, E. Marshall; Wanderer, F. N. Moore; Iola, T. E. Oertel; won by Red Wing, Wanderer second.

AMENDMENTS TO THE CONSTITUTION.—In order that proposed amendments to the Constitution of the A. C. A. may be voted upon at the coming meeting of the executive committee, to be held at Toronto, on Nov. 10, they must be announced in the Forest and Stream of Oct. 25 at latest. Notice is hereby given of the following proposed amendments: Art. V. to specify the date at which the division officers shall take office, making from the termination of one A. C. A. meet to the next. Also to Art. VIII., extending the time within which the vice-commodores must appoint their regatta committees, and also the date of auditing of the purser's accounts, making the latter just prior to the expiration of the pursers' terms of office.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

THE

Perfection Shooting Vest.

No. 1. No. 2.

The Strongest. Best and Most Durable.
The Only Complete Vest Manufactured.
An Absolute Necessity for Sportsmen.

Our Perfection Vest embodies the three most essential points in a shooting vest: **even distribution of weight**, protection to shells from rain or moisture, and **convenience** in carrying and handling shells. The shell clasp used is the celebrated **Nelson Lateral Action** steel clasp, made of the best crucible steel, which permits the carrying of shells "up or down," and being tempered after formation, one size answers for 10, 12, 14 or 16-gauge, and is **warranted not to spread.** The **"Perfection"** is provided with a **double front**, the clasp being secured to the inner front, and the outer front or cover being provided with pockets, combines **convenience with protection.** The entire vest is made of the **best waterproof navy duck**, and will outlast any vest in the market. When using the Vest open as shown in cut No. 1, the outer front is buttoned at the back.

When Ordering Send Chest Measure.
PRICE $3.50. Discount to the Trade.

RIVER VIEW KENNELS
Pure bred English Bulldogs and Pugs.
Champion imported bulldog Merry Monarch (7348) at stud. Fee $25. The prize-winning pug Chequasset Diamond (3880) at stud. Fee $10. Young stock for sale. For pedigrees, winnings and prices address R. B. SAWYER, Prop.,
River View Kennels.
P. O. Box 1029, Birmingham, Conn.

Highly Bred Pointers
FOR SALE.
I offer for sale pointer dogs and brood bitches, broken and unbroken, by such sires as champion Beaufort, champion Graphic, champion Nick of Naso, champion Bravo and Bang Bang, out of dams equally well bred. I will book three orders for puppies by champion Naso of Kippen out of Bonanza, winner of 1st at Boston, 1888, by champion Beaufort. Also four puppies by champion Beaufort out of Katisha, by champion Graphic. Also three puppies by champion Beaufort out of Zitta (A.K.R. 1358). This stock is as choice as can be produced, and will be sold at the value of such breeding. I also offer the services of Mikado, by champion Graphic ex Zitta, and Slasher, by champion Beaufort ex Zuba in the stud. Both well broken and good dogs in the field. For further information address
FRED. F. HARRIS,
Woodfords, Me.

Rosecroft Kennels.
Breeders of Fine English Setters.
Some very desirable young stock for sale, including puppies by Prince Foreman and Champion Rockingham, out of bitches combining the blood of Champion Foreman, Goodsell's Prince, Thunder, Count Noble, Dick Laverack, etc., etc. For particulars apply to WILSON FISKE, 102 Chambers street, New York, or to G. E. OSBORN, Birmingham, Conn.

Fox-Terrier Pups
FOR SALE.
By Celebrated Sires and Matrons.
HILLSIDE KENNELS,
Lancaster, Mass.

Pure Bred Llewellin Setter Puppies
From field trial stock, handsome, healthy and intelligent; not gun shy. For pedigree and description enclose stamp to CHAS. YORK, 9 & 11 Granite Block, Bangor, Me.

Irish Terriers.
Chas. H. Backhouse, Darlington, England, has for sale his kennel of Irish Terriers, through want of room. A list may be had on application at the office of FRANK, KIERNAN & CO., 152 Broadway, New York. oct11,3t

POINTER AND SETTER PUP. PRICE TO suit the poor and working class. Broken and unbroken dog. ELM GROVE KENNELS, South Norwald, Conn. oct11,2mo

ITALIAN GREYHOUNDS AND FINE ENGlish pugs from imported, registered and prize winning stock. In stud—Prize pug stud dog Cricket, weight 9½lbs. HENRY C. BURDICK, 150 Bridge street, Springfield, Mass. jy7,tf

MASTIFFS.—PUPPIES ALL AGES. BITCHES in whelp and stud dog for service. Send for pedigree and price. C. C. RICHARDSON,
aug2,3mo Suffield, Conn.

FOR SALE.
A few thoroughbred red Irish setter pups, of the finest and purest strains
RORY O'MORE KENNELS,
Albany, N. Y.

The Kennel.

SOUTHERN
FIELD TRIAL CLUB'S
FIRST ANNUAL MEETING
TO BE HELD AT
AMORY, MISS.,
OPEN TO THE WORLD.
Commencing Monday, Dec. 3.
ORDER OF RUNNING:
1. Derby. Prize and judges already announced.
2d. All Aged Setter Stake Open to all setters that have never won a 1st prize in an All-Aged stake in any recognized field trial in America. 1st Prize, $250; 2d, $150; 3d, $100. Entries close Nov. 1. Judges: T. L. Martin, Lexington, Ky.; W. W. Legate, Marietta, Ga.; Duryea, New York.
3d. All Aged Pointer Stake. Open to all pointers that have never won a 1st prize in an All-Aged stake in any recognized field trial in America. 1st prize, $250; 2d, $150; 3d, $100. Entries close Nov. 1. Judges: R. I. Hampton, Athens, Ga.; B. P. Holiday, Prairie, Miss.; T. L. Martin, Lexington, Ky.
Trials to be run on quail under S. F. T. C. rules.
Any trainer or owner working dogs within five miles of Amory will be barred from this and future trials of the club. Good hotel accommodations and plenty of birds.
For entry blanks or any other information address the Secretary.
$10 to enter, $20 additional to start.
J. W. RENFROE, President.
T. M. BRUMBY, Sec'y and Treas.,
Marietta, Ga.

Champion Plinlimmon
PUPPIES
OUT OF
Lady Wellington.
Grand litter of four dogs and two bitches, whelped Sept. 18, 1888. Orange tawny, correct markings, immense bone, etc.
IN THE STUD.
That 1st prize winning rough St. Bernard
St. Gothard III.
FEE $40.00.
WYOMING KENNELS, Melrose, Mass.

RABBIT HOUNDS.
Before the season opens is the time to get the best. We are making a specialty of them at $20 for broken and $10 for unbroken ones. We have 83 in stock at present. Any we ship can be returned if not satisfactory.
ASSOCIATED FANCIERS,
sep6,tf 237 S. 8th st., Philadelphia, Pa.

Special Sale
Of thoroughly broken field Pointers. Also some young stock by Sachem ex Daisy of Naso and champion Graphic. Send stamp for prices, etc.
CLIFTON KENNELS,
203 Summit avenue, Jersey City, N. J.

BRANFORD KENNELS
BREEDERS OF
Pointers and Gordon Setters.
Young dogs and pups on hand. Also a fine litter by champ. Beaumont ex Queen.
Address with stamp, Box 202, Branford, Conn.

RABBIT HOUNDS.
A large lot of English beagles, 14 to 16 inches high, dogs and bitches, well broken; $15 each. Pups from 6mos. to 1yr. old, $8 each. Satisfaction guaranteed. WM. W. SILVEY, 133 South Eighth street, Philadelphia, Pa. aug23,tf

WM. GRAHAM, NEWTOWNBREDA, BELfast, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen 1sts, nine specials, three 2ds and one 3d. At New York, 1884 seven 1sts, six specials and one 3d.

DOGS FOR SALE.
Newfoundlands, St. Bernards, Mastiffs, Setters, Pointers, Fox, Bull, Skye, Scotch, and Black and Tan Terriers, Beagle and Fox Hounds, Dogs and Pups at low prices. Write before purchasing.
F. Hope, 464 N. 9th, PHILAD'A., PA.

SMOOTH-COATED ST. BERNARDS.
(The Typical St. Bernard.)
Young stock for sale, sired by champions Apollo, Hector, Victor Joseph and other noted prize winners. Address
LORENZO DANIELS.
P. O. Box 1,991, New York.

FOR SALE.—POINTERS AND SETTERS; field trained stock and puppies from imported and home strains. Prices always reasonable and stock as represented. GEORGE W. LOVELL, Middleboro, Mass.

CHAMPION (X) (3) CHAMPION STILLhunting coon dogs, (3) champion track barkers, (3) gray squirrel dogs, (1) rabbit dog. Lap-ear rabbits, ferrets; also English pugs, adult dogs and puppies. Game chickens, Jersey cattle, Poland China swine. All are earth's best.
H. C. GRAFF,
Kensington, Ohio.

DO YOU WANT A DOG?
DOG BUYERS' GUIDE,
Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them. Mailed for 15 Cents.
ASSOCIATED FANCIERS,
237 S. Eighth St. Philadelphia, Pa.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, OCTOBER 25, 1888.

VOL. XXXI.—No. 14. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

A SNAKE RIVER INCIDENT.

IT has come to a pass nowadays that to chronicle all events connected with shooting and fishing means to devote space to reports which properly belong in the criminal news of the daily press. It was only the other day that we recorded the murder on the Tobique and the gross miscarriage of justice by which the miscreants escaped righteous punishment. But if murderers of women go unhung in New Brunswick, they see to it that the hemp has its own—and more too—out in Wyoming.

That Territory has a law forbidding the killing of game for market. In spite of this, skin hunters and meat hunters have in years past invaded the Territory and plied their trade. This can be done no longer with impunity. Public feeling is on the side of the law. News has just come of the fate that overtook two hunters in the Snake River country who sought to combine skin hunting and house burning. The combination would not work and the consequences were exceedingly disastrous. The hunters were F. W. Adams and one "Dutchy." They were engaged in a wholesale slaughter of elk and antelope, saving only the hides and horns, when an exranchman, Tom Johnson, remonstrated with them on the ground that they were violating the law, and threatened to have them arrested. The rest is quickly told. The hunters fired Johnson's house at night. Johnson, his wife and child-in-arms escaped from the flames, and from the hunters' revolvers; the father made his way to the settlement and gave the alarm; forty men turned out at daylight, captured the hunters, carried them into the settlement and jailed them in an adobe hut; in the night a hundred men hustled them out, and the morning sun revealed two human forms dangling from the limb of a tree.

There is no special moral to this perhaps, but it is worth noting that while in New Brunswick one may follow up unlawful salmon spearing with woman killing and get off with a fifteen years' term in jail, out in Wyoming skin-hunting and the firing of houses by night put one's neck in the halter.

In these repeated cases where interference with game law breakers has resulted in personal violence and crime, the fact has stood clearly revealed that the offenders against the game laws are desperate characters, and when their offenses are regarded with leniency the tone of the community is debased.

It was so with the Maine "Shacker" incendiaries, the doggers who killed the Maine warden, the New Brunswick salmon spearers and the Wyoming skin-hunters. Lawlessness with respect to one class of statutes here means rebellion against good order and the bonds of society. Desperate miscreants who break the game laws show themselves ready to stand at nothing, not even murder. Sympathy for them, as poor creatures who must live somehow and who have a God-given right to support themselves by taking from Nature her salmon and elk, is sympathy thrown away.

SNAP SHOTS.

THERE is a terrific uproar in the American Pet Dog Club. The trouble all hinges on the incompatibility of two of the leading spirits, and on the principle that when a man and a woman cannot live together in peace and harmony they had best separate, the club has resolved itself into two factions, one following the man and the other the woman. Each faction has expelled the chief movers in the other, and each one claiming itself to be the club, the ins are casting about for injunctions and other legal devices to get the better of the outs. The old rhymes of the stormy days of George I. apply:

> God bless the King, our holy faith's defender;
> God bless the King, and drive out the Pretender,
> Which the Pretender is, and which the King,
> God bless my soul, that's quite another thing!

Mr. Linley, of Claverack, N. Y., is possessed of the true spirit; he is a fisherman to the backbone. One day last week Mr. Linley's little son was fishing in the Hudson, when a huge pickerel seized his bait, pulled him overboard into the water and was about to perform "the big one's" act of getting away, when Mr. Linley hastened to the rescue and saved—the fish, which proved to be a 30lb. pickerel. Incidentally the small boy was saved too.

FORESTS OF THE ROCKY MOUNTAINS.

I.

THE Department of Agriculture in the Forestry Division has issued its Bulletin No. 2, embodying its report on the forest conditions of the Rocky Mountains. This report, compiled by Dr. B. E. Fernow, Chief of the Forestry Division, who contributes an introductory chapter and a paper on Snow-slides or Avalanches, their Formation and Prevention, consists of contributions from various official and non-official sources. There are extracts from reports of the Commissioners of the Land Office, a treatise on the Government in its Relation to Forests, by Prof. G. J. James; a special and detailed report on the Forest Conditions of the Rocky Mountains, County by County, by Col. Edgar T. Ensign; the Forest Flora of the Rocky Mountains, by George B. Sudworth; Report on the Forests of Los Angeles, San Bernardino and San Diego Counties, Cal., by Albert Kinney; The Needs of the Yellowstone National Park, by Arnold Hague, geologist in charge; Summary of Legislation for the Preservation of Timber or Forests on the Public Domain, by N. A. Egleston; The Climate of Colorado and its Effect upon Trees, by George H. Parsons—altogether too varied and voluminous a mass of matter to do justice to in the space of an article; and as the subject is one of vital importance to the future well-being of the country, and one on which we have always been ready to lift our voice when the occasion demanded, we will take the more important of these reports in serial order, but to make the argument for a comprehensive and rigid system of forest management more intelligible, and to indicate the most formidable obstacles to the introduction of such a system in this country, we propose to preface our review of the report by a glance at the simple financial aspect of the whole problem, for herein lies the chief difficulty.

Timber is one of those products of nature which, being applicable to many economic purposes, constitutes wealth, provided it can be applied.

Wherever and to such extent as it is the product of labor, its value is determined by the costs of production, but wherever it is the free gift of nature, its value is determined by the law of supply and demand, costs of transport to market, etc.

In the early days of settlement of this country, and especially on the Atlantic seaboard, the forests were so widely distributed that they were an obstacle to settlement, and timber, instead of being a valuable crop, became a burthen to the land owner. It cost say fifteen dollars an acre to clear it, and its presence consequently detracted fifteen dollars an acre from the value of the land. Standing timber being valued at a minus quantity, lumbermen bought it from the State at a mere nominal price, and not being burthened with the costs of production, have been able to prosecute a very large foreign trade.

The home consumption of timber, too, has grown with the growth of the country. According to the census report of 1880 the forest crop of that year was valued at $700,000,000, and these figures, it must be remembered, represent little more than the costs of felling, dressing and transport to market, with the lumberman's profit on these transactions. The lumberman gets his timber practically without consideration, and the costs of production are consequently not an item of calculation. In this report round timber is estimated in the market at eight cents a cubic foot; in Germany the selling price of round timber (pine) in the forest is about twenty cents a cubic foot, and it is very questionable if we could produce it for less than thirty to thirty-five cents per cubic foot in this country. Add thirty cents per cubic foot of timber or thirty dollars per thousand feet board measure to present prices and it will afford an approximation to the figure at which it could be produced for the market.

The actual value of the present annual cut of timber, instead of being as is estimated in the report, one-third of the value of the farm crop, is nearly equal to it, but unfortunately the timber brought to market during the year is not the growth of one but of many years. Pine takes from eighty to a hundred and twenty years to reach what we may call a marketable maturity, and where it can be conveniently worked on a rotation of area, the forest block if divided into as many compartments as there are years in the rotation, and the most advanced of these compartments cut over annually, and restocked with seedlings, the standing crop which we may call the capital stock would be always the same from year to year, the one compartment cleared, yielding a product, equal to the annual yield of the whole block; the forest remains, the interest only is utilized. In this country we have been trenching on the capital stock for many years past, we have made no suitable provision for reproduction, the annual production of the forest area is very low for want of proper method, large areas are destroyed by fire, and everybody realizes that the capital stock of timber is being steadily exhausted, and that it must be still further trenched on until it is all consumed, the size and quality of the timber diminishing as we near the end.

The bulk of the remaining timber lands of the country is in private hands, but the United States Government still holds considerable tracts in the Rocky Mountains. Colonel Ensign estimates that 45,000,000 acres of so-called forest in the State of Colorado and the Territories of New Mexico, Montana, Idaho and Utah belong to the public domain. This is a noble tract for a public timber reserve, situated on the main watershed of the continent, where its existence is of the greatest importance to the general well-being of the country, and capable, under proper management, of yielding an annual product of from 1,000,000,000 to 1,500,000,000 cubic feet of fuel and timber, and under favorable conditions an annual net revenue of from ten to twenty millions of dollars.

Under the present loose system of administration, the same authority tells us, "Forest fires have almost undisputed sway; railway corporations freely use and waste the public timber, and unscrupulous lumbermen fell more trees than they can use."

In a tabular statement of this report there is a return of 413,519 acres of standing forest as destroyed by fire in the year 1880, and the value $6,705,375. From these figures it appears that an acre of timber is valued at a little over sixteen dollars, although if it were a full stand of good mature pine timber, carrying say two thousand cubic feet to the acre, it would cost the country five hundred dollars per acre to reproduce it, and probably fifteen hundred dollars per acre to import it from Europe if we had to resort to foreign markets for our needs. But when we talk of a forest area as capable of yielding a given quantity, let us say twenty cubic feet of fuel and timber,

per annum, it must be understood first, that the whole area is covered with a crop of growing timber, and that the area annually cleared is immediately restocked. These conditions do not exist in a primeval forest. From year to year, from decade to decade, from century to century, there is absolutely no increase; growth and decay counterbalance each other. Under systematic treatment, the area annually cleared being immediately restocked, would become the theater of growth, but under the reckless system of mismanagement in this country, there is no reproduction worth speaking of, and the problem is simply: "Given the standing crop, and the annual consumption, destruction and waste, to determine how long it will last."

But if these are facts beyond dispute it may appear very strange, incomprehensible in fact to many, that the Federal Government, retaining control of such important forest areas in the Rockies, does not at least husband its resources and place them under systematic management. These forests would not only provide permanently for the States and Territories in which they are situated, but yield a very handsome surplus for the supply of adjoining States; and during the century required to bring them into proper working order, the cost of restocking would be offset by a steady annual revenue from standing stock.

The difficulties of establishing such a system are very formidable. If it were decided to close the remaining forest area to the lumberman with his destructive methods, two courses would be open to the Government: the first, to close the forest absolutely and prevent all further utilization of its standing stock, a measure which would be regarded as simply intolerable; the second, to work the forests systematically by the agency of a working staff under the control of a forest department. There is another possible method, a compromise between the last indicated and the existing system, under which licensed lumbermen would work out the timber on their own account but in conformity with the instructions and under the supervision of a forest department. Either of these methods would involve a very considerable outlay for its proper enforcement. Forty-five million acres are a large tract of country to look after; at least one man must be employed for every ten thousand acres, and assuming—which is very probable—that of the estimated forty-five million acres of forest in this region not more than fifteen million acres are actually covered with forest, it would still require a subordinate staff of fifteen hundred forest guards at an outlay of approximately a million dollars annually to maintain anything like a perfect system of supervision, whether the forests were worked or not.

But it goes without saying that the proposal to lock up the forests and prevent all further utilization of their products is one that cannot be entertained. As to the proposal to work the forests by Government agency, this would involve an annual outlay of many millions, to be met by a corresponding revenue, but the necessary trained establishment is not available, and the country is not ripe for the measure; and as to the compromise proposal of allowing lumbermen to cut on their own account under the control of a forest department, it requires no argument to reach the conclusion that destruction would go on as at present, and the establishment render the public no service in exchange for its pay.

The great bar to the systematic management is to be found in the fact that past conditions have effected a state of affairs under which the standing stock has no more than a nominal selling price. If the whole remaining timber of the country were in Government hands, it would be possible to fix the price at so high a figure that the annual revenue derived from its sale would cover the costs of maintaining a suitable staff, of restocking an area equal to that annually cleared, and would further provide a surplus for the construction of roads, bridges, river clearances, etc., necessary to the proper administration of the forests. And all this it should do, for we must remember that the whole capital stock of the forest is being used up, and that the timber stock which should replace it can only be produced at a cost.

These conditions are not attainable, and although a State or Government department undertaking the control of the forests were to provide for restocking by self-sown seed wherever possible, the costs of getting out the lumber under the conditions necessary to provide for natural reproduction would be something higher than on the lumberman's methods. The State, too, in addition to its working charges, would be saddled with the cost of a protective establishment for the whole forest area, and having the price of its timber regulated by outside competition, it is very doubtful if it could work out the standing stock at such a profit as would cover the whole costs of establishment and provide for the restocking of such areas as could be restocked only by planting; that is, areas in which the forest is open and the forest floor destroyed. The condition are not, then, favorable to a financially successful administration of the forests, even although the bulk of the existing capital standing stock would all be utilized in the first few decades. We will return to this subject in a later article, in which we propose to advocate some practical measures for the insertion of the thin edge of the wedge of reform.

The Sportsman Tourist.

TWO MONTHS A COWBOY.

I ARRIVED in Salida, a town in Colorado situated on the Denver and Rio Grande R. R. July 12, 1886, expecting my cousin to meet me there. He did not come until several days later, however, and in the mean time I tried to install myself in the good graces of trail boys. They arrived the same day I did, having brought up from our lower ranch in New Mexico, the yearly drive of steers. Those employed in the business of driving are called trail boys. They were soon paid off for the work and sent to the ranch, to give the horses a rest before shoeing them anew preparatory to a return south.

On the 15th my cousin and I started for the ranch thirty miles away, and perhaps I was not tired before we had gone ten, but you may be sure I did not say so. How odd it seemed to ride along, meeting no human being, but now and then a bunch of cattle, among which I saw our brand occasionally, V V N across the side, and an undercrop out of the ear. It was a seven hours' ride, and when at last our pasture gate was passed, and the cabin appeared in sight, unmindful of our tired horses we set off in a gallop, and the last mile and a half were soon covered.

All the boys were busily engaged, washing their bedding, trousers and underclothes, not having had either the inclination or chance to do so before in the two months drive from the south. The cook soon had something for us to eat and we were ready to eat it. The evening passed quietly, the boys not trying any tricks so soon. The ranch is situated in South Park at the foot of Black Mountain about seventy miles west of Pike's Peak, as a crow flies, and is 10,500ft. above sea level. Eighteen sat down to the table the first night—and how they did swear. To me, a tenderfoot, it was surprising to hear the number of oaths they could put into one sentence and that sentence issuing from their mouths with such apparent ease, not stopping once to think. The stories and conversation were such that they could not be repeated here. It seemed taken for granted that I knew everybody, so introductions were dispensed with. I kept still, only joining in the conversation where I saw no chance of displaying my ignorance of their ways, manners and customs.

The next day the horses were rounded up from the adjacent pasture and the shoeing started. Part of a cowboy's education is to be able to shoe a horse; and this they can all do to a certain extent, but the forge and anvil are sometimes very primitive: and I remember once on the round-up the tire of a wheel was the anvil and a bonfire the forge. At times it is very risky, and needs a good deal of strength joined with patience. It was a big job, and as the horses had a long road before them back to New Mexico it had to be done carefully. I watched a while and then tried to get my hand in throwing the rope. The terms lasso and lariat are not used. I practiced on two dogs, on posts, and once on one of the boys. I missed him, however, and as he had his rope in hand asked for a lesson in the art. This he readily gave, and before I knew it a ½in. rope encircled my neck, and as he playfully pulled me around the yard he said, "Do you catch on, Tenderfoot?" I immediately "caught on," and I have always remembered how my neck hurt where he wore the skin off. As with everything else, practice is the only way to learn, and then even the old hands will often miss, which encourages beginners. To be able to catch any named foot of a steer in a dead run, while on horseback running behind, is no easy task I assure you, and only the best cowboys can do it.

Tiring at last of the boys' company and the *rat-a-tat-tat* of the blacksmith's hammer, I shouldered a rifle and went up into the woods hunting, hoping to run across some deer or perhaps in the clearings an antelope, for I had seen two of the latter in the pasture the day previous. The cabin was just at the edge of the timber, so I was soon deep in the woods, moving quietly and scarcely daring to breathe when the twigs cracked beneath my feet, imagining it was a deer, or worse, perhaps a bear. The bears, I was told, occasionally ate up a cowboy, when he so far forgot his calling as to wander afoot among the trees. I strayed around for a long time, not confining myself to any one spot. There were many springs about and I could hear the streams as they trickled among the rocks, falling from hollow to hollow, in which they made small lakes. Suddenly the sky darkened and the heavens opened and poured down rain by the bucketful. It thundered and lightened so close together that I thought repeatedly the tree against which I leaned must be struck. I came across large pine trees split and torn by lightning that very afternoon during the storm, and I felt anything but comfortable. I crept beneath an overhanging rock, having placed my rifle in a dry spot, about 20yds. off, for I knew steel was a good conductor of electricity. This did for a while, but as darkness came on I thought of the camp and the "dandy" hot biscuits Joe could make. I could not stand it any longer, and although it was still raining heavily, I caught up my rifle and ran as best I could over the slippery ground and logs, every now then stopping to catch my breath, which was soon lost in that high altitude. All the boys stood at the door watching for me, and I felt as does a mariner who reaches a safe harbor when I saw them. It is odd, but I don't believe they are afraid of anything so much as lightning. That year one of the train boys had been killed by a bolt, and this naturally made them timid.

It took several days to shoe all the horses, but there was in it all a measure of excitement, running out into the corral to rope them, where one had to be nimble to avoid their too willing heels, as they were being shod.

The corrals are made of large logs with strong posts 7ft. or more high. They inclose different sized spaces and are similar to an Eastern barnyard, only they are divided up, connecting by gates so as to hold one bunch of cattle, while in the adjacent inclosure some are driven to be branded.

Strange as it may seem, the horses have to be roped each time you ride them, no matter how long they have been broken, but when you throw the rope, should it miss and hang on the horse's neck, he thinks he is caught and will allow you to walk up and put on the bridle.

On the lower ranch we have over 20,000 head of cattle, and there all the breeding is done, driving up yearly the two-year-old steers, and that year as an experiment sixty-five heifers. They were soon sold, and the purchaser, wishing his brand, a T, put on, we did it. When the irons were red hot, a few of the heifers were turned into the corral and two men on horseback quickly roped them, handing the rope to those afoot. A half-hitch was taken around one of the logs, giving the yearling but little play, so the fellow catching hold of the tail could easily throw her on one side by a simple twist. Then taking off the rope one would hold the head down, another the hind feet, while the brander would in a jiffy trace the letter on her side, burning through the hair into the hide so as to make a scab, on which no hair would ever grow again. It was hot work, for I tried it all from catching to branding. So many were at it that we were soon through, but on the other ranch it is sometimes a two weeks' work from morning till night, branding between 3,000 and 4,000 head. Each owner has his own registered brand, and many are the different styles, letters, figures and symbols. Our boss, though he could neither read nor write, knew his letters, having learned them from the different brands. It is part of a boss's education to know who own the different brands, and this is learned from a book published for such a purpose. Our boss was the best horseman I ever saw, boasting that he could ride anything that had hair and stood on four feet, and it was not a vain boast, for I saw him make good his boast more than once.

A maverick is a calf whose mother has deserted it. In olden days out West mavericking was a big business, some of the biggest cattlemen having made a start that way. When a cowboy saw a motherless calf he felt sorry for it, and would put on his brand, and then keep on his quest, riding until he had a large enough herd to settle down in some good place. Many owners, besides branding, cut off different parts of the ear or slit it. Thus if you are told the steer has an undercrop and slit in the right ear, it means a piece off the underpart of the ear and a slit lengthwise of it.

Seven-up was the great game of cards, and many were the angry disputes the boys had. One hot-blooded little Texan, called "The Mosquito" or "Sketer" for short, drew his knife on one of the boys, but we immediately made him put it up. He afterward proved to be a coward, as such generally do.

On the 20th and 21st we made ready the round-up wagon, putting in a stock of food, doing some necessary carpenter work and making some hobbles for the horses. These are made of twisted raw hide, rope or leather. At night on the round-up, when all the riding for the day is finished, the horses are hobbled, their front feet being tied together with twenty inches space between. This prevents them from wandering far at night, so that the morning "hustlers" may hope to find them within the space of a mile or so. It is wonderful though how far they will sometimes stray, even breaking the hobbles and finding their way back to the ranch or joining some of the horses in the Bald Hills or Buffalo Peak, of which localities I will speak later. On the 22d we left the ranch, driving our horses before us. My mount contained five, namely, Old Sport, Terrapin, Donie, Bald Eye Beauty and Three D. These names are not made up, for Old Sport looks like one, Bald Eye Beauty had no eye lashes. Three D was so marked with a brand 3 D, Terrapin from his wish to crawl instead of walk, and Donie just a pet name without special significance.

Toward night we reached camp and there found about fifty boys belonging to different "outfits." It was raining and fuel was scarce, so we gathered it on horseback, throwing a rope over the end of a log and hauling it into camp. All work is done on horseback when practicable; it is said a cowboy will walk a mile to catch a horse to ride half a mile. The ground was damp and soggy where the cook pitched our tent, but flat, so we dug a trench around and a ditch to carry the water off to a hole. It is the cook's place to cook, take down and put up the tent, and drive the wagon, but in such little things as gathering and splitting wood the boys sometimes help.

The supper was of canned corn and tomatoes, fried pork and hot biscuits, but there was a plenty for all, and we had with it cups of hot black coffee, but no milk, you may be sure. We had milk at the ranch several times. By tying a cow head, tail and feet to the fence, we managed to milk her; but a pint was not much reward for an hour's work.

Being tired I turned in, spreading my canvas on the wet earth and the blankets on top of me. To keep my saddle blankets from getting wet I put them in the tent near the stove, which the boys soon found out by the stench; and they said it was a leggings case. They forthwith hauled me out of the blankets and applied a pair of leggings to my back. At first it did not hurt, but when they and I also got warmed up to it, I called time. Although the ground was very damp I never once thought of catching cold, but slept soundly all night, thinking in my dreams that I was home sleeping on a soft bed; but what matters it, if one be tired, where they sleep?

The following morning the cook awoke us all when breakfast was ready, and not having much to put on, having slept in all but our coats, trousers and boots we were soon dressed and speedily made a meal. Our dress consisted of a sombrero with a band of leather, a colored shirt, cartridge and pistol belt, cloth trousers or overalls and chaperajos, or leather leggings, open in the rear but down the sides decorated with leather rosettes or some skin tanned with the hair on, and boots having a heel three inches long to prevent the foot from slipping through the stirrup, as the rider rides with his legs at full length and the curve of the foot resting on the stirrup.

The morning duty performed, we saddled up, mounted and formed in a big bunch waiting for the boss's orders. Indicating such men as knew the country, he told them to "pull their freight" (move off) and then told off the rest of us into parties of five or six with these men as guides and overseers for the time being. There being six squads in all we left camp as the hub of a wheel, and took our way as the spokes up different gorges or trails as the case might be. From neighboring hills little streams found their way into the valley and up these a different man would go to the hills, sometimes five miles or more, and gathering what cattle he might run across, would drive them down into the valley and there hold them awaiting the others. In this way the party would have scoured the country well over five miles, gathering a bunch running all the way from ten head to over a thousand, which they would then drive back to some open space near camp. Here, when all had returned, the "cutting out" would be done. That is, two men would ride in among the cattle, selecting first the cows with calves, and so on, until all those having the brands sought

after had been run out, when the rest were turned loose. It is not so easy to cut out as it sounds, and only those of long experience who have well-trained horses and a good seat can do it, for many are the sudden twists and turns the wild cattle make, and besides having to be done quickly there is need of as little commotion as possible. Cattle are easily stampeded, and at night the least thing, such as the jingle of a spur, will start them running. While some do the cutting out the others hold the bunch, and when a steer is driven near the edge, rush him out to a place where the cut out ones are held.

Danger is attached to it all, which gives spice to the work, for occasionally the bulls have bloody battles, each one contending for the mastery. We held off when the encounters took place and watched the fights, which lasted quite a while, and had the attraction of the Spanish sport in which men take so active a part. They will at times turn on man and horse, inflicting severe wounds, one horse I remember perfectly having had its side slit open for more than a foot.

The cooks are busy all the time supplying the boys with dinner, as they take turns to ride in, eat and saddle a fresh horse, none being ridden over half a day. Generally by 3 o'clock the work is over, and while some drive on the horses and cattle (cut out) to the next camp, others stay behind and do the branding. Many people do not understand how the right brand is put on the right calf; but it is very easily explained, for the brand of the mother is put on the calf. Mavericks when now found are put up at auction and sold to the highest bidder.

That day the move of camp was some ten miles, and it was a very disagreeable ride, for it began to rain toward night, but luckily the cook had put the tent up on dry ground and a ditch carried the water off from around us.

A yearling heifer was killed, beheaded and hung up. The head was placed in a hole containing hot coals, covered up and left to cook for some time. Upon being dug up the brains were eaten by our boss, but I said, "No, thank you," when he offered me some.

On the next day's hunt I chased a cow about half a mile in a dead run down a sandy gulch, but found when I headed her that she belonged to one of the grangers or "tater skinners," so the run only excited me and winded my horse.

That night we camped by a log cabin, in which we spent the evening watching five of the boys playing freeze-out poker for a steer, each one entering the game taking five dollars' worth of chips. The game was very exciting, and places near the board on which they played were at a premium. Not being able to get near enough to see I placed a board slanting against the wall and sat upon it, having a bird's-eye view. I was not let alone long, for one of the boys ("Sketer") pulled the board from under me, so that I fell about four feet. This tickled "Sketer" but it hurt me a good deal. G. F. BLANDY.

[TO BE CONTINUED.]

Natural History.

THE GOPHERS AND POUCHED RATS.—I.

BY R. W. SHUFELDT.

EITHER internal or external cheek-pouches characterize quite a number of the Rodentia, and we saw how that in our genus *Cynomis*, the so-called "prairie dogs" of the Western Territories, these cavities were inside the mouth, one on either aspect, and quite shallow. And I am inclined to believe that these little marmots seldom make much use of them as a means to transport food, nor have they the need to do so that some of the other rodents have, as they, for the most part, feed upon material to be found in abundance within a short distance of their burrows. Further, it would seem that *Cynomis* makes no special effort to hoard up a storehouse full of eatables against long winter months. The specimen of this animal which hibernated in my cellar this winter, took no food down with him, but for as much as a fortnight prior to his final disappearance he did carry down with him each day a great quantity of newspapers, rags, and everything he could lay his paws on to make a comfortable resting place.

Then we remember that the chipmunks of the genus *Tamias* are furnished with internal cheek-pouches of no mean capacity, and every one knows who has ever studied these interesting little ground squirrels, with any care at all, how well they can use them. They will, when carrying stones to their burrows, pack these natural pockets of theirs so full that their heads sometimes appear to be double their normal size from the pouting of the cheeks, and I am almost afraid to say how many beech nuts I once removed from the pouches of a specimen of *T. striatus* that I had collected; certainly a great many.

Spermophiles, too, as we saw, also possess capacious cheek-pouches which they put to the same use as does *Tamias*, a feature which distinguishes them from the true marmots on the one hand, while it has on the other been responsible for their being called in many localities "gophers," the only genus so designated among our *Sciuridæ*.

Finally, it was noted that certain spermophiline animals in Europe and western Asia were possessed of these internal cheek-pouches, as for example the souslik of Bohemia, Ireland and Hungary, and the *S. concolor* of western Persia, an animal so notorious for its ravages upon the grain fields of that country.

Now, however, the next two families of the Rodentia which we come to in our "List" are always thought of in connection with these characteristic pouches. I refer to the *Geomyidæ*, or true gophers, and the *Saccomyidæ* or the pouched rats. The first of these two families we find composed of some nine species grouped under two genera (*Thomomys* and *Geomys*), all of which are comparatively small animals and all designated as "pocket gophers." The *Saccomyidæ* of North America, as we have seen, are represented by some eleven species, distributed among four genera (*Perognathus, Cricetodipus, Dispodomys* and *Heteromys*), but only three of these are to be claimed as belonging to our United States fauna, *Heteromys* being a West Indian and tropical group of animals.

The *Saccomyidæ* are chiefly represented by the "pouched" mice" and the "Kangaroo rats" (*Dipodomys*).

THE PACIFIC POCKET-GOPHER (*T. t. bulbivorus*).—MALE; LIFE SIZE.

Drawn by the author from Dr. Kennerly's plate in the "Pacific Railroad Reports" (1859), and adapted to the present article.

I have already pointed out that among the Rodentia the hairy skin of the face is reflected inward behind the incisor teeth, thus dividing the cavity of the mouth into two apartments which communicate mesially by a minute opening when the animal chooses to constrict these partitioning integuments. Among the hamsters and pouched rats of the Old World fauna, we, as a rule, find them in possession of large internal cheek-pouches, lined with hair, and extending posteriorly even beyond the ears.

Our pouched rats and gophers, of which we shall treat in the present paper, have these pouches opening externally one on either side of the mouth, and also lined with a continuation of the facial integument, which grows a fine, soft coat of hair, usually white in color. Upon side view in such a form for instance as the Pacific pocket gopher (See Fig. 1) the cheek-pouch is plainly to be seen, and appears as a long, curved line, with its concavity forward, and which extends from the commissure of the mouth down the side of the throat. This line marks the entrance to the cheek-pouch of that side.

Here in New Mexico I have had the opportunity to examine several specimens of both *Geomys castonops* and *Thornomys talpoides umbrinus*, the chestnut and the Southern pocket gophers respectively. In such a form as the Southern pocket gophers I found these cheek-pouches very capacious, extending to a point on either side behind the ears, and lined by the common integument, from which grew a short, white and beautiful coat of hair. We usually find in the pouches of this animal a wad of the leaves, and at some seasons, the buds of the sage bush (*Artemisia*); though of course it feeds upon many other things. One that I had in confinement for some time readily fed upon nuts of all kinds, pieces of apples, raw potato and similar substances. Although it showed a disposition to bite severely when first captured and for a day or two afterward, after that I began to notice that it bore handling with far better grace, and no doubt in time would have become quite tame.

This species of gopher usually burrows in the softer varieties of soil, passing under ground considerably deeper than does the mole, and carrying his excavation to a depth of about 12 or 15ft., where he terminates it by a semi-globular cavity, which he duly lines with such soft materials as he can secure for his nest. We may easily secure specimens of this species by pouring sufficient water into one of their occupied burrows, to drown its inmates out; and a sorry-looking gopher it is, too, when he appears at the entrance of his subterranean abode, with his large foreclaws made doubly prominent by the matted wet hair on his feet, with his curious looking mouth and now easily-seen entrances to his cheek-pouches, and with his angry pair of almost Talpoidean eyes, which seem to fully express his indignation at such a dastardly means to effect his capture.

Members of the old Pacific Surveying Expedition found this species in various localities throughout California, and especially near San Francisco.

A great deal yet remains to be studied and known in reference to these animals; we are by no means in possession of a full history of their habits, and in many instances, we are completely ignorant of much that pertains to their natural history.

Even in the case of the common pocket gopher (*Geomys bursarius*) I dare say there are a number of chapters in his daily life that might be profitably enlarged upon by naturalists to the benefit of natural science in particular, and the profit of common knowledge in general. This can however only be accomplished by long and patient observation, which only the few at long and stated intervals are willing and anxious to undertake. The habits of such creatures can only be successfully studied in nature by those methods which Audubon adopted to secure his data for the life histories of his avian favorites. It means being in the forests and fields at the haunts of the species you may be engaged upon, at all seasons of the year, and at all times of the day and at all times of the day and night; patient and continuous observation by the hour at a time. A few data, however, secured by these means, far excel in usefulness all that one may get by handling dry skins in the museum trays, keep up the latter process as long as you may please.

Not so very long ago it was generally supposed that *G. bursarius* used its cheek-pouches to carry out the sand or soft soil which came away while it was engaged in excavating its burrow; it's hardly necessary to say that such a notion as this is now exploded, and it is well known that the pouches are put to the use alone of transporting its food. Packhard states that this species "burrows in sandy soil and feeds on acorns, nuts, roots and grass, which it carries to its burrows in its enormous hanging cheek-pouches, which, when full, have an oblong form and nearly touch the ground."

Generally this species is known as the "pocket gopher," but in the State of Missouri, where it appears to be quite common, it is known as the *Mulo*. From tip to tip the animal measures rather over 10in., its tail being generally over 2in. in length; its coat above is of a reddish brown, while beneath it is a darker shade of the same color. The fur is very soft and fluffy. Its eyes are quite minute, while its inconspicuous ears are buried almost out of sight in the fur of the sides of the head. In constructing its burrow, it builds a central nest from which lead numerous passages in different directions which open on

the surface of the ground in places where their entrances are the least likely to be observed, as in tufts of grass or similar spots. Among the other soft substances chosen to line the central nest, it is said that the female often plucks her fur to assist to the same end.

Agriculturists charge this animal with barking and thus killing many of their fruit trees, more especially pears, plums and apples; and no doubt in the vicinity of gardens and nurseries it is often guilty of doing no little amount of damage. Sometime during the early spring the female brings forth in her underground nest some six or seven young ones, and I believe they bear but once during the year, possibly twice. Should one attempt to capture with his unarmed hand one of these creatures, he will find that they can use their sharp incisor teeth with wonderful effectiveness, keeping up a series of sharp squeals at a high note during the entire time. Gophers can travel backward down their burrows nearly as fast as they can by the usual forward method of locomotion, and it is said that they often fight among themselves, using their snouts for the purpose, as we often see pigs do. As in the case of rats and other rat-like animals, they will, when eating, sit up on their haunches and use their forepaws to hold the food which is being consumed; and like so many others of the order to which they belong, they are very fond of dressing their fur and whiskers, using their forepaws for the purpose, and they will often scratch their sides by bringing up their hindpaws, performing the action in a rapid and nervous manner. During the cold winter months these animals hibernate, while at other seasons they are chiefly nocturnal in their habits.

[TO BE CONCLUDED.]

JELLY FISH IN FRESH WATER.

Editor Forest and Stream:

I was trout fishing last week with three friends at a pond on the Barrens, about fifteen miles from here, and about fifty yards from the railroad; the officials of which obligingly made a flag station for our convenience. We spent three pleasant days in camp, and thanks to Doctor Nessmuk we bade defiance to the flies, both great and small. His prescription for "punky dope" proved most efficacious, but very dirty. I suppose most of your readers would call the fishing good. One of my companions in about ten hours caught eleven dozen beautiful trout, weighing from a half-pound to a pound. I caught about two dozen and fished no more, thanks to FOREST AND STREAM ethics, which I tried in vain to inculcate, but my young friend listened and fished on. He was not *un chien du sentiment*, and no appeal in favor of posterity affected him. "What did posterity ever do for me that I should deprive myself of a pleasure for their sake?" is a ready and smart answer, but of the earth-earthy.

All this by the way, but my object in writing is to state a fact and ask a question. This fact is, we saw and examined jelly fish in this fresh-water poud. They were numerous, both large and small; the largest five to six inches in diameter, the small about the size of a half-dollar. They were of a greenish color and convex shape, and I thought closely resembled, except in color, those found in sea water.

I have fished for many years and never noticed them before, and I will be obliged if you inform me whether they are known or are common in your American ponds.

HARBOR GRACE, Newfoundland, July 12. B.

[If our correspondent will send on a specimen we may identify the "jelly fish."]

A CAPTIVE GROUSE.

Editor Forest and Stream:

Speaking about grouse, I was just admiring the rich fall plumage of the male bird sent me last October by Mr. Edward Swift, of Elmira, N. Y. This bird, evidently a last year chick, has moulted nicely, and is as fine a specimen as one would wish to see, all his markings perfect, and the tail especially very full and long, with the two central feathers characterized by the broken irregular band at the end, while all the other tail feathers are banded in clear black and white. When he came to me, a year ago, he was the wildest specimen I had ever received, having been but a few weeks from the woods. Now he comes up readily when called, and if I sit down in the coops he walks up my leg, or jumps at once into my lap, where he feeds readily from my hand. He even thinks it great fun to reach up and take kernels of corn from between my lips, a trick which he performs with great dexterity.

It still seems to me that I cannot afford to give up the attempt to rear a brood of grouse without one more effort, and I am hoping to get one or two hens this fall to take the place of the one lost last May. And if any of the readers of FOREST AND STREAM can put me on the track of any female ruffed grouse which have been "reduced to possession," I shall feel exceedingly grateful to them, and to the paper as well. J. B. BATTELLE.

TOLEDO, O., Oct. 17.

AMERICAN ORNITHOLOGISTS' UNION.—The sixth Congress of the American Ornithologists' Union will convene in Washington, D. C., on Tuesday, Nov. 13, 1888, at 11 o'clock A. M. The meeting will be held in the lecture room of the U. S. National Museum. The presentation of ornithological papers is expected to form a prominent feature of the meeting.—C. HART MERRIAM, Secretay (Washington, D. C.).

BREEDING OF GRIZZLY BEARS.—In Mr. Thompson's paper on grizzly bear breeding last week the type made him say eighty instead of sixty days for the period of young bears leaving the nest.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

NOTES FROM THE ROCKIES.

PUEBLO, Colo., Oct. 10.—At the Union depot of this town there is shown the stump of an enormous cottonwood, which bears this inscription: "Pueblo's Big Tree, the Old Monarch. Age, 380 years; circumference, 28ft.; height, 88ft." This tree was cut down in Pueblo on June 25, 1883, at an expense of $250. It was known throughout Colorado as the oldest landmark in the State. During the Pike's Peak excitement this tree sheltered many a weary traveler. In 1850 there were thirty-six persons massacred by the Indians while camping near the tree. Kit Carson, Wild Bill, Buffalo Bill and other noted Indian scouts have built their camp-fires under this tree. It is said that fourteen men were hanged on one of its limbs at different times. The first white woman who died in Colorado was buried under its branches.

VETA PASS, Oct. 11.—Morning—I woke up on the train thinking I was a corkscrew. It is only the curves.

ALAMOSA.—A good breakfast. The landlord says trout of good size can be caught near by, in the Rio Grande. Mountain sheep and deer are plentiful in the Conejos range, which we approach. Wagon Wheel Gap, just above us, is a grand locality for trout. I weep that I cannot stop off for a day at least. The mountains exercise their old fascination.

CONEJOS.—The conductor refuses to stop the train while I get off and catch a trout. He is a very cruel man.

SUBLETTE.—The country is wonderful, wonderful. Stream after stream is passed and all have plenty of trout. I am gradually growing wild. I want to fish.

FOLTEC.—A herd of fifteen deer were scared off the track near here yesterday. The Foltec Gorge is grand.

CHARMA.—A good dinner. Chief of interest, however, is the fact that a man caught 27 nice trout here yesterday.

MONERO.—Miners near here to-day killed a big bear, not over a mile and a half from the railroad.

TOP OF THE CONTINENTAL DIVIDE.—I have just taken a subscription for FOREST AND STREAM. That is all right. FOREST AND STREAM always is on top.

AMARGO.—Twenty-eight miles north of here, in the heart of the unbroken wilderness, are the wonderful Pagosa springs, whose medicinal properties are known all through this section, and should be through all the country. The little community about these springs has in it some splendid fellows and genuine sportsmen. I doubt if a better point could be found for the summer visitor who comes West. Bear and deer are numerous near at hand, and you can catch three-pound trout almost from the hotel door. The scenery is magnificent. The San Juan, Piedra, Blanco and Navajo rivers are all easily accessible, and all swarm with trout. What more could you want?

EN ROUTE.—The Navajo and San Juan rivers tumble along beside us, mile after mile. They are magnificent. The air is full of trout. The conductor will not stop the train. This isn't right—to be so near to such streams and not to fish. Four wild turkeys are seen running up the side hill near by. A coyote races with us. Numerous wickiups of the Jicarilla Apaches are seen along the way. These Apaches were put on the Mescalero reservation in New Mexico in 1883. I lived there then and know how troublesome they were. They have since been allowed to come back here to their former reservation. Further down we see the tepees of the Southern Utes. The Government gives them canvas to cover their tepees. They cut big round man-holes in it to make it look natural.

IGNACIO.—The Pine River here affords the finest trout fishing in the world. I shall go wild. My watch has stopped. This is enough to stop a clock. But the conductor won't stop the train.

DURANGO.—Better and better. Within thirteen miles of here, up Junction Creek and in the Hermosa Mountains, bears can be found any day the hunter likes. Mr. S. G. Lohr killed a big cinnamon to-day within five miles of town. He says he knows where five more are, not any further off than that. Last week Messrs Ed Ray, G. W. Kephart, Charles DePauw and B. W. Ritter brought in a noble bull elk from the La Plata and Hermosa Divide. This is the last house in the row. I don't see why anybody lives anywhere but here.

Mr. J. A. Butler, ex-member of the Legislature, planted down fifty Nebraska quail near here last March. They stood one severe snowstorm all right, and are now all alive and lively in their lofty mountain home. Mr. Butler is active in urging measures of prevention of the horrible waste of fish life now in Colorado, and of which later mention will be made. Mr. Butler shot some ducks at Alamosa yesterday. It seems strange, but great numbers of ducks follow the Rio Grande through the mountains. Over a hundred a day to a gun is not unusual at Alamosa when the mountain flight is on. It is too early for that now.

Durango is a grand town and beautifully located. The delightful Animas River tumbles right through it. There is an excellent hotel—the Strater House—and the men of the town are such fellows as you don't see outside the mountains. I wonder how many trout streams there are near here? We have crossed dozens of them. I am coming back here again, if I live.

Oct. 12.—With heartfelt regret I turn East. It is simply horrible to be forced to leave all this great country untried. But what I can't do, some other fellow will tell to FOREST AND STREAM from this country.

EN ROUTE EAST.—The wonderful, wonderful, noble mountains! They are so grand.

ALAMOSA, Oct. 12.—Human nature can stand it no longer. I am a frail and human man. I don't care what becomes of the country during my absence, but I wish I may die if I don't stop off right here and go fishing! I will not have it said of me that I weakened in the hour of danger. Here goes! I feel better already. My watch has begun to run. We're all right!

PUEBLO, Colo., Oct. 13.—On the way up from Durango I met Special Land Inspector Barnett, who has spent the past six months on the Ute agency at Ignacio. Mr. Barnett tells me that the country about Ignacio is a wonderfully attractive one to the sportsman. He caught twenty-seven fine trout in the Pine River the day before he left and last week killed a bear, besides several turkeys.

Indian Agent Van Neff, of Ignacio, says that bears are numerous between the agency and Pagosa Springs and that anybody can kill turkeys and deer who will take the trouble to go after them.

At Chama bears are reported unusually plentiful in the adjacent range. A. D. P. Coupe, an English hunter, who has been in the range over a year, is now over on the Brasos. He and his party have killed over forty bears this fall. Mr. Coupe has four or five men in his employ and is having a grand time. He had just sent over to the railroad after a photographer as I passed his station.

A band of sixty-three elk is on the range between the San Juan and Alamosa mountains. Bears are reported numerous within twenty miles of Wagon Wheel Gap; and parties in Alamosa also claim to have located a small bunch of mountain sheep.

Mr. Baker, of Baker's ranch, ten miles from Ignacio, caught a large bear in a trap last week. He has taken several in this way.

Mr. H. M. Morse, perhaps as old and experienced a hunter and trapper, and one as familiar with Colorado as any here or elsewhere, says that he can reach elk within a day's drive from this point. He also has a small band of mountain sheep located. Mr. Morse killed an antelope last week on his ranch, about thirteen miles from town, I believe.

The boys here report great numbers of ducks at the stone quarry lakes, about fifteen miles north of town. A few canvasbacks are seen among the teal.

La Junta reports plenty of ducks and geese on hand and accessible.

The trout season is over, but a great many trout are still being taken. They lie deep and prefer bait, rising to the fly readily only in the middle of the bay.

E. HOUGH.

THE MAINE DEER SEASON.

Editor Forest and Stream:

The deer question promises to excite considerable interest in the Maine Legislature this winter. It is understood that the Commissioners are in favor of opening either a part or the whole of September to the legal hunting of deer, and it is certain that sportsmen and guides will generally favor such a measure. Under such circumstances it would seem that the measure would reasonably be sure of success. But it may not be a success after all, though the Commissioners feel certain that could dog hunting and crusting be generally stopped, the deer of Maine could still be trusted to keep on increasing though the month of September be opened to still-hunting. The lumber interest may kill such a bill. In the first place, there is a feeling among some of the large owners of lumber tracts in Maine that they do not desire the presence of hunters in their region. They say they fear their fires. The men who do the lumbering are many of them willing to let the deer remain unkilled by sportsmen till the loggers arrived. Every moose or deer killed saves so much beef. This is not true of all the loggers, and indeed the feeling is rather confined to the eastern section of the State. It should be stated in defense of the people who lumber for E. S. Coe, who, together with the Pingree heirs, is the largest owner of lumber tracts in the State, that generally they do not favor the illegal destruction of deer. Mr. Wilson, of the firm of Bearce & Wilson, who locates camps and has some 500 men engaged in lumbering every winter for Mr. Coe, says that he does not know of a deer or moose being killed by his men last winter. Just before Christmas they killed two caribou, as they had a legal right to do. He said that he certainly should not countenance the killing of deer by his men out of season. Indeed, his men have no time to hunt. They must be at work at daylight and work till dark on week days, and on Sundays they mend their clothes. Neither should he permit the harboring of hunters in his camps who proposed to hunt deer or moose out of season. Would that there were more managers of camps like him. He is something of a sportsman himself, and believes in legal protection of game in certain seasons of the year.

But the deer law is not obeyed as it should be in other parts of Maine. It is notorious, if a fact, that certain Boston sportsmen can visit Alligator Lake and there find dogs and guides in waiting, and deer can soon be brought down to the water. I have only the statement of one who says that he did this thing a year ago and said that he could do the same thing this year, did time permit him to take the trip. He says the dogs are ready there for those who have the password and the grip, each properly oiled with cash. My informant is a Boston merchant. Again, the jacking of deer has been practiced this season more than would at first appear. Now I must tread on the corns of Mr. John Danforth of Parmacheene Lake—that is, if he has corns in the direction I shall hit upon. A perfectly reliable Boston merchant tells me that deer jacking has been considerably practiced at Parmacheene this fall, and that, too, in September. He says that it is done without the knowledge of Mr. Danforth, or at least, if one wishes to go deer jacking in September, he, with guide, must steal away from camp, and keep the trophies from the sight of Mr. Danforth. But the thing has been done this year and in September. The gentleman—my good friend Commissioner Stilwell would hardly admit that he is a gentleman—does not say that he killed a deer in September there himself, but he was there in September and he shot a deer, or at least he began his account with the manner by which he paddled him up to the game. He says that Mr. Danforth is in no way to blame for this illegal jacking. He claims that it is the result of a law too strict in the point of prohibiting hunting deer in September. His idea is that every guide in the Parmacheene region would stand up for the law, were it changed so as to allow hunting in September. He feels certain that these very guides would, under no circumstances, "float" a sportsman in June or July; since he heard them express a good deal of feeling against a man who would kill a deer in summer, when the young are helpless.

If this gentleman is right, then the sentiment is certainly better than it is in the Dead River region; for it is a fact that deer jacking was done there in the early summer this year. The result of camp keepers and sportsmen or guides shooting each other has already been told

of in the FOREST AND STREAM. Again I met a fond father some time in August, when the conversation turned on hunting and shooting. His son had just returned from the Dead River region. He had shot a deer. He was paddled up to the animal in the night time. At least such was the account he gave his fond parents. Now I do not make these things public for the sake of hurting the feelings or the cause of my good friends the Maine Fish and Game Commissioners, but I tell the story because I believe that every honest sportsman who goes into Maine and does not break the laws, and there are many hundreds of them, is entitled to the fact. I also make the above statements now, since the Maine Legislature is to convene this winter, and a knowledge of the true state of affairs is essential to better legislation. The State should give the present Commissioners funds sufficient with which to enforce the law, especially in regions no more remote and as much visited as Alligator Lake, Parmacheene Lake and the Tim and Seven Ponds.

As an item of good news it may be mentioned that Mr. Frank Thomas, Andover, Me., has this fall been elected a member of the Legislature. Frank has guided a good deal in the Richardson Lake region, and an excellent guide he is. He has helped take more than one deer. In one instance he was the guide of Omer Whittemore and Geo. T. Freeman, of Arlington, Mass., when they killed a deer at the Cranbury Bog early in October. The night was so cold, however, that the water froze in the coffee-pot only twice the length of George's gun barrels from where the fire was till it died down toward morning. The next morning that deer had to be toted out to the lake, two miles and a half, through a rough carry. Frank, now a member of the Legislature, held up his end of the pole against both Omer and George. The deer dressed off some 150lbs., but it weighed more than 500 before the boys got it out of the woods. Mr. Thomas will probably take with him a petition from Andover, asking that the deer law be so changed as to permit hunting in September, and he will also be ready to help any measure that shall better protect the deer in other seasons.

Deer shooting in the woods of Maine has not yet been much of a success on the open season this year. The general verdict of those who have tried is that there are deer enough—more than they expected to find—but there has been no success in getting them. In the first place the weather has been remarkable for both rain and snow, while at the same time the light and damp snows began to come before the leaves had gone from the trees. Hence the tendency of the snows has been to load down the limbs and twigs of the forest, and thus to make successful deer stalking almost an impossibility. Mr. N. G. Manson, well known in the iron trade of this city, with his friend Mr. Young, also of the iron trade, has just returned from a hunt in the vicinity of the Rangeley Lakes. They saw five deer, or at least deer at five different times, but did not kill any. The weather was made up of either snow or rain generally when they were hunting. A short time from camp, especially on the snowy mornings, would bring them on to the tracks of deer, but generally the deer was hard to find till he had taken alarm, owing to the difficulty of moving in the woods where the twigs and smaller growth were bent down with snow. Mr. Young, whose first trip this was, is much pleased with the number of deer that must exist on the ground they hunted over, and he declares that he will try again.

Mr. Louis Hartley, with his brothers of the wool trade in this city, will take a try for a deer in the Maine woods, before Louis goes back to England. Mr. Hartley is an Englishman. He is much pleased with this country, and says that if all the stories that he has heard about hunting in the wilds of Maine are half true, he shall be more pleased with the country than ever. He is fond of shooting, but about all the shooting he has ever had the privilege of participating in has been rabbit shooting.

Now and then a deer carcass gets into the Boston market, I saw several the other day. They were evidently from the West, but they set me to thinking that it will not be long before they will be seen, occasionally, from Maine, though how they get into this market will not be apparent. Smuggled in is about the only satisfactory answer. This matters not to the commission marketman; his commission for selling is all that he cares for. He will not give away either the shipper or his methods; it would mean a loss of trade to the merchant. But the shipment of a deer from Maine has been accomplished without any form of secrecy this fall. A Boston merchant, in the machinery trade, has lately returned from a successful hunting trip in that State. He shot a fine buck, weighing nearly 300lbs., and he brought it along with him. He took it to the train on the Maine Central and suggested that it be put on board the baggage car. The baggage master refused to receive it or have anything to do with it. His orders are not to receive game for shipment out of the State, the same being in violation of the statutes. But the Boston merchant remarked that he could not go himself without his property, and that the deer was his property. He should put the deer on board the car, and take care of it himself. If the company desired to charge him for extra freight or baggage they could do so, but his property must go along with himself. It was legally killed in open season. He, with the assistance of his own man, put the deer on board the car, and it came all the way to Boston without further trouble. SPECIAL.

GAME AND GAME GROUNDS.

CLEARFIELD, Pa., Oct. 18.—I have been out in the Alleghanies on my annual deer hunt. We hunted but three days owing to bad weather, and at some disadvantage, owing to the fact that the leaves are still upon the bushes and trees. We killed one four-prong buck that weighed 175lbs., and nicer venison one would not want to eat. We find the deer very much scattered, owing doubtless to the great abundance of chestnuts and beechnuts, on which they are now feeding. We found grouse plenty and in fine condition. Squirrels are very scarce. We found signs of bears very abundant, and one of our party came very nearly getting a shot at one old fellow who was "lopping" a chestnut tree, but who was frightened away by our dogs. After the election we propose having another hunt, and some time we may give you a more extended account of some of our grand old hunts in the mountains.—F. G. H.

HOLLIDAYSBURG, Pa., Oct. 17.—The fall shooting in this vicinity is about as usual; ruffed grouse seem moderately plenty and some fall woodcock have been killed.—T. E. D.

ALL-AROUND RIFLES.

Editor Forest and Stream:

I have read with interest the article by "Iron Ramrod" in your issue of Sept. 27, on rifles for small game.

I have always been fond of the rifle, and though I have never been much addicted to target shooting, I have used the single bullet a good deal against game. For the last few years, however, my shooting has been with the shotgun, and partly for the reason that I have found nothing satisfactory in the shape of an "all-around rifle." In this region one is when shooting, often liable to see a bear, and for such cases I habitually carry a few buck-shot cartridges.

Your correspondent appears to have found at last the style of rifle which might meet the requirements of men like myself, and I venture to supplement his idea with one of my own, which is, that as the quality wanting in the piece he recommends appears to be its want of adaptation to the shooting of moose or bear (there are no moose here), I would suggest that an explosive cartridge ought to meet this want.

With a long bullet, hollowed at the point so as to receive a .22 blank cartridge, I think that one might feel safe in shooting at a common brown bear, even with a .32-caliber rifle.

I shall be glad to learn the opinion of the correspondent referred to, as to this suggestion. KELPIE.

CENTRAL LAKE, Mich., Oct. 17.

THE CAMP SAVOR OF GAME.

NEVADA, Oct. 13.—*Editor Forest and Stream:* I see in your last number an article from "Ebeeme" as to which was the most savory of game meats. I have never heard of beaver meat being considered a dainty, leaving ing out of consideration the tail and the liver; the latter is considered equal to chicken liver, and the broad flat tail—ye gods and little fishes! Take it, old or young, impaled upon a sharp stick, hold it over the coals a few minutes, when the rough, scaly hide will blister and come off in silps and sheets without any trouble, leaving the tail clean, white and solid. Now put it in the camp kettle and boil until tender; place in a jar and cover with good vinegar. As Burns has it, "Fancy's flight her wing maun cour." I have seen nothing yet to equal soused beaver tail. Or cook it with a pot of beans, then place them in an old Dutch oven, dig a hole in the ground, put in the hole hot coals and ashes; on this place the oven and let it bake slowly for ten hours *à la* Boston beaver tail and beans. I believe it was the mess of pottage for which Esau sold his birthright, and I don't blame him.

I have eaten beaver flesh of every age and cooked in many ways, but never liked it, and never saw any one who cared much for it. Perhaps the feed is not so good in the Northwest for making good meat as that further East. The oil is very much prized by hunters and trappers for cooking. I have eaten prairie dogs and think them equal to squirrel. Being hard up for fresh meat while in the Siera Prietta Mountains in Arizona, I shot a ringtail wildcat and made a pot-pie. It was very fat, and the meat seemed to have a very smooth, slippery taste. Then it was cat. I don't like cat, and my "pardner" of that time did not either. J. J. F.

A DAY'S SHOOTING IN MY MARYLAND.

II.—AFTERNOON.

AFTER our chat, following dinner, we set out once more; and taking opposite directions hunt two fields without a find. As we enter the third field Sport stops on the top of the fence, hanging as it were in mid-air, and we know the birds are directly under his nose. Flora, at a signal, comes up and stands firmly on a back, while Dash, who is some distance off, is let run. We cross the fence, go out in the field, turn and walk toward the dogs, which is the hardest test you can give them. The birds rise confused; we get in our four barrels, but only one bird down on a tipped wing. "Too much dinner, old fellow," B. says in his quiet, quaint way, while Sport, although at charge, looks the deep disgust he feels. For this winged bird we had a hunt, as he ran, but after a long trail Dash came to a point and we had him. Never give up a wounded bird, but find him if it takes an hour. It will improve the dogs.

The birds flew to a swamp, where in the middle was a firm place, about forty yards long and twenty wide, surrounded by bushes and greenbriers. Here I had splendid shooting, and got some ten birds over as many separate points, as the covey lay close. I noticed Sport at a greenbrier, looking in a quizzical, uncertain way, and gave it a shake, when up sprang a woodcock and settled down about ten yards distant. It was too thick to shoot if I flushed him, so I took aim at his large, expressive eye, put one shot just above it, and saved his bacon. It was the largest one I ever saw, weighing 9½oz. and measuring 17in. across the wings. I am no advocate of summer shooting, and you men who call yourselves sportsmen and kill the half-fledged younglings in July, do not know the excitement of shooting nor the enjoyment of the flavor of woodcock killed the last of October. We got several that day, but this was the only one shot sitting. As we were going out of the field, B., who would not often shoot at the rabbits, because so heavy to carry, saw one sitting, and picking a stone he threw and killed it, which was a good joke, as he had to carry it. We shot until dusk, having a fine day's sport, and getting a bag which for variety only the woodlands of our own dear country will furnish. Sixty-six partridges, some woodcock, several rabbits, a few larks and other smaller game. I shot at a wood duck, but missed, while B. winged a pheasant (ruffed grouse), but did not get it. B. had three more partridges than I.

After a light supper we bade our kind host good-bye; our ride home was pleasant and exhilarating. The dogs, who were tired enough, curled themselves up in the wagon and slept the sleep of the righteous; we were received by our wives with that joy and gladness which ever attends the meeting of the loved ones. Mine has long since gone to her last sleep, while Mrs. B. lives to add joy and peace to my friend's life, and shed a halo of happiness and love around his beautiful home.

At the risk of being tedious, I wish to say a word or two about dogs. It always has been, is now, and ever will be, a moot question among sportsmen whether the setter or pointer is the better dog. The two above named were nearly perfect specimens of their class. Sport was the best pointer I ever saw, and I have seen him go in greenbriers of his own free will and come with his sides lacerated and bleeding, but he had extraordinary nerve. In dry, hot weather he could find more birds than Flora, but in rough, cold days she was his superior. Pointers will suffer from a little cold, while setters will give out entirely in hot, dry weather. I have seen them exhausted, but a lap of water and a roll will put them all right. My advice to youngsters is, to procure a brace, one of each. The pointer after being broken once will always be broken, but will never be so affectionate and so companionable as a setter, who will, no doubt, have to be flogged several times at the commencement of each season, but he will forgive you, and lick the hand for a caress and go to work in good humor. The best dog I ever had was an English setter of native breed, once removed from imported stock. He would work to perfection in the open, slowly and carefully in the cripple, cautiously in the woods, and take water and retrieve like a Chesapeake water dog. Of his exploits I may tell you anon. JOSEPHUS.

CECIL COUNTY, Maryland.

SHOT AND POWDER MEASURES.

Editor Forest and Stream:

Whether the dram used as a measure of powder is an arbitrary quantity now or not, I am satisfied that it was at one time the dram of avoirdupois weight, in which 16drs. makes an ounce and 16oz. makes a pound. My father, who is an old-time sportsman, has informed me that the graduated thimbles of the old-fashioned powder flasks measured off drams which, by his personal test, were equal to $\frac{1}{16}$ of an ounce, and I have recently talked with other old sportsmen who have made the same test with a like result. The cups now used to measure powder for loading shells vary considerably in the quantity of powder in their respective drams, and there are considerable differences in the weight of a dram of various kinds of powder. An ounce of No. 12 shot (Dixon's loading cup) weighs more than an ounce avoirdupois, and a measured ounce of No. 1 shot weighs less than an ounce avoirdupois. SENECA.

NEW YORK, Oct. 16.

HUNTING NOTES FROM THE ROSEAU REGION.—Hallock, Kittson County, Minn., Oct. 13.—The Hallock *Enterprise*, our local paper, of this date contains the appended hunting notes. The attraction to this region is greater than ever, but several parties who contemplated coming have failed to show up. The Mershon party from East Saginaw, Mich., took their hunting car as far west as the Bad Lands of the Little Missouri early this month, and returned on the 17th regretting that they had not carried out their original plan to go to the Roseau. However, this leaves more game for others. I quote what the *Enterprise* prints as follows: "Beautiful Indian summer weather, and the farmers are improving every opportunity.—Scott Riddell and Al Suffel started for the big lakes in the Roseau country last Saturday.—On Monday morning John Websterson, W. H. Alley and Ole Johnson left for the Roseau valley.—Last week Messrs. Vasterline and Maran, of St. Vincent, and Messrs. Kabenogle and Moorhead, of Pembina passed through Hallock from the Roseau well loaded with game.—Several parties have made trips out east to the Roseau the past week to hunt geese and ducks.—Last Friday morning mine host Woodworth, of Hotel Hallock, Dean Benson and the sporting editor of the *Enterprise* left Hallock for a two days' shoot among the eastern swamps. Ben Thrane took Ole Peterson along to help load the game. At daybreak we started for Benson's favorite spot about five miles east, when we found game in abundance. At four o'clock we were ready to start home, and when camp was reached we counted out forty-seven ducks and thirteen geese. Ben and Ole came in later in the day with a good supply." Next month big game shooting will be in order. Last year seventy-six elk were killed, besides deer, moose, bears, etc.—QUACK.

ONE OF FRANK FORESTER'S GUNS.—Hollidaysburg, Pa., Oct. 17.—*Editor Forest and Stream:* I recently had the pleasure of examining and handling a valuable relic of Henry W. Herbert (Frank Forester). It is a fine old double gun, 14-bore, weight 7⅛lbs., 29in. twist barrel, with platina vents, and marked "James Sperling, London, Maker to Royal Family." It has a handsome straight stock and is in fine condition. The locks are the finest I ever saw, and finished like the works of a chronometer. The breech, hammers and lock-plates are finely engraved, and the gun case is solid mahogany, lined and partitioned with leather, brass-bound and engraved, and on the name plate is the name of its famous owner, "Henry W. Herbert." The gun was imported by Mr. Herbert, and is said to have cost £40 in London. Some time before his death he presented the gun and case to Major John W. Duncan, who was at that time an army officer stationed at Pittsburgh, Pa., and was a son-in-law of the original "Iron King" of Pennsylvania, Peter Shoenberger. Over thirty years ago Major Duncan exchanged the gun for a fine fly-rod to H. S. Van Tries, Sr., in whose possession it has remained ever since. Its shooting powers are unimpaired, for with it 18 out of 20 bluerocks have been broken at 18yds., single traps, and some modern chokebores won't do any better.—T. E. D.

THE GAME LAWS OF NEW JERSEY have been published in pamphlet form. The compiler is Mr. Chas. A. Shriner, secretary of the Passaic County Fish and Game Protective Association and fish warden of Passaic county; the work was done under the direction and supervision of Hon. John W. Griggs, late President of the New Jersey Senate, and was revised by him. The book contains all the numerous laws relative to game and game fish, the rights of property owners and associations, forms for the prosecution of offenders, and a great deal of other matter of interest to persons who hunt and fish in New Jersey. It is a complete compilation of all the game and fish laws passed by the Legislature of the State. The price is 50 cents, and copies may be procured from Chas. A. Shriner, Paterson, N. J.

PHILADELPHIA, Oct. 22.—*Editor Forest and Stream:* The writer has seen three bunches of quail, one bunch of ruffed grouse and several bunches of rabbits. Where do they come from? The law is not up until Nov. 1 in Pennsylvania, I think.—R. L. L.

NATIONAL PARK PETITIONS.—The following names have been appended to a copy of the petition sent from New Jersey: Henry N. Dodge, M.D., Susan M. Dodge, Mary D. Dodge, Julia E. Dodge, Louisa M. Horne, Ella Dodge, Delia B. Merritt, Mary H. Maury, James F. Maury, Elizabeth Maury, Alfred Elmer Mills, Kinsley Tivining, Norman Fox, Fred G. Burnham, C. L. H. Burnham, Kate H. Hilliard, John C. Beatty, Julia E. Soutter, Hetty B. Beatty, Caroline H. Marsh, John Marsh, H. O. Marsh, Sadie Pitney Johnson, L. Juliana Halstead, Frederic Vernon Pitney, S. R. Cooper, Arthur Dodge.

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

GUT LEADERS.

THERE are few American anglers, I should imagine, who have not at some time or another had cause to deplore, or, perhaps, if not properly brought up, to execrate at the loss of a fish because of a defective or inadequate gut leader. It is, not infrequently, a difficult matter to get either good leaders or good gut at anything like a moderate cost. The silkworms have the pip, there is civil war in Spain, the gut is cornered by dealers in futures, or there is some other excellent reason for putting a stiff price on a hank of the best gut. Then, again, the question arises, do we on this side of the herring pond get any of the very best gut, whatever may be the price? I am inclined to think not, and in saying this I have particular reference to extraordinarily heavy salmon gut.

I once bought of a man new in the business ten hanks of as good gut as is often seen in this country at a price that was akin to burglary, but his second bill rectified all previous errors and made me think the dealer should be indicted for manslaughter. London is the chief market to which most, if not all, of the dealers in fishing tackle are obliged to go for their silkworm gut, whether it be Spanish, Indian or Chinese. Unless the dealer has a factory in Spain, separate and distinct from the castles in Spain, which some dealers have; and it would appear to a man up a tree that if the London dealers have the first whack at the gut crop they are intelligent enough to take the cream of it. This may be disputed by some of our own dealers, but the proof of the pudding can better be established when it is first made than when it is warmed over. If we do not have the very best salmon gut it is posssibly because there is not a demand for it, or because our method of fishing for salmon from a canoe instead of floundering along the shore, does not require such particularly strong gut as I have designated as very best. I quote from Mr. H. Cholmondeley-Pennell in "Fishing" (Badminton Library) to better illustrate what I mean when I say I do not think we get the very best gut. "The breaking dead weight strain of a strand of the stoutest salmon gut, round, smooth and perfect in every respect, ought not to be less than from somewhere between fifteen and eighteen pounds. For gut of extraordinary quality and strength, as much as from £5 to £7 per hundred strands, wholesale price, is now stated to be frequently paid. Some samples of the 1884 crop, tested by my friend Mr. R. B. Marston, broke at a dead strain of seventeen pounds."

Do we have any such gut? Twenty-five to thirty-five cents per strand, wholesale, is a very snug price for gut. Major Traherne, in his excellent article upon salmon fishing in the same volume from which I have just quoted, says that he tested a casting line (leader) and broke it at 15lbs.; and two strands brought his steelyard down to 20lbs. without breaking.

To Mr. R. B. Marston, editor of the *Fishing Gazette*, I am indebted for repeated favors in the way of specimens of English fishing tackle. In one of his last letters he sent me samples of leaders of twisted and of gossamer-drawn gut, tied by Mrs. Bulmer, of London.

I have tested the leaders, not exhaustively, and will give the details. In Mr. Henry P. Wells's book "Fly-Rods and Fly-Tackle," page 70, can be found an illustration of a gut-gauge. Mr. Wells presented me with a gauge from which, I believe, that illustration was drawn. One limb of the gauge has marks which separate it into tenths of an inch, the other limb is marked after Stubb's wire gauge, and as the latter only will convey an idea of relative size to my readers I will use that. The coarsest that I can measure is 26, the finest 32, as the slit below 32 is filled with solder. The Bulmer leaders of drawn gut are three yards in length and tapered from 32 to so fine that I have no means of measuring to convey the size in a letter. I think, however, that I have seen hairs from the human head that were coarser than the fine end of one of these leaders. I soaked one of these, and while it was soft tested it with spring scales. It first broke at one pound. I tied another loop on the broken end, and at the second trial it broke at three-quarters of a pound; the third time it broke at the same notch; the fourth time it broke at one pound; the fifth time at one and three-quarters of a pound, and the sixth time it did not break at two pounds. After breaking the leader five times it was 9ft. 6in. long. The five breaks were all in three lengths of the fine end of the leader, and all were between knots. I examined pieces of the fine end that were broken off under the test under a microscope (magnified 100 diameter) and found the mark of the drawing tool remarkably even, without the little wavy lines sometimes seen in drawn gut so magnified. The sides were smooth and did not show any fraying, fluffing or peeling, as the turning up of fine fibers on the surface of drawn gut is variously called. This very fine-drawn gut is not necessary for leaders to be used in American waters, except on rare occasions. The Bulmer leaders of twisted gut are also tapered. The gut is twisted in ordinary lengths and the lengths tied together, and the knots whipped with silk and shellacked. In the Wells gauge one of these leaders measured (Stubb's wire measurement) 26 at the coarser end and 28 at the finer, and the leaders are very evenly twisted and smoothly finished. I tested one, dry, at 5lbs. without breaking it. I have never used a twisted leader, but shall give these a trial in fishing another season and see how they wear.

I tested two leaders of salmon gut made by Forest & Son, Kelso, Scotland, for which I am indebted to Mr. James B. Baker, of Elizabeth, N. J. In one leader I could not find a single gut length that would enter, any part of it, the Wells gauge, and this leader did not break at 10lbs., which was the greatest strain of my scales. The other leader had one length only that would enter the gauge, and that marked 28. A 9lb. strain broke that particular gut length, when I cut it out, retied the leader, and it withstood 10lbs., the limit of my scales. Some years ago Mr. Allen Gilmoeir, the well-known Canadian salmon angler and owner of the Gadbout River, sent me some of Forest's salmon flies, and with these some gut lengths to attach the flies to a leader. I tested these gut lengths, as I find from a memorandum, at 10lbs., without breaking either. Of course natural (undrawn) gut is to be preferred to drawn gut, if it could be obtained fine enough. About the best fine natural gut I ever saw for roundness, smoothness, fineness and length, measured in a Wells gauge about 31, but a trifle heavier than that figure. I tested a 3yd. leader made of this gut that I used this season, and it broke at strains from 2lbs. to 2¾lbs. I could not tell just how much I had used the leader, but it showed considerable wear. When gut, which is nothing more nor less than the silk sacs of the Chinese silkworm (*Bombix mori*), is stretched and dried, it is covered with a yellow skin or envelope, and in this condition, all sizes and lengths together, it is sold by the peasants at the factories by the pound. There it is bleached, sorted and tied in hanks for market.

GLENS FALLS, N.Y. A. N. CHENEY.

POTOMAC FISHING NOTES.

ALTHOUGH it is quite late in the season, Potomac anglers are having good sport, and nice strings of fish are brought in. At Great Falls, Seneca, Muddy Branch, Point of Rocks and other noted places between Washington and Harper's Ferry, a great many bass have been taken, and enthusiastic anglers count on having several weeks of fishing yet before cold weather shuts them off. I have had some fair days right here within sight of the Washington Monument, between Aqueduct Bridge and Little Falls. One day last week I caught a 2lb. bass within sound of the bells of Georgetown College, and added five striped bass and three channel catfish, averaging over a pound each, to my string before I stopped for the day.

Three months out of the past six the water has been too muddy for fishing; and for a time in the early fall it seemed it would never get clear. I waited a week at Point of Rocks in September, and then returned disappointed. Some days it would be muddy on both sides of the river and quite clear in the middle; then one side roily and the other clearing up. But rains came in time to dash all hope and play the mischief with long-anticipated vacation.

Recently a great number of striped bass have come up the river, and many have been caught. At the Navy Yard men and boys have had excellent sport, one of the latter catching thirty-five in two hours, one of which weighed 6lbs., the string aggregating 35lbs.

There has also been an influx of channel catfish, clean, lithe, good-looking fellows, that run from ¼lb. to 2lbs. in weight, and look first-rate on the string, even along with black and striped bass. A few anglers have succeeded remarkably well in catching carp, some of which weighed from 10 to 20lbs. each. One of the most successful of these anglers made a paste of flour and corn meal, which for bait he tied up in small pieces in mosquito netting, using small O'Shaughnessy hooks on strong snoods. I never hear of any one eating carp; it is the sport of catching that leads in the enterprise. J. C. B.

WASHINGTON, Oct. 22.

TROUT AT THE UPPER DAM.

SPRINGFIELD, Mass., Oct. 15.—*Editor Forest and Stream:* Your articles by "Special" in recent issues, on "Maine Fishing" and a case of jigging at Upper Dam, have unusual interest for those who, like myself, have just returned from the Rangeley waters. While at the Rangeley Lake House the last week in September, a Mr. Randall, of Orange, N. J., talked with us freely of his trip to Upper Dam, and of some unheard of trout fishing that he and his guide saw. The guide was Warren Stevens, one of the oldest and most reliable guides on the lakes, as I was informed. They both said they saw a sportsman casting from his boat in the swift water, just below the pool; his guide sat in the bow intently watching the rapid water; suddenly as a big trout passed up the guide turned his eye to the pool where the fish had halted, threw a heavily-loaded line into the still water and with a jerk hooked the trout. The pole was handed to the sportsmen and the fish was hauled in tail first.

According to Mr. Randall and his guide Stevens this novel method of catching big trout was repeated several times with the same result, and acting on their account Mr. Huntoon, the Rangeley game and fish warden, who exposed Messrs. Stewart and Hollingsworth last year, was sent to investigate. When he returned he reported that he found several large fish, but could not detect the marks of the jig, and gave his opinion that the fish he saw were illegally caught with a net.

Since my return home, I have received a call from Mr. Peck of Waterbury, Conn., a well known sportsman, who has been at Upper Dam spring and fall for a number of years. In comparing notes about our autumn trips I recalled the incident above related, and Mr. Peck manifested much regret that the statement of Mr. Randall and his guide had made such an impression on the sportsmen at the Rangeley Lake House. He declared the whole thing to be a mistake, for from his positive knowledge there had been no illegal fishing at Upper Dam during the season. He states that the man whom Mr. Randall saw was a Mr. Hill of Boston, a perfectly honorable fisherman, and his guide was Charles Cutting of Andover, whom "Special" mentions in his letter of the 27th as a famous cook and companion. Mr. Peck asserts that Cutting, being desirous of getting several large fish for Mr. Hill to take out with him, packed a gang of hooks with worms and caught in a perfectly legitimate way the fish which Mr. Randall saw lifted into the boat as he supposed tail first.

Now, let your readers take these statements for their face value. Doubtless Mr. Randall was mistaken, or as one who is acquainted with the facts states, it may be an instance of the ill feeling between the Rangeley and the Andover guides. Such stories are apt to arise from the jealousy of these men, who, although extremely loyal to their patrons, often entertain a most intense hatred, and are too ready to get each other into trouble. But taken for what it is worth, this incident plainly enforces the feeling among sportsmen against illegal fishing and the demand for careful watching about the waters of Upper Dam.

The Commissioners have closed Rangeley and Kennebago rivers. Why not close the passage from the big lake to Richardson, swift water and pool, after Sept. 1? Such legislation would remove temptation from a number of fishermen who have not the moral courage to control their instinct to get big fish by illegitimate means. A large number of sportsmen whom I have recently met look to the FOREST AND STREAM for help in this matter. They feel that you deserve warm thanks for the thorough and painstaking manner in which the Stewart investigation was prosecuted last year. And now they want you to emphasize the fact that men who go to the Androscoggin lakes for legitimate sport have some rights which the Lewistown Water Power Co. are bound to respect. The company have acquired liberal privileges of flowage, but they have no right to stop the run of fish. They have laid out so much money on the big dam that they do not want to build the necessary fishway. And so they have pledged themselves to stop illegal fishing, yet it is feared they have winked at it this season as last.

W. F. STURTEVANT.

PITH AND BRAINS.

THE English chub fisher has evinced great ingenuity in the matter of baits wherewith to entice his favorite game. He has searched the earth, old stumps, and all kinds of vegetation for worms, grubs, and other animal life, and even the large mammals are called upon to furnish a *bonne bouche* for the palate of the chub.

Mr. Alfred Jardine, in the London *Fishing Gazette* says: "Of all baits, 'pith' and 'brains' is the most deadly for winter chub fishing. Pith is the spinal cord of an ox or cow, and should be quite fresh from the butcher. Some anglers use it raw, as is usually done on the Trent; but I prefer to boil it for three minutes with a spoonful of salt in the water, then removing it to get cold, and afterward cutting it up into one-inch lengths, which are kept clean in damp calico or linen, ready for use. The 'brains' are for ground bait, and may be either bullock's or sheep's, freshly killed, thoroughly cleansed in cold water, and boiled for a quarter-hour; when cold they are ready for use. The pith is for the hook—a No. 4 is the best size. Previous to baiting, slit up the piece of pith with a sharp knife or scissors, and remove the outer skin, which is useless; then insert the point of the hook, and put it through the pith several times, until the bend and barb are entirely covered. It is a most attractive bait in slightly discolored water; also kills well in clear, on frosty days, if the rivers are free from snow-broth. The brains can be minced, or, if preferred, chewed by the angler as he uses them, and, if this be objected to, squeezed in the hand held under water; but any way, they must be used very sparingly for ground-bait; nor is it necessary to bait a swim beforehand, as seldom more than two or three chub can be caught in the same place, without scaring the rest."

The late Greville Fennell, in writing on the subject of pith and brains, told the following story:

A medical friend of his, very fond of chubbing, started for some favorite boughs, where on arriving he found another angler had appropriated the swim.

"Good morning, sir," said the M.D.; "have you had any sport?"

Angler replies—"Only one or two small chub."

M.D.—"What baits are you using?"

Angler—"Greaves and worms."

M.D.—"Try them with pith and brains."

Angler—"I have none."

M.D.—"You are welcome to some of mine; I have plenty."

Angler chews the brains, spits them in, baits his hook with pith, and gets a three-pounder the next swim.

M.D. hands him a little more brains, and another chub is caught; then a third portion is given, with the remark: "Don't fear to chew them well, for they are perfectly fresh; I performed a post-mortem only yesterday, and prepared the brains this morning."

The angler said he felt sick, and must hurry home for some brandy. So the M.D. regained his chub swim, and had a capital catch of fish, with the pith and sheep's brains he had brought with him.

SALT-WATER FISHING NEAR NEW YORK.—The autumn fishing for salt-water fish near the city is almost over. The striped bass will soon go into winter quarters and the bluefish may leave the coast very soon. The weakfish and kingfish have gone, and the coming of the tomcods proclaims that the winter season is near at hand, when they are the only fish to reward the angler in salt waters. These little fish are taken up to January along the wharves and bays of Long Island and, while they do not make much of a show in the markets, furnish much food and sport for men and boys who patiently angle for them. While not very gamy they are the only winter fish in this locality which can be depended on to take bait during the early winter months, and many tons of them are captured and sold in the villages. They vary in size from a few ounces up to 2lbs., and are a good little fish. The Long Island waters, especially those of the Sound, will soon swarm with them.

THE RAGGED LAKE CLUB.—The lake from which this club takes its name is in Franklin county, N. Y., the northern portion of the Adirondacks. The club has twenty members, all residing in Syracuse, N. Y., and Mr. A. C. Belden is its president. Three years ago it started to stock the lake and established a hatchery for that purpose. Mr. Fred Mather was employed to plan a hatchery, build troughs, trays, etc., and put it on a working basis. Last spring 275,000 brook trout were hatched and placed in the lake in May. The superintendent, Mr. Gardiner Smith, reports the brook, which feeds the lake and is only some sixty rods long, as being full of young trout from previous hatchings. The club does not own the whole lake and others fish in it, several gentlemen having camps upon its shores. If all the Adirondack clubs would follow the example of the Ragged Lake Club, that region would soon be well stocked with trout.

THE MAJOR'S YANK.—Auburn, Pa.—Does "Tile," in your issue of Oct. 11, wish us to understand that the Major "yanked" the head off of a 17lb. pickerel while trying to "wallop" him out, or did he secure the whole fish?—BON AMI.

Fishculture.

FISHCULTURE IN CANADA.

WE have the "Report of Mr. Samuel Wilmot, Superintendent of Fishculture in Canada, 1887." It consists of 45 octavo pages, including the appendices which contain reports of the officers in charge of the different hatcheries, and is largely statistical. The general condition of the twelve hatcheries now in active operation is of a very satisfactory nature. The whole of the available space for the reception of eggs in many of the nurseries is fully utilized, and with the increasing work in certain localities more room and additional apparatus will be required.

The distribution of fry hatched in 1887 from the individual hatcheries in each Province and their species is shown in the following table. But the particular waters and the numbers of fry planted in each locality are recorded in the separate reports of the officers in charge of the hatcheries.

SCHEDULE OF FRY TURNED OUT OF HATCHERIES IN 1887.

Hatchery.	Province.	No. of Fry.	Species.
Frazer River	British Columbia	4,414,000	Salmon.
Sydney	Nova Scotia (C.B.)	1,415,000	Salmon.
Bedford	Nova Scotia (C.B.)	1,350,000	Salmon.
Bedford	Nova Scotia (C.B.)	50,000	Salmon trout.
Bedford	Nova Scotia (C.B.)	2,850,000	Whitefish.
Dunk River	P. E. Island	500,000	Salmon.
St. John River	New Brunswick	45,000	Salmon.
St. John River	New Brunswick	334,000	Salmon trout.
St. John River	New Brunswick	2,100,000	Whitefish.
Miramichi	New Brunswick	900,000	Salmon.
Restigouche	Quebec	1,500,000	Salmon.
Gaspe	Quebec	630,000	Salmon.
Tadoussac	Quebec	900,000	Salmon.
Magog	Quebec	675,000	Salmon trout.
Newcastle	Ontario	2,090,000	Salmon trout.
Newcastle	Ontario	1,370,000	Whitefish.
Newcastle	Ontario	70,000	Speckled trout
Sandwich	Ontario	31,500,000	Whitefish.
Sandwich	Ontario	25,000,000	Pickerel.
Total		77,673,000	

The planting of this number of young fish in so many of the lakes, rivers and other streams of the country is a work of no inconsiderable magnitude and danger, especially when surrounded, as it is, with manifold difficulties and trials in their transport by railways for long distances; in wagons over rough and intricate roads to waters far inland; through woods and thickets by hand, and up rapid, turbulent rivers in canoes, and in scows towed by horses, in some instances a hundred miles and more beyond habitable parts of the country. Yet, with all these unavoidable difficulties to overcome, it is satisfactory to know from the evidence of numerous reliable eye-witnesses of the work, and from the officers and men engaged in it themselves, that the loss of young fish in these voyages of transportation is trifling. From lengthened experience, however, it has become demonstrated beyond a doubt that young fish, if removed at the proper time, can be safely carried long distances by land or by water if properly attended to on the journey by careful and tried messengers.

The grand total of young fish put out from the several fish-breeding establishments in Canada, since the commencement of the industry of artificial fishculture, now amounts to five hundred and forty-seven millions, one hundred and thirty-five thousand and nine hundred (547,135,900). By far the greater proportion of these, namely, 400,000,000, were of the salmon species, consisting of the Atlantic salmon, Pacific salmon, salmon trout and whitefish of the Great Lakes, and speckled trout of the streams; the balance were the *Lucioperca*, or lake pickerel.

These species comprise the principal commercial fishes which are indigenous to the extensive fluvial and lacustrine waters of the country; and thus far the artificial methods of propagation have been applied only to them, but it is confidently expected that the system will soon be applied to the rearing of many other descriptions of fishes which are natives of, or might be acclimated to, the waters of Canada.

The salmon hatched at the Fraser River Station were of two species, viz.: 3,405,000 suckey (*O. nerka*) and 1,009,000 quinnat (*O. chovicha*). It is recommended that a small steam tug be purchased to gather eggs, distribute fry, and for general service to the coast and river fisheries. All salmon hatched at the Eastern stations were the *Salmo salar* of the Atlantic coast. It is also recommended that young shad be sent to stock the waters of the coast of British Columbia, in like manner as the U. S. Government has already stocked California rivers with marked success.

There are several methods in use for securing the supplies of parent fish for stocking the hatcheries with eggs, and it is a matter of much consideration which to adopt. The great object, however, is to obtain the fish by such means as will be the least likely to injure them, for if they become bruised or wounded in their capture, many will die before they become ripe for spawning, others from the same causes will get sickly and diseased in their confinement in the retaining ponds and bring about that deadly fish scourge *Saprolegina ferax* of fungoid growth upon their bodies, which not only affects the fish outwardly, but also prevents the proper ripening of the ovaries, causing unsoundness of the eggs for healthy impregnation.

It is not only the individual fish thus affected that is ruinous to the work of obtaining ova, but it is the rapid spreading of the fungi, or disease to other fish confined in the same pond. Therefore it is of the first and greatest importance that the parent fish should be captured by such means, and with such careful handling, as to avoid, if possible, any chances of injury to their bodies when taken in the nets, that will cause wounds, bruises, or any abrasions of the skin, for it is on such injured parts the fungoid disease first takes its hold, and then spreads rapidly over the whole body till death results—when so to speak, a three-fold loss is experienced—the parent fish becomes destroyed for present or future benefits for reproduction; the thousands of ova within its body are also lost for the purposes of the hatchery, and the money value given the the fishermen for the fish is thrown away. And I must further add disappointment to the officers, and dissatisfaction to the public, as well as the Department is experienced, from inability to fill the Government hatcheries with eggs.

As previously mentioned, numerous methods have been adopted for securing supplies of parent fish, but after a close study, coupled with practical experience of this subject for some years past it has been shown that there is only one safe and reliable plan to be adopted, namely, that the Government secure the best fishing stations available in the several localities, where the parent fish of the species required are known to frequent on their migrations up river, or in the bays where they resort to spawn; and there, under the control and working of proper officers, set such nets or other appliances as are best adapted to capture the fish in the most careful and economical manner, and convey them to properly constructed reservoirs, or retaining ponds, having sufficient area and depth of pure living water, where they may freely roam about at their pleasure until the time of spawning. In this way experience has demonstrated that parent fish may be taken without injury, and kept in a perfectly healthy state until ripe for manipulation, after which they can be liberated again without experiencing any loss.

The plan adopted of purchasing parent fish from the ordinary net fisherman, while from necessity it has been resorted to, is, nevertheless, one that should be discontinued, for it is found that the owners of fishing stands, though they may get the usual market price for each salmon, cannot be made to understand, nor do they wish to comprehend, the absolute necessity there is for having the proper description of nets, and using every possible precaution and care in the handling of the fish, in order that they may not get wounded or bruised. The long-accustomed method of taking salmon from the nets in a rough and hurried manner by the fishermen cannot be overcome, especially when no object has been gained, for the fish dealers, from the great competition existing between them, care for nothing beyond the numbers and weight of salmon they may get, let them be wounded, bruised or otherwise injured as the case may be.

The experience always gained in purchasing parent salmon, as just described, has been that a large percentage of them die, or become so diseased with fungoid growth from injuries received that it will be unwise to continue it. But the correct remedy should be adopted, which is for the Government to appropriate a sufficient number of well-selected fishing stations, and carefully fish them with its own nets, apparatus and men, thus avoiding (as practical trials have shown) the unnecessary loss of parent fish, and preventing an expenditure which does not give commensurate benefits, nor such success in the work of artificial propagation as it is most desirable to attain.

THE GREEN MOUNTAIN HATCHERY.—Mr. J. L. Winchell, the well-known breeder of English mastiffs and bloodhounds, associated with Mr. M. T. Mead and Dr. O. H. Morehouse, have erected in the village of Fair Haven, Vt., one of the most complete fish hatcheries to be found, and the only one in that State. It is organized under the name of the "Green Mountain Fish Hatchery." The officers are: President, Mr. J. L. Winchell, of the Green Mountain Kennels; Treasurer, M. T. Mead; Dr. O. H. Morehouse, Secretary and Superintendent. Though not so large as many in other States (24x36ft.) it is a model of its kind; no expense has been spared, and nothing forgotten that will make it a success. They each have devoted much time to the study of pisciculture, and expect soon to have three vats filled to their fullest capacity with the eggs of brook and lake trout. They would be pleased to hear from parties interested or to have them call.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Oct. 23 to 26.—Second Annual Show of the St. Paul and Minnesota Kennel Club, at St. Paul, Minn. J. E. Stryker, Secretary, Room 98 Globe Building.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Nowman, Secretary, No. 6 Hamilton Place.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Nov. 1.—Second Annual Field Trials of the Indiana Kennel Club, at Bicknell, Ind. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

COURSING.

Oct. 23 to 27.—Meeting of the National Coursing Association, at Hutchinson, Kansas. M. E. Allison, Manager.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6666**.

CONNECTICUT CLUB.—Bridgeport, Conn., Oct. 20.—A meeting of the Connecticut State Kennel Club will be held at the Atlantic Hotel, this city, Tuesday evening, Oct. 30, at 8 o'clock. All members are requested to be present, and any one wishing application for membership blank can obtain them by addressing the undersigned.—DR. JAMES E. HAIR, V. S.

THE AMERICAN COURSING CLUB MEET.

[*By our Special Reporter.*]

MONDAY morning, Oct. 15, the opening day of the meet of the American Coursing Club, at Great Bend, Kan., dawned clear and bright, and saw the town filling up well with visitors and dog owners. The streets early in the morning were fairly alive with greyhounds, and it needed but a glance to see that among them were many of a distinctively higher class than have been commonly seen here before, as well as many of the old favorites of former years. Mr. H. C. Lowe nominates his imported White Lips, and she is a favorite. The Waterloo Kennels, of Great Bend, enter three imported dogs, Little Lady Glendyne, Lady Milly Glendyne and Trales. These are just over this summer. Little Lady and Lady Milly are half sisters of the great Waterloo winner, Miss Glendyne. It shows enterprise and the right spirit on the part of the Great Bend men to bring them over. The Waterloo Kennel is owned by Dr. G. Irwin Royce and Messrs. D. N. Heizer and G. N. Moses. Mr. A. C. Lighthall, of Denver, brings down a new dog and a good one in Young Golddust, a wonderfully handy-looking red fawn, which all Denver claims cannot be beaten. Mr. Allison also has a good young dog in Reno Pilot. It is only fair to say that the club this year shows marked improvement in membership, quality of dogs, and perfection of organization, and this improvement has won its reward in the great increase of popular interest in the meet. Probably 600 or 700 spectators were on the grounds during the running of the first day. Among other promiuent guests present were Col. R. S. McDonald and daughter, Mr. Frank K. Doan and wife, and Mr. R. N. Alexander, of St. Louis, Mr. Geo. S. Parvin and brother, of Cincinnati, Mr. R. A. Burch, of Salina, and Judge Clark, of Larned. Later on in the week the attendance will be very much larger. Newcomers are delighted with the sport, which has the combined charms of novelty and great excitement.

Monday was a slashing day, fourteen courses and two bye-races were run. Hares were not found in especial plenty, as the dogs were purposely kept away from the edge of the bluffs, where the hares are most numerous. Mr. Massey is an admirable slipper. During the day only two hares got away unsighted, and there was no undecided course run. The hares averaged very large and strong, being started well out on the flats, where the coyotes give them good exercise. Mr. R. D. Williams, of Lexington, Ky., and Mr. A. Fred Nash of Detroit, Mich., judged alternately. Messrs. W. W. Carney, C. G. Page and D. C. Luse acted as field stewards. Col. David Taylor, of Emporia, Kansas, president of the club, Mr. D. N. Heizer, vice-president, and Mr. J. V. Brinkman, treasurer, both of Great Bend, were on hand promptly also. Fifteen new members, elected to the club last Saturday night, were among those who went afield.

The start from the club house at 9:30 sharp, after the eight mile ride out from town, found a number of the club and others interested a trifle unprepared and hurried. Promptness, however, is something against which complaint should hardly be made, and it kept up it would be highly commendable.

Running was begun in the American Field Cup Stakes, in which there were thirty-five entries. Mr. A. S. Allen's Ruby and Mr. A. C. Schermerhorn's Dandy could not be gotten to town, and were passed. Mr. S. J. Shaw's Skippie being absent also, Mr. M. E. Allison's red fawn dog Sandy Jim, winner of this cup two years ago, was put down to run a bye with Col. Taylor's dark and mysterious Midnight, winner of the Derby, which latter dog proceeded to figuratively wipe the earth with the big red fellow. Jim had the best at first in this unjudged course, and did the most of the work for three-quarters of a mile, when Midnight drew by and shut him out completely over a mile and a half of hard running, killing alone, with Jim quite out of it. The hare was a great white-tail.

D. C. Luse's brindle bitch Bessie Lee and the Waterloo Kennels' blue bitch Humming Bird were put down next. Bessie got off best and won two points for speed and another for a turn; later on, she took a go-by. Humming Bird drew in, and did clever work, but on the turn Bessie was clearly the better worker, Bessie killed and won. The jack was not an especially strong one. Mr. Williams judged.

Dr. Q. Van Hummell's white and red bitch Minnehaha and Joseph Roetzell's brindle bitch Jenny were called. Jenny not showing up, Dr. Van Hummell claimed the course; it being shown, however, that Jenny's owner had not heard the call, she was put in the slips. Minnehaha gained two points for speed and also a turn, and was then unsighted for an instant, running too wide on a turn. Jenny got in, turned, wrenched, and lost place on a go-by to Minnehaha, who tripped, killed and won. Roetzell objected to the decision; why, it is not known. Mr. Nash judged.

Dr. Van Hummell's brindle and white dog Master Rich went down with Mr. L. Zutavern's red-fawn dog San Pedro. Master Rich was very quick in his lead to the hare, and was doing all the work when the FOREST AND STREAM horse, whose natural deviltry got him his name of "Jesse James," began indulging in an ecstatic fit of bucking, which left him out of the course for a moment or so. Mr. Nash, who judged, gave the information that San Pedro earned only two wrenches and the kill. Master Rich won. He is very speedy indeed. The hare was strong.

Mr. Allison's red fawn dog Rowdy and Dr. Van Hummell's white and brindle bitch Miss Rare ran a swift course on a good white-tail. Rowdy was best off for the run-up, turned and wrenched twice. The bitch was fairly clever in her share. Running neck and neck, Rowdy was drawing to a go-by when he tripped the hare, throwing her to Miss Rare for the kill. At this instant Mr. Williams, judge, being close upon the dogs, ran into them, knocking the hare out of Miss Rare's mouth. The hare got away. Rowdy was struck on the hip by the horse's foot, and came back very lame. Rowdy won.

Mr. D. C. Luse's red bitch Pauline went down with Mr. Frank K. Doan's brindle and white bitch Danger. Pauline was first up and turned. Danger turned. Pauline then took up the running, and shut out the St. Louis dog over four miles of great speed over grass. Danger quit at two miles. Pauline won. Mr. Nash judged.

Mr. Amos Johnson's black bitch Dinah Black and Mr. Allison's well-known red Terry got off well on a tremendous hare. Terry was first up, turning and scoring six wrenches. Dinah Black got place after three-quarters of a mile, turned and scored seven wrenches. Dinah then led clear away, scoring repeatedly. Terry, for the first time on record, quit at two miles, apparently quite done up. Dinah Black ran a mile further, and showed surpassing quality. When found she was crawling on her belly after the hare, which was crawling on about 20yds. ahead. The course was run to a standstill all around. Dinah Black won. Mr. Williams judged.

Mr. T. F. Foncannon's black and white bitch Meta and Mr. D. C. Luse's red bitch Lavina got off well. Lavina led up, scoring four points before her trip. Meta wrenched and tripped. The hare took to earth. Lavina won. Meta is not in condition. She was a good one last year.

Mr. I. D. Brougher's blue bitch Honey Bee and Mr. C. G. Page's black bitch Lady went down. Honey Bee was first up and did all the work over a short course; killed and won. Mr. Nash judged.

Mr. H. C. Lowe's imported black and white bitch White Lips and the Waterloo Kennels' imported white and brindle dog Trales went down for a rattling short course, Mr. Lowe kindly waiting for Dr. Royce to drive three miles and get his dog, which should of course have been on hand. White Lips led to the hare, getting in very quickly, turning and

placing Trales, who handled the hare very cleverly. White Lips drew in, got a turn and six wrenches, and made a great kill and won. She is a fairly good-looking bitch, and wonderfully quick and clever. The course was a brilliant one. Mr. Williams judged.

Mr. C. G. Page's black bitch Topsy and Mr. A. C. Lighthall's crack Denver dog, a grand red fawn, Young Golddust, now went down, Mr. Nash judging. Mr. Lighthall wanted a "long" rabbit, and was of the opinion that only Colorado jacks were of any account. He got his wish, as the big whitetail ran away from both dogs. Golddust was first up and placed Topsy; interchanging of points then followed, and Golddust came out in possession, but only made one turn, when Topsy drew in, but could not hold, though showing remarkable staying powers. At two and a half miles Golddust took a go-by and followed the hare, not earning points, over a three-mile course. There was no kill, the hare lying not thirty yards away. Both dogs were pumped out. Golddust won. Mr. Page was thus, on the first day of the meet, shut out from further running. His third dog, on which he placed his main reliance, was run over by a buggy and disabled. Belle P., the winner of last year, was not entered. Mr. Page has hard luck with his dogs, having had so many accidents. No man might better win with a good dog than Mr. Page. He is the model member of the club, always quiet, unpretentious, but thoroughly game, and never anything but a gentleman.

Mr. Williams judged the course between the Waterloo Kennels' brindle bitch Little Lady Glendyne and Joseph Roetzell's white and red fawn dog Keno. Lady led and turned. Keno wrenched three times, but Lady was too clever. On the change Keno tripped, Lady killed and won easily. As Mr. Williams was unrolling the red flag he turned to the FOREST AND STREAM reporter and made some little remark. This gave the elaborate kicker, Roetzell, an opportunity to say that the judge was asking the reporter what decision he should render. This was not good nonsense. Keno was beaten clearly and Mr. Williams certainly asked no advice. The man Roetzell and his loud-mouthed friends were rapidly becoming a nuisance on the grounds. He was not really a member of the club as his dues had not been paid. His dogs were by mistake nominated in his own name. He evidently thought they should win, no matter how they ran.

Dr. Van Hummell's brindle and white dog Rich and Rare went down with Col. Taylor's black dog Bobolink. Rich and Rare ran cunning at the start and should have been thrown out at once. Rich and Rare really has great speed when well extended, but he is too long and lanky, and always runs wide on the turns, a fault noticeable in several of Dr. Van Hummell's dogs. Rich and Rare went in and turned the hare to Bobolink, who handled it very cleverly and quite outpointing Rich and Rare, who could not get in. Bobolink turned the hare to Rich and Rare, who made a magnificent kill, turning a complete somersault. Mr. Nash judged this course and gave it to Rich and Rare by one point, emphasizing the kill. This decision was quite wrong. Dr. Van Hummell was surprised by it, so were the slipper, the spectators, and the FOREST AND STREAM's reporter. Beyond doubt, however, it seemed correct to Mr. Nash, who possibly lost a point or two at the time the wind blew off his cap.

Mr. Williams judged for Mr. Roetzell's dog Cap R. and Mr. Robert Smart's black bitch Miss Smart. The latter is by Flink, probably the fastest 300yds. dog ever run in America. Miss Smart got three points for speed, four turns, all the wrenches and the kill, beating Cap R. pointless.

Mr. Allison's very likely-looking light fawn dog Reno Pilot and Mr. Doan's red dog Modesty were ordered down. Now occurred another one of those utterly reprehensible delays for which there are always plenty of excuses, but no real reason. Mr. Doan's dog was at the club house two miles away. The rules should have been enforced, but were not, and Modesty was sent for. The course was passed over for a bye race between Lady Milly Glendyne (the bye dog) and Robt. Smart's Little Queen. Lady a bit better start, but Queen did good work, and at two miles was doing the work. The hare was coursed four miles to the bluffs. She ran among sheep twice. Lady would have won on judging.

Reno Pilot and Modesty were put down. Modesty was sick. Pilot beat her pointless, and so could any other dog have done. Modesty could hardly stand up on the morning of this day.

This closed the running for the day, which had throughout been highly pleasant and satisfactory. The hares were more plentiful than was at first expected. J. W. Moore, a railroad man at the adjacent hamlet of Hoisington, is known this summer to have killed over sixty jack rabbits on and in the vicinity of the grounds. Other men of Hoisington have broken their bird dogs over the grounds, and have killed every jack pointed by their dogs. Mr. Carney has had no means of preventing this outrage. The Missouri Pacific officials will be notified, and if Mr. Moore and his friends persist in trespassing, they will trespass somewhere away from their present home. They will not be allowed to ruin the sport of men who come hundreds of miles to see the running of this meet.

It was announced that on the following day an admission fee of twenty-five cents would be charged at the gate of the grounds.

TUESDAY, Oct. 16.—The beautiful weather of the previous day was continued, and 2,000 visitors formed in line testified to the interest the sport excited. Larger numbers of ladies were present, and much dressiness and style made itself apparent on every hand, uniquely commingling with the ruder garb of the humbler spectators.

Running was continued in the first series of the American Field Cup Stakes, and the two passed dogs, Mr. A. S. Allen's white and red bitch Ruby and Mr. A. C. Schermerhorn's brindle dog Dandy were ordered to the slips. Ruby was first up to hare and scored, making their four go-bys and doing all the work, showing really great speed and skill and killing almost unaided. Ruby won. Mr. Williams judged.

The second passed pair, Mr. Frank K. Doan's white and black bitch Daisy and Mr. W. W. Carney's black dog Dick Taylor, got off well on the flats after a strong hare. Dick got the run-up, placed Daisy and passed her twice, making the running, scoring rapidly and sticking close to the hare to the kill. Daisy yelped in the course. Dick Taylor won. Mr. Nash judge.

THE GREAT BEND DERBY.

The Puppy Stakes were now begun, and Mrs. E. L. Branch's brindle bitch Mary Anderson and Dr. Van Hummell's white and brindle bitch Miss Rare went in. Miss Rare was very eager and knowing in the slips. Mary got first to the hare, Miss Rare not being so well sighted. Mary stuck well to the hare, and gave Miss Rare enough to do. The latter, however, drew in, and by three go-bys, as many turns and a trip, won the course, a short one.

Col. Taylor's black dog Plymouth and Waterloo Kennels' white bitch Ariel got off on a strong hare. Plymouth first up, took two go-bys and three turns, handing hare to Ariel, who worked prettily, but lost to Plymouth, who held possession over a long course. The hare was lost. Plymouth won. During the course Col. R. S. McDonald, of St. Louis, who was following the hounds at a distance, met with a serious fall, his horse stepping in a wolf hole and rolling entirely over his rider. Col. McDonald is a large man and over fifty years of age, and the fall was ugly enough for a younger man. His face was badly bruised and cut by the grass, and his nose was thought to be broken. He shortly recovered his faculties and reassured his daughter, who was sadly frightened by the news of the accident. Although badly shocked and injured, the Colonel pluckily staid on the grounds and even mounted again, quietly saying he did not wish to spoil the sport. On the following day, however, he was unable to leave his bed until quite late in the afternoon. The accident excited great sympathy, for Colonel McDonald was much esteemed on the grounds. Mr. Nash judged the course.

Mr. A. Laidlaw's red and white bitch Goldy went in with Mr. C. F. Culver's white bitch Queen of Kansas. Queen hung back and refused the hare. Goldy went in. Queen, after spasmodic work, refused again and was thrown out. Goldy won. Williams, judge.

Dr. Van Hummell's brindle and white dog Master Rich and Mr. A. C. Fair's brindle and white dog Davy Crockett went in. Master Rich ran up, took seven turns and two go-bys, and beat Davy practically pointless. Master Rich is speedy, but does not turn so closely as he should. Mr. Nash judged.

A long give-and-take course was run by Joseph Roetzell's Bell and Dr. Van Hummell's Minnehaha. Mr. Nash, judging, rightly made it a no-course. Roetzell and a drunken rowdy friend of his, by the name of Tom Colts, rode and shouted all over the course and interfered with the running. At the announcement of the decision the Colts fellow applied a vile name to the judge, calling him "d—d English fraud," etc., and acting utterly abominable. Roetzell was little better, though not so drunk, and was entirely devoid of all regard to the rules of coursing and the principles of gentlemanly conduct. A fellow who will abuse a coursing judge, and swear publicly and vilely in the presence of ladies, could not learn to be a gentleman, drunk or sober, if he lived a thousand years. The scene was disgraceful and deplorable, and it is a matter of high regret that such a cad was allowed to enter or run a dog. Both Mr. Williams and Mr. Nash declared they would not judge another course if Roetzell ran, and the FOREST AND STREAM's representative declined to write another line at this or any other meet of the club if Roetzell were not disqualified. There being no civil officer at hand, Mr. Carney, the owner of the land, was applied to, and a committee waited on the fellows and ordered them off. Both begged out and were allowed to remain, to make more trouble later on. Two deputy sheriffs were on hand the following day, and the hoodlums were less vociferous. This wretched business spoiled the day for 2,000 people, among whom it might well be supposed that ladies and gentlemen predominated. The committee was too lenient. Such ruffians should be thrown out. There is no excuse for not checking such work at the start. The American Coursing Club is a body of gentlemen, each of whom should feel safe in taking a lady to witness the sport. It is not right that ladies should be insulted. The club cannot last if it cannot prevent that, and prevent it promptly and without any shilly-shallying. It is a disgrace to the whole club to allow a judge to be insulted by any runner. Roetzell was of course disqualified, and it is to be hoped that he will disappear and that Colts will die. Colts was not a member. He was only a free-born American, full of bad Kansas whisky, and fortified with a strong natural proclivity for emotional asininity.

Mr. Allison's red Reno Pilot and Mr. Doan's red Pattie got off, but a third dog, a cur-staghound, broke away and joined. No course was had. Pattie was ruined on a wire fence, and when the course came on again was withdrawn. Pilot won.

Bell and Minnehaha were called. No judge rode up. Bell was refused to slip, and Minnehaha took the course.

Dr. Van Hummell's black and white dog Lee went in with Mr. Luce's brindle bitch Katydid. Lee led up. Katydid was never placed. Lee won, seven points to nothing.

Col. C. P. Townsley's Cap and Dr. Van Hummell's black and white dog Locks ran a corker, Cap drawing in and doing well till mangled on the deadly sheep fence. Locks, in splendid condition, earned enough before and after this accident to give him the course. The dog and hare were running five miles away when the crowd left and went for dinner.

After dinner Mr. C. E. Rowe's white dog Cousin Frank ran a bye with a tidy little bitch, Fidget, loaned by Mr. Frost. Fidget ran and played around him. Frank's course. This ended the first series in the Great Bend Derby.

THE GRANDPARENT STAKE.

There were but three entries in this stake, which was for greyhounds over eight years of age. Col. R. S. McDonald's light fawn bitch Gyp, a right well-bred one, from St. Louis, age ten years and two months, went down with Mr. Frank K. Doan's red and white bitch Fleet, also from St. Louis. A short no-course was run, not enough points being made before the hare was lost.

Mr. D. C. Luse's old black bitch Thorna ran a bye with Robert Smart's Tiny, the latter out-pointing.

The first series of the American Field Cup and of the Great Bend Derby had now been run through. The second series was therefore now begun, and in the Field Stakes Sandy Jim and Ruby were called to the slips. Ruby was at the club house, and the all-too-frequent wait of twenty or thirty minutes had to be endured while Dr. Royce rode furiously over the two or three miles after the dog. This was all wrong. There is only one way to course, and that is by the rules. There is no kind of fairness in suspending a rule in one case and not in all; if the latter be done there are no rules, and therefore no real coursing meet. The missing dog should have been penalized. When at last Ruby was got up the dogs were slipped on a good hare. Jim did all the work, turning repeatedly and earning three go-bys. A third dog broke into the course, but Jim still held. A fourth dog, by a continuance of this most unfortunate run of affairs, generously offered his aid, and between the four there was a good deal of running. Mr. Williams promptly decided "no course," and imposed a fine of $10 each on the owners of the loose dogs. It was learned that neither was a member of the club: and it was further established that the drunken fellow Colts, who made the disturbance in the morning, purposely loosened his dog in this course. And still the club were patient. In this melee two other hares were started and frightened away. It was most annoying and painfully different from what the sport of coursing should be.

Gyp and Fleet were now put in to run the Grandparent first series. Gyp led up to the hare, and had the better of it in the exchanging which followed, during which the old ladies performed very creditably. Gyp footed it the better and scored to win on the hare, which was lost in a field of weeds.

The second series, winners against winners, was now on in each stake. In the American Field Cup Minnehaha and Bessie Lee were started on a hare right among the crowd. Bessie ran up, turned twice, wrenched very prettily and flicked the hare at one mile. Minnehaha drew in but lost, and Bessie led over the Carney hill. Minnehaha got in again, placed Bessie after a go-by, and let the latter in for two turns, a kill and a winning.

Sandy Jim and Ruby were ordered down. Ruby, of course, was again absent. This time Mr. Allison claimed the course for Sandy Jim and got it. It was nothing for the owner of Ruby to complain of. The complaint lay the other way.

Master Rich and Rowdy went down together now, each a grand specimen of the large and rangy type of greyhound, Master Rich the better looking. A hare was started and both the big fellows sprang forward, breaking the slipping cord and tearing the slips away from Massey's hands. A murmur of fear, then a shout of approval, as the two long backs rose and fell together while the dogs ran, literally neck and neck, up to the hare. No one doubted that one or both would be killed, but still they went on, and there ensued a wonderful display of pluck, mettle and thoroughly game qualities, such as perhaps was never before witnessed and never will be again. The horsemen could not catch the dogs, which crossed a wire fence, both unhurt, and coursed the hare into the hills. The chase led so far away that both dogs seemed not as large as one, and it was now declared that Rowdy and now that Master Rich had broken away and was the animating cause of the big cloud of dust which flitted in turn and doubled down the hill. The course lasted over five miles; the hare then ran to the road, and was picked up wounded just as the dogs were caught, thus ending an unexpected but magnificent exhibition. There are probably not two dogs in the world which could repeat it under such circumstances. It was a comfort to the crowd to hear that "neither won." Dr. Van Hummell confidently remarked that his dog had the hare's tail in his mouth, and Mr. Allison scornfully declared that Rowdy was choking Master Rich to death; but that was all nonsense. The dogs were matched to a degree.

Another pair of slips being brought, Mr. Nash rode forward to judge Dick Taylor and Paulina. These dogs are full brother and sister of same litter. Five hares got off unsighted, and the dogs were not slipped. There were two thousand beaters in line, and they became unmanageable, and ran the hares everyway. This closed the day's work. The weather had been grand, and the list well run off, but the series of mishaps and the wretched drunken wrangle of the earlier day had made everybody feel a little cross-grained.

WEDNESDAY, Oct. 17.—The day opened cold and cloudy, but warmed up nicely before noon. Five hundred beaters formed into line at ten o'clock, and worked north along the big bluff. Dick Taylor and Paulina went in again. There was much jesting at Mr. Carney over his black dog Dick, who is a scarred and not very beautiful wolf-killer, and some one suggested that he should put bells on him, so he would not get lost from the hare. Dick, however, did not get lost from the hare; to the contrary, he stuck so close to her for a mile and a half that he beat Paulina out of hand. He capped this performance by killing a cottontail before his owner got him tied up. Mr. Nash judged.

The two running-mates, Rowdy and Master Rich, now went in, and expectation was on tip-toe. They got a good long hare well out on the flats, and went off together, killing to Rowdy's advantage in 100yds. No course. They were ordered in again. Beating a field of millet a grand jack was started. Rowdy got the run-up and a go-by, two turns and a few wrenches. He had much the best of it for speed and handling for one mile. Master Rich got in, and held possession for one mile, scoring repeatedly. All thought him winner, but Rowdy came again at two miles, did a trifle better work in the constant exchanging of 1½ miles more, and killed to Master Rich's turn, winning by sixteen points to fourteen. The pace was terrific. Rowdy is two and a half years old, Master Rich one and a half. The latter was in better condition. He will be a hard nut next year.

Lavina and Dinah Black broke a second pair of slips, but got separated and were caught, unsighted. The millet was beaten again, and two more hares got off unsighted. The next time they were slipped out on the flats, and ran a slashing course, full of work and pointing. Lavina ran so cautiously at first that she seemed cunning. Mr. Williams gave her the course. Dinah Black was thought entitled to it, though not the better bitch in fact.

Imported White Lips and blue Honey Bee got off on a tremendous plains white-tail. White Lips ran up, Honey Bee was tidy for 150yds. White Lips zig-zagged by, twice on the outer circle, and worked the hare faster than Honey Bee could run, passing the latter when she liked and clinging to the hare with great handiness and unexpected staying powers for four miles, the hare being lost in the hills. White Lips won. She showed such work that no one would hear of any other favorite for the championship.

Goldust and Little Lady Glendyne were put in, but after one hare had gotten off unsighted, all went to dinner. There had been a tremendous lot of walking, as the jacks are scarcer, out from the bluffs. There was general comment on the wonderful walking powers of Arthur Massey, the slipper. There is probably no professional walker who can live with him for a week. Arthur Massey is a Welshman, about six feet in height, and a thoroughly good fellow. He says his gait is six miles an hour, and claims his brother Walter does seven miles, though not on square heel and toe. The slipper keeps the whole line on a trot, that is sure.

[TO BE CONCLUDED.]

SPANIELS AND THEIR WORK.

Editor Forest and Stream:

"Spaniels and Their Work," by J. Otis Fellows, would be an interesting theme for a book. He could fill one with what he knew and what he didn't know. (This is an old saw, but a good one.) Every time he don't win on the bench, which, by the way, seems to be frequent, the air about Hornellsville is blue with cuss-words and challenges to the world for bench show competitions, or trials in the field, or both. Now it is pretty safe to remark just here that the Hornellsville shouter hasn't anything that he can win with in either "district." His $1,000 challenges we are tired of, for that much money is quite beyond all of us. These few facts will no doubt be fruitful of a tirade of abuse from him, but no amount of assertions can alter them one iota. Fellows is a good chap and means well, but we are tired of his bluster. The cocker spaniel standard is all right, and the judges are unmistakably all right; the trouble is, that Mr. Fellows is behind the age. His dogs won because they were the best along in 1880 to '83 or '84, but his old-style leggy breed has been superseded by what is called for in the standard—shorter-legged spaniels, which come to-day nearer the standard than ever before, being in fact almost perfect. The average second or third prize winner in the open class to-day would have made short work of the open classes in those days and bounced quickly into the champion class, and Mr. Fellows knows it himself. To-day, were our representative breeders to send a draft of their dogs to England, they would win with them. On the other side they can no longer give us points on the cocker, it is the reverse. I will show cockers with those of the Hornell-Harmony Club any time, under almost any judge. Come, Mr. Fellows, write your book or sit down.

AN ON-LOOKER.

STAMFORD, Conn.

NATIONAL DOG CLUB.

Editor Forest and Stream:

At the executive meeting of the National Dog Club, held in New York, Oct. 15, among other business transacted, it was voted:

"That the American Kennel Club be formally notified that the National Dog Club of America is ready, and will be pleased to aid it in advancing the interest of the breeders and exhibitors of this country.

"That should the American Kennel Club desire to confer with the National Dog Club, the latter, on receiving such expression, will meet it in the person of Dr. J. Frank Perry, the chosen representative of the executive committee."

"That hereafter at all bench shows there shall be appointees of the executive committee of the National Dog Club to take charge of the dogs of those of the club's members who are unable to attend; to see that such dogs are properly benched, fed, watered, groomed, brought before the judges, etc., and at the end of the show to superintend their reshipment. The expense of such service to be borne by the National Dog Club."

Twenty new members were admitted to the club.

H. W. HUNTINGTON, Secretary National Dog Club.

No. 148 SOUTH EIGHTH STREET, Brooklyn, N. Y., Oct. 20.

SHAKESPEARE AS A BREEDER AND TRAINER.

"Each change of many-colored life he drew;
Exhausted worlds, and then imagined new."

"I will a plain unvarnished tale deliver."

WHILE it may be deemed highly improbable at the present advanced state of intellectual activity, that anything very new or strange can be presented to a thirsty and inquiring public concerning the "Sweet Swan of Avon," and that by an obscure country writer, nevertheless a perusal of the strangely authenticated facts hereinafter set forth may at least have the result of stimulating younger and better read people to a more extended research in the direction I have briefly pointed out.

The cryptogram of Ignatius Donelly has had one good effect at least; it has drawn increased attention and more indefatigable research to, and into, Shakespeare's immortal plays. Many excellencies and accomplishments have been found in that great genius. Nothing he touched but to adorn. One gay and brilliant writer has conclusively proved that he was a devoted and accomplished billiard player, for in "Antony and Cleopatra," Act II., Scene 5, he writes, "Let us to billiards." In "King Lear," Act I., Scene 1, he exclaims, "My cue is villainous." In the "Merry Wives of Windsor," Act III., Scene 3, he writes, and very justly too, "Remember you your cue," and in "Coriolanus" expresses his decided preference for the cushions of the well-remembered "Michael Phelan." Act III., Scene 1: "Let them have cushions by you;" while in Act IV., Scene 3, he exclaims in triumph, "I put it in the pocket," showing his fondness for fifteen-ball pool. So, too, another painstaking and accomplished writer has proved beyond the shadow of a doubt that Shakespeare was well posted up in the mysteries of that intensely fascinating, though slightly delusive game, called "draw poker." Henry V.: "I would give all my fame for a pot." King Lear: "I cannot draw." Hamlet in his advice to the players: "I cannot draw," and also in that sound doctrine, "Beware of entrance into a jack pot, but being in, bear'st that the opposed may beware of thee." Act V., Scene 1, "Much Ado About Nothing;" "As under privilege of age to brag." I am sure he was fond of sparring, for in the "Two Gentlemen of Verona," Act II., Scene 1, he talks of "putting on the gloves."

But these, after all, are effeminate accomplishments. Many a youth might play a very successful game of billiards or draw poker, and yet not be able to tramp a mile through the woodlands, or hit the side of a barn at fifteen paces, and it is therefore with a pardonable feeling of satisfaction that I shall make known to my readers the gratifying discovery of what an incomparable sportsman the poet really was. Scattered all through his works are, it is well known, unnumbered beautiful passages descriptive of his love of woods and water, not a play but what has many such, but while I shall briefly touch upon a few as illustrative of my meaning, I shall later on call attention to one play in which the qualities of Shakespeare as a trainer and breeder are conspicuously set forth.

That the land of his birth stands forth pre-eminent for all manly physical exercises, goes without saying. Well known it is that Shakespeare in his early life paid dearly for his fondness for deer. His youth, his pecuniary circumstances at that time, forbade his paying that attention to dogs, which he was able to devote later on, when success had crowned his efforts. He felt certain the sensible and proper thing to do would be to improve the breed. Captious critics may feel disposed to proclaim that dog training at that time was not invented, but investigation and research show that spaniels were first taught to set in the reign of Edward II., and that this fact was also mentioned in a MS. treatise by the grand huntsman of that monarch, so long ago as A. D. 1309; and again, that Henry Percy, Duke of Northumberland, in A. D. 1335, first systematically broke in setting dogs. This effectually disposes of the question, though a singular confirmation appeals to me even while I write these words. Stretched out on the floor of my sanctum lies a pure spotless white setter dog of cerulean pedigree, a nephew of a very celebrated dog called List, mentioned *verbatim, et literatim, et punctuatim*, in Hamlet, Act I., Scene 5—"List, List, Oh List." And as I propose in this treatise to give authority for all my conclusions, imperfectly expressed though they may be, I will add that I have consulted two copies of Shakespeare in my library; one, the Johnson and Steven edition, with character portraits of Mrs. Siddons, Inchbold, Miss Farren, Mr. Macklin, Garrick, Kemble, *et alias*, in 12 volumes, published in London, 1788; the other, "his edition of Shakespeare by Nicholas Rowe," in 1827.

To begin at the beginning as tending to strengthen and fortify the announcement and position I have taken in relation to the many sided accomplishments of this remarkable man, I could call attention to the admirable opinions expressed by the "Bard of Avon," upon all conceivable sporting pastimes, which even to this day remain unchallenged, and are of universal adoption. Look over the various opinions expressed on that most delightful of sports—angling, and for the comfort and delectation of those proud, boasting mortals, who thank God "they never took a trout with a worm," and who probably never took one any how, see the "great master's" private opinion in "Much Ado About Nothing," where he affirms—Act III., Scene 2: "The pleasant's angling is to see the fish cut with her golden oars the silver stream and greedily devour the treacherous bait." Also Act II., Scene 3: "Bait the hook well [*i. e.*, put on your worm scientifically], the fish will bite." Let "Piseco" thank God and take courage.

Observe also his familiarity with glass ball shooting, and the excellence attained therein. "King Richard II.," Act IV., Scene 1: "Mark! Give me that glass" (ball, of course, understood). The umpire had hastily cried "No ball" but is immediately corrected, "For see, there it is cracked in a hundred shivers," showing, past controversy, that he had held "dead on."

First part of "King Henry IV.," Act II., Scene 4, he speaks of Douglas admiringly as a man "that rides at high speed, and with his pistol kills a swallow flying," praising the dexterity of one who could perform such a feat, imitated even at the present day by Dr. Carver and Buffalo Bill in their wild western shows, only they use a rifle or shotgun. In the same play, not long after, he speaks of "a thousand blue caps," showing that pigeon shooting from the trap, at blue rocks, was then in vogue, though it is evident that Shakespeare, from the casual mention made by him, did not, as might be naturally expected, admire this kind of sport, but vastly preferred glass balls.

In "King Henry V.," Act III., Scene 5, he speaks of an "ancient Pistol," evidently referring to an old time favorite of his, with which he had frequently put in fine work in the shooting gallery. In "Hamlet," Act I., Scene 3, he makes contemptuous reference to the pot hunters, as he does on other occasions, "Springes to catch woodcock with." In the very last line of that noble play—"Hamlet"—he cites the old familiar apothegm: "Every dog has his day," and true and consistent to the last says, "Go bid the soldiers shoot," showing that his motto was, "In times of peace prepare for war," and evincing the strong reliance he placed in making his soldiers practice at the range.

In the second part of "King Henry IV.," I confess I was startled at the discovery I made. I could scarcely believe my eyes, but there it is in plain black and white in my Nicholas Rowe edition. Act I., Scene 2, page 423, Sir John Falstaff exclaims: "You hunt coun, hence avaunt." The word "coon" in those days probably having been spelled with an u, or it may have been a printer's mistake. Honest Jack with all his faults didn't fancy coon hunting.

In "Midsummer Night's Dream," Act IV., Scene 1, we find his incomparable description "of the music of the hounds, bred of the Spartan kind." Act III., Scene 2, he mentions "wild geese that the creeping fowler eye;" and in Act V., Scene 2, he cries, "Mark—O, dainty duck—quail." Showing his delight at a successful shot, and his intense fondness for sampling the game of the country. He delighted in filling his game bag with various kinds of game.

In "Taming of the Shrew," Act I., Scene 1, how confidently he speaks, "Trust me, I take him for the better dog;" showing the reliance he placed upon his own judgment. Again he adds, "See how he loved his hounds." While in the very opening of the play, desirous of entertaining his guest, he mentions: "Wilt thou walk, or wilt thou ride, or wilt thou course, or wilt thou hunt?" The region around Stratford-on-Avon in Shakespeare's time must have been very much like the grounds round Fire Island Inlet, and South Oyster Bay, in the times when the "Fire Island—Ana" first made their appearance.

Observe, I pray you, in "Macbeth," Act III., Scene 1, how he calls them off as if from a catalogue, "Hounds, greyhounds, spaniels, water dogs and setters." Notice in "King Richard III.," Act V., Scene 3, how he reproves the ardor of some youthful friend who would not give the bird any chance to get away and shot so quickly that he "punched him full of deadly holes." First part of "King Henry VI.," Act I., Scene 5, "Where is the best place to make our battery next?" Evidently he was "laying off" in the Avon for the toothsome mallard and the juicy canvasback, and though the hasty glance I have cast over his works does not, so far as I am aware, absolutely assert it, there can be no doubt so skilful a sportsman as Shakespeare used the very best of tools and evidently shot with a breechloader. In fact I am just reminded that in "Othello" he speaks of "the imminent deadly breech." Nothing could be plainer.

Third part of "King Henry VI.," Act I., Scene 4, he exclaims, "Ay, ay, so strives the woodcock with the gin!" "gin" being evidently a misprint for gun. In the "Two Gentlemen of Verona," Act II., Scene 3, note the manly generous style of shooting, where he walks the bird up and will not let his dog flush him: "Stalk on! stalk on! the fowl sets." Again in "Measure for Measure," Act I., Scene 5, "This is the point," *i. e.*, "Your shot, sir, of which I have not the slightest intention to deprive you." Act II., Scene 3, "We kill the fowl in season." Evidently he had not forgotten his first pardonable youthful indiscretion with the deer, and he was determined not to be caught again.

In "Midsummer Night's Dream," Act I., Scene 1, he naturally and justly calls his shooting companion's attention to the dog's misbehavior: "This fellow doth not stand upon point" (breaks to shot); while in "Twelfth Night, or What you Will," how triumphantly and joyously he breaks out in praise of his favorite as being a grand dog, Act I., Scene 1: "I'll be sworn thou art; thy tongue, thy face, thy limbs, thy actions, thy spirit, do give thee five-fold blazon." There was a dog fit for any one to shoot over. Observe how specifically he calls attention to his good points and names them one by one. This passage truly confirms what I had some time ago suspected, that Shakespeare had evidently judged dogs, not only on the bench, but in the field, and a certain interest attaches to the quotation, because while pondering over it and trying to fathom its depth, I was led to follow up the train of thought suggested to its successful conclusion. Notice, as I have before stated, Shakespeare's many-sided accomplishments, his love of nature, his magnificent descriptions of scenery, his multiplied accounts of game of every description; how, when and where to capture them; his ardent love for man's faithful friend, the dog, and thinking over briefly Donelly's alleged wonderful discovery, I said reflectively to myself, I will look over his writings and see if I can find embodied therein the result of his wisdom and experience. Of course unnumbered allusions can probably be found to those "who work their way with hound and horn to drive the fallow deer," but if I can find such results recorded in a single play, and evidently so recorded for the double purpose of vindicating his fame as a fine sportsman, somewhat impaired at first by his youthful escapade, as well as to preserve a truthful record of his real opinion—should I find such a play, I should certainly consider I had proved my case.

Turn, therefore, to your Shakespeare, I entreat you courteously, and follow me through the play of "As You Like It." Observe at the very start the faintly disclosed intention in the very title—as you like it—in proportion, that is, to your capacity for valuing dogs and their qualities as developed in hunting, with an intimation gently conveyed that the reader, the searcher after truth, could not fail to like it. Observe how like Shakespeare to dash at once into his subject. Aware of the importance of breeding as well as training up his dogs in the way they should go, he calls out (Act I., Scene 2), "Charged!" showing that then, as now, this rather unusual and difficult act of obedience was one of the first things taught. He remembered how in "Romeo and Juliet," Act I., Scene 4, the dog was directed to be staked to the ground, so he could not move—pegged down and compelled to remain at "Down charge" until the order "Up"—the very rule in force at the present day. In the same act and scene, remark the just weight he attaches to pedigree, for he advises "to breed him well;" excellence in sire and dam he considered of chief importance. Act I., Scene 2, "Sport? Of what color?" plainly showing his nice discrimination, first as to what kind of dog his customer wanted—a pointer or setter or hound; then whether any particular fancy of color was to be indulged in, as regards black or orange, or liver or tan. Shakespeare had his own private preferences, and evidently favored black, as we learn in "Othello," where he speaks of "black noses and palates," though in almost the very next line he shows his freedom from prejudice, and his not attaching entire prominence to one particular color, by the considerate remark, "As wit or fortune wild, or the destinies decree," meaning thereby that a good dog might be of any color.

Act I., Scene 4: "Alas! he is too young, yet he looks successfully!" This passage evidently foreshadows an event of daily occurrence. Here was one of his customers evidently in want of a dog and disposed to buy one, only he feared he might be too young, he would naturally thereby give more trouble and be harder to manage in the field. Act I., Scene 4: "Yet I should bear no cross." Evidently the great trainer took no stock in cross breeds, droppers must have been his aversion, "keep the breeds intact and pure." (Capt. Bogardus's attention is cautiously directed to this quotation). Act I, Scene 4. By a lucky chance we learn the name of one of his favorites, "O Phœbe! Phœbe! Phœbe!" Younger sportsmen will take notice, Shakespeare preferred a short quick sounding name and one not ending in o. Naturally enough his dogs were his great favorites. How could it be otherwise when he found. "Tongues in trees, books in the running brooks, and good in everything."

Act I., Scene 1: "Come shall we go and kill us venison?" Shakespeare did not wish to pursue one kind of game all the time, his dogs needed "a let up." He must give his hounds fair play. He wanted to capture "fur" as well as "feather." Act II., Scene 2: "I'll make him find him." "Do this suddenly." There is no ambiguity about this sentence, "The Bard" evidently knew that the true way to teach a dog retrieving, is after the dog has learned the rudiments of his education thoroughly, then take him out into the back yard and teach him to retrieve by the whip, firmly, though gently. This is Miles Johnson's plan, and here follows a remarkable verification of the truth of my suggestion. Ponder this well. "And let not search and inquisition quail to bring again these foolish runaways." observe the mysterious play on the word "quail." Not only primarily as meaning "to fail" but secondly as referring to the habits of the birds at certain seasons, to run from the dog and not "lie to them," under which circumstances, as Shakespeare had probably found to his cost, they are very hard to bring to bag.

Act II., Scene 3: "To overcome the tony prizer of the humorous Duke." Shakespeare's dog, probably Phœbe before alluded to—it couldn't have been List, he was too good a dog—had failed to carry off first prize at the bench show, and the successful Duke had poked fun at him, and taunted his dog with being deficient in bone.

Act III., Scene 5: "The best thing in him is his complexion, yet for his years he's tall, his legs but are so so, and yet 'tis well, a little riper and more lusty red." How wonderfully true to nature!

Will any good judge of a dog attempt to controvert this description? See how carefully the great master had looked that dog all over. His color seemed to strike Shakespeare's fancy more than his shape, at the same time he did not wish to seem hypercritical. Doubtless he would have chosen a deeper red, more of a mahogany color, a good-sized dog, rather unhandy to stow away in the dog cart; this dog was rather too leggy. Shakespeare would have preferred his legs probably straighter, with better hocks, well bent stifles, and muscular, but not heavy haunches; still as an all-round dog he might do, though not a good enough animal for a prize winner.

Act II., Scene 7: Still pursuing our researches through the same play we find his opinion tersely expressed, "Yet I am inland bred!" showing the bard's decided preference for the native English setter, in contradistinction to other breeds that were contending for position, viz., the Irish and the Russian.

Act III., Scene 1: "Bring him dead." Here we have the ancient and ceremonious command modernized as "Find dead bird," but this apparently brief command proves very conclusively that Shakespeare was well aware of the great importance of making his dog retrieve, and broke all his dogs to "retrieve dead." I am at a loss to account for this quality of his dogs having been overlooked by his English reviewers.

Act III., Scene 2, "What did he when thou sawest him; How looked he? Where was he? Where remains he? How parted he with thee?"

Shakespeare could not escape from the annoyance common to all dog men of having their four-footed favorites scuttle off some times, the best of dogs will sometimes run away. Phœbe had, I am afraid, broken away and was scampering through the merry green woods, and his master was trying anxiously to recover him, for to his inquiry after his lost dog the man very naturally inquires, "What were his marks?"

Act III., Scene 5, "An excellent color. Your chestnut was ever the only color." Here was one of his friends, who evidently desired a dog of another color. He was not on the lookout for an Irish red. Shakespeare probably told him, "I knew a party who has a dog would suit you," for he turns around to his kennel man and says: "But why did he swear he would come this morning and comes not?"

There is nothing small or mean about William. In the true spirit of a sportsman, thinking the man may deem his terms too high, and not wishing to disappoint him, he tells him of another man, and adds to the question, "Does he know his biz?" "Yes, and breaks them bravely."

But "last scene of all that ends this strange, eventful history," is where the grand old poet bewails the loss of his pets. Ill-fortune had crept in on him apace, and many a kennel man, by sad experience, can sympathize with him. Troilus "had his brains dashed out by a club" (the infernal dog killers got ahold of him). Leander perished, "seized with cramps." Hero of Sestos "fell a victim to worms." But why continue the melancholy recital? I have briefly attempted to draw attention to a hitherto unnoticed accomplishment of Shakespeare's. No single writer that I am aware of has heretofore made the strange discovery. I leave to younger and abler heads and hands the pleasant task of making fresh discoveries; let them fall to with pen and paper and say of me, "Thou marshals't me the way I was going; and such an instrument I was to use." And so, with no charge for my kind offer, as you like it, I bid you farewell.

CAPT. CLAYTON.

THAT MITCHELL LETTER.

Editor Forest and Stream:

In the letters of Mr. Anthony and Mr. Heath, which you declined to publish last week, the former reiterated his previous statement that he purchased a letter he asserts he knew was stolen. He enters into some remarkable reasoning to prove that at the time he bought it he knew it was stolen, one yawning absurdity being that several weeks after he had bought it, as he states, I applied to the person from whom he bought it for its return, while another is that two years and a half after that the *Sporting Life* decided to give up its kennel department. A man who argues like that needs no annex to hold the balance of his brains.

So long as it was Mr. Anthony's word against mine I was content to leave it at that; now he has got Mr. Heath to introduce himself into the case. Mr. Heath says somebody tried to blackmail him with this Mitchell letter.

I propose bringing both of these letter writers up to the bar of public opinion in short order, and I therefore publicly challenge them to name the person who figures as the unknown in their airy romances. I further challenge Mr. Anthony to publish the certified copy of the Mitchell letter which he says he has. Let us see what his dear friend Mitchell said that caused him to endeavor to protect (?) him by "buying" a "stolen" letter, and never letting him know it was in his possession till he had given it back to the man he had "bought" it from. Mr. Anthony must think all his readers are horse marines with his free trade in stolen letters and his mythical protection romances.

JAS. WATSON.

"PRACTICAL" JUDGING.

Editor Forest and Stream:

As I have a number of important things to attend to before I start for St. Paul on Saturday or Sunday, my reply to the "reliable" of Mr. Davey's letter must be held over until next week or the week after. Tell "Corn Cracker" to reserve his italics, small capitals, quotations, exclamations, etc., until I shall have finished with Mr. Davey. The wonder is that the proofreader lives, not that he allowed a number of typographical errors to escape his notice. I hold "Corn Cracker" responsible for the following: "By this time the other dogs had become so thoroughly exhausted that they made a wild rush from the sack." Instead of "exhausted" read exasperated. "'Antwerp,' who is a bit of a racing man, called it a dead heat." Dead heat is what I wrote. Your compositor makes me say that I have a brother who has seen "hundreds, yes thousands of dogs." 'Good dogs" is correct.

CHAS. H. MASON.

THE COON'S WHICKER.—I once had an experience like that of your correspondent C. E. Lewis, that is, hunting for a coon with a first-rate old coon dog, a hound, in an orchard where we had heard night after night the quavering note which we had been taught to believe was the cry of a raccoon. And we found no coon, though we located the very tree or trees from which the cry came. I cannot help believing from the testimony that the raccoon does at times utter a note very similar to that of the little screech owl, but that it is seldom heard, and that he often gets the credit of the owl's performance. Those who ought to know say that the cry of the raccoon is hoarser than the owl's. I think of no one who might so certainly enlighten us as "Nessmuk." Let us hear from him.—AWAHSOOSE.

THE RICHMOND DOG SHOW.

RICHMOND, Va., Oct. 13.—*Editor Forest and Stream:* The members of the Virginia Field Sports Association have distinguished themselves: their bench show has come and gone, and naught but praise and expressions of satisfaction can be heard on all sides from visiting sportsmen and local exhibitors alike. Northern dog men were received with open arms, and many an affecting scene was witnessed, when grizzled heroes, who had not met since the smoke of Manassas enveloped and begrimmed them twenty-five years ago, fighting side by side, or crossing swords in deadly strife for opposing causes, met. Aye, these were meetings indeed, and we younger men looked on at such touching episodes with reverence and respect, as the old gladiators embraced and often kissed one another with moistened eyes. Seven Pines, Malvern Hill, Petersburg, all offered their quota of subjects for discussion, and many a side skirmish or small battle, the history of which has never been recorded, was fought over and over again in the evening in the club's pleasant rooms. Southern hospitality, so proverbial, was in the very air; it seemed to ooze out of every pore of the quaint old city; all were made welcome and no efforts nor expense were spared in the endeavor to make the four days of the show pass pleasantly.

The fox hunts proved quite a card. Three days were devoted to this, and many of the New York exhibitors and visitors rode and were in at the death. That genial gentleman and successful fox hunter Col. W. S. Archer was master of the hounds. To his efforts and to those of Mr. Barton H. Grundy and one or two others may be attributed the great success with which these meets were received.

The meet the first day was held on a large meadow, just without the exhibition grounds, and the sight presented was enough to make glad the heart of any old time fox hunter. Old times in old Virginia were vividly brought back to those who had participated in this most noble sport of the chase in ante-bellum times. Prancing horses, beautiful women, red-coated men and liveried grooms on all hands; stylish equipages and rigs of every kind, and one hundred and seven of Virginia and North Carolina's best blue-mottled hounds helped grace a picture that will ever live with those who witnessed it. Coupled with these was a perfect bracing day and two hundred and fifty representatives of Virginia's F.F.V.'s there congregated.

The start was made after a drag, which led over a beautiful piece of country in full view of the assembled hundreds who came to witness the meet. At the end of the drag, which ran for about five miles, a live fox was released, and after a short run killed. A gentleman secured the brush and handed it to Miss Blacker, of Amelia county, who was the first lady in at the death.

Among the Northern visitors who rode from start to finish were Messrs. J. M. Tracey, Col. F. G. Skinner, Harry Malcolm, Lorenzo Daniels, A. Clinton Wilmerding, Mitchell Harrison, Col. W. F. Cody, W. Tallman, W. S. Diffenderffer and H. Schellhass.

The second day's meet, owing to the inclement weather, was not so large as the first. About forty persons assembled and three foxes were released. After about fifteen to twenty minutes run on each a kill was made, but the cold rain put a damper upon the sport and a return was soon in order.

The third day was clear and nearly a repetition of the first. The sport was voted a grand success by those participating in it.

The dog show contained 356 entries, of which there were 37 absentees and 19 not for competition. The show was well conducted, being clean, well-lighted and properly ventilated. Thursday's storm, however, created some discomfort among the dogs, as the roof of the building proved leaky and considerable rain found its way in and down on the benches. The judging was begun early and got through with, specials and all, by the next morning. Catalogues were issued promptly the first day. Capt. John S. Wise was indefatigable in his labors. A liberal wine luncheon was served each day at the club's headquarters on the grounds for the judges and a few chosen guests. The benching was done by the Spratts Company, and the hall was just comfortably filled with the dogs benched. Mr. Geo. H. Hill superintended. The judges were J. M. Tracy for setters, James Mortimer for the non-sporting classes, Col. F. G. Skinner for foxhounds, A. C. Wilmerding for spaniels, H. Schellhass for beagles, Harry Malcolm for Gordon setters and J. H. Winslow for pointers. Mr. Tracy was advertised for pointers, as well as setters, but it seems that Mr. Winslow was asked also, and he duly officiated.

Mastiffs contained twenty entries. One not for competition (a litter of pups) and two absentees. Mr. Moore took the kennel prize.

St. Bernards were a fine lot. The Hospice Kennels made a good exhibit, as did also E. H. Moore and Lorenzo Daniels. Lord Hector, first in the smooth-coat dog class, is the most promising young dog we have seen for some time. His faults are few, and his bone and substance good. He is but nineteen months old.

The Meadowthorpe Kennels won with Prince George over New York Lass in the Newfoundland class.

Deerhounds had but one entry, Bevis III.

Cassandra won from Balkis in the champion greyhounds, and Highland Chief got the blue ribbon in the open class; second withheld.

The foxhound class was well filled, there being fourteen entries. Mr. Winston's Wise, a good black and white from native stock, was the winner. The average hound here, while a stayer in the field, is far removed from bench show form.

Pointers saw Graphic to the front in the champion dog class for heavy weights, and Meally in the corresponding bitch class, both in nice condition. In the open class Lad of Bow was placed first, with Duke of Vernon second and Sachem third. There was some dissatisfaction expressed at the putting of Lad over the Duke. The former is well known and needs no description. Duke of Vernon is a white and liver ticked dog, clean cut and upstanding. He stands on good feet, has a good body and head, ears hung a trifle bad, but fine action, and stern carried well. His markings about the head are a trifle against him, but taken altogether he is a hard one to beat. Naso of Kippen won in the small dog class, and the two entries in the bitch class were absent. In the open class Ned B., Glaucus and Echo were placed in the order named. In bitches the judge saw fit to resort to the usual expedient for getting out of a hot place, by awarding equal firsts, and, in this instance also, seconds—the firsts to Bloomo and Glauca, and the seconds to Flirt and Lady Norrish. John White won in the puppy classes with Grouse and Bonnie Doone.

Rockingham and Cora of Wetheral took care of the champion English setter classes, while that very good-looking new importation of Mr. Windholz's, Count Howard, made an easy step toward the championship in the open class for dogs. Mr. Durkee's Haphazard captured first in a very hot class for bitches.

Blarney, looking superbly, was alone in champion Irish setter dogs, and Nellie in the corresponding bitch classes. Larry S., Joe Gladstone and Meadowthorpe Rover were first, second and third in the dog class.

Little Boy, looking well, was alone in the champion black and tan setter class. Beaumont won in the open class for dogs, and A. G. Dixon's Lady Pilot in the bitches.

In spaniels Oldham and Willey, from Salmon Falls, N. H., had Newton Abbot Darkie alone in champion class, and Newton Abbot Lord the winner in the open dog class for field spaniels. Mr. Morris's Bridford Negress won properly in her class for bitches. Doc was placed first in champion cockers. Dandy W. and Roy Obo won in the open dog class, and Chloe W. and Hazel Obo in the open bitch class.

In collies the Chestnut Hill Kennels made a pretty clean sweep with Dublin Scot, Flurry II., Charleroi II., Flurry III. and others.

Bounce and Lou were alone in their respective classes for champion beagles and won. That good little dog Storm beat Stinger in the open class for dogs, and Cloud did the same for Belle of Woodbrook, second, and others in the bitches. The Somerset Kennels' Hope and Woodbrook Blossom were first and second in the puppies.

Merry Monarch was alone, and won, in the class for bulldog champions, and Portswood Tiger under his new owner's name, won, likewise alone, in the open dog class.

Grabber, Bonnie Princess and the Sunnyside Kennels' dogs constituted the quality in the bull-terrier classes.

The Blemton Kennels had they remained away, would have left sorry looking classes indeed, as the majority of the fox-terriers came from these kennels.

Dr. Cryer's pretty string of pugs was one of the features of the show.

True Gordons numbered seven with two absentees.

Meadowthorpe Heather Boy from class 55, and Meadowthorpe Belmont from class 56, were transferred to this one. The former won in the dog class and Countess of Devonshire in the bitch class.

The other classes for small dogs were only fairly filled with nothing new. RICHMOND.

THE SENSE OF SMELL IN DOGS.

Editor Forest and Stream:

Of late much has been written on the sense of smell in dogs, and the following is to me a puzzling instance. I frequently go to a place in the country in pursuit of the early grouse, and, of course, some Clumbers go with me, champion Johnny invariably being of the party. When I drive to the post office for my mail or elsewhere on business the dogs are shut up in the house. Johnny then watches for an opportunity to steal away. If he succeeds in doing so, I see him running along the road that my buggy has traveled, nose to the ground, taking no notice of the approaching vehicle, until I call to him, when he trots home after me perfectly content. He has never overtaken the trap, so I do not know what he would do in that case. It makes not the least difference what road I travel he follows every time he can make his escape. Now what scent does he follow up? The horses? The buggy wheels? What?

CLUMBER.

"Bulger" writes in the October *American Kennel Register* on the same topic:

"A correspondent in a recent number of a contemporary presents a very ingenious and plausible theory as to how a hound is enabled to determine which way a trail runs, and in some degree it supports the view I have taken, that scent in a dog differs in kind from smell in man.

"This writer argues with considerable force that the hound is guided, not by scent, but by observation, by seeing the deflection of the grass, shrubs, etc., caused by the passage of the animal, and by observing the difference between the sides of foliage due to the brushing off of dew. In the case of a trail in the grass the explanation would be very satisfactory, even conclusive, but it does not meet the cases where the dog distinguishes which way the trail leads when there is no dew, or where the trail is on solid ground, bare of grass, where the deflection of grass cannot come in play. Yet any hound man of experience will tell you that a hound determines which way the trail runs just as quickly on a road or footpath, where there is neither grass nor shrubs, as in any other place.

"Then again, when a fox has holed and it is desired to punch him out for a second run and it is desired to get the hounds away, it is a common trick to get them on the back trail, shouting and fooling them until they break away on it. This is tolerably easy to do, but the hounds never are fooled by it to any considerable distance, they speedily returning to where the fox has holed. Now it cannot be that the hounds discover the imposture by their having recently passed over the ground in the opposite direction, for when the fox is forced out it is not uncommon for him to take the back trail, and then the hounds will follow the trail just as any other. It seems totally inadmissible to assume that the hounds, in the fire of their first burst on the back trail, have time to consider niceties of foliage, deflection of grass, etc.

"Another difficulty in the way of considering scenting of dogs as only a highly developed sense of smell, is the impossibility for hounds to follow a trail in the woods when the leaves are down, if the wind is blowing. If the day is still, hounds will run a trail over freshly fallen leaves, almost as readily as over open, clear ground, but if the wind is blowing, disturbing the leaves, they seem utterly confused, and unable to make any headway in tracing the scent. If there were no other factor in the case than a 'smell' (as our experience of a smell suggests), the leaves impregnated with the smell blown around would only make the trail more difficult, and one of our cold-nosed hounds, particularly a 'potterer' of the harrier type, would work it out somehow, be it ever so slowly, but in this case, they simply give it up. You have recalled Dr. Romanes' investigation of this question, and I see that his experiment was with a setter, a breed with which I have never had any experience, and I think it is admitted that hounds are ahead of all other dogs in that respect.

"Adversely to Dr. Romanes' experience, I may say that I once tested a hound's nose in this very matter by starting off with his master on opposite sides of a road and after proceeding a quarter mile we exchanged boots by throwing them across the road to each other. When the hound came to the point where we had exchanged he blundered for only a short time, when he picked up his master's trail, made with my boots on, and followed it straight along, although his master and I came together shortly after, walked some distance behind each other and then diverged, the hound following his master's trail throughout. I regret to see so much nonsense in the papers about 'bloodhounds' being employed to track the perpetrator of the horrible murders in Whitechapel, England. Even admitting that a hound could keep a trail over pavements where hundreds had passed after the murderer had (an incredible admission) how could the hound determine which trail he was to follow? This is the keynote of any trailing particular persons with hounds, first get something belonging to the party making the trail that the hound may identify the one wanted, or separate the trail from others, point it out to the dog and let him follow it. In the old days of slave tracking it is said that it was the custom to get a blanket from the bed of the fugitive and give it to the hounds to smell, when they would immediately take up the track among many others. This may look like an admission of 'scent' being only 'smell,' but you will note that I do not dispute that 'smell' has something to do with trailing, but maintain that the dog's powers differ from human sense of smell in kind as well as in degree."

THE BOSTON SHOW.—New England Kennel Club, Boston, Oct. 19.—*Editor Forest and Stream:* We beg to claim our usual dates for bench show to be given at Boston in 1889, and name April 2, 3, 4 and 5.—BENCH SHOW COMMITTEE, N. E. K. C.

THE AMERICAN PET DOG CLUB.

Editor Forest and Stream:

A special meeting of the American Pet Dog Club (incorporated) was held Oct. 15, at 129 East Sixteenth street, New York, the president, Mrs. Wheatleigh, in the chair. The secretary being absent, Dr. Cryer was elected secretary pro tem. The following members were present; Mrs. Charles Wheatleigh, Mrs. M. E. Randolph, Mrs. John Draper, Mrs. Frank Leslie, Miss Marion Bannister, Dr. M. H. Cryer, Mr. W. J. Fryer, Jr., Mrs. Henry B. Cowles, Mrs. Landreau. The minutes of the preceding meeting, held Oct. 3, were read and approved. Miss Kidder and Miss Bertha Stratton were unanimously accepted as members. The treasurer presented his report, which was the same as at last meeting. Mr. Ormsby not being present although notified, the question of his expulsion, for causes stated in minutes of last meeting, was considered. Mrs. Cowles offered the following: "Resolved, That Mr. Ormsby be and is hereby expelled from membership in this club, and in consequence of such expulsion the office of secretary be and is hereby declared vacant, and also any other office which Mr. Ormsby claims to hold or may have been elected to." The motion was then put to vote and unanimously carried. On motion, it was ordered that notification be sent to members that proposed changes in the by-laws are to be voted upon at the annual meeting to be held Nov. 15, as follows: Article 3: The word "nine" to be stricken out and the word "five" inserted in place thereof, making it "five shall constitute a quorum." Article 8, last clause: Strike out "one" and insert "three," making it read, "Three negative votes or black balls shall disqualify a candidate for membership." Strike out Article 14. Other changes not mentioned to also be brought up for consideration. On motion, it was ordered entered on the minutes and published that the regular place of meeting, until further ordered by the club, be at 129 East Sixteenth street, New York, the residence of the president, and the post office address be at the same place. Meeting adjourned.

M. H. CRYER, Secretary pro tem. A. P. D. C.

THE AMERICAN PET DOG CLUB.

Editor Forest and Stream:

The annual meeting and election of officers of the American Pet Dog Club took place on the 19th inst. at the residence of the second vice-president, Mrs. Eugene Clarke, 111 East Twenty-eighth street. Dr. Surles, the first vice-president and acting president, presided. Eighteen members answered to their names. Nineteen letters were received from absent members expressing regret at their inability to attend, and six sent proxies authorizing the secretary to vote for them. The minutes of the meeting held Sept. 21, were read and approved. Three candidates were admitted to full membership, and five proposed. Mr. Clarke, treasurer *ad interim*, reported that in accordance with a resolution of the club, he had requested Mr. W. J. Fryer, Jr., ex-treasurer, to transfer to him the club's funds. The expelled treasurer did not comply with the club's resolution and the treasurer's demand. The public will be fully informed as to the club's next step in this matter. Officers were elected without a dissenting voice or vote: President, H. R. Surles, M.D., Worcester, Mass.; First Vice-President, H. F. Foote, M.D., New York; Second Vice-President, Mrs. Eugene Clarke, New York; Secretary and Treasurer, Mr. C. Ormsby, Cranford, N. J.

Dr. Foote took the chair and Dr. Surles offered a resolution expelling Dr. M. H. Cryer; and Mrs. Eugene Clarke offered a resolution expelling Miss Mary E. Bannister. Both resolutions unanimously adopted. The president and executive committee were authorized to apply for and obtain a charter for and in the name of the American Pet Dog Club; and also to make arrangements for the holding of a bench show of dogs in New York next May. Mr. Eugene Clarke gave notice that at the next meeting he would move the appointment of a committee to wait upon the president or managers of the street and other railroads with the view of securing for passengers—especially for ladies—the right or privilege of taking such dogs into the cars as are not too large to be held in the arms or laps of passengers. The meeting adjourned subject to the call of the executive committee. C. ORMSBY, Secretary.

NEW YORK, Oct. 22.

DOG TALK.

SINCE the Columbus fire, where they lost their cocker spaniel stock dog Keno, the Moorfield Kennels have concluded to give the cocker spaniels the go-by, and in the future breed beagles in their stead. They write: "We have purchased from Mr. A. C. Krueger, Pittsburgh, Pa., the great young dog Racket II. (Cameron's Racket—Krueger's imported Myrtle). He is 14in. high and his ears spread at 16in. Mr. Krueger considers him the best young dog he ever bred. Also the great little brood bitch Bannerqueen (champion Bannerman—Queen). This grand little bitch is under 12in., and is in whelp to Racket II. This brace was only secured from Mr. Krueger at a very long price, and then he was loth to part with them. They will be shown through the Eastern circuit next spring with the Mt. Washington Kennels' dogs."

If all reports are true this is a great year for the beagles. A Wayne, Pa., correspondent writes: "Rabbits, the only game we have about here, are unusually abundant this season, particularly in the hills which inclose the Chester valley. I have the Elk Moor pack out almost daily, and never fail to have plenty of sport. I have some promising youngsters doing their first work well.—ELK MOOR."

What a contemptibly small and mean soul must that creature have who will avenge his quarrel by torturing a man's dog. The Hempstead Farm Kennels, at Hempstead, Long Island, were destroyed by an incendiary fire last Sunday morning, and it was only by the exercise of much presence of mind and bravery on the part of John Gaynor, a trainer, that the dogs Robin Adair, Zulu Princess and others were rescued from the flames.

The dog killing crank has been at it. Last Monday a St. Bernard dog owned by Col. J. A. Joel, publisher of the *Grand Army Gazette* of this city, was shot and killed by an unknown man at Mr. Joel's home in Hoboken, N. J. A policeman saw the man shoot the dog, but he escaped. The Hempstead Kennel burner and the Hoboken dog shooter both deserve more than the law allows.

The Richmond dog show was a clean, well-managed little exhibition, and in these respects did credit to the promoters. We regret to learn that financially the enterprise was a failure; the loss exceeded $2,000. It is now in order for the turf idiot, who jeered at Buffalo because that show had (in the idiot's mind) lost money, to try his malevolent hand on Richmond. Other folks, who want to see dog shows prosper in this country, will hope that another year the Virginia Field Sports Association will fare better and give a paying show in the old city on the James.

Through an open window at night an insect flies into the room and goes whizzing and buzzing, bump into this, bang against that, and drops with a thud to the floor. There is dead stillness, and you forget that there is a bug in the room, when all of a sudden there it goes, whizz, buzz, bump, thud,

then buzz, whish, out into the dark again, and you never see it more.

James L. Anthony announces that he is ready to retire. Whether weighed in his own scales as the one righteous man in a sinful generation of dog fanciers, or taken at the estimate others put on him as a noisy nuisance, it was clear from the first that Anthony would not last long. He was not a "dog man." He bought a kennel because he thought it an opportunity to make a splurge, and by brag, blow and bluster achieve notoriety. He has made his splurge, has blown, bragged and blustered, and has achieved a notoriety such as it is, and now he gets out. That is all there is of it. Every dog must have its day. Yesterday he said "I am." To-day they say "He was." To-morrow "Who was he?" The next day oblivion.

There are others who will follow. Anthony's former kennel partner and Man Friday will say "Me too," and sell out. The next will be the individual who signs "Pres. A.K.C." to his name. Belmont is not a dog man; he went into showing because it was English; he has tired of the fad, and when he discovers that the members of the ring, who because they have use for him cajole him to his face and adopt resolutions indorsing his "defense" (untruthful statements and all), sneer at him behind his back, the joys of office will pall on him, and the Blemton Kennels will be put up at auction. And then will follow the windy pedant who has almost exhausted his cyclopedia of Greek authors done into easy English, and will abruptly reach the end of the book and the end of his career as a dog screed maker at the same moment. This is the rule that one and another, who for one reason or another buy or write about dogs, but have no natural interest in dogs, will go out of the fancy and be forgotten; but let no one fall into the mistake of supposing that there will not be just as many dogs left and just as many dog men, for there will be. This bit of dog talk is in the nature of prognostication, and on it we will cheerfully wager our repute for soothsaying.

A crazy woman, four dogs, thirteen cats and a parrot, all camped out in the street, invited the attention of the Brooklyn police last Monday. The four dogs were shot, the thirteen cats drowned and the woman and the parrot sent to the insane asylum.

A meeting of Hudson River poultry breeders will be held at Newburgh, N. Y., Nov. 17, to organize a Hudson River Poultry, Dog and Pet Stock Association. An exhibit covering four days is proposed during the coming winter.

Messrs. Larson and Frouman, of Anoka, Minn., have brought out an "improved bench dog," good not only for the bench but for the gun as well, which is more than can be said of many a bench dog.

Mr. J. O. Thurston (Erminie Kennels, Mt. Vernon, N. Y.) writes: "I have purchased from Mr. Jas. Jarvis, England, the well-known rough-coated St. Bernard dog Lysander. He is two years old, was bred by Sidney W. Smith of Leeds and has won fourteen prizes and cups. He is orange tawny with white markings, stands 33½in. high, and weighed the day he sailed 190lbs. I expect he will arrive next Wednesday per steamship Italy. I have also purchased the Swiss smooth-coated dog Barry, out of Bella, litter sister to the celebrated Guide."

The Meriden Poultry Association will hold its eleventh annual exhibition of poultry and pigeons, and fourth bench show of dogs, at the Polo Rink, Meriden, Conn., Jan. 1 to 4, 1889, inclusive.

DISTEMPER.

II.

In its ordinary form, distemper, as we explained in the last article, is a catarrhal affection, which at its commencement resembles an ordinary cold; and when the attack is mild and transient, it is not always possible to determine which of the two diseases exists. When the affection runs a more definite course, the evidence is sufficiently positive, and the occurrence of certain complications leaves no room for doubt as to the nature of the malady. Excessive emaciation and sometimes entire collapse are the frequent results of the ordinary progress of the common kind of distemper, when the early stage is neglected or improperly treated; and even when everything is done for the animal's benefit, the disease may prove to be beyond the doctor's skill, owing to the implication of important organs—the lungs, liver, or brain.

Coughing is one of the almost constant symptoms of distemper, and its existence is evidence of the irritable state of the mucous membrane of the air passages. Increase of the irritation is not uncommon, and sometimes it advances to the degree of acute inflammation of the lining of the larynx or bronchial tubes. In such cases the cough becomes very painful, and the breathing is quickened, and is carried on with an open mouth. It is frequently observed that dogs, when suffering from disease of the respiratory organs with difficult breathing, will seek to relieve themselves by elevating the head, and in some cases they will stand with the fore paws resting on a stool or the edge of a fender The more common position, however, is sitting on the haunches, with the head held up and the mouth open.

Inflammation of the substance of the lungs is indicated by the symptoms above described, minus the painful cough and plus a quick, hard pulse, instead of the soft beat of bronchitis. All inflammatory affections are associated with fever, which is shown by the rise of internal temperature, dryness and heat of nose, and constipation. Acute affections are also, as a matter of course, productive of general lassitude, with loss of appetite, attended with rapid emaciation. Treatment of distemper with lung complications does not include any important alterations in the method which will have already been adopted in dealing with the ordinary catarrhal form of the attack which precedes the more serious affections of the respiratory system. If the dog's condition is good, and the acute disease supervenes before the strength is impaired, bleeding may be resorted to; but the operation is now seldom performed, and the amateur should not attempt it. Only the experienced canine surgeon can decide whether or not the conditions are such as to render the treatment necessary. Counter-irritation in acute inflammatory disease is not deemed to be good practice; but in the case of the dog an excellent and safe substitute is found in the warm bath, by the use of which, followed by the application of hot towels, and completed by wrapping the dog in a blanket, the skin may be kept warm, and all the benefit of stimulant applications obtained without causing any pain or excitement.

Some care is necessary in giving a bath to small pet dogs in reference to temperature, and also duration of the immersion. Dogs are easily affected by heat, and faint on the slightest provocation, especially when they are suffering from a weakening disease. On no plea should the temperature of the bath be judged by the hand; but a common thermometer should always be used, and a temperature of 98 to 99deg. will be sufficient. Should fainting occur while the dog is in a bath, the animal must be immediately removed, and quickly dried while lying on its side. If necessary, the usual devices which are resorted to in the case of the human patient in similar circumstances may be employed.

Careful nursing is absolutely essential in the treatment of acute disease in dogs, and it is particularly necessary to avoid alarming the patient by rough handling, or the use of force in the administration of medicines. For this reason, powders which can be thrown on the tongue, or remedies which can be made up with honey to form an electuary, are to be preferred to fluid mixtures and pills; and with very irritable pet dogs, it may often be worth consideration whether it is not better to trust to good nursing in acute disorder of the breathing organs, rather than excite the animal by an attempt to give medicines.

Regulation of the diet will not be difficult in the cases which have been described. The dog is disinclined to eat, and it should be coaxed to lap milk in which an egg has been beaten up, or cold soup made of meat without any salt. Small quantities of food should be offered, and, if not accepted, should be removed from the animal's sight, and a fresh portion of another food be tried in an hour or two. Nothing is so certain to disgust a sick dog as the sight of food which it objects to take. Cold water will often be taken freely, and whatever is offered in the way of nutriment must be cold, or it will certainly be declined.

Jaundice or the yellows is a disease which is sometimes developed during the progress of distemper, although it may occur independently. The symptoms are characteristic and easily recognized; in fact the common name of the disease (yellows) at once suggests the most prominent sign, which is the yellowness of the skin. White dogs exhibit the change of color in the most marked form, but even in black animals the yellow tint may be observed quite distinctly. Besides the yellow color of the skin and mucous membranes there are other symptoms in jaundice which indicate general derangement of the digestive functions. The dog is dull, apparently suffering from nausea; sometimes constipation is present and at others diarrhœa. The evacuations in either case are at first light or clay-colored, but in the advanced stage of the disease they may become dark from the mixture of dark green or brown bile or blood.

In some cases abdominal pain is present, and pressure over the region of the liver causes the dog to flinch. Coming on when the animal is already weakened by the primary disease, jaundice often proves fatal in a few days. But it sometimes becomes subacute or chronic, and is attended with considerable enlargement of the liver, which occupies the lower part of the abdominal cavity, causing the belly to swell out, while the sides fall in, showing deep hollows on each side.

During the whole course of the disease in its acute form there is a disinclination to take food of any kind, and it is necessary to administer small and frequent doses of the concentrated meat extracts to keep the animal alive. Fatty substances should not be given, as in the disordered state of the digestive system they are not likely to be appropriated. In the medical treatment of jaundice the fluid extract of taraxacum, in doses of a drachm to half an ounce, will be a very useful remedy, and it may be given mixed with the meat solutions.

Some practitioners give small doses of calomel, and apply mercurial ointment with friction over the region of the liver. Iodide of potassium, in doses of from one to four grains, has proved beneficial in the chronic form of the disease; but, speaking generally, jaundice is an intractable disorder, and treatment cannot be undertaken with much hope of success.—*London Field.*

THE SPANIELS.

Editor Forest and Stream:

To your correspondent "Quester" I would say to come out of his dense cover and let us know his name and residence if he is not ashamed of them.

I should like to ask this Rip Van Winkle "Quester" where he has been and what he has been doing for the last five years? and if he thought our challenge was a "bluff" why he did not "call us" or see us $1,000 and raise it.

The only "rot" about it is in "Quester's" letter, nothing was ever said about $1,000 or any amount. The challenge read, "The Hornell Spaniel Club will back Hornell Silk and Daisy against any brace of cockers in America on woodcock and ruffed grouse for any reasonable amount, the test to be endurance, nose, style and obedience. Will give or take $100 for expenses." That was straight. No one accepted the challenge, and a man of "Quester's" experience must know that we had a perfect right to claim the field trial championship by default, and the fact remains that Hornell Silk is champion, and the entry at Buffalo and Syracuse correct.

It may be that "Quester" has put in the last five years in training spaniels, and if he has one as good as Silk I congratulate him, but he can win no cash from us by beating the old dog in the field; but if he has a team of five cockers that he wishes to match against Silk, his son and grandson, and two daughters, then let him come here and we will make a match for marbles or fun, anything to "size his pile" and accommodate him.

J. OTIS FELLOWS, Sec'y Hornell Spaniel Club.

HORNELLSVILLE, N. Y.

CHESAPEAKE BAY DOGS.

Editor Forest and Stream:

In the FOREST AND STREAM of the 4th inst., "G. E. S." asked for information in regard to the Chesapeake Bay Dogs.

I have shot ducks for thirty-five years, and have had a great many kinds of duck dogs, but never had any others that suited me so well as the Chesapeake Bay dogs.

They are hardy and tough. Will go through ice and snow after water-fowl. They handle birds with great care and are very sure to get all the dead birds. They are very sure on the track of a wounded bird, and it is almost impossible for one to get away from them.

The color of the Chesapeake Bay dogs is such that they do not scare birds. I have shot over seven within two years, and have found them all good duck dogs. As house dogs they are very kind to children, and will mind their own business. I have a bitch that stays in my house nights and I have found her to be one of the best I ever had. J. G. S.

ALGONA, Iowa.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Chesapeake. By Dr. E. A. Palmer, Blair, Neb., for sedge Chesapeake Bay bitch, whelped July 24, 1885, by Gowrie (Sunday—Nellie) out of Kate (Bob—Nellie).

Judge. By F. H. Claridge, Blair, Neb., for sedge Chesapeake Bay dog, whelped March 8, 1887, by Drake (Rake—Rose) out of Duck.

Inland. By Cumberland Konnels, Portand, Me., for fawn greyhound bitch, whelped Jan. 21, 1887, by Skip (Bessie II.—Gucss) out of Bessie I.

Bowstring, Viceroy and Valentine. By G. W. McNeil, Jersey City, N. J., for pointer dogs, whelped Oct. 9, 1888, by Nick of Naso (A.K.R. 4391) out of Temptation (A.K.R. 1590).

Bonita and Lady Primrose. By G. W. McNeil, Jersey City, N. J., for pointer bitches, whelped Oct. 9, 1888, by Nick of Naso (A.K.R. 4391) out of Temptation (A.K.R. 1590).

Minting, Jr.—Montclair, N. J.—*Editor Forest and Stream:* In last week's issue of your paper Mr. Geo. P. Jones, of St. Louis, Mo., claims the name of Minting, Jr., for his mastiff dog, whelped April 12, 1888. If he will refer to page 170, A. K. R. (No. 6454), he will find my mastiff dog Minting, Jr. (Minting—Beatrice), whelped Dec. 3, 1887, registered, and will kindly give his dog some other name.—J. HELLEN.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Belle II.—Bannerman. J. G. Messner's (Pittsburgh, Pa.) beagle bitch Belle II. (Bradlaugh—Belle) to A. C. Krueger's champion Bannerman (champion Marchbow—Dewdrop), Aug. 5.

June—Bannerman. F. Eibel's (Lancaster, Pa.) beagle bitch June (Victor II.—May) to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), Sept. 13.

Goodwood Music—Bannerman. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Goodwood Music (Flute—Victress) to his champion Bannerman (champion Marchboy—Dewdrop), Aug. 1.

Bannerqueen—Racket II. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Bannerqueen (champion Bannerman—Queen) to his Racket II. (Cameron's Racket—imported Krueger's Myrtle), Sept. 20.

Cricket—Racket II. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Cricket (champion Bannerman—Pet) to his Racket II. (Cameron's Racket—imported Krueger's Myrtle), Oct. 4.

Krueger's Dot—Rowdy. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Krueger's Dot (champion Bannerman—Floss) to his Rowdy (champion Rattler III.—champion Myrtle) Aug. 4.

Dots—Rowdy. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Dots (Cornet—Solo) to his Rowdy (champion Rattler III.—champion Myrtle), July 30.

Kitty—Krueger's Racket. A. C. Krueger's (Pittsburgh, Pa.) beagle bitch Kitty (champion Bannerman—Dots) to his Krueger's Racket (Cameron's Racket—Fly), Aug. 6.

Maud—Gruss Bayard. C. Kammerer's (South Boston, Mass.) St. Bernard bitch Maud to Weimer & Lincoln's Gruss Bayard (A.K.R. 5931), Oct. 16.

Clover Gladstone—Gun. Elmer A. Hight's (Lynn, Mass.) English setter bitch Clover Gladstone to Chas. York's Gun (Gladstone—May B.), Sept. 5.

White Puss—The Baron. E. A. Woodward's (Chicago, Ill.) bull-terrier bitch White Puss (A.K.R. 6428) to Associated Fanciers' The Baron (Dutch—White Rose), Aug. 29.

Bradford Lill—Bradford Harry. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Bradford Lill (Tickle'em—Judy) to his Bradford Harry (Crawshaw's Bruce—Beale's Lady), Oct. 9.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Chesapeake. Dr. E. A. Palmer's (Blair, Neb.) Chesapeake Bay bitch Chesapeake (Gowrie—Kate), July 25, eleven (six dogs), by F. H. Claridge's Judge (Drake—Duck).

Temptation. Geo. W. McNeil's (Jersey City, N. J.) pointer bitch Temptation (A.K.R. 1590), Oct. 9, five (three dogs), by C. J. Peshall's Nick of Naso (A.K.R. 4391).

Lakme. F. Kimball's (Worcester, Mass.) St. Bernard bitch Lakme (A.K.R. 5077), Sept. 19, nine (six dogs), by Hospice Kennels' champion Hector (champion Apollo—Thyras).

Devon Beauty. A. Laidlaw's (Woodstock, Ont.) cocker spaniel bitch Devon Beauty (Lad o' Devon—Woodstock Dinah), Oct. 14, five (four dogs), by his Robin (champion Obo II.—Woodstock Dinah).

Scarlet Princess. F. S. Clark's (South Paris, Me.) bull-terrier bitch Scarlet Princess (Young Royal—Scarlet II.), Oct. 13, nine (five dogs), by his Royal Dick (Young Royal Prince—Nellie Curtin).

Dewdrop. T. J. Tyrell's (Philadelphia, Pa.) fox-terrier bitch Dewdrop (Warren Billy—Nettle), Oct. 7, six (four dogs), by L. & W. Rutherfurd's Warren Jim (Diamond Dust—Diana).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Rattler. White, black and tan beagle dog, whelped April 19, 1887, by Cameron's Racket out of Nellie II., by A. C. Krueger, Pittsburgh, Pa., to R. A. Smith, Grand Crossing, Ill.

Queen Lill. White, black and tan beagle bitch, whelped Oct. 24, 1887, by Dale out of Lill II., by A. C. Krueger, Pittsburgh, Pa., to B. F. Cooper, Johnstown, Pa.

Kitty. White, black and tan beagle bitch, whelped Sept. 7, 1887, by champion Bannerman out of Dots, by A. C. Krueger, Pittsburgh, Pa., to Tom E. Hibben, Indianapolis, Ind.

Goodwood Music. White, black and tan beagle bitch, age not given, by Flute out of Victress, by A. C. Krueger, Pittsburgh, Pa., to T. Wills Hemphill, Glen Mills, Pa.

Bannerman III. White, black and tan beagle dog, whelped Feb. 20, 1888, by champion Bannerman out of Blossom, by A. C. Krueger, Pittsburgh, Pa., to Ed Fisher, same place.

Tuck. White, black and tan ticked beagle dog, whelped Feb. 15, 1887, by Little Mack out of Lace, by A. C. Krueger, Pittsburgh, Pa., to B. F. Cooper, Johnstown, Pa.

Racket II. White, black and tan beagle dog, whelped Oct. 13, 1886, by Cameron's Racket out of imported Krueger's Myrtle, by Dr. H. B. Nicols, Cookstown, Ont., to A. C. Krueger, Pittsburgh, Pa.

Beech Grove Bess. Dark fawn mastiff bitch, whelped June 26, 1887, by Thor out of Delph Viva, by Geo. Jackson, Beech Grove, Ind., to L. Blanden, Fort Dodge, Ia.

Valentine and Lady Primrose. Black and white pointer dog and bitch, whelped Oct. 9, 1888, by Nick of Naso (A.K.R. 4391) out of Temptation (A.K.R. 1590), by Geo. W. McNeil, Jersey City, N. J., to John N. Lewis, Ramsay's, N. J.

Dolph. Fawn and white St. Bernard dog, whelped Nov. 10, 1887, by Blucher (A.K.R. 3577) out of Madeline (A.K.R. 2587), by J. R. McAlpine (deceased), Littleton, N. J., to J. Randolph McAlpine, New York.

Ben Hur. White, with orange spots and black facings, rough St. Bernard dog, whelped Aug. 26, 1887, by Cato out of Belle Valentine, by Halfway Brook Kennels, Glens Falls, N. Y., to Tracy Gould, Troy, N. Y.

Cato. White and orange, black facings, smooth St. Bernard dog, whelped July 4, 1886 (A.K.R. 5265), by Halfway Brook Kennels, Glens Falls, N. Y., to F. J. Carlyle, Walla Walla, Wash. Ter.

The Duchess Armande. Orange brindle, correct white markings, black facings, rough St. Bernard bitch, whelped April 28, 1888, by Cato out of Nutmeg, by Halfway Brook Kennels, Glens Falls, N. Y., to Miss Mary R. Wilson, Sandy Hill, N. Y.

Nobility. Orange brindle, correct markings, rough St. Bernard dog, whelped Aug. 26, 1887, by Cato out of Belle Valentine, by Halfway Brook Kennels, Glens Falls, N. Y., to Mrs. B. H. Kathe, Chillicothe, O.

Isabella. Orange, correct white markings, smooth St. Bernard bitch, whelped Nov. 28, 1887, by Cato out of Belle Meade II, by Halfway Brook Kennels, Glens Falls, N. Y., to Mrs. B. H. Kathe, Chillicothe, O.

Earl C. Orange brindle, white markings, rough St. Bernard dog, whelped Feb. 23, 1888, by Cato out of Belle Valentine, by Halfway Brook Kennels, Glens Falls, N. Y., to Wm. P. Perkins, Danvers, Mass.

Cato—Belle Valentine whelps. Rough St. Bernards, whelped Feb. 23, 1888, by Halfway Brook Kennels, Glens Falls, N. Y., an orange and white dog to Dr. S. T. Birdsall, same place, and a white and orange brindle dog to R. W. Perkins, Oxford, N. Y.

Gun—Dora Gladstone whelp. Black, white and tan English setter dog, whelped June 4, 1888, by Chas. York, Bangor, Me., to W. A. Dilks, Hammonton, N. J.

PRESENTATIONS.

Dolph. Fawn and white St. Bernard dog, whelped Nov. 15, 1887, Blucher out of Madeline, by J. Randolph McAlpine, New York, Miss J. E. Headley, Newark, N. J.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

OLD SUBSCRIBER, Cincinnati, O.—Will you please inform me in your next issue what will cure canker in a dog's ears. I have an Irish water spaniel that is troubled a great deal with it. By answering above you will greatly oblige. Also a good remedy for the mange. Ans.

R Bromo-chloral	ʒ ii
Tr opii	ʒ i

Mix. After cleansing and drying the ears let a few drops fall into them. For mange oxide of zinc ointment externally, and Fowler's solution of arsenic 5 drops night and morning in the food.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CONNECTICUT STATE SHOOT.

HARTFORD, Conn., Oct. 17.—The brigade rifle tournament of the Connecticut National Guard was held at the rifle range of the First Regiment at Colt's meadows, to-day. The crack military target perforators from all parts of the State poured into Hartford from early in the morning, but the fog and the air was so frigid that every hand was too much benumbed to do good work. Major James H. Jarman, brigade inspector of rifle practice, was the executive officer in charge. It was arranged to have firing commence at 8 o'clock, but at this hour the humidity was so dense that Major Jarman called a consultation of officers and it was decided that if it did clear up the matches would be decided upon scores made at the 200yds. range only, as it was then impossible to see the 500yds. target. Firing commenced about 9 o'clock and the fog gradually lifted and gave place to a cold, drizzling rain, which continued during the day, and it was decided to shoot at both targets if possible. A number of tents were erected with blankets under them, enabling the men to shoot from under a partial shelter.

The first match was the "company team" contest open to teams of six from any organization of the C. N. G., using any weapon issued by the State. The contestants must stand at the 200, and not be prone at 500yds. The prizes for this contest are a $50 silver cup, presented by the Wilcox Company of Meriden, the Derby Silver Company cup, a decorated vase valued at $35, pair bronze statuettes valued at $30, and two other $30 prizes. Four targets were shot at continually, keeping up a fusilade like the discharge of a Gatling gun, and at the same time pool shooting and individual matches were carried on at other targets. Owing to lack of range accommodations, no challenges were allowed, and as a result the markers at the targets were the supreme dictators of the match. In many instances men were given either much more or much less than they received. A telephone such as is always used on many ranges would have obviated all this difficulty and made a much fairer match. The whims of the markers decided the contest and all day there was a big kick. Another thing the New Haven men found fault with was that members of the First Regiment kept the scores while the regiment's team were shooting, although there was no very serious objection to this. Each company team shot five rounds at both targets with two sighting shots at 500yds. The following companies were represented: Companies H, F, K, First Regiment; companies H, D, G, A, C, E, K, Second Regiment; companies 1, G and E, Third Regiment; companies B and C, Fourth Regmient; Company A, Fifth Battallion, and brigade, field and staff.

The most important competition for regimental pride was the State regimental team match, for two trophies offered by the State, at 200 and 500yds. These prizes are to be competed for annually until one team has won it three times, when it will become regimental property. The first prize is a silver cup. The conditions of the match were the same, except twelve men constituted the regimental teams.

Company K of Wallingford shot first at the 200yds. range in the company team match. About $1,500 worth of prizes for this tournament have been contributed and otherwise secured, and were on exhibition in Hartford to-day. The officers of the match were: Range officer, Major J. H. Jarman, brigade inspector rifle practice; assistants, Capt. S. C. Kingman, inspector Fourth Regiment, Capt. Andrew Allen, Second Regiment, Capt. J. B. Houston, First Regiment, and Capt. Thomas H. Allen, Third Regiment; surgeon, Maj. H. G. Howe, First Regiment; statistical officers, Joseph T. Elliott, A. A. G. of brigade and financial officer, Maj. Alexander Allen. Among the well-known officers of the National Guard present were Col. Thomas H. Watson, Bridgeport; Capt. A. H. Embler, of the Blues; Capt. Charles G. Lyon, Bridgeport; Col. W. G. Leavenworth and Lieut. W. H. Newton, Wallingford.

Company K, of Hartford, won the company team match with a score of 115 at 200yds. and 117 at 500; total, 232. All except Hartford militiamen are mad. They say that the first prize was bound to stay in Hartford anyway, and some officers say that the match was a regular farce. Co. H of the First Regiment withdrew their team on account of unfair scoring after shooting from the first targets. It will be a very long time before the effects of the tournament are soothed away. The scores of the other contesting teams are as follows: Co. K, Wallingford, 108, 58—206; Co. F, Hartford, 113, 99—212; Co. D, New Haven, 100, 83—183; Co. H, Middletown, 86, 55—141; Co. I, New London, 95, 91—186; Field and Staff, Second Regiment, 106, 89—195; Co. G, New London, 93, 88—181; Field and Staff, First Regiment, 98, 105—204; Co. F, Hartford, 98, 104—202; Co. C, New Haven, 109, 94—203. The best score in the individual match, 200yds., was made by Sergeant Ripley, of Co. K, Hartford. Late in the afternoon regimental team shooting began.

Oct. 18.—In the regimental team match at the brigade rifle tournament at Hartford to-day, as in the company matches, the first prize was awarded to Hartford's First Regiment team. The Second Regiment protested against awarding the trophy to the First and the matter has been referred to the Adjutant-General. The score was as follows:

	200	500	Total.
First Regiment	326	319	645
Second Regiment	316	310	626
Third Regiment	311	293	604
Fourth Regiment	307	290	597
Fifth Battalion	260	194	454

Individual Prizes—Following are the scores and prizes in the individual match: Sergt. White, Co. G, 3d, 31; Sergt. Hatton, C, 3d, 31; Pvt. Peltier, F, 1st, 31; Sergt. Ripley, F, 1st, 31; Sergt. Tourtellotte, A, 3d, 31; Sergt. Kerr, B, 4th, 31; Sergt. Thompson, H, 1st, 31; Pvt. Daly, C, 2d, 31; Surgeon Howe, 1st, 30; Pvt. Withey, G, 3d, 30; Corp. Smith, F, 1st, 30; Pvt. O'Connor, C, 2d, 30; Pvt. Jordan, E, 4th, 30; Sergt. Northmagle, M G P, 4th, 30; Capt. LaBarron, K, 2d, 30; Maj. Jarman, B 1 R P, 30; Capt. Welles, Adj't 2d, 29; Capt. Newton, F, 1st, 29; Lieut. Matheis, F, 4th, 29; Sergt. Beach, K, 2d, 29; Pvt. Collins, H, 1st, 2d; Lieut. Preston, K, 1st, 29; Corp. Case, K, 1st, 29; Lieut. Gibney, B, 4th, 29; Lieut.-Col. Thompson, 1st, 29; Pvt. Whitman, A, 2d, 29, Pvt. Halm, I, 2d, 28; Pvt. Turner, K, 1st, 28; Sergt. Kimberly, K, 1st, 29; Lieut. Darnstadt, I, 2d, 29; Capt. Houston, I, R P, 1st, 29; Corp. Munson, A, 2d, 28; Pvt. Stockwell, C, 4th, 28; Corp. Landon, E, 2d, 28; Corp. Liveridge, K, 2d, 28; Capt. McLean, H, 1st, 28.

TORONTO, Oct. 20.—The tenth annual prize meeting of the Toronto Rifle Association was held to-day on the Garrison common ranges. There was a fair turn out of local riflemen and much interest manifested, the competition being very keen. A stiff wind blew across the ranges, and this, coupled with the cold, damp and cloudy weather, made shooting disagreeable and kept the score very low. The association has had a very successful season, and next year, as it is intended to reduce the fees from $3 to $2 per annum, a large addition to the present membership is expected. The list of prize winners is as follows:

Match No. 1.—The "Cartwright" ranges, 200 and 400yds., 7 shots at each range, Snider rifles. A. D. Cartwright won the "Trowern" medal and $10:

A D Cartwright	59	A G Ronan	56
W Jack	58	A Anderson	56
R McVittie	57	R Cartwright	55
J Davis	57	W Brown	55
W Ashall	56	A Curran	55

Match No. 2.—The "Johnson" ranges, 200, 500 and 600yds., Snider rifles, 7 shots at each range:

T Mitchell	84	A D Crooks	69
Geo Bell	82	A Anderson	68
A D Cartwright	78	J M Delamere	67
W Ashall	76	F W Curzon	67
R McVittie	71	Geo Thompson	67
W Harp	71	W Brown	66
Geo Lewis	70	A Bell	66
W Jack	69		

Match No. 3, the Ronan ranges, 200, 500 and 600yds., 7 shots at each range, Martini rifles:

T Mitchell	82	W J Graham	73
W Ashall	81	W Jack	72
A D Cartwright	81	A Bell	71
W Mowat	80	A D Crooks	70
W G Donnelly	78	Geo Thompson	70
W Brown	78	R McVittie	70
A Curran	75	Geo Lewis	69
W Harp	75	W C Vanloon	68

One 68 counted out.

Match No. 4, the aggregate, grand total in matches 1, 2 and 3:

T Mitchell, D. R. A. Medal	220	W Jack	199
A D Cartwright, O. R. A. Medal	218	R McVittie	198
W Ashall	213	W Harp	193
W Brown	199	A D Crooks	189

Match No. 5, the Bullseye, the greatest number of bullseyes to count in matches 1, 2 and 3:

T Mitchell	21	W Harp	16
W Brown	16	A D Cartwright	15
W Ashall	16	W Jack	14

The Toronto Silver Plate Cup, value $40, aggregate in matches 1 and 2 (to be won twice):

Winner, T. Mitchell 138

As Mr. Mitchell won this cup last year, he keeps it.

The Trowern Medal, value $15, aggregate scores at 500 and 600yds. in match No. 2:

Winner, Geo. Bell 56

BOSTON, Oct. 20.—The attendance at the rifle range to-day was good and the shooting lively, though no very high scores were made. The wind was strong from 10 o'clock. The following are the best scores made:

Off-Hand Match, No. 1.

A Clarke	10	8	7	9	7	9	7	7	5	5—74
C Williams	10	7	6	7	5	5	9	8	7	8—72
F James	6	6	7	6	6	5	7	6	5	10—64

Off-Hand Match, No. 2.

C Williams	9	10	5	7	3	9	8	8	8	10—79
A Clarke	8	9	9	6	8	5	8	4	8	6—71
F James	7	6	6	10	6	8	6	8	6	6—69

Rest Match, 200yds.

A L Stone	12	12	12	10	12	9	10	12	12	11—112
C H Davis	11	10	10	11	9	9	12	11	10	10—105
A Ballard	7	9	9	9	11	10	8	9	11	10—93
J E Tuttle	10	7	6	8	10	9	11	8	9	10—88

Revolver Match, 50yds.

A Lorin	9	7	8	10	9	9	9	10	7	10—88
J B Fellows	9	9	8	10	10	7	6	10	8	9—86
O T Moore	9	6	8	8	8	6	7	9	10	10—81
F Carter	9	7	9	9	6	5	9	9	9	8—80
A Martin	8	8	7	7	10	7	8	8	6	6—76

Victory Medal Match.

J A Frye	8	10	7	7	6	9	9	8	7	8—79
F Carter	8	5	9	5	6	9	6	6	5	10—69
A Maynard	7	6	6	10	6	8	6	8	6	6—69
O T Moore	8	6	8	5	7	6	6	9	5	7—67

Decimal Off-Hand Match, 200yds.

W C Johnston, Jr	9	10	5	7	3	9	8	8	9	10—79
D L Davis	5	9	9	8	8	5	8	10	6	7—75
H Severance	10	8	7	0	7	9	7	7	5	5—74
B G Barker	9	9	6	7	10	7	7	7	7	5—74
A Maynard	10	7	6	7	5	5	9	8	7	8—72
W C Ames	4	6	10	9	4	4	9	9	6	9—70
O T Moore	3	7	9	7	6	7	7	4	3	7—69
S Ham	6	9	5	7	4	5	8	9	2	6—68
F James	8	3	3	9	5	4	6	6	5	4—53

CAMBRIDGE TRIBUNE TROPHY.—The annual rifle competion for the Tribune Trophy between teams representing the two B's will occur at the North Cambridge Range next Saturday. The City Guard team will be minus the services of Private Chas. Ryan, one of its best shots, who is confined to his home with typhoid fever. The individual scores and team totals made by the Brattle Square team last Saturday were as follows:

Pvt Getchell	4554444—29	Pvt Lounsberry	4343434—25
Pvt Chittick	4534454—29	Bvt Ellis	4433343—24
Pvt Sawin	4444434—27	Pvt Frost	3344222—23—183
Sergt Henderson	4553344—26		

The Tribune Trophy, which is the only prize ever offered for competition by both companies, is at present held by Captain Dallinger and his men, having been won last year by one point, the score being 174 to 173. The scores of the leading six figured out the same total, and the result hinged on the scores of the two tailenders, and the man from Central Square came of victor with a score of 23, his opponent scoring 22. It was a close shave, and simply illustrates the determination with which the battle for the trophy is fought each year.—*Cambridge (Mass.) Tribune, Oct. 20*

SACRAMENTO, Cal., Oct. 14.—Thirty-two of Company G's men faced the 200yds. target on the Twelfth street range to day. Their score was 1,245 out of a possible 1,600, or 78 per cent. One made 44 out of a possible 50, three made 42, five made 41, seven made 40. Thirty-two officers and men shot, and the detailed scores show the remarkable exhibit of no misses and but 35 bullseyes in the 320 shots. The following scores were made with pistols at 60yds. by the Signal corps:

Lieut Kennedy	4445444544—42	Pvt Bessy	3433344542—35
Sergt Quin	4242223345—29	Pvt Geiser	4524232223—27
Corp Hazelstein	5443444234—37	Pvt Graves	2334234222—27

PHILADELPHIA, Oct. 20.—The military event of the week happened to-day, when the opening contest of the First Brigade of the National Guard of Pennsylvania was shot at the new Hartranft Range, at Bridesburg. The construction of the range was commenced last summer, but owing to delay in getting lumber and materials to the ground it has only just been completed. The range is in splendid condition, and regular rifle practice will hereafter be done by the men. The grounds at present are arranged for 100, 200, 300, 500 and 600yds., and may be increased to 1,000yds. The targets are backed by railroad ties that have been piled to a height of 18ft. in the rear, insuring against accident.

The prizes competed for are the gift of Lieut.-Col. Thomas Potter, Jr., A. D. C. to the commander-in-chief, General Snowden. They consist of collar badges; the first prize of gold, the second of silver and the third of bronze. The contest was between fourteen teams of four men each, representing companies from the First and Second Regiments, of this city; the Sixth, of West Chester; the City Troop and the State Fencibles. The men reported at the range at 9 o'clock in the morning, and a practice match occupied the time until noon. All the contestants were required to appear in uniform, and one team which failed to do so was not allowed to shoot.

The match began at half-past 1, and finished at five minutes past 4, and considering the want of practice of the men, Major Huidekoper, inspector of rifle practice, says that the score made was particularly good, and very promising for fine marksmanship in the future. The teams shot five shots each man at 200 and 500yds., under Creedmoor rules. The winning team scored 151 out of a possible 200, the second scored 128 and the third 127. The individual scores of the winning teams were: Company D, First Regiment, Lieut. Crump 42 out of a possible 50, Sergt. J. O. Bowman 37, Capt. Hastings 36, Pvt. Glathery 36; total of the team 151, winning the gold badges. Company F of the same regiment, Sergt. Bryan 35, Lieut. Heath 33, Capt. Eller 19, Pvt. Neffeldorf 41. The third team, Company I, of the Sixth Regiment, of West Chester, made 127 as follows: Capt. Paxton 34, Sergt. Ogier 22, Pvt. Phillips 27, Pvt. Johnson 34. The lowest score was 82, by the Norristown Company. The shooting was rendered more difficult by a strong and uncertain wind. The second match will be shot next Saturday for prizes of gold badges with diamond and ruby bullseyes, and the "Potter trophy" and others.

ST. LOUIS, Oct. 20.—An even dozen were present at the regular shoot of the St. Louis Pistol Club to-day. Below will be found the scores on the standard target, distance 200yds., possible 100:

L V D Perret	87	M C Billmeyer	73
W H Hettel	86	M Summerfield	68
W J Larned	82	R E Bengel	63
E C Mohrstadt	81	H C Griesiedick	62
F A Fodde	79	L Denig	59
W Bauer	76	W C Mackwitz	52

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE CALIFORNIA STATE SHOOT.

STOCKTON, Cal., Oct. 4.—The first day's shooting of the California State Sportsmen's Club was held here to-day, about thirty members of the association being present. In all the matches prizes were divided into 40, 30, 20 and 10 per cent of the entrance money, and special prizes were given by business men.

The first match, at fifteen live birds, 21yds. rise, plunge traps, one barrel, entrance $5, had thirteen entries. J. Fanning, C. J. Haas, Dr. Cross and F. J. Leffler tied on thirteen birds each and divided.

The second match was at fifteen live birds, 30yds. rise, Hurlingham rules, ground traps, $5 entrance. There were sixteen entries. Fanning, Hass and Dr. Britton each killed fourteen birds; C. A. Merrill and E. Leffler killing thirteen each.

The third match was at ten single and five pair of bluerock targets, 15yds. rise, entrance $2.50. Twenty-one shooters entered. C. J. Hass and J. Fanning tied on 18 out of a possible 20 and divided first and second money. Hass had 10 straight singles and 3 straight doubles, missing one each in the second and third doubles. Fanning had 9 singles and 4 straight doubles. F. J. Leffler took the third prize with 17. Dr. Slade had 16 and fourth prize. J. Delmas had 15, and J. Coffin, I. J. Kellogg, H. Whitehead, L. C. Stockwell and C. A. Merrill tied on 14 each, taking the special prizes.

Two special freeze-out matches, $2.50 entrance, closed the day's sport.

Oct. 5.—At the second day's shoot of the California State Sportsman's Association the attendance was large and the sport interesting. The first match was for the challenge medal, offered by the Selby Smelting and Lead Company, at 50 singles and 25 pairs of artificial birds, 15yds. rise. There were 11 entries, F. J. Bassford, C. J. Haas, O. F. Britton, T. N. Buckingham, J. F. Anning, A. B. Sperry, S. J. Kellogg, Jr., F. G. Leffler, F. E. Coykendall, J. Delmas and Crittenden Robinson.

Each paid in $10 entrance and shot for prizes of 40, 30, 20 and 10 per cent. of the entrance money, in addition to the prize. The medal is to be awarded to the man who wins it four times, not necessarily consecutive. F. J. Bassford took the medal and first money with 87 out of a possible 100. Haas took the second with 81, Fanning third with 77, Leffler fourth with 76, Buckingham and Leffler tied for fifth and sixth with 74, Delmas 71, Coykendall 63, Sperry 60.

The next match was at 15 live birds, 30yds. rise, Hurlingham rules, ground traps. There were 20 entries at $5 each and 4 money prizes and specials. Robinson took first money with 14, Coykendall, Markey, Fanning, Hopper, Dr. Britton and Haas tied on 13 and divided the prizes.

A special match at 6 live birds, 30yds., 2 barrels, had 20 entries at $2.50 each. Haas, Coykendall, Robinson, Lastrello and Kellogg tied on 6 and divided.

Another special match was shot off at 5 birds, 30yds. rise. It had 11 entries at $2.50 each. Dr. Knowles, Haas and Robinson each killed 5 birds and divided the money equally; Dr. Knowles killed his with the first barrel.

At the annual meeting held to-night, Vice-President Cross presiding, the following officers were elected for the ensuing year: President, Ramon E. Wilson of San Francisco; Vice-President, Dr. S. N. Cross of Stockton (re-elected); Secretary, Horace H. Briggs of San Francisco (re-elected); Treasurer, Dr. S. E. Knowles of San Francisco (re-elected). Directors: J. Delmas and E. F. Coykendall of San Jose, Dr. J. W. Hayes of Grass Valley, T. B. Norton of San Francisco, and C. J. Haas of Stockton. The next meeting is to commence on Oct. 10, next year, at San Jose, continuing three days. The members of the Los Angeles Club were elected, adding 20 names to the roll. George Ditz of Stockton, J. S. Fanning of San Francisco, and C. H. Cory of San Jose, were also elected members.

Oct. 6.—The State Sportsmen's meeting closed to-day with several interesting shooting matches. First on the programme was the association shoot at 20 live birds, 30yds. rise, Hurlingham style, for an elegant diamond badge, presented by the retiring president, E. Fay. The winner holds the badge from year to year until won three times by any member, then it becomes his property. In case the badge is lost at any succeeding meeting the previous holder will surrender it, at the same time taking the entrance money subscribed at each meeting. There were 18 entries, and each paid $5 entrance, which was divided into four prizes of 40, 30 20 and 10 per cent. Crittenden Robinson made the best record, killing 20 birds, using his second barrel six time. He earned the medal and first cash prize. C. A. Merrill, Dr. Knowles and J. T. Fanning killed 18 each, dividing the balance of the money. Coykendall, Maskey, Norton and Bassford got 17 each.

The next match was at 15 live birds, 30yds. rise, Hurlingham rules, entrance $5, four cash prizes. There were 19 entries, making the purse $95. H. F. Hooper killed 15, making the best record and taking first money. Coykendall, Bassford and Dr. Knowles killed 14 each and divided the other purse.

Three special matches were made. The first was at 6 live birds, 30yds., $2.50 entrance. C. A. Merrill killed 6 straight birds with the first barrel, taking the first prize. Dr. Britton, Coykendall, Burnett, Robinson and Kellogg made 5 each, and divided the balance of the money.

The next special was at 8 live birds, 30yds. rise. There were 12 entries. Crittenden Robinson made a clean score of 8, taking the first prize. Merrill, Hopper and Sperry killed 7 each and divided the balance of the money.

The last match of the tournament was a special one at 6 live birds, 30yds. rise. There were 14 entries at $2.50 each. Coykendall, Sperry Robinson, Fanning and Hopper killed 6 each and divided the money. To-night the visiting members of the association were banqueted by the Stockton members. During the evening the diamond medal was presented to Crittenden Robinson.

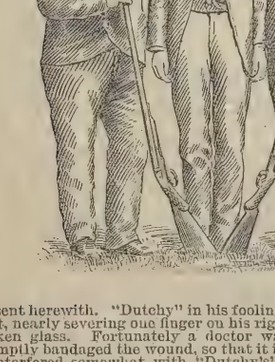
THE MIDDLESEX SHOOT.

ANOTHER tournament in the New Jersey circuit has come and gone. The Middlesex Club opened the ball at their grounds at Dunellen, N. J., on Tuesday of last week. The shoot extended over four days and was in every way a most successful one. The attendance was good, though not quite so large as expected, the arrangements for shooting and for the comfort and pleasure of shooters were most complete, the press were well taken care of and everything passed off very smoothly.

The Middlesex boys know how to run a shoot; they have this reputation and fully lived up to it on the present occasion. They are all workers, from the president down, and spare no time or trouble to make visiting shooters at home and to give them an enjoyable time. Their grounds are beautifully situated on the New Jersey Central R. R. within five minutes's walk from the station at Dunellen. They are inclosed with a good, sound board fence, which constitutes the 80yds. boundary. They have a commodious club house, in which a hot fire was kept going during the week, around which the boys huddled to talk shoot; a large grand stand, which unfortunately was not filled this time on account of the bad weather, and a cozy little secretary's office where the members of the press were comfortably ensconced with every arrangement for the rapid accomplishment of their work.

Too much credit cannot be given to the various committees for their successful endeavors. Seymour G. Smith, the chairman of all the committees, was in the box as custodian of the moneys; the reception committee—Wm. L. Force, M. W. Mulford and Charley Smith—were on deck with welcoming hands to the visitors, and Fred Quimby, the genial "Quinlan" of shooting fame, was here, there and everywhere securing entries for the various events with his never-failing persuasive powers and blarney.

Charley Smith ("Dutchy") and Tom Keller ("Tee Kay"), aided by "Razzle Dazzle" Miller, gave free variety shows for the boys every day, about which more anon.



With the exception of Thursday, the weather was very unfavorable, either showery or overcast, and this no doubt prevented the attendance of many shooters. However, those who came were hot for shooting, and the bang! bang! of the guns was almost continuous.

Two days were devoted to inanimate targets, of which there were several kinds used, all of which worked very satisfactorily, with the exception of the clay-birds, at which the shooters kicked.

Three sets of traps were in constant use and over 8,000 targets were shot in the two days. Each event was scored on a separate card properly headed, which on completion was handed in to the Secretary's office, where the winnings were figured up and each man's quota placed in an envelope bearing his name; these were delivered as called for. This system entails more work on the management, but is much more satisfactory than the old style of paying the whole amount in each tie to one man and having him chase up his companions in the divide. Some of the boys went in to make this a "dude" shoot, and on Wednesday appeared on the grounds and went to the score in high hats, some of them of modern style and others of the days of our daddies. Among the "plug" brigade were Fred Quimby, who looked the elegant, with a nobby tile; Seymour G. Smith with an old-timer, his red badge pinned into the top of the crown, giving him a very jaunty appearance, "Razzle Dazzle," "no flies on me" Peters Miller, H. A. Keystone Penrose; Charley Budd, long likeau Italian count, and a clerical-looking gentleman, who hails from the city where bluerocks are made, and whose name belied his looks, as he figured on the score cards as "Profane." This gentleman rejoiced in a frock coat and white choker, and evidently sought to impress the crowd with his sanctity, but utterly failed.

This high toned contingent fronted the score on Wednesday morning, dazzling the more humble shooters with their display of style, but after their enterprise had been properly recognized the swells withdrew the pressure and peeled down to regular shooting toggery. There were however two men on the grounds whose exuberance of spirits it was impossible to check, Charlie Smith "Dutchy" and Tom Keller "Tee Kay." They were rejoicing in the possession of some gifts from a few kind Western friends, which they displayed prominently to show their appreciation. When these two worthies were at Cleveland a few weeks ago, they made much sport for the boys, who last week testified their gratitude in the shape of a large box addressed to "Dutchy", which when opened was found to contain four hats, two of them diminutive rough felt plugs about three inches high in the crown with brims rolled tight at the side and about two inches wide front and back; they were inscribed, "Dutchy" and "Tee Kay" on front of crown and "Oh Ho" on the back in gilt letters. The other two hats were very flat crowned derbys, something like one sees on the German emigrants at Castle Garden, lettered in the same fashion. In addition to these, the box contained two leather medals about the size of a desert plate, "Dutchy's" lettered "Champion Sour Krout Eater 1888, won at Cleveland Oh Ho," and "Tee Kay's" "Champion Gum Chewer 1888, won at Cleveland, Oh Ho."

Both titles have a peculiar significance, which will be apparent to any who know them. At any rate they were as proud of their possessions as a boy with his first pair of boots, and it was inexpressibly comical to see them standing around arm in arm wearing their plug hats and medals and indulging in all sorts of antics. "Dutchy" and "Tee Kay" wish to present their thanks for the generosity of their Western friends, and beg to say that if the donors will but make themselves known a champagne supper with all the delicacies of the season awaits them. It is suspected that some Cincinnati parties could supply the information if they would. At all events a return gift is in order, and "Dutchy" and "Tee Kay" will not fail in their duty. "Razzle Dazzle" Miller resurrected a green cloth cap with a tiny visor, just large enough to rest on the top of his head, and the trio sang German songs, danced and cracked jokes for the edification of the crowd. For the benefit of our readers we have secured a picture "en costume," which we

present herewith. "Dutchy" in his fooling met with a bad accident, nearly severing one finger on his right hand with a piece of broken glass. Fortunately a doctor was on the ground and promptly bandaged the wound, so that it is now doing nicely, but it interfered somewhat with "Dutchy's" shooting, although no restriction on his overflowing spirits.

The headquarters during the shoot was at Force's Hotel at Plainfield, about twenty minutes drive from the grounds, on a good macadamized road. This ride out in the morning and back in the evening was very pleasant and the scenery fine, the Orange Mountains looming up in the distance all aglow with varied autumnal colors.

The evenings at the hotel were pleasantly spent, "Razzle Dazzle" Miller developing quite a talent as a hotel clerk and making much sport for the boys.

On Friday, after the big 25-bird sweep, Mr. Fred Quimby addressed the shooters on behalf of S. G. Smith, chairman, thanking them for their attendance, hoping that all had had a good time and a fair show, etc. In response to this three hearty cheers and a tiger were given as a goodwill toward the management, and although no one gave it voice the prevailing sentiment was that the Middlesex boys were good ones and square, and that no better time could be had anywhere than on their grounds. Below are the scorrs:

Tuesday.

Heavy showers in the morning, but cleared toward noon. Not much wind, and conditions favorable to good scores.

Event No. 1, 9 single bluerocks, entrance $1; open to all; four moneys:

Budd	111111111—9	S G Smith	110111111—8

Wednesday.

About 5 A. M. it thundered and rained hard, and those of the shooters who were awakened by the noise groaned in spirit at the thought of another rainy morning at the traps; but before breakfast was finished the clouds parted and Old Sol appeared, cheering the hearts of all.

Event No. 9, at 5 pairs bluerocks, $1 entrance, four moneys, open to all:

Carter	11 11 10 11 11—9	Alice	11 11 01 10 11— 8

Riggetts	10	Collins	8
McAlpin	10	Sigler	7
Wild	10		

First and second div., third shot off and div. by Wild and Luther, fourth shot off and won by Wheeler.

Thursday.

This was the first day at live birds, and many old-time pigeon shooters were on hand. The birds were an exceptional lot, of a kind rarely seen at tournaments; very few of them required putting up. Most of them were strong flyers and started for the woods at a rapid pace as soon as the trap was sprung. Many beautiful stops were made, but many more birds, though hard hit, managed to get over the fence, only to fall from the frying pan into the fire, for on the outside were about fifty scouts, and almost as many shots were fired at a fugitive, so that few escaped. Once in a while an exceptionally strong flyer would be liberated, duck or swerve out of reach of both barrels, then tower high and escape the murderous gang outside, whose fusilade sounded like an infantry engagement. At such times the crowd would give a rousing cheer for the lucky bird. Weather clear and beautiful, with a moderate breeze from northwest, blowing right across the traps.

Event No. 17, at 10 live birds, tournament rules, $10 entrance, $100 guaranteed, open to all, handicap rises:

Collins	10	Tee Kay	8
Wheeler	10	Bowdish	7
Luther	9	Stevens	7
J E Miller	9		

First, second and third div.; fourth shot off and won by Apgar.

Friday.

This was the big day with a sweepstake event for a $400 guaranteed purse. This event was the first on the programme, but as many shooters had not arrived, an extra sweep as 7 live birds was shot. The big sweep was started at about 11 o'clock and finished about 4:30 P. M.. Considerable excitement was manifested during the progress of the event, and when John L. Brewer won first money with a straight score, he was congratulated by all the contestants. Up to the 18th bird Frank Class, of Pine Brook, N. J., was a tie with Brewer, but this bird was a teaser; when the trap was sprung it did not fly at once, but when started it was a goer and twisted clear of both barrels. Class finished his score straight after this miss and took second money. We have compiled a complete record of the guns and various loads used by all the contestants, which will no doubt be appreciated by our readers.

Extra sweep at 7 live birds, $5 entrance, handicap rises, 3 moneys:

Budd (30)	1211101—6	Peacock (30)	2121120—6
Wild (28)	2221110—6	S G Smith (28)	1111111—7
Brewer (30)	0222221—6	Kleintz (30)	1111222—7
Wheeler (30)	2211222—7	Carter (30)	1212210—6
Class (30)	1111100—5	J E Miller (29)	1121211—7
McMurchy (30)	2111121—7	E D Miller (30)	0111111—6
Penrose (30)	0121121—6	C Smith (30)	2111110—6
Luther (30)	1211111—7		

First div., second shot off and div. by Budd, Penrose, Carter and E. D. Miller, Class wins fourth.

Event No. 20, at 25 live birds, sweepstakes open to the world, entrance $25 and the birds, $400 guaranteed, money divided 40, 27½, 17½, 10 and 5 per cent.

Brewer (30)	1121122122222122222221121—25

E D Miller (30)	1011211112111112102122o1—22

Brewer with a straight score won first money, $180; Frank Class with 24 won second, $123.75; the 23 men divided $78.75; the 22 men divided $45; and the 21 men $22.50. o denotes dead out of bounds.

Extra sweep, at 5 live birds at 32½yds., $2 entrance; three moneys:

Forest	22101—4	Squires	11111—5
Geddes	22102—4	Tee Kay	11111—5
S G Smith	21111—5	D Terry	11111—5
Lindsley	12100—3		

Ties on 5:

S G Smith	111—3	Tee Kay	110—2
Squires	110—2	D Terry	111—3

S. G. Smith and Terry div. first; second div.; third won by Lindsley.

Home sweet home match, at 5 live birds, $2 entrance; three moneys:

C Smith	22111—5	Tee Kay	02101—3
Carter	12211—5	McMurchy	11211—5
Peacock	02111—4	Williams	22011—5
Budd	12210—4		

Ties on 5 shot off and div. by McMurchy and Carter. Ties on 4 shot off and won by Budd. Tee Kay wins third.

FRANK MASON.

THE ST. LOUIS TRAP SEASON.

ST. LOUIS, Mo., Oct. 18.—*Editor Forest and Stream:* The curtain will soon be rung down on the most active trap-shooting season this city has ever known. From early spring up to the present time matters trap-shooting have been quite lively. Many hundred pounds of powder and shot have been consumed in pursuance of the sport, and many thousands of inanimate targets have been smashed by the shooters. One interesting feature of the past season has been the team matches which were inaugurated first by the Empire Gun Club of this city, and the Indian Lake Gun Club of East St. Louis. The above two clubs shot three different team contests at inanimate targets, in which the Empire's team proved themselves the most expert with the shotgun. Following closely upon these matches the Western Gun Club and the Riverside Gun Club, both of this city, had a set-to, each team composed of ten men, and each man on a team shot at twenty clay-birds. The Westerns won the contest easily, and were anxious for the Riversides to try the affair over, but it wisely concluded it had enough and retired with defeat on its hands. The most interesting contest of the season was the team matches between the St. Louis and Excelsior Gun Clubs. They were shot at live birds and the exhibition of shooting given by the gentlemen of the teams in the first match was a burlesque that was quite amusing to witness. Men who had stood at the trap and shot at thousands of live pigeons, to let as many get away as they did, was something that no one would have believed unless witnessed personally.

The birds were a remarkably fine lot, still that ten crack shots of the St. Louis Gun Club, which claims to be one of the strongest in this country, should score only 66 out of 100, was something the members could not explain when questioned regarding it. It was a clear case of rattle, but none of the gentlemen who were on the St. Louis team would acknowledge it. But it was a fact nevertheless, and it was quite noticeable to the observant spectator. Withal that the St. Louis team made the poor score it did, it won the race. The Excelsiors scoring only 56 out of the 100 its ten trusty men shot at. The second match, which took place a week ago was again won by the St. Louis Gun Club. The winning score was much larger than the one that won the previous one. That the score was larger was not accounted for by any improvement in the shooting on the part of the contestants, but because the birds used were an indifferent lot. No such birds were trapped as for the former match. The St. Louis scored 88 to the Excelsiors 75. The teams were composed of ten men, each man shot at ten live pigeons, and English rules governed the match.

Next in order of importance in the team match business comes the contest between the Compton Hill and Carondelet gun clubs. Through some misunderstanding a challenge appeared in one of the daily papers published in the city, wherein the last-mentioned club wished to get on, as the term goes, a ten team match with any gun club in this city or within a radius of forty miles of this city, at either live birds or inanimate targets for $50 a side. Members of the Compton Hill Gun Club who were first to see the challenge, dropped all business and began a vigilant search for other members of the club to call their attention to the above referred to challenge. Blood was "boiling" in the veins of the Comptons, and they were eager for the fray. A committee was appointed which called at the office of the paper which published the unauthorized challenge. When the editor was seen regarding it, he innocently acknowledged that he had no authority to accept a challenge on behalf of the Carondelet Club, as there was no forfeit accompanying it, consequently nothing could be done just then. The Compton, lest it should place it in a bad light before the country, determined to see if there was any so-called grit, and to ascertain if it really meant business, and with that end in view called upon the editor of another morning paper and gave him authority to publish a challenge to the Carondelet Gun Club, at the same time posting a forfeit of $10 for a match of ten men a side, each man to shoot at twenty Peoria blackbirds, for $50 a side.

Several days passed and no response was had to the challenge, and the Compton Hill Club thinking, and rightly so, that the Carondelet Gun Club were not very anxious to shoot, nohow, withdrew the $10 forfeit and supposed the whole matter was at an end. But it was not to be so; the fire that had been kindled had not died out, but was only smoldering on account of lack of draft. The next day, after an announcement had appeared that

he money which had been placed as forfeit by the Comptons had been taken down, a challenge reappeared in the paper first mentioned from the Carondelets, offering to shoot any gun club in the city a ten-man team match at clay-birds for $50 a side, the editor of the paper acknowledging the receipt of $10 as forfeit. In less time than it would require to tell it, a member of the Comptons repaired to the office of the paper and placed $10 with the editor to bind the match. So far, so good; the prospects of the two clubs coming together was now assured, and this was just what a great many of the trap-shooters of this city wanted to see. There is an old and a true saying, that the darkest hour is just before the dawn of light. This was just reversed in the case of the two clubs above. The brightest hour was just before darkness set in. Some misunderstanding occurred in reference to the time when the balance of the stake money and final arrangements were to be agreed upon.

At a self-appointed time representatives of the Carondelet Club were at the paper's office, and patiently waiting for the Comptons to put in an appearance until patience had ceased to be a virtue, departed for their homes with the firm conviction that the Comptons had reconsidered their rash act, and had decided wisely to forfeit the $10 in preference to sending $40 more to be put into a rat hole, as they began to term the affair, so confident had the Carondelet people led themselves to believe the contest would be when they met, if they ever met at all. After some little correspondence between the officers of both clubs, the matter was finally adjusted and all difference patched up. An appointment was made and a date was set, for representatives of both clubs were to meet to sign articles and post the balance of the stake money. What for a time seemed as though would wind up in a contest of printer's ink and wind, had now taken definite shape, and was soon to come to an amicable termination.

In due course of time the appointed time arrived for the match to be shot. Both clubs had indulged in considerable practice previous to the time and each felt quite confident that victory would perch on their side. Carondelet, by the way, is a suburb of this city, and is to some extent a little town all to itself. The people take much pride in their gun club, and naturally felt certain that the club would win. But it didn't, in fact it was defeated, and badly so at that. The day was not exactly as favorable as it might have been. Heavy clouds overhung the heavens, and a strong wind blew directly across the traps, which made some of the birds quite hard to hit. A few of the gentlemen made good scores, several of them breaking over eighteen out of the twenty clay birds shot at. The Compton Hill Club scored 149 to the Carondelet's 117, thus winning easy, with thirty-two birds to spare. A return match was talked of, to be shot under the same conditions, but as the game season is at hand now it was called off until next season. UNSER FRITZ.

THE NEW YORK SUBURBAN.

CLAREMONT, N. J., Oct. 23.—"Old Prob" seems determined to frown on shoots. The New York Suburban Shooting Grounds Association Tournament commenced here to-day with beastly weather, fine drizzling rain and atmosphere almost thick enough to cut, making the smoke from the guns hang low and rendering it extremely difficult at times to see the targets. There were about thirty shooters present, who seemed determined to make the best of things, and five regular events were run off besides three extra sweeps. The grounds are in a rather crude state as yet, and the recent heavy rains have left their mark in the shape of numerous pools of water here and there. However, this does not incommode the shooters, as back of the traps all is dry and well planked. Eventually, when the improvements shall be completed, the Suburban will be exceptionally fine shooting grounds, handy to New York, with every appointment for the comfort and convenience of shooters.

A change in the rules governing inanimate target shooting was made, and instead of National Gun Association Rules, the Keystone Target Co. rules were adopted and put in force under the guidance of Mr. H. A. Penrose of the Keystone Co., who acted as referee. This system of rapid shooting seemed to find favor with the contestants.

A MATCH WITH REPEATING CUNS.

MR. GEORGE E. ALBEE, os the Winchester Repeating Arms Co. of New Haven, gives us the particulars of a match which is to be shot next season, under the auspices of that company, which will be a decided innovation, inasmuch as the contestants will be obliged to shoot at triplets.

It is intended to run this event at the first regular tournament given by the New York Suburban Shooting Grounds Association in 1889, with the following conditions:

First day, Winchester Repeating Arms Company offers $150, to be shot for with Winchester repeating shotguns; 60 artificial targets, thrown from traps three at a time, 15yds. rise, entrance $3, open to all, ties to be shot out.

On second day, all money received for entries on first day will be offered as a prize for the same kind of a match, under the same conditions, except that the four winners on the first day will be barred. Entrance $1.50, four moneys, ties to be shot out.

On third day, all the money received for entries to second day's match and all money received for this day will be shot for at the same number of targets and on the same conditions, except that the four winners on the second day will be barred. Entrance 50 cents, four moneys, ties to be shot out.

TORONTO.—The second annual shoot of the West Toronto Junction Gun Club took place on Tuesday and Wednesday, Oct. 9 and 10, at Dan Blea's grounds. The weather was fine, with the exception of a high wind, which made the birds go very fast. Mr. Joseph Taylor, the veteran, acted as referee, and gave great satisfaction. Following are the scores:

First class—At 15 birds each, 26yds. rise, use of both barrels:

D Van Vlack	101111111111111—14	W A Clarke	111111111101010—12
D Blea	011111111111110—13	E Dollery	111001111110011—11
A Purse	111011111110010—12	S Staneland	010011101111110—10
J Bailey	100111101111111—12		

Shoot-off of ties of 12 won by Purse.

Second class—Same conditions as first class:

E Brown	101111111111101—13	E D Eye	110001011111111—11
C Wakefield	111111111001100—11	W Smith	100010011111111—10
C Hinton	110111001011111—11	W McDowall	010111101110110 — 9

Shoot-off of ties of 11 won by P. Wakefield.

Third class—Same conditions as first and second:

W Davidge	111111110110110—12	A Royce	011110101010001— 8
G Davis	111011111010010—11	H Power	010111010000110— 8
F Brimer	111010100111110—10	S Watt	011011101011000— 8
F Wakefield	111011110001101—10	A Lascelles	001001001111010— 7
H Newman	101110100100111— 9	T Charles	101000101100100— 9

Ties in third class, F. J. Brimer 3, F. Wakefield 2.

Fourth class, 10 birds each:

F Schaefer	0100011111—7	W Blea	0110011010—5
T Griffiths	0011000111—5	E Gabello	0010100000—2

Ties in fourth class, W. Blea 3, T. Griffiths 2. The following gentlemen took specials in their respective classes for killing most birds with one barrel: D. L. Van Black, W. Davage, P. Wakefield, F. Schaefer.

WELLINGTON, Mass., Oct. 18.—There was a good attendance at the grounds of the Wellington Club to-day, when the merchandise match was opened and also the individual prize match, the prize being offered by a member of the club. Following are the winners in the sweepstake matches: Six bluerocks, James; six clay-pigeons, James; six bluerocks, James and Chase; six clay-pigeons, Chase, Wild and Snow; six bluerocks, Stanton; six clay-pigeons, Chapin; ten bluerocks, Stanton; ten bluerocks, Bert and Sanborn; ten clay-pigeons, Wild. In the badge match Wild and Stanton tied with 18 out of 20 birds.

KANSAS CITY, Mo., Oct. 18.—The regular monthly medal shoot of the Kansas City Gun Club was held at Exposition Park to-day. Riley, Underwood and Savage tied on 9 birds, Riley winning the shoot-off, killing 9 birds to Underwood's 7 and Savage's 6. The conditions were 10 single live birds, 30yds. rise, the use of both barrels allowed. The score was as follows:

J E Riley	1222112120—9	S E Scott	1022122122—9
Fred Denser	1210001112—7	W J Baer	1100102110—6
George Yeoman	2110001202—6	Captain Ditsch	1202100012—6
John Savage	1110132211—9	Al Wetzel	0120200021—4
Frank Smith	0212000020—4	D W Williams	0020112111—7
A O Bonibeck	0001012010—4	Major Cross	2022012000—5
William Stone	1102000122—6	G Johnson	0110212011—7
W S Hallowell	2001002110—5	Dock Wallace	2101011001—6
C P Fairman	2010110011—6	Frank Jones	0202221022—7
Joe Underwood	2101222211—9	Ben Holmes	2001020000—3

An interesting sweepstakes was then shot, there being 20 contestants. Messrs. Riley, Scott, Barer, Williams, Elliott and Smith were tied for first money and in the shoot-off Williams won, killing one more bird than Smith.

FRANKFORD, Pa., Oct. 13.—The North End Gun Club held a special prize shoot on their grounds this afternoon. Quite a number of members and invited guests were present and a pleasant time was enjoyed by all. The targets were 15 singles and 5 pairs bluerocks. The score:

W M Pack	1101111111111102	10 11 11 11 11—22
W Wolstencroft	1111111111111111	11 11 11 11 11—25
Jas Wolstencroft	1101101111111110	11 10 00 00 01—17
W Garvin	1010111111000111	10 10 01 10 11—17

Geo Pack	1111111101111100	10 11 11 11 11—21
Chas Knorr	11000110w	

Wm. Wolstencroft took first prize, Leffingwell's "Wild Fowl Shooting," a handsome volume and much appreciated by the winner; second prize, a gunning coat, went to Frank Barron. A sole-leather gun case, third prize, was captured by W. M. Pack. Fourth prize, a leather cartridge box, was not awarded. Wm. Gibson took fifth prize, one of W. H. Pack's new and improved loading blocks, one of the neatest and decidedly the best thing for the price yet invented for handiness of loading and for preventing the bulging of shells. All the other classes took prizes which were numerous and usuful. After the shoot the members and invited guests were escorted to Tweitman's Hotel, where a bountiful supper was spread. Here was where some grand scores were made, I wish to emphasize this, for a busier set of scorers in the shape of waiters I never saw. Speeches and jokes flew about like autumn leaves, and the amount of game that was killed in their tales of gunning trips would have covered the floor two feet deep. The festive and home-loving oyster came in for a full share of attention, and if the balance of the tribe of bivalves could have seen the amazing quickness in which they were made to disappear it would have caused their shells to quiver. One member was so immensely tickled with the flavor of a baked ham that he was impelled to rise and offer a resolution, that the other members go down in their pockets and put up $100 as a premium to induce some energetic farmer to breed a variety of pig that would have a ham just like the one before him on all four corners instead of only on two as at present. He was widely cheered and congratulated, but his eloquence came to naught, no money was put up, for all seemed to have bets on the election. And so on, to the hour when cordial "good nights" were in order, and as they bent their steps homeward congratulated one another that good fellowship was the rule and not the exception in their club.—J. C. D.

SHOTGUN AT WALNUT HILL.—Walnut Hill, Oct. 17.—The usual number of trap shooters found their way out to the Hill to-day, and as a result the trappers and scorers were kept busy until the departure of the last train upward. In addition to the regular matches, the fifth monthly competition for the climax diamond badge was on the programme. This match was interrupted by a smart shower, but when the contestants finally got to work they showed by their scores that the rain had not dampened their enthusiasm. The match finally resulted in a tie between Stanton and Knowles. The summary follows: Climax diamond badge match, 20 clay-pigeons from 5 traps, and 20 standard targets from 3 traps:

Clays.	Standards.
Knowles 11111111111001111110—17	11111111110111110111—18—35
Stanton 11111101111111110110—17	10111101111111111111—18—35
Nichols 10111111111011111111—18	11011111110111010100—14—32
Wardwell 11111011101111111011—17	10111110000111011111—14—31
Swift 01111101111111111111—17	11111110110110110100—14—31
Hammond 11111111101011111111—18	11001101111001011110—13—31
Webster 11101001111111111110—16	01011111010111011101—14—30

Rub	0101011100— 6	0101011100— 6	—12
Swan	1111010111— 8	1010101111— 7	—15
Webster	0111101111— 8	1001111011— 7	—15
Crown	1111111011— 9	1110000101— 5	—14
Houghton	0110111001— 6	1100111111— 8	—14
Nichols	1111110011— 8	1100100110— 5	—13
Perham	0010111111— 7	0111011001— 6	—13
Burt	1110011011— 7	0100101110— 5	—12

The minor events were as follows:

First, 6 standards: Chase, Nichols 6, Griffith 5, Houghton 4.

Second, 5 clays: Chase 5, Knowles 4, Griffith, Nichols 3.

Third, 6 standards: Rule 6, Wardwell 5, Houghton, Griffith 4.

Fourth, 5 clays: Wardwell, Griffith 5, Nichols, Rule 4, Chase 3.

Fifth, 6 standards: Stanton, Houghton, Griffith 6, Chase 5, Rule, Swift 4, Snow 3.

Sixth, 4 clays: Knowles, Stanton 5, Chase, Griffith, Nichols 4, Snow, Swift 3, Perham 2.

Seventh, 6 Macombers: Rule 6, Chase 5, Wardwell, Knowles 4, Crown 3.

Eighth, 5 clays: Stanton 5, Rule, Houghton, Wardwell 4, Nichols 3.

Ninth, 6 standards: Swift, Nichols, Griffith 5, Knowles, Rule 4, Chase, Houghton 3, Wardwell 2.

Tenth, 3 pairs clays: Curtis, Perham 5, Knowles 4, Crown 3, Nichols 2.

Eleventh, 6 standards: Swift, Crown, Knowles, Nichols 6, Stanton, Rule 5, Hosmer, Griffith 4, Snow 3.

Twelfth, 6 Macombers: Nichols, Knowles, Wardwell, Stanton 6, Swift 5, Webster, Perham 4, Hosmer, Curtis 3.

Thirteenth, 10 clays: Stanton 10, Crown, Griffith, Rule 9, Hammond, Chase, Webster 8, Perham 7.

Fourteenth, 10 standards: Knowles 10, Wardwell, Griffith 9, Houghton, Swift 8, Hosmer, Snow, Stanton 7.

Fifteenth, 20 clays: Nichols, Hammond 18, Wardwell, Stanton, Swift, Knowles 17, Webster, Chase, Perham 16, Crown, Rule 14.

Sixteenth, 20 standards: Stanton, Knowles 18, Hartford 16, Crown 15, Rule 14.

Seventeenth, 5 clays: Nichols, Rule 5, Hammond, Snow 4, Hartford, Perham 3.

Eighteenth, 6 standards: Stanton 6, Chase 5, Crown 3.

The next shoot in the current series will be held on Wednesday, Oct. 31.

SAN FRANCISCO, Oct. 14.—An interesting and well contested clay bird match for $25 a side took place to-day at Bird's Point, Alameda, the competing parties being S. Carter and Chas. Holtz. The match was only made on the day previous, during a little discussion down at Holtz's ranch, and the original conditions were that each man should shoot at 15 singles and 5 pairs bluerocks, but it was found on reaching Bird's Point that the last of the black and yellow disks had been used up, and it was necessary to postpone the shoot or fall back on terra cotta. The latter alternative was accepted. The preliminaries were soon settled and Mr. Shrader being installed as judge the shoot commenced at the single birds, 5 traps being used. After a brief interval the double birds were set going, Carter leading as before. Appended is the complete score, 15 single birds, 18yds. rise:

Carter.....111101111111111—14 Holtz.....101111110101111—12

Five pairs double birds, 15yds. rise:

Carter.....11 00 10 11 01— 6 Holtz.....11 11 11 11 11—10

By the above it will be seen that Holtz totaled 22 to Carter's 20. The match was governed by international rules. Before Mr. Carter arrived a couple of sweepstakes were shot. The first was at 10 single clay birds, and was won by Moore with a clean score. The second sweepstake was at 5 pairs of doubles, the same four shooters subscribing a pool of $10. This was won by Holtz with 8 breaks. On the conclusion of the Holtz and Carter match, two more sweepstakes were gotten up, each at 10 single birds. There were five competitors in each, the pools amounting to $12.50. The first shoot was won by Carter with a score of 9, and the second by Moore with 8. On the whole day's shooting Holtz broke 51 out of 65, and Carter 35 out of 45.

PHILADELPHIA, Oct. 20.—The third and last of a series of three shoots between the Parker and Darby Gun Clubs was shot on the grounds of the former club, resulting in a victory for the Darby Club, thus giving them two of the three matches and the title of champions. The latter part of the match was shot in almost total darkness, thus affecting the scores of several shooters, principally Messrs. Gildner and Clarke. In the aggregate scores for the three shoots, with a total of 1,350 shots, the Darby Club won by the small number of nine birds.

Darby Gun Club.

TORONTO, Oct. 15.—To-day the much-looked-forward-to match between Mr. James Douglas, of the Aquatic Hotel, Yonge street, and Mr. Samuel Stancland, of King street west, at 50 birds each for $100 a side, took place on Mr. Chas. Stark's athletic grounds. It was a lively and interesting match all through. The weather was fine, the birds lively and the shooting good. Mr. John Wilson was referee, and a fairer man never stood at the scratch. Mr. Douglas won by 34 to 33, after three of his birds had fallen dead just out of bounds. There were upward of two hundred people present, all keen as to the result. Following is the score:

Staneland	0101110011111111111111000010110111011010001011110—33
Douglas	1101101000111110111011111011110100101011101001100—34

Staneland has challenged for another match.

KANSAS CITY, Mo., Oct. 17.—A shooting match to test the merits of the Lefevre, Parker and Smith guns was held at Exposition Park this afternoon. The teams were made up as follows: Lefevre gun—George P. Orr, Mr. Worson, W. Anderson. Parker gun—Ed Bingham, J. K. Guinotte, F. C. Maegley. Smith gun—A. E. Thomas, Louis Kunz, W. V. Rieger. The conditions of the match were 10 live birds, 30 yards rise. The score is as follows:

L Kunz	1000001110—4	George B Orr	1110110111—8
Ed Dingham	1111110010—7	A E Thomas	1101111101—8
W Anderson	1111011001—7	Worson	1111111110—9
Rieger	1011011101—7	Maegley	1011111101—8
J K Guinotte	1011010001—5		

A sweepstakes with 15 entries was then shot. It was won by J. K. Guinotte. W. Thomas won first money in another sweepstakes and Messrs. Anderson and A. W. div. second. Mr. Ed Bingham won the third sweepstakec match, Mr. Riley winning second money.

TORONTO, Oct. 20.—A match was shot this afternoon at McDowall's grounds at 15 Peoria blackbirds, between J. Bailey and T. Weslick and W. Howell and W. Eppletf, for an oyster supper:

J Bailey	111000010010000—6	T Weslick	111111111110001— 2
W Howell	011010101003001—6	Wm Eppletf	010101111111100—10

MISS OAKLEY.—Miss Annie Oakley is matched to shoot 50 live pigeon against an unknown for $250 a side, at the Arlington Driving Park, Baltimore, Md., on Oct. 30. It is probable that Miss Oakley will visit Paris during the exposition of 1889.

GUELPH, Ont., Oct. 15.—The first pigeon shoot of the season took place at Sleeman's flats to-day. Sleeman killed 11 birds out of 12, W. D. Shattuck 10, D. Martin 10, and J. Johnson 9.

THE U. S. CARTRIDGE CO., Lowell, Mass., have received the following letter from Mr. L. S. Carter, winner by 25 out of 25 live birds at Cincinnati, Sept. 8, and who won 18 out of 20 at the shoot Sept. 9, winning the American Field Championship Cup:

"HAMMOND, Ill., Oct. 8, 1888.

"*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—I have found no shells that can come up to yours, and think your strong primer Climax paper shells superior to Eley's. I used your shells at all the shoots this season, and had no trouble with any of them. They are more durable, crimp better, and for wood and Schultze powder they are superior to any I have yet found. (Signed) L. S. CARTER, Now Champion Live Bird Shot of the World."—*Adv.*

LITERARY NOTE.

THE FOREST AND STREAM Publishing Company, New York, announce "Bird Portraits for the Young," the text by Dr. W. Van Fleet and the photogravure plates from drawings by H. H. Darnell.

Well authenticated scraps of information respecting the habits of Canadian birds should invariably be sent to the newspapers, as being of interest to ornithologists, the Audubon Society, and the general public. Last Saturday one of our prominent gunners started off at early dawn with the avowed intention of shooting partridge. After a weary trudge of, not to exaggerate, say five and twenty miles, he arrived home again with an empty stomach and game bag, and a voracious appetite, without having seen so much as a feather to shoot at. On the following Sunday morning, while shaving, with his head and mouth on one side, as is the manner of man, he happened to glance through the window to see sitting on the garden gate, within 50ft. of him, and with its head also on one side, the identical bird which he had been chivying during the previous day. This is *prima facie* evidence that the Canadian partridge when pursued, instead of flying away, dodges round with instinctive cunning, takes up a position in rear and follows the attacking party. The sportsman, pitting human against animal cunning, should occasionally stoop down, and under pretense of tying his bootlace or buttoning a gaiter, take a squint between his legs. If he sees a covey or two of birds hopping after him from branch to branch, he can turn round suddenly and let fly. He will probably hit something, if he does not fill his bag.—*Orillia (Ont.) Packet.*

Dr. Downes, of Lakeport, Cal., had a pet deer to which he was very much attached. Last fall it ran away to the mountains, and that was the last he saw of it until the spring, when one day it appeared in the dooryard, and, walking straight to the Doctor, laid its head on his arm and seemed greatly pleased, as was the Doctor. It hung around him in rather an unusual way and then disappeared. The next day it came again, and acted as though it wanted the Doctor to follow it, and he did so. The deer led him some distance from the house directly to a little fawn which lay hidden in the bushes. The Doctor took the little thing in his arms and carried it home, the mother following and showing unmistakably that that was just what she wanted.

Dr. G. W. Massamore while gunning on Thursday in the Green Spring Valley, saw a large booby owl in a tree, but did not disturb it, thinking the bird did not see him. He was about to raise his gun when the owl swooped down upon him, drove its ugly-looking talons through his hat and flew away, carrying the hat. Dr. Massamore shot the bird, which measured over four feet across the wings.—*Baltimore Sun.*

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. Gibson, } Albany, N. Y
Secretary-Treasurer: F. L. Mix, }
Vice-Com. *Rear-Com.* *Purser.*
Central Div.: W. B. Huntington. E. W. Masten..... T. H. Stryker, Rome, N. Y.
Atlantic Div.: W. P. Stephens..... L. B. Palmer..... F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div.: H. E. Rice, M. D.... Maxton Holmes..... H. D. Marsh, Springfield, Mass.
N'thern Div.: Robert Tyson..... S. S. Robinson..... Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

MY THUNDER STORM CRUISE.

ALTHOUGH I look upon Friday as being a particularly lucky day, because upon it I receive my copy of the FOREST AND STREAM, and although I have no more objection to sitting down with twelve others to a good dinner than with any other number, I must confess that I am the victim of at least one superstition. I believe it brings hard luck to bid too many "good-bys" before starting on a cruise. The proper way to start is to sneak down to the canoe and the pile of duffle when every one else is looking at a dog fight, or some other equally engrossing spectacle, stow the stores quickly, and shove off without saying anything to anybody, that is unless the canoe is a somebody. I am convinced that on such an occasion it always well to look upon the canoe as a very coquettish somebody of the feminine sex, and to endeavor to mollify her by some of those little attentions which the feminine sex, whether built of cedar or animated clay, are not entirely averse to. It is, in fact, decidedly a forerunner of luck to devote a little time during the preliminary operations to smoothing the canoe down, calling her sweet names, making audible remarks as to her beauty, and disparaging allusions to other fellows' canoes. If it is not unlucky to reverse this order of doing the thing, and to start off, after saying half a hundred good-bys, each one more difficult than the forerunner, with the feeling somewhere about the pit of your stomach that your canoe is a failure, why is it that on my cruise northward from the meet in August, last I fared so badly. Two thunder storms and three gales would make up a fair assortment of weather for a two weeks' cruise in August, yet in four days the elements arranged a programme with that number of events therein, and as I was sightseeing and steamboating on the day when there was no performance, I had to enter for all the exciting displays. Unless the clerk of the weather was visiting upon me my sin of leaving the meet a day and a half too soon, why was it that I was so badly treated if it was not because I had started with a blast of trumpets and a flourish of horns so to speak? Answer me that ye soothsayers.

It was not until after the Springfield cup race had been lost and won that the Lucille and the Inez finally broke away from the entangling environment of Long Island and that cruise of the thunderstorms began. We had intended to get away before the dew was dry, but all luck began from the start. Of that first half day's work I want to say as little as possible. There are some things that are at times done on a cruise, such as going ashore at a hotel for dinner within sight of your starting point and going to sleep on the lawn afterward, taking a tow, funking a paddle against a head sea or a run before a squally breeze, that should never find a place in a carefully edited log book. Let it suffice that in the evening, while it was yet day, we were running before a light and (for Lake George) steady breeze through the Narrows, keeping a sharp lookout for a camping place.

"There'll be a flat beach under the lee of that rounded island to starboard," shouted Lucille, "or else my experience on Stony Lake doesn't count."

I took a squint at that round-headed island, and, although it did not look promising, I swung the head of the Inez round, ducked under the swinging boom, and found around a jutting point of bush-covered rock the long-sought-for ideal camping ground. A long shelf of rock, as smooth as a plain, rose up from the placid waters of a sheltered cove. Above a ledge the ground was thickly carpeted with grass and a springy shrub, and a few stunted pines gave shelter and shade. In five minutes the canoes were berthed on the natural skidway of rocks, and while I built a fire in a natural fireplace, the Lucille, which carried more dunnage in her open hold than would have freighted a bumboat, was being unloaded.

A level place well protected from the wind, which promised to grow chilly, was found for the tent, and as it had been folded up in the right way, it was set in a few minutes. Then while Lucille got the duffle into it, lit the lanterns and got things ready for the night I dug the frying-pan, billy and grub box out of the Inez and went to work to get up a meal of bacon, potted tongue, beans and coffee. The scrub on the little point furnished dry fuel in plenty, the coffee boiled in no time, and before Lucille had the bread cut I had replaced the coffee billy with a water pail and had carried the grub up to the camp. What a meal that was; piping hot bacon, baked beans and coffee, with condensed milk, followed by honey, marmalade and biscuits, and the best part of a loaf of bread, all vanished as if a Dakota blizzard had descended upon one small islet in Lake George, and devoted itself to absorbing provisions. As our camp was a well ordered one, the cook was relieved from the task of dish-washing, so I contentedly devoted myself to fumigation, after carefully laying down on that portion of my anatomy which since that dinner appeared to want rest the most, and bent a critical eye upon Lucille's goings.

Lucille is an open Canadian canoe, and her captain is one of those Canadian canoeists who are prepared to go anywhere or do anything within the limit of the canoeable, with an open canoe, a big lateen sail, a frying-pan, a couple of tin pails and a bundle of blankets. His first proceeding was to scrape plates, cups and frying-pan clean. Then he stuck a piece of rag, a strip cut from one end of the dish towel, in a split stick, soaped it well, and with this implement applied plenty of warm water to everything but the frying-pan. The knives were cleaned by rubbing them in the ground and washing them afterward, and the whole outfit was washed clean and dried in five minutes. Then he made the frying-pan as hot as he dared without burning it, soused it into the cold water and took it out clean and sweet.

It was a long time after we went to bed before we went to sleep that night, for Lucille was in a story telling mood, and I was tired with laughing before we finally said "good night."

The sun had not climbed the western mountains, when I got up, but he was high enough to tinge the light vapor that clung about their tops with iridescent hues, and the tender light of the morning was in the sky. A plunge into the clear waters of the lake began our active day, and the fire was kindled before we dressed. Coffee, bacon and eggs, formed the staples of the meal Lucille got up in no time, but we did not make an early start for all that. As we were in a region of hotels and expected to be in a civilized community before night, we had to shave, and the Lucille had to be restowed. As her cargo consisted in part of a big A. tent, a camera, and a large supply of dry plates, a big duffle bag, a bigger bundle of blankets, and odds and ends of all descriptions, this latter operation was a big one. However, when we did get off there was a fine breeze blowing down the Narrows. By putting a reef in the mainsail of the Inez, keeping the jigger flat aft, and putting down my Radix board, the speed of the two canoes was equalized, and we merrily sped along together. A most charming sail we had that morning. Now threading our way among fairy-like islands, now running through a long clear reach with the quiet mountain walls of the lake close upon us, and now and then hauling in sheets to examine some particularly interesting object on either hand. We met very few craft, of any kind that morning, but our lawful wrath was excited by one canoe which we encountered a few miles to the south of Sabbath Day Point. She was sailing across the lake under a jigger with a fair passenger on board. We forgot all about our nameless conduct on the previous day, and noted such a selfish action unworthy of the canoe.

At Sabbath Day Point we landed and fraternized with those assembled on the pier in general, and with a splendid collie dog in particular. Here we found a party of men in canvas canoes, on their way around the lake, and as one of them had capsized the day before, the Sabbath Day Pointers were much exercised about going out in one of those tippy little things. When we got under way again, one stately old lady came to the edge of the pier and said to me: "Good-by, and I hope you'll have a good time; but my dear boy, do be careful." I thanked her then, and I thank her again now, and taking it as a whole I think I followed her advice.

We landed for lunch on a beautiful little point, about two miles to the north of Sabbath Day Point, and while I was getting the cooking utensils out of the Inez, I made a most important and unpleasant discovery. I had been presented at the meet with a very pretty nickel-plated coal oil lantern, with all the latest improvements incorporated in it. Before we left camp that morning Lucille had squirted upon me his last cruse of oil, and without knowing or remembering that the lantern was full, I had stowed it away with the kettles and the pans, aft of the mizen-mast. Of course every drop of oil leaked out of it until the interior of the canoe smelt like a coal oil well, and both the frying-pan and billy were well greased with the confounded stuff. I had promised to take that lantern home with me, or I would have flung it into the lake, and as it was I put it to soak, and threw away the faithful billy which had stood by me for two years. We were content with coffee boiled in a big tin pail and potted meats for lunch that day. Coal oil may be discovered to be desirable flavoring at some time in the far distant future, but we had no desire to anticipate the march of time.

The Monday that was not a long one, but it was sufficiently long to give Lake George an opportunity of changing its mind as to the sort of weather it was going to say good-bye to us with. The comparatively steady and rather light breeze that had been good to us all the morning died away, and in its stead, gusts that appeared to have their origin in a one hundred and one ton gun, began to fire themselves across the reach in front of us. As the Lucille's lateen rig could not be reefed, there was nothing for it but to go on under paddle or separate, something neither of us thought of. The Inez crossed the first reach under her jigger, but even that fragment of sail—there is only 15ft. in it—prevented her from keeping in touch with Lucille, and it was dropped. As the afternoon wore on, the gusts grew more violent, and as they came from all directions, we made but slow progress. We reached Caldwin, after a halt at a hotel, about 5 o'clock, and at once pushed on down the creek, so as to get our carry made that night. So anxious were we to make all necessary arrangements for this unpleasant feature of our trip, that we did not stop for dinner but went straight on to a wharf, where we managed to get a berth for the canoes on a half-sunken skidway at the foot of a road leading to the village.

While Lucille went off to make arrangements for transport, I got together a collection of chips and pieces of bark in the lee of a pile of graphite and started to cook our dinner in the middle of one of the suburban streets of the village of Fort Ti. No sooner was the fire kindled than all the small boys, a good many of the good wives and a fair sprinkling of the house fathers of the district gathered about me. The boys were intensely interested, and put their "kind assistance to help the thing along" in a variety of ways, the good wives were mildly incredulous as to my ability "tew cook anythin' fit ter eat," and the house fathers were anxious that I should "look after that fire, and keep it from dueing any harm." I am not accustomed to exhibit my culinary capabilities in the presence of an admiring multitude, and I decided to do as little cooking as possible. I broke four eggs into a well-greased frying pan, emptied a can of tomatoes on top of them, and stirred the whole mass vigorously.

The Lucille's captain did not appear until long after I had given up all hopes of being able to save that dinner from spoiling, and with him came another captain—not of a canoe however—who entertained us while we ate with ghost stories and contradictory directions as to where we should go and what we should do, at the same time keeping the small boys at a distance. The means of conveyance across the carry, which Lucille had procured, turned out to be a ricketty wagon, drawn by a ricketty horse, the whole manipulated by a couple of rickerty boys, who at once demonstrated the fact that their sense of commercial morality was of a ricketty order by demanding twice the contract price for their services. We soon discovered that these two boys represented the boat transporting industry at Fort Ti, that they had formed a pool, organized a trust, and effected a combination, that they intended to charge all the traffic could bear. We succeeded in splitting the difference between us, got the canoes into the wagon, and had the serene pleasure of walking "about eleven miles anywhere" along a dusty road to Addison Junction. Here the split came, Lucille and her captain were going to continue their journey by rail, while the Inez went on by the lake. RETAW.

[TO BE CONCLUDED.]

T. C. C. FINAL RACE.—A full sail breeze was blowing as the Dawn, Hyla and Mac manœuvered to secure a good position for the final gun. Just as it went off the Mac shot across the line, followed in about 10 seconds by Dawn and later by Hyla. With eased sheets they bowled merrily along without changing positions till after the first buoy was reached, when in the beat to windward Dawn captured first place and Hyla second, which position was maintained throughout the race, twice around the 3½-mile course. Dawn finally winning by a quarter of a mile. Hyla led Mac by about 100yds. Mr. Jacques, skipper of the Hyla, wins the club championship, having the best record, namely, 1 first, 2 seconds, with Mac 1 first, 1 second, 1 third, and Dawn 1 first. The Hyla is 16ft. 6in.×31½in., 40lb. board, lapstreak build, with high-peaked balance lug sails of 85 and 25sq. ft. The Dawn is a smooth-skin Ruggles boat 16ft.×30in., light board, standing sails of about 110sq. ft., which, not being reefable, have several times prevented her owner racing her, there being too much wind. The Mac, smooth-skin, 16ft.×30in., 6lb. board, was rather handicapped by having to borrow sails of 78sq. ft. The race for second class canoes did not come off, as business engagements prevented their skippers from being present.—MAC (Toronto, Sept. 15).

P. S. The bridge mentioned in last cruise was spelt without a t, and is usually disposed of with a long-handled spoon.

IANTHE C. C.—The regular record race of the Ianthe C. C. was sailed on Oct. 20, only two canoes starting, Essex, G. W. Cox, and Atalanta, L. B. Palmer. Essex won by a few feet, Atalanta lapping her at the finish. Two more races will be sailed on Oct. 27 and Nov. 3; and on Nov. 6, Election Day, the final race of the season will take place and the record prize will be presented.

MONTREAL.—An effort is being made to unite all the canoeists about Montreal in one club, in connection with the Amateur Athletic Association of Montreal.

A. C. A. EXECUTIVE COM. MEETING.—The annual meeting of the Executive Committee of the American Canoe Association will be held in Toronto, Canada, on Nov. 17, at the house of the Toronto C. C.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. W., Centerbrook, Ct.—1. I have a lemon and white setter dog said to be two years old. He has never been trained. Is he too old to train now? 2. Is there any way that I can tell about his real age? Ans.—1. No. 2. No.

CREEDMOOR, Slatington.—At a rifle target match, six persons engaged, the first prize was $20, second prize $10, and third prize $5. The scores were as follows: 101, 101, 82, 77, 75, 73. A dispute arose about the divison of the money, the two having the score of 101 claiming to be entitled to first and second prize, and that they should shoot off to determine which would get first prize and which second prize; while the party with the 82 score claims the second, and the one with the 77 the third, and that the two with the highest are entitled to one prize. Who is right? Ans. No one can decide who is right unless there was something bearing on it in the rules under which you shot. If it was class-shooting, the two who scored 101 shoot off for first prize, second goes to the 82 score and third to the 77 score. But this matter might have been agreed upon before the shoot.

CLARA.

[Owing to an error in photo-engraving, the lines prepared to go with this description were reproduced to a wrong scale. They will be given next week.]

WHILE the success of the American champions in the races for the America's Cup has served to draw attention from the smaller yachts, and to concentrate it almost entirely on the few large ones, there is no other racing yacht afloat to-day on either side of the Atlantic which can show such a remarkable record in every way as the cutter Clara, whose lines are here given, by the permission of her owner, Mr. Chas. Sweet, and her designer, Mr. Will Fife, Jr. Not only is her record in British waters a remarkable one, but in American waters, amid a different fleet of yachts, and under different conditions, she has made even a better showing. Added to this, she is the smallest yacht save one, the new Minerva, by the same designer, which has crossed the Atlantic, a fact which, in connection with the amount of cruising which she did here, fully sets at rest any talk about her being a mere racing machine. Back and forth around Cape Cod, from Beverly to New York, then back to Marblehead, and at once off to Larchmont again; returning after one race to Marblehead, she went wherever there was any racing, rolling up a total of miles cruised that is far in excess of American yachts of her class. Without agreeing in the least with the popular verdict based on a hasty generalization from the results in the large classes, that the present type of wide boats is the best possible, we recognize the disadvantages of the six beam type, represented by Galatea, Clara, Ulidia and Delvyn, in so far as lack of initial stability and of space for working long spars, etc., in racing, and are willing to admit the advantages claimed for a moderate increase of beam; but in as far as the speed of racing yachts is concerned, it would be an easy task to prove, from Clara's record alone, that the extreme type is the equal of the very wide boat, whether shoal or deep.

The most important question of the day, though few yachtsmen seem to recognize it, is this very one of beam; whether, as is generally assumed, in the new boats the best proportions have been reached, or whether a reduction of beam, not of necessity to Clara's extreme, but to something nearer Bedouin's proportions, would not bring corresponding advantages. Unfortunately under the present rules there is but little room for the experiment to be tried, sail area is worth so much more than it pays under the rules that it is taken, at the cost of an unwieldy and expensive rig; the successful designer being one who can load on the most lead and pile the largest practicable sail plan above it, rather than the one who can turn out the most perfect model.

In the races in American waters between the extreme of each type, the wide sloops on the one hand and the narrow cutters on the other, it has so happened in most cases that the terms were anything but equal, through the great difference in the rules of the two nations, under which the yachts were built. A five tonner, as it happens, is a little over 30ft., thus coming in the 35 or 36ft. class here, against boats not only longer by several feet but of double the beam, as with Shadow, 34×14.4×5.4, and Pappoose, 36×12.6×7.6, against the Scotch five tonner Shona, 33×5.9×6; or in the larger sizes, a ten tonner like Ulidia will be just over the 40ft. class, thus being matched with yachts like Fanita and Vixen, of 45ft. l.w.l. and double her beam. In some cases too, the narrow boats had to pay heavily for long hang, while in none did they receive any credit for a small sail area. These things of course were not premeditated, but were mere matters of chance; and had an American yacht crossed to the other side she would also have been hopelessly handicapped by the rule until lately in vogue there, by which beam was taxed even more heavily than length is here. This difference in the elementary conditions of yacht racing made it very difficult to match the boats with any degree of fairness, or to draw any accurate conclusions from such races as have taken place, and at the same time they serve to show more fully the wonderfully good record of a boat such as Clara, which, built to take every advantage of a peculiar rule, not only wins under it, but under totally different rules and surroundings; while at the same time proving her superiority in those points not necessarily associated with speed in racing.

Clara was designed for Mr. J. George Clark, a nephew of Messrs. William and Stewart Clark, the well-known Clyde yachtsmen, by Mr. Will Fife, Jr., and was built by him at the Culzean yard, established by the Marquis of Ailsa, the amateur designer and builder. In 1883 the Culzean Ship Building and Engineering Co. was formed with Mr. Fife as manager, to take charge of the works at Culzean, and in the fall Clara was commenced, being launched in the spring of 1884. She was intended for the 20 ton class, the leaders in it being Freda, 49.64ft. l.w.l.×9.79ft. beam, 19.98 tons; and Lenore, 50.81ft.×9.43ft., 19.78 tons. In the new boat the designer chose extreme proportions, making the length 52ft. 9in., the beam but 9.02ft., with a proportionate increase of depth, the tonnage under the rule then current being the same as the others, 19.99 tons. Her dimensions are as follows, being taken from the design. Her l.w.l. length in 1886 was 53 7-100ft., making a draft of 10ft., about the trim that she was raced in, and while this differs a little from the design, it is worthy of note that her designer boldly put every pound of ballast in her lead keel, and that it has never been altered.

Length, over all	63ft. 4in.
L.W.L.	52ft. 9in.
Beam	9ft. 1in.
Draft extreme	9ft. 8in.
Displacement, long tons	37ft. 5in.
Ballast, all on keel	21 tons.
Mast, deck to hounds	37ft.
from fore side of stem at l.w.l.	21ft.
Topmast, fid to sheave	31ft.
Bowsprit, beyond fore end l.w.l.	24ft. 3in.
Boom	47ft. 8in.
Gaff	32ft. 2in.
Spinaker boom	48ft. 9in.
Topsail yards	{28ft. 3in. / 25ft. 3in.
Mainsail	1,525sq. ft.
Jib	477sq. ft.
Staysail	377sq. ft.
Total lower sails	2,339sq. ft.
Sail area, New York Y. C. rule	3,221sq. ft.

The hull is of composite build, every third frame being a steel angle 2½×2×¼in., with two steamed oak frames, 2×2¼in. between, the spacing being 10in. Diagonal straps of 2½in. steel are run across all the frames, the planking being screwed to them and bolted to the frames. The planking is of elm and pitch pine, with mahogany plank sheer, Spanish cedar bulwarks, teak hatches and elm rail. The finish of the wood and metal work is very fine throughout. The model speaks for itself and needs no praise, being by all odds the most perfect specimen of the extreme narrow cutter ever seen in American waters. It is not possible to put the finger on an angle or a sharp curve in the whole boat; while in spite of the narrow and vise-like grip of the old tonnage rule, there is not a flat spot visible in the side. The sheer is easy and fair, the overhang is graceful, while the lateral plane is ample in area and admirably proportioned.

Clara made her first appearance in public in the latter part of May, 1884, with Sam Randall at the stick, taking part in the open cruise of the Royal Clyde Y. C. on May 29, but not starting in the race, though under way with the fleet, and being generally complimented on her good looks. The serious business of her racing career began on June 14, when she won the first prize in her class in the regatta of the Royal Clyde Y. C., with Mr. Fife at the stick, beating Irene and Amathea, and winning fifteen sovereigns. Amathea lost her bowsprit, but not until she had been safely beaten. Lenore did not venture to tackle the new rival, nor did she turn up at the Royal Mersey regatta of June 19-20, where Clara had a sail over on the first day, also beating Vespa 48.05×9.63, and pocketing £40 for the two days' work. Back again to the Clyde, she raced in the Royal Clyde regattas of July 5 and 6, once beating Amathea, 51.25×9.50, and once finding no antagonist to meet her. On July 7 she beat Vespa again very easily in the Ramsay Bay regatta, and on each of the two following days she found no one ready to meet her in the regattas of the Royal Northern Y. C. On July 16 and 17 she sailed in the regattas of the Royal Ulster Y. C. at Belfast Lough, beating Vespa on each day.

On July 21 she met her first defeat in the regatta of the Royal Alfred Y. C., at Kingston, Ireland, where she sailed against Tara, 40 tons; Annasona, 40; Neptune 46, and Vespa. Tara won the prize. Two days later she had a sail-over in the first regatta of the Royal George Y. C., also at Kingston, and on the following day, under the same club, she again beat Vespa. Lenore was

present on this occasion, but did not enter. All this time she was sailed by Captain Randall, but Captain John Barr, whose name is so thoroughly identified with her success in this country, was then in Ulerin, 10 tons, and sailed in most of the above races, though of course not in Clara's class. It is nothing to her discredit that so many of her wins were but sail-overs, as there has been, and still were, plenty of good twenties, but from Lenore down they wanted nothing to do with the new flyer.

In view of her success in the North, much interest was felt in her performance in the matches of the South coast, especially in her meeting with the hitherto renowned crack Freda, designed by Mr. J. Beavor Webb. Freda was no longer in the first bloom of youth as a racer, being then in her fifth season, and in size she was no match for the new boat, being 49.04×9.79 l.w.l., but she had headed her class for a long time as the fastest of the 20-tonners. Their first meeting was in the Royal Western Y. C. regatta of July 31, at Plymouth, the result being a victory for Clara, though the race was not in itself a decisive one. Next day, however, they met again in the Port of Plymouth regatta, with the same result. On Aug. 6 they met again in the Royal Southampton regatta, when Clara came to grief, first through the breaking of her spinnaker boom, and then through the splitting of her clubtopsail, thus being beaten by Freda, but coming in close to the winner. On Aug. 11 they came together again in the Royal Albert, at Southsea, when Clara won by 5m.; and in the Royal Victoria Y. C. regatta, at Ryde, next day, Clara was again the victor by 3m. No room for doubt as to the better of the two was now left, and a few days later Clara started for home, arriving in time for the Royal Clyde regatta of Aug. 30, when she met and defeated Lenore, 20 tons, Amathea 20, Sayonara 20, Thyra 20, Louise 19, and Irene, yawl, 49. On Sept. 4, however, in the regatta of the Royal Northern Y. C., Lenore had her revenge, both she and Annasona, the latter of 40 tons, beating Clara. This race ended Clara's first season, and she went out of commission with a record of 17 firsts and 1 second prize, netting £340 for 20 starts. In the same month she was purchased by Mr. N. B. Stewart, owner of the 40-tonner May, in which Capt. Barr had sailed very successfully for a season.

The season of 1885 found Clara ready to meet all comers in the South, with Captain John Barr at the stick, her first race being that of the New Thames Y. C., Southend to Harwich, sailed on May 30. This time she was in company with larger craft than she had yet met, the starters being Galatea, 91 tons, Irex, 85 tons, Marguerite, 60, Marjorie, 68, Tara, 40, Ulerin and Queen Mab, 10, besides the yawls Wendur, 125, Lorna, 85, Anemone, 68, and Fairlie, 14. Clara won third prize, beating all but Irex and Galatea. On June 1 she sailed in the Royal Harwich regatta, beating Queen Mab, Ulerin and Fairlie, and next day, under the same club, she beat Erycina, 90, and Arethusa, 54, both yawls. This ended her career in British waters, as she was purchased a few days later by Mr. Chas. Sweet, and at once went to Blackwall to fit out for the passage across to New York.

Her new owner, a British yachtsman, had spent much of his time in New York for several years, being engaged in some legal business there, and as his stay promised to be more or less prolonged, he determined to send a yacht out, being a member of the New York, Eastern, Seawanhaka and Larchmont clubs. Clara was fitted with a jury boom of 41ft. and small sails, carrying her racing mast, and on June 24 she sailed from Blackwall for New York. After an uneventful passage of 39 days she reached port in safety, an amusing incident of her arrival being the mistake made by her skipper, who brought her in during the night and did not realize that he had actually reached New York until he had taken her some distance up beyond the city piers, instead of anchoring off Staten Island. She was soon in commission under Capt. Barr and her regular crew, who came out by steamer, the passage across having been made by a skipper and crew who made a specialty of taking yachts on long ocean voyages.

After fitting out she sailed for Newport, joining the Eastern Y. C. fleet, then on its cruise to New York. On Sept. 2 the fleet of 13, of which Clara was the smallest, sailed from Newport for New London, Clara being third boat in, Fortuna, schr., and Thetis, sloop, 64ft., beating her. Next day she sailed well with the fleet, and continued on to New York, not stopping with the others at night. Her first race in America was for the Bennett-Douglas Cup, on Sept. 21, outside Sandy Hook, in a good breeze and some little sea. Genesta won the cup, the smaller yachts having no chance, but four of them, Clara, Isis, Athlon and Daphne, made up a sweepstakes of $150 each, which Clara won very easily. This was her only race this season, her record being but four starts, in which she took two regular first prizes, one third prize and sweepstakes mentioned above. She was laid up at Beverly bridges, her crew returning home.

It was by this time pretty well recognized that none of the old sloops were good enough to meet such a boat as Clara, and during the winter a new yacht of the compromise type was started at Piepgrass's yard to race in the same class. Cinderella, as she was named, was designed for Mr. Wm. Iselin by Mr. Cary A. Smith, and was 52ft. 3in. w.l., 16ft. 6in. beam, and 9ft. 6in. draft, with a lead keel of 12 tons and a displacement of 42 tons. She was built of wood, but of far lighter construction than is common in America, the main object being speed. Clara was fitted out early, and was on hand on May 30 in the opening race of the Seawanhaka C. Y. C., but found no competitor, Cinderella not being in commission. The first meeting between the two was on June 5, in the pennant regatta of the Larchmont Y. C., Clara beating Cinderella by 1m. and two older sloops, Thistle by 23m. and Athlon by 13m., the former being larger than Clara. The result was a challenge from Cinderella for a match next day, in which Clara was again victorious. Following these races came regatta week, when Clara made a clean sweep of the field, beating all of her own class easily as well as Gracie, 70ft., Fanny, 67ft., and Thetis, 61ft. Her work for the week was summed up as follows in the FOREST AND STREAM:

"Undoubtedly the honors of last week belong to one boat, though one may look in vain for any mention of it in the daily papers of New York and Boston, except a few brief notices and a line in the tables of times. No big type and heading call attention to her work, but to any one who reads the times carefully it speaks for itself, thus:

	Tuesday.	Thursday.	Saturday.
Clara	7 16 37	6 32 42	7 31 19
Thetis	7 17 55	6 47 39	. . . .
Gracie	7 13 59	6 46 09	7 55 18
Fanny	. . . .	6 46 28	. . . .
Athlon	7 28 49	7 03 12	withdrew.
Thistle	8 08 24	. . . .	. . . .
Bertie	. . . .	Not timed.	. . . .
Cinderella	7 33 19	6 49 48	7 45 35
Vivid	8 34 36	Not timed.	. . . .
Roamer	7 34 56	. . . .	. . . .
Daphne	8 10 45	7 09 16	7 49 19
Whileaway	. . . .	Not timed.	. . . .
Regina	. . . .	Not timed.	Not timed.

These are the elapsed times, and it must be remembered that Thetis, Gracie and Fanny are from 11 to 17ft. longer and twice as wide as Clara, so the corrected times will show still more in her favor, while they would reduce a little the time of some of the others, but the result is near enough. There are ten sloops, among them the fastest we have, aggregating 23 starts in the series of three races in light weather, and beaten in even time, irrespective of size, in every case but one, by the narrowest cutter we have yet had here, and in this one case the cutter wins by a big margin on time allowance."

After the Seawanhaka race Clara started for Marblehead, sailing on June 29 in the regatta of the Eastern Y. C., but with only Active and Ulidia against her, the former an old sloop 50×16ft., both of which she defeated easily and then returned to Larchmont for the annual regatta of July 5, in which she beat Cinderella by 27m., besides five schooners, all larger than she. Besides the regular class prize, Clara won the Connor Cup. She returned at once to Beverly, where she cruised about until the cruise of the New York Y. C., when she was on hand for the Goelet Cup, but of course with little chance of winning from such yachts as Puritan and Mayflower, all being classed together. A sweepstakes was made up, however, which she won, beating the sloops Fanny, Hildegarde, Cinderella, Regina, Athlon and Gaviota, and being within 1m. of Gracie. Two days later, on the run to New Bedford, she beat all of her class, but no prize was given. On Sept. 18 the Citizen's regatta was sailed off Newport, the fleet drifting for nearly twelve hours over a 45-mile course and only finishing at midnight. Cinderella finished a short time ahead of Clara, and would have won the prize, but she had no club member on board, so the prize went to Clara. As far as the honors of the race were concerned, it was an even matter, as neither boat did anything but drift all day. The last race of the year was at Larchmont on Oct. 2, when Clara again beat Cinderella by 1m. 31s. Thus Clara started 11 times and won 12 prizes, all of them firsts save the Goelet Cup race, in which she won the sweepstakes.

During the winter Capt. Barr was engaged to sail Thistle, Mr. Sweet being detained in England and not expecting to fit Clara out, but in July he arrived in New York and at once had her put in condition with a scratch crew from a large yacht just laying up. She was very hastily fitted out by the new hands and hurried off to join the New York Y. C. cruise, her sails being just from the loft, a new suit of cotton duck made by Wilson & Griffin. She reached Newport after the Goelet Cup race and joined the fleet at Vineyard Haven for the race to Marblehead for the Morgan cups on Aug. 8. She beat all of her class and some of the class above her, but took no prize, being beaten by Bedouin and Gracie. On Aug. 11 she started in the special regatta of the Eastern Y. C., off Marblehead, her principal antagonist being Cinderella. Before the first mark was reached, the leg being a beat of 12 miles, the crosstrees broke and a little later the clevis on the stem pulled out, the head of the copper bolt having been corroded while she lay all winter in the water near New York. The consequence was a general wreck, both topmast and bowsprit going out of her, so that she withdrew from the race. Whether or no she would have beaten Cinderella was of course an open question at that stage of the race, but from the evidence it seems that Cinderella was the leader at the time of the second and principal mishap. There was very little general racing during the rest of the season, the Volunteer—Thistle races engrossing the attention of yachtsmen, and Clara was not entered again. After Thistle's defeat Mr. Sweet gave notice of a challenge for the Cup, his intention being to build a 70ft. yacht, but in this he was promptly headed off by the action of the New York Y. C. in so revising the deed of gift as to do away with all time allowance between a 90ft. and a 70ft. boat.

During the past season Mr. Sweet's business has kept him in London, and Clara has not been fitted out. During the season of 1887, when Clara raced but twice, as told above, Cinderella sailed 12 races and captured 9 firsts, thus setting at rest the statement that has been made to account for Clara's success, that there were no really good boats in her class. It has also been said that her success was due entirely to Capt. Barr's skill as a sailor, but during her first season she won in other hands, and during many of her races here she was sailed and manned by Corinthians. At the same time there is no doubt but that Capt. Barr is one of the shrewdest and most capable skippers that has sailed a boat, either sloop or cutter, in American waters; and that much of Clara's success is due to the constant pains he took in keeping her tuned up to racing pitch. Unlike most foreign skippers, he was very quick to appreciate the difference in conditions between the racing here and abroad, and to adapt his boat to them. All spars and gear were lightened as far as safety would permit, and yet in all her races while he was in command she never met with a mishap of any kind. Her boom was very light for heavy weather, but instead of replacing it with a heavier one he put a row of grommets in the foot of the sail and rove a lacing in heavy weather, using with a loose foot in light winds. In the same way, one topping lift was discarded in her summer racing, as being unnecessary; while the weight aloft was reduced in every possible way. We will shortly give the deck and cabin plans of Clara.

KEEL YACHTS AND CENTERBOARD CANOES.

"ONE of the curious things noted by gentlemen mariners is that the keel model has no one to champion it among canoe owners. The British used to build canoes of deep model and load them with ballast, but they got whipped out by the centerboard canoe of Yankee build, and wholly abandoned their own model to bring to America this year the Charm, built on Yankee lines. They got licked on that tack also, but there is no return to the deep or keel model in prospect. The FOREST AND STREAM has done more than any other sportsman's paper to make keels popular among yachtsmen and centerboards popular among canoemen. And yet a centerboard trunk is a much greater nuisance in a canoe than in a 90ft. yacht, and both boats are driven by sails."—*New York Sun, Oct. 7.*

The reason why the FOREST AND STREAM has advocated the keel in one class of boat and a centerboard in a totally different class, is by no means so difficult to discern as the *Sun* would imply. Wherever a sailing craft of any kind is to be used for sailing in deep water we claim that the keel boat is stronger, safer and more seaworthy than the centerboard craft; and just as fast. Where, however, a limit of any kind is placed in the depth of water, a departure in some direction from the ideal keel model is necessary. For this reason we recognize the value of sharpies and other shoal craft for certain waters where navigation with a keel vessel would be impossible, and for the same reason it is likely that the centerboard will be retained in racing craft of 90ft. should any be built, as a keel boat of that length and proportionate draft would be too deep for ordinary regatta courses of the Atlantic coast.

When it comes to canoes, there is no possible doubt but that a keel canoe could be built that would be faster and give far more room inside than any centerboard canoe, and so long as she was in two feet of water she would be preferable in every way; but this is a very small part of a canoe's usefulness. The first requisite in a canoe is light draft, not over 6in. at most, and 4in. is often better. Added to this, she must be nearly flat on the bottom, so as to stand upright on shore, for sleeping aboard, etc. Much of her cruising is done in a few inches of water, she is beached and set afloat half a dozen times a day; loaded into cars and wagon; and this point of convenient handling on shore is far more important than speed afloat. Consequently the deep keel has been prohibited in the rules of the American Canoe Association, as the introduction of keel canoes would mean the establishment of a special racing class, against which no cruising canoe could compete with a chance of success. The *Sun*'s analogy between the yacht and canoe in respect to sails and centerboard trunk is correct as far as it goes, but it is hard to imagine Gen. Paine holding up Volunteer in a heavy puff by hiking out over the side and putting one foot on the centerboard as it comes out of water, or of him entering her in a "sailing capsize" race, where the mainsail must be laid flat in the water and the boat righted again.

A POSSIBLE CHALLENGE FOR THE CUP.

LAST week Mr. Walter Reeks, a yacht designer from Sydney, N. S. W., arrived in Boston and visited Mr. Burgess, his object being to learn something of American yachts, with a view of challenging for the America's Cup on behalf of the Royal Sydney Y. C. Mr. Reeks is an Englishman, a pupil of Richardson, the designer of Irex, Samoena and Petronilla, but has resided in Sydney for the past five years. The intention at present is to challenge for a race in 1890, but nothing has been said about the dimensions or model of the challenger, or whether she will be cutter or schooner rigged. The challenger will be built in Sydney and will sail to New York by way of the Cape of Good Hope, a number of Australian yachtsmen coming in her. Mr. Reeks expects to visit New York this week.

MIRAMICHI Y. C.—This club closed the yachting season of 1888 on Oct. 18 by a race for a championship pennant presented by Vice-Commodore J. L. Stewart. The course was from Black Brook to Oak Point and back, rounding Murdock's Point and Napan buoys both ways, between two and five miles long. Tide flood, wind fresh northerly. Weather mild and sunny, a perfect day. The competitors were sloop Fisherman, the winner of the Miller silver cup at the last race; sloop Kilbride, the winner of nearly all the races ever sailed by the club; Kittoch, a keel cutter with outside ballast and sloop Welcome Home. The first three engaged in a luffing match for a couple of miles, thereby getting considerably to windward of the true course, while the latter kept well to leeward and went straight for the first buoy, rounding it 3m. ahead of the next boat. Fisherman and Kilbride passed Kittoch before the Napan buoy was reached and Kilbride passed Fisherman on the close reach across from Napan to Oak Point. Fisherman had her revenge on the reach back. In the beat up to Black Brook Fisherman passed Welcome Home, Kilbride almost caught her, while Kittoch, though she had been five minutes astern at the entrance on the home stretch, lapped Welcome Home after passing Kilbride. She had tacked but once as against three times for the others. She finished a minute and a half before Fisherman, and it is interesting to recall the fact that the latter had beaten her a month before, in smooth water and very light wind, on a 10m. course, over half an hour. Welcome Home, the winner of the race, was left fifty minutes astern by Fisherman on that occasion, and twenty-two minutes by Kilbride, but had in the meantime been provided with a new set of sails and an iron centerboard in place of twilled cotton and wood. The flag is a gorgeous piece of bunting, designed by Miles, a St. John artist, and made especially for the occasion. The following is the summary:

	Start.	Finish.	Elapsed.	Corrected.
Welcome Home, F. Loggie	12 50 00	2 43 31	1 53 31	1 50 28
Kilbride, Com. Miller	12 49 58	2 43 40	1 53 42	1 50 52
Kittoch, Jas. Miller	12 48 30	2 43 32	1 55 02	1 51 07
Fisherman, R. Loggie	12 49 27	2 42 45	1 53 18	1 53 18

YACHT AND BOAT SAILING.—The sixth edition of Kemp's well-known work is announced. Among other additions it will contain a chapter on centerboards. Among the new designs will be Mystery, centerboard sailing boat; the Mersey boats Gladys, Brunette and Whisper; a Clyde boat by Mr. Watson, Minima, Itchen boat, Mr. Clayton's Madcap and a single-hand cruiser designed by Mr. Watson.

THE NEW HERRESHOFF TORPEDO BOAT.—The Herreshoff M'f'g. Co. is now at work on a torpedo boat for the U. S. Government, under a contract signed last March, the boat to be completed in fifteen months. The price is $82,750 for the boat, exclusive of the torpedoes and their fittings. The dimensions are: Length over all, 138ft.; length on deck, 134ft; extreme beam, 15ft.; extreme depth, keel to crown of deck amidships, 10ft. The keel will be rockered, the draft aft 4ft. 8in. Displacement about 100 tons, and the horse-power estimated at 1,600. The engines are to be five-cylinder quadruple expansion, driving twin screws. The two boilers are to be of Herreshoff's latest design, and placed in separate compartments forward and abaft the engine room. Eight bilge-ejectors will give a total discharge of 280 tons per hour. A steam steering engine will be fitted to work a balance rudder of large area. The engines and boilers will be protected by coal. The interior will be divided into eleven water-tight compartments and lighted by electricity. There will be two conning towers, one forward and one aft, with a search-light on each. The armament is to consist of two torpedo tubes, a torpedo gun aft, and three 37-pounder rapid-firing guns. A weight of 15 tons is to be carried on trial, which will be a three hours' continuous run. If on a three hours' trial the mean speed of the boat exceed 22 knots, a premium of $1,500 will be paid, provided the boat is accepted by the Department, for each ¼ knot in excess of 23 knots, and $2,000 for each ¼ knot in excess of 24 knots. If the speed of the three hours' trial calculated as aforesaid falls below 22 knots a penalty of $4,000 will be exacted. If the speed on trial falls below 20 knots the Department reserves the right to reject the boat.

BISCAYNE BAY Y. C.—This club is looking forward to an early opening of a prosperous season, as its northern members are preparing to start for the South. The fleet will be increased this year by the addition of several new yachts, all of sload draft. Com. Munroe and Vice-Com. Hines have each a new craft, built by Brown of Tottenville, S. I., while Mr. Ralph M. Munroe will take down his yawl Presto. The latter boat, built in 1885, has served for a model for the new ones; having proved a very successful boat of the kind. She was designed by her owner for use about the Lower Bay, New York, and as her moorings were in the Great Kills, on the south of Staten Island, where she lies high and dry at very low tides, shoal draft and a flat bottom were essential. She differs from the sharpie in being wider and having a round bilge, her length over all being 41ft., beam 10ft. 6in., and draft about 2ft. Rigged with mainsail, jib and mizen she has cruised about Sandy Hook and the lightships for the past five seasons, and proved very safe and comfortable. The cabin is quite large with berths for four. Com. Munroe's new craft is a little smaller than the Presto, while Vice-Com. Hines's boat is larger. Mr. Brown has also finished lately a 60ft. sharpie for the U. S. Government, for surveying work about the Florida reefs. She draws about 2ft. of water, and has accommodations for a crew of 14.

COOPER'S POINT CORINTHIAN Y. C.—The eighteenth race of the Cooper's Point Corinthian was sailed over the club course on Oct. 16. Item, Allmond and Wilkins (second class) started at 3:10 P. M.; wind S.W., moderate, ebb tide. Down wind the boats ran side by side for two miles, and so closely that a 50ft. piece of "gill twine" would have tied the boats together without breaking it. When approaching the upper end of Petty's Island, the turning point, the Item and Wilkins were turning with their booms to starboard and port, wing and wing and with scarcely room enough to drop a mate between them, Allmond slightly in the rear. By a "coup-de-jibe" that insured all the air from the head boats, the Allmond went to the front as if sent there by an electric motor, which place she held to the upper mark, with the Item and Wilkins close in her wake. The beat home to windward, with lee rails awash, made fine sailing. Not a quiver in any of the sails, or a jar in the boats that would have capsized an egg on end, and no mistakes were made. The Allmond, Capt. R. G. Willkins, turned the home stake boat at 4:11:05; Item, Capt. Will Kinsey, 4:11:15; Wilkins, Capt. Will Cook, 4:11:20. Another race will take place on Oct. 23 and every following Tuesday until ice drives the boats out of the river.

NAROD AND SAGAMORE.—The collision which lately took place at the foot of Twenty-fourth street, East River, New York, by which the steam yacht Narod was injured by the Sagamore, has given rise to considerable trouble, as Mr. S. G. Doran, the owner of the Narod, has libeled the Sagamore in a suit for damages, placing the sum at $4,600. An outcome of the suit is the discovery that Mr. Doran has sailed during the season under the flag of the New York Y. C., though not a member, a fact which he explains by saying that his name had been proposed before he left New York on a long cruise to the St. Lawrence, he supposed that he had been elected. However true this may be, it does not explain why the Narod flew the flag of the Seawanhaka C. Y. C. on the occasion of the club's regatta last June, Mr. Doran not being a member of the club or even proposed for membership.

MOLLY AND WOOS.—A race was sailed on Oct. 20, at Toronto, between the sloop Molly, owned by Mr. Percival, and the catboat Woos, owned by Mr. Haverson, the course being triangular, on Toronto Bay, two rounds. It was blowing heavily at the start, a violent thunderstorm having just passed by, and Molly tied in two reefs and Woos one. The two started at 3:05, Molly having the lead, but Woos ran out a spinaker boom forward, setting a balloon jib on it and drawing away from Molly, leading around the first mark. On the second leg Molly shook out one reef and tried a spinaker, but Woos continued to gain, especially on the windward work of third leg. At the end of the round Woos led by 6m. She shook out her reef and set her balloon jib, still gaining, and won by 11m.

BANSHEE.—The lead keel of Banshee is now being slightly increased, the bottom being padded out and the corners rounded so as to make the bottom a curve. It was discovered lately that the iron plates on the lower corner of the centerboard, to reinforce the bolt hole, had been badly eaten away by galvanic action, being so near the lead keel.

STEAM LAUNCH RACING.—On Oct. 20 the steam launch Dolphin, Major W. B. Wetmore, beat the Mariquita, Col. L. B. Cameron, on Lake Champlain; the course being 6¼ miles. Dolphin won by 2m. 58s., making the course at a speed of 11 7-10 miles per hour.

GANNET.—Mr. Walter C. Hubbard, Seawanhaka C. Y. C., has purchased the Gannet from Mr. Oliver Adams, and will rig her as a yawl. She lately lost her mast in the storm at Larchmont through the Portia dragging her anchor and driving down on Gannet.

TOMBOY—The new 29ft. cutter built for Mr. Archibald Rogers of the Bedouin, has been named Tomboy. She left for New York in charge of Capt. Pittuck on Oct. 19.

CHIQUITA has had her mast and gaff reduced, and will have a new mainsail from Wilson's loft.

SAY WHEN.—Mr. N. L. Munro has sold the Say When, the price being $46,000.

NEW YORK Y. C.—The fall meeting will be held to-night at the club house.

Rev. R. Ashton, superintendent of the Mohawk Indian Institution at Brantford, Ont., has a black and tan terrier that always accompanies the Indian children to church on Sunday. He goes to the altar rails, and lies down facing the congregation. When they rise to sing, he rises; when they sit, he lies down. One Sunday, a strange clergyman preached a sermon that was very much longer than usual. The dog grew tired and restless. Finally he went to the boy who usually passed the plate at the close of the service and "begged" persistently, as much as to say, "If you will only pass the plate the preacher will stop." He kept it up until the sermon was concluded.

The war between the Tweed poachers and the watchers continues with unabated fury. But it has its comic aspects. For instance, a Scotch newspaper reports that on Sunday, two days after the close time commenced, the bailiffs seized five nets in the neighborhood of Barnmouth, and that the fishermen are "deeply incensed at the action of the bailiffs, and consider that their labor on Sundays should be forbidden as scandalous.—*Fishing Gazette.*

PEEKSKILL, N. Y., Oct. 10, 1888.—*U. S. Cartridge Co., Lowell, Mass.*: Gentlemen—I am filling orders every day for Schultze and American Wood Powder, using your Climax shells, and they are dandies I assure you. In fact *they are the best.*
—*Adv.* (Signed), W. H. PIERCE.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.
Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING Co., 318 Broadway.
LONDON: DAVIES & Co., 1 Finch Lane, Cornhill.

In the Stud.

The Syracuse Kennel Club

Offer the services in the stud of the famous English setters:

DAD WILSON (A.K.C.S.B. 3371).
CHANCE (A.K.C.S.B. 9645).

At a fee of $50 Each.

A FEW CHOICE PUPPIES FOR SALE:

Dad Wilson—Lillian (3735),
Dad Wilson—Lit II. (4825),
Chance—Di (3637).

IRISH RED SETTER

CHAMPION GERALD.

IN THE STUD

TO FIELD BROKEN BITCHES ONLY. Fee, $25. Gerald has been heavily shot over two seasons in the South. PARK CITY KENNELS,
P. O. Box 2,057. Bridgeport, Conn.

St. Bernards.

IN THE STUD.

Champion "RIGI."

Young stock for sale sired by Rigi.
WENTWORTH KENNELS,
P. O. Box 264, Utica, N. Y.

St. Bernards and Pugs.

A few fine, high-bred pups of both varieties now on sale. Address with stamp,

CHEQUASSET KENNELS,
Lancaster, Mass.

The Hospice Kennels,

K. E. Hoff, Prop. ARLINGTON, N. J.

Breeders and Importers of thoroughbred

ST. BERNARDS.

104 PREMIUMS IN 1887.

Yorkshire Toy Terrier.

The English bench winner **Bradford Harry**, Described in all show reports as "best Yorkshire in America." Photos 50c. Pedigree and winnings free. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

EYESIGHT BY MAIL. Our method of fitting persons who cannot see a good optician is highly recommended by oculists and physicians. Send 4c in stamps to QUEEN & Co., Opticians, 924 Chestnut St., Phila.

In the Stud.

AT STUD. FEE $50.
The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended: for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS,
Niles, Mich.

ROUGH-COATED ST. BERNARD

Champion Barry II.

(A.K.R. 3760.) (A.K.C.S.B. 8935.)

IN THE STUD

To a few approved bitches. Winnings: 1st, New York, 1887; 1st New York, 1st Philadelphia, champion Syracuse, 1888. Address
WILLIAM J. EHRICH,
Room 82, Tribune Building, New York.
oct18,5t

The Kennel.

Choice Gordon Setters,

9 mos. old; all black and tan; champions Rupert and Argus stock.
1t X. Y. Z., Station R, New York.

FOR SALE—BEAGLES.

Five broken dogs, good starters and stayers on trail; also one pair exceptionally fine puppies. SEBASTIAN GRAFF, Cadiz, Ohio. oct25,2t

IRISH TERRIERS.—PUPS BY PRIZE WINning parents, champion Bachelor strain, for sale. SANDYCROFT KENNELS, Milford, Del. oct25,3t

FOR SALE.—A VERY FINE BULL-TERRIER dog 6 mos., a beauty. Price $10. LEANDER F. HERRICK, Millbury, Mass. 1t

I HAVE SOME PURE BRED LLEWELLIN setter puppies, 3 and 4 mos. old, from field and bench show stock. For particulars address with stamp, CHAS. YORK,
9 & 11 Granite Block, Bangor, Me.

FOR SALE.—A BRACE, OR ONE, WELL broken orange and white English setter dogs, 3 yrs. old, good stock. Address JOHN T. SPEER, Avondale, Essex Co., N. J. 1t

WANTED.—NO. 1 ENGLISH BEAGLE, thoroughly trained on foxes. E. J. KENNEALLY, Marlboro, Mass. 1t

FOR SALE.—BULL-TERRIER BITCH MERcedes Royal (A.K.S.B. 7589): prize winner. Pups by Mercedes Royal and Royal Diamond, whelped May 10, 1888.
oct24,4t G. M. ROSSMAN, Keene, N. H.

FOR SALE CHEAP.—TWO BLACK COCKER bitch pups, whelped May 12, 1888. Sired by imported Laddie; dam by champion Obo II. Address FRANK J. SMITH, Farmington, N. H. 1t

BUSINESS COMPELS ME TO DISPOSE OF some of my setters and beagles, including Belthus and Riot. HERMAN SCHELLHASS, 44 Broadway, New York. 1t

English Greyhounds & Irish Setters.

For Sale—The well-known red Irish setter bitches Meg Merrilies (A.K.R. 2181) and Baby in the Woods (A.K.R. 5811); also the English greyhound bitch Kitty Grey (A.K.R. 1759), and the celebrated young stud dog Gleudon (A.K.R. 5885). For pedigrees, prices, and full information address CUMBERLAND KENNELS, Portland, Me.
oct25,5t

FOR SALE.

Three Setter & Two Pointer Bitches

Old enough to handle this fall. All well bred pedigreed stock. Address
oct25,2t F. E. ROGERS, 134 Duane st., N. Y.

FOR SALE.—A FINE PAIR POINTER PUPpies, by the famous champion Fritz ex Toinette, champion King Bow ex Sue. C. W. LITTLEJOHN, Leesburg, Va. 1t

For Sale—Rough-Coated St. Bernard Pups

From a celebrated sire and dam; the dam was imported in whelp, and is for sale. Also 6 dogs and 3 bitch pups, whelped Aug. 27 last, and are now in splendid condition for shipping. For further particulars address
oct25,2t JOHN OGILVY, Montreal, Can.

FOR SALE.—THE MAGNIFICENT RED Irish setter dog, Kilkenny, unbroken pedigree, Glencho and Elcho stock. House broken and partially field broken; flat coat, mahogany color; has had distemper; nearly 2 yrs. old; tough and wiry. Price $75. Address DWIGHT HOLBROOK, Clinton, Conn. oct25,tf

FOR SALE.—BLACK POINTER RING, $50, or will exchange for fine Laverack setter, not over 1 yr. old. Ring can be seen on game. F. KOEHLER, Litchfield, Conn. 1t

FOR SALE LOW.—SMALL ROUGH-COATED St. Bernard bitch, house broken and gentle. Would suit one desiring house dog. Address JOHN KEEVAN, 195 King st., Brooklyn, N. Y. oct25,2t

IRISH SETTER, 18 MOS., WELL BROKEN, $20. A. MERRIMAN, Plantsville, Conn. 1t

Pedigree Record Book

Containing 175 blank pages arranged for carrying out a dog's pedigree to the fifth generation with a lettered index for ready reference. $2.50
FOREST AND STREAM PUBLISHING Co
318 Broadway, New York.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 1, 1888.

VOL. XXXI.—No. 15. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE CAMPAIGN.

OCTOBER has passed—October with its flaming foliage; and November is here. The opening week of the month finds the campaign in full blast. Our game columns chronicle reports from many quarters of this great land. Deer, grouse, woodcock and quail figure in these reports. Taken as a whole what an index do they afford of the magnificent plenitude of the field resources of our continent. The notes are full of suggestions. There is that one from western Massachusetts telling of the failure of the woodcock flight; how general is that failure, and what had the blizzard to do with it? Mr. Lathrop is an experienced observer of the ways of the woodcock, and his theories are worth discussion. Then there are notes of the late breeding of quail, which appears to have been the rule over a large territory this season. And then comes up that old and ever pertinent theme, the ravages of the market hunters. Would that some crafty campaign manager might rise up to devise means to circumvent the grouse snarers. The conflict between market hunters and recreation hunters is irrepressible and irreconcilable; but we risk nothing in playing the role of a campaign prophet long enough to predict that the recreation hunters will in time get the better of the potters and carry the country by a big majority.

Frosty nights, storms and gales are detaching the leaves, and every new day finds the foliage less dense, the cover more open and the upland shooting improved. On the water the fowl are flying; from Dakota and the Atlantic Coast alike come the reports of a great supply of ducks.

October is proverbially the sportsman's choicest season of the year, but while an artificial notation of the calendar may set bounds to the months, and give new names to the divisions of the season, those who follow the dog afield will find in the early days of November sunshine just as bright and air just as exhilarating as ever in October.

FORESTS OF THE ROCKY MOUNTAINS.

II.

COL. EDGAR T. ENSIGN, to whom was deputed the task of investigating the forest conditions of the Rocky Mountains, has taken considerable pains to collect information and put it in presentable form. He gives us estimates of the area of the region classed as forest, but he cannot, of course, tell us what proportion of that area is covered with timber, nor does he make any guesses as to the amount of standing stock, nor the relative proportions of the several species. According to the figures the total area of the region is 640,155 square miles, of which about fourteen per cent., say 90,000 square miles, is classified as forest area, distributed as follows: Idaho, 15,990; Montana, 20,285; Wyoming, 12,060; Colorado, 12,025; New Mexico, 12,500; Utah, 6,000. Of this 90,000 square miles, or 57,000,000 acres, four-fifths of the whole, or 45,000,000 acres, is said to be still owned by the general Government.

In Wyoming, Montana and Idaho very little of the forest land has been surveyed, and the present policy of the Land Office is to discourage the making of such surveys. The land is not wanted for settlement, and to throw it open to settlement would simply be to place the timber in the hands of the monopolists, instead of holding it open for a general scramble.

The forests in this region are situated at elevations of from 5,000 to 12,000ft. on the great Continental Divide, which, being intersected here by a great transverse divide, gives formation to four great basins; one sloping to the northeast drained by the Upper Missouri, one at the northwest drained by the Columbia River, one at the southwest which is double, and discharges its waters into the Great Salt Lake Basin and the Colorado River, and one at the southeast drained by the Arkansas and Rio Grande rivers and their affluents.

This region is the source of the North Platte and South Platte, the Big Horn, Yellowstone and Upper Missouri. Numerous tributaries of the Columbia carry its waters westward to the Pacific Ocean. Here, too, is the source of the Colorado and the numerous rivers which feed the Great Salt Lake basin, the Rio Grande rivers and the Arkansas—a broad network of rivers on whose waters the region of the great plains and a considerable portion of the area of Washington and Oregon is dependent for the irrigation of the soil. Treating of the forest conditions of this region, Col. Ensign says: "It embraces a wide expanse of wooded ranges, foothills, valleys, parks and plateaus. Naked and often snow-clad crests and peaks, rocky slopes, barren surfaces, deep defiles and swift-running streams. * * * * Upon the mountain ranges are irregular masses of coniferous trees separated by wide spaces—the latter treeless or sometimes clothed with a growth of aspen. Bordering the streams are cottonwood, willow, alder and other deciduous trees of minor importance." Pine, spruce and fir are the principal lumber trees of the region, all very useful for economic purposes, but there is nothing to guide us to a conclusion as to the percentage of the so-called forest area occupied by them. The above extract from Col. Ensign's description of the region is consistent with the assumption that perhaps less than five per cent. of the area is stocked with useful timbers.

Heavy inroads are being made upon the existing stock for local requirements, and Col. Ensign always employs figures to aid us in forming ideas, but in spite of the labor they have cost him, he is constrained to admit that they are not very reliable. He gives the annual consumption of timber in the region as from 150,000,000 to 200,000,000 of native timber and 40,000,000 to 50,000,000 of imported timber, B. M. Then there is the drain upon the forests for railway construction and maintenance. At the close of 1887 the mileage of railroad track is given at 10,000 miles, estimated to have used up 200,000,000 cubic feet of timber in the course of construction, and to require 25,500,000 cubic feet annually for their maintenance.

But what avail figures? We know nothing of the area actually stocked with timber, nor of the possible yield per acre per annum, and in the absence of these data, we cannot pretend to calculate how long the forests will last. Some portion of the area burned and cut over has been taken possession of by the aspen, which, although it has little market value, serves to save the forest floor from erosion, and to hold possession until, in the course of centuries, perhaps in a state of nature, young pines get possession of the soil and crowd the aspens out. But this is a result which cannot by any means be relied on. The bared forest floor baked in the sun is either destroyed by fire, or if on steep slopes it is subjected to the erosive action of floods until its restoration becomes both difficult and costly. Reproduction is not an item to be counted on where forests are recklessly exploited. The most we can hope for is that some of the area may be spared in a fit condition for reconversion into forest. The timber stock is reduced by the amount taken out and wasted, the "irregular masses of coniferous forest" disappear one by one, and "the wide treeless spaces" which separate them grow ever wider. The region is essentially a mining region, and this industry involves the consumption of a considerable amount of timber and charcoal. One mining camp in Montana, Butte City, is estimated to use not less than 40,000,000 feet of timber B.M. per annum, and 30,000,000 cubic feet of fuel for charcoal.

It will be evident then to those capable of assessing the facts at their just value, that the drain upon these forests for utilizable material, supplemented by the reckless waste everywhere apparent, and by the ravages of periodical fires, must be making considerable inroads upon the existing stock.

Colonel Ensign collected his information as to the state of the forests principally by means of circulars addressed to the civil engineers and other well-informed persons in the several counties of the region, and in reply to the question, "Is there danger of the timber supply failing?" he received twelve answers in the affirmative and nine in the negative. From these undecisive opinions of intelligent and well-informed men we may turn to the logic of facts. Until recently native timber was relied on wholly for telegraph and telephone poles, and countless numbers of smaller trees were and are used in the mines for "lagging;" but the superintendent of the Western Union Telegraph Company at Omaha, Neb., writing to Colonel Ensign, says, "We are not now using any native poles, but for what renewals are made, and new lines built, white cedar poles are shipped from the East." And as regards lagging timber, Colonel Ensign says, "Much of that used in Utah and Montana is now imported from the Pacific slope, as the home supply of good-sized or accessible timber is exhausted." These facts alone are quite sufficient evidence that the forests are in process of rapid exhaustion.

Colonel Ensign, in his report, touches on the relation of forest to agriculture by their conservation and distribution of moisture, and collects some very interesting data as to the expansion of the irrigation system, with the consequent development of farming and other dependent industries, giving carefully compiled statistics of the population of the region, the assessed valuation of real and personal property for the year 1887, amounting in round numbers to three hundred and fifty million dollars; of its manufactures, its wool growing, stock-growing, agricultural and mining industries, all in a flourishing condition, many of them dependent for their prosperity on the facility of procuring forest products locally, and all of them dependent for their persistence upon the proper regulation of the water supply of the region, the maintenance of which can only be secured by the conservation of the forests, which, it is properly argued, are the pivot on which the future prosperity of the State hinges.

On the subject of forest policy the worthy Colonel waxes warm, and is ready to exclaim, "Policy! God bless you, there is no such thing, sir."

"Alleged trespassers," he tells us, "are often prosecuted but rarely convicted. No forests are saved from fire, and few, if any, from the ax. The policy of withholding from survey the public timber lands in certain parts of the Territories, is worthy of commendation, and is likely to prevent, for the time being, the entry or sale of such lands, but not the spoliation of the timber on the same."

This is a very depressing outlook, and in his despair, the Colonel addressed letters to all sorts and conditions of representative men asking for suggestions for reform, and in reply received a mass of most absurdly contradictory suggestions, which fairly indicated the popular comprehension of the subject of forestry but which certainly did nothing toward alleviating his perplexity, if they did not aggravate it. We quote one which indicates the manners and customs of the charcoal burners, and the shrewdness of the writer: "It would be better to allow charcoal burners, and the cutters of mine timbers to take living timber from the public domain under proper restrictions, than to encourage the destruction of the forests by fire, in order that they may cut the deadened timber as they please."

The sentiment of local governments and residents is in accord on one point, that "no obstacle must be placed in the way of securing a necessary timber supply." There is a popular impression that if a proper set of regulations were drawn up, the forests might be levied on to any required extent without impairment of their resources, and there is a general disposition to submit to such regulations provided they are neither arbitrary nor inconvenient. The popular maxim is that it is the privilege of the people to utilize the forests as long as they last, and the duty of the Government to restore them when exhausted.

The detailed returns from the several counties in the region are very interesting and valuable, and embody perhaps the most reliable information on the subject available. At the same time Colonel Ensign finds occasion to observe that "estimates of forest areas differ widely from the same region. This results from the difference in the competency and carefulness of the observers, and from the fact that there is no accepted standard of estimate. Some include in forest lands not only those tracts which are densely or mainly covered with trees, but also grazing lands on which may be found only a few scattering pinons or cedars."

CO-OPERATION IN FISHCULTURE.

A PAPER on this subject was read before the American Fisheries Society by Mr. John H. Bissell, of the Michigan Fish Commission, at its last annual meeting, but so far but little has been done toward co-operation. States which have interests in the same waters should agree on the laws governing such waters, and many instances might be cited where independent legislation over waters lying between two States would be the better for consultation between the Commissioners. One, however, will serve as an illustration. Greenwood Lake, lying partly in New York and partly in New Jersey, has different dates for the opening of the black bass season at each end of it, and a fish legally hooked in one State might be illegally landed in another, a state of things which is most absurd. If the Fish Commissioners of these States would meet and agree upon a date to open the season, and get their Legislatures to fix that date by law, it would be a step in advance. The capture of salmon in the Hudson could be considered and perhaps concurrent legislation obtained, for at present the fishermen of New York are forbidden to take them in nets, while those of New Jersey are not restricted. We have been moved to these remarks by the report, in another column, that the Commissioners of Delaware, Pennsylvania and New Jersey will soon have a conference in regard to the fisheries of the Delaware River, and it is to be hoped that they will not only agree upon what should be done, but will be able to induce their law makers to do it.

The Sportsman Tourist.

QUAIL NETTING IN CAPRI.

(A Woman's Letter.)

ANACAPRI, Island of Capri, Italy.—Oh! sleep, sleep! nature's sweet restorer; how you have been despised, neglected and disdained for the last three weeks; and how we poor forlorn stay-at-home creatures have had to suffer from the shooting mania, which has possessed all mortals of the genus *homo* since the quail shooting commenced. Yes, how we have been quailed!

On the 5th of last month the first straggling quail put in their appearance, serving only, however, as *avant-couriers*, for the sport did not commence in earnest until toward the end of the month; the best days being from the 3d to the 8th of September. The birds came, so to say, all together this year, whereas in other years the season has been not exactly of longer duration, but the supply was more divided. But, notwithstanding that the rush has come and gone, three days rain; there have been, and are now every day, enough quail to amuse any hunter, particularly if he happens to have one or two good dogs—which are comparatively rare in this part of the world—though some of those used, mostly mongrels of all imaginable kinds, are exceedingly good for this sport, being from their very youngest days accustomed to it.

In spite of the cold, rain and snow in the north, which, it is easily understood, must have destroyed many of the young, and in many instances entire broods; and, contrary to all predictions and expectations, the numbers of migratory birds so far this year are about the same as usual, according to all accounts from the people here, who have trapped birds for years and years, or more or less for their whole life long. This occupation is carried on to a great extent, entirely beyond the notion of any one who has never been privileged in one way or another to witness the *modus operandi*.

This mountainous island, as I have previously mentioned, is three and a half miles long and one and a half broad, with about 4,500 inhabitants in all, and two important villages. Capri, the capital of the island, lies on the saddle which connects the eastern heights with the western, and Anacapri, with 1,800 inhabitants, lies 880ft. above the sea. It is here that the trapping and shooting is carried on. One sees down in Capri here and there in the gardens nets extended, and some of the places are fairly good for game; but they are all nothing in comparison to these here in Anacapri on the side of Monte Solaro and everywhere in the vineyards, where they are placed in the fall. In the spring they are, as I wrote in my previous letter, stretched out on the high rocky cliffs on the water's edge, and on the Piccola Marina, on the south side of the island, one of the two beaches and landing places which this "isle of the sea" can boast of. The other one is where the principal traffic is carried on, the landing place for the post steamer, which comes once a day, and a pleasure steamer which comes in summer and good weather daily, also for boats with merchandise; there lie all the fishing boats, and it is faced with houses, therefore no chance is there for placing nets.

There are perhaps some twenty-five men on the island who have a "permission" for setting these stationary nets, for which they pay 27 lire a year. Then again there are others who carry nets around shaped like a fan, opening and closing just the same. They are about four metres high and are supported by the butt end in a girdle which the man wears around his waist, leaving his hands comparatively free.

They hunt with dogs. When a dog shows that there are signs of a quail, the trapper, who follows it step by step, goes with his net from below, in the fall, toward it; from above in the spring; for in autumn when the birds are molested they fly toward the sea, *al contrario* in the spring. If the bird flies directly toward him, well and good; if to the right, he throws or leans his net with a quick movement in the direction from which it comes. If he has good luck it becomes caught in the meshes, he claps the net together, slips it out of his girdle to the ground and releases his captive. These trappers catch many birds in a day, being indefatigable. Has a quail fallen in and been noticed—and those are rare which are not remarked—they follow and follow until they have succeeded in capturing the poor thing. For being allowed to use one of these nets or *rete* a charge is made, but on account of being easily and rapidly closed and hidden away many are carried without permission. Last week a man was caught using one under these circumstances. His punishment consists in having to pay seventy lire and of having his *ventaglio* or fan confiscated.

It is something entirely new and interesting to all the unsophisticated to see how the other nets are stationed, arranged and made, and this advantage all visitors to Capri have in the fall. But in the spring to form an idea of the extent to which snaring is carried on takes a long, tedious clamber over steep stony ways, which is certainly not advisable for ladies nor for either sex with light-made shoes.

Most of the stationary nets are now fixed on the mountain side, in sickle form, from east to west. According to the number of nets in a line are posted at intervals of from thirty to forty feet decoy or call birds, in little wooden houses, each covered in front with a cloth, about three metres from the ground; in autumn above the nets, in the spring below them. Being blinded these quail call day and night, curiously enough nights almost uninterruptedly, making real music in all directions, seeming to me weird and uncanny on these bright, moonshiny southern nights. The best decoy birds are kept the entire year, and cost five lires apiece.

One of these nets is from ten to twelve metres in length, about six high, and placed between poles of about seven or eight metres in height, is worked like a curtain, and is always—that is, when the bird flies in high—let down to take them out, then drawn up again. Through the top, and at intervals of every metre downward, stout cords are run through from side to side. To these are attached rings, through which tightly drawn cords, which are secured to the tops and bottoms of the poles, are passed, pulling the net up somewhat at every cord, and forming a half sack or bag, into which the unwary quail falls, becomes entangled, is unable to free himself, and is liberated only to become a certain prisoner later, with hundreds or thousands of his fellows, packed in layers in baskets, with only a netting between, to be sent back by rail perhaps to that very land from which his weary wings day after day have fanned, at a far height, the cold thin atmosphere, until exhausted he stops with his comrades at the close of the day, when the hamlet is still, for a few hours' repose before his last long flight toward his Mecca. Then, alas! a prey to these *reti*, his voluntary journey, born of instinct, has come to a cruel end and his days are numbered. Yet, from 5 to 6 per cent. of the birds do release themselves, sometimes get caught again, other times go scot free, others get shot. Live birds are sent to all parts of Europe, and are sold for from three to six soldi; dead ones for two to five soldi apiece. One soldo is equal to one American cent. Up to-day there have been caught and shot somewhere about 20,000 quail.

If it is not too windy the nets are left up day and night, in order to be in readiness for any stray or belated individual which might chance to come that way. It would be a pity, too, if the greedy hunters should miss a single one. If winds prevail they are let down to within a couple of feet from the ground and reefed in the manner of sails.

The greatest number of birds fall in toward midnight, but the trappers have more or less to do until about eight in the morning. When a quail has chanced to pass over a net and the spot has been marked where it has fallen in, men, boys and dogs go below or above, according to the season, and drive it into the nets; in this manner many single ones are entrapped. One man who occupies his spare time with trapping quail and whose nets are placed right near the street in the vineyards in the proximity of houses, using ten or twelve decoy birds, caught in one night one hundred and fifty; another on the mountain side back of this village six hundred, and yet another whose nets cover a distance of two hundred metres or more in length, with perhaps fifty call birds some distance away from here, in the rocky rough mountain sides, trapped in the same length of time eight hundred.

Between here and Naples some three or four times a week runs a barca, doing or carrying out commissions for the people in both places, taking merchandise, such as wine, oil, grapes and figs from here and bringing back vegetables, of which few are produced on the island, on account of lack of water, and other articles of food. Since the quail season commenced the barca has had to be unloaded as quickly as possible on arriving here, thousands of quail packed in—I know of one trip when there were five thousand—and immediately sail set again for Naples, seventeen miles distant.

In the fall the quail come in large flocks, high in the air, on the southeast wind; when in the neighborhood of the decoy birds, hearing their call, they fall down with such a force that one can hear them strike the ground, even from the houses, while in the spring they come singly, or at least very few together, low over the water.

The birds this year, notwithstanding being literally loaded with fat, are very quick on their wings. I have never seen such clumps of fat as they are. I have prepared them in every conceivable way, aside from resorting to any Italian method, with their eternal mixture of oil and *pomi d'oro* or tomatoes, in order, if possible, not to open them, and yet to cook out the superfluous fat, that we should not get cloyed from eating them; nevertheless it was simply impossible. I could barely see, much more touch another, and had to resort to opening and removing the fat from rump, breast and neck. Butter, of course, was not to be thought of to use with them. Among other quail I had one, lighter in color, an old bird not as fat as the others, with a beak exactly like that of a hawk, with claws longer and sharper than any other, the only one of the kind which we have ever seen. Was that only a freak of old Dame Nature? Another had a good-sized snail, house and all in its crop, which was otherwise entirely empty, and it had become, probably for this reason, decidedly meagre.

From daybreak until the twilight, in spite of the heat—and the best days the heat was intense for September—there was such a bombardment and cannonading that it was utterly impossible to sleep, and almost every one caught the shooting contagion, at least I'm sure I did, for I spent most of the time from 4 until 7, up on the roof watching the hunters through my glasses, having many a good solid laugh over the awkward doings of hunter or dog, or praising another's good shooting.

The really experienced and capable hunters are mostly to be seen in old clothes, and old hats, with hunting apparel looking the worse for wear and tear, wind and weather, and the report of their guns show sound judgment in loading, whereas the *Sonntags Jäger*—Sunday hunters, as the Germans justly call them—come finely dressed in corduroy velvet of all conceivable colors, newest style sporting hat, adorned with a feather cockade, stuck on one side or back of the head, newest system shotgun and highly polished equipments. The charges are something terrific, sounding more like mortar reports or blasting of rocks. Of these sportsmen there were many here, coming from Salerno, Sorrento, Castellamare and Naples.

The Italian powder is cheap and miserable; if the gun is not immediately cleaned on returning home, above all if it happens to remain over night, it is then, as a result of bad powder and the hot climate, almost an impossibility to get it clean, for the residue adheres as firm and becomes as hard as stone. The barrels of a good clean gun become soon ruined, after using this powder, because sharp stuff detrimental to the steel must be used in order to restore them to their former and necessary brightness.

An expert hunter with a couple of well-trained dogs, in the best days brings down from thirty-seven to fifty brace. On these days the quail are to be found everywhere, the more the season advances the nearer they go to the sea. In ordinary days one can easily bag from twenty to thirty birds.

It is easily understood that where so many birds come, through much practice the peasants become adept in the art of shooting, therefore among the *contadini* there are some very alert hunters.

Quail shooting will last until about the first of October, then will commence the season for fieldfare and wild pigeons, for which some of the trappers will move their nets down nearer the sea.

In November will follow the woodcock, but more of this shooting in my next letter. I. C.

ST. AUGUSTINE AS A WINTER RESORT.

WHEN those who dwell in this Northern latitude remember the blizzard of last March, with its mountains of snow and hillocks of ice, many who recall the freezing experiences of those bitter cold days will now, that the leaves have been falling, think of where they may fly, "where the leaves never fall, and the skies never weep," to avoid most certainly the possible reccurrence of such fearful storms. For the benefit of those interested I recommend Florida, where snow is never seen, and ice seldom forms, where the leaves do not change, and sunshine is the general rule. A practical experience of many winters enables me to say there is no place better adapted to health or pleasure than St. Augustine. It is easily reached by steamers or by elegant vestibule cars in little over one day from New York, and last winter the trains were generally promptly on time.

The city is situated on a peninsula, almost surrounded by salt water; indeed it is, at very high tides, almost an island. The fact that the place is washed on all sides by the ocean tides guarantees the sanitary condition to be as perfect as any natural locality can be; and it absolutely precludes the possibility of malaria—a case of which disease I have never met, originating in the city. In addition to its possessing these natural advantages, those in authority spare no efforts nor expense in adopting all artificial means known to sanitarians to add to the health of the favorable locality. The elements so essential to perfect health are abundant, in bright sunshine, pure bracing sea air and abundance of water, while the most cheerful and choicest society makes the ancient city the most desirable winter resort in this country.

I have known many men, women and children who have renewed their seriously damaged constitutions in Florida: and for those suffering from overwork, insomnia, nervous prostration and all its sad train of symptoms, I know of no more desirable place than St. Augustine. Children recovering from pneumonia, diphtheria, scarlet fever and whooping cough find a perfect climate for outdoor life and rapid convalescence, without the danger of relapse, so common in a variable Northern climate. For nearly forty years I have recommended the climate of Florida to my patients, and I am happy to say many of these still thank me for sending them away from this Northern climate, which is as trying as any known to the profession. Scarlet fever and measles are not dreaded by the parents and physicians of St. Augustine; and diphtheria is almost unknown. A few years ago I was asked to see a child recently arrived, supposed to be suffering from that dread disease. The physician long resident had never seen a case. The child was removed a few miles out of town, and but one other took the disease, a playmate of the first. An honored and lamented physician of St. Augustine, the late Dr. Peck, told me some years ago, when I was expressing anxiety about some cases of scarlet fever, not to be alarmed; that the disease never assumed a dangerous type in that climate, and that it was very seldom followed by death; it responded

quickly to treatment, a[illegible] seldom followed by those dangerous sequels so dre[illegible]in a Northern climate. He stated the remarkable [illegible]hat years earlier they were visited by an epidemic o[illegible]rlet fever, when he attended one hundred and twe[illegible]ldren, without losing more than a single patient; [illegible]is one death was owing to other complications. There is no other way of accounting for such a history of such a disease, except the perfect climate. Some winters ago I received a little patient from New York with chronic pneumonia following an unusually severe whooping cough: and in a very short time the little girl recovered completely, renewing the roses in her cheeks and her buoyant, childlike spirits. She returned with her mother, who was summoned to attend her husband suffering with pneumonia, in the month of March—much against my advice, but fortunately without serious consequences. Pneumonia is seldom seen in St. Augustine, and the resident physicians are almost unacquainted with the disease and have no desire to attend it. The absence and the mild form of the diseases mentioned can be accounted for on no other grounds than the salubrity of the climate.

If there is the slightest possibility of any one laboring with the first symptoms of consumption being benefited by climate it will be accomplished in Florida. A gentleman who was a martyr to asthma all his life, possessing a beautiful home near Philadelphia, told me he could find no comfort in life but in two localitities, Newport in summer and St. Augustine in winter.

My own personal experience in the beneficial effects of the climate of St. Augustine makes me the more earnest in recommending it to all who may be suffering from overwork. After a laborious life of more than thirty years in the climate of New York, on the Hudson River, I broke down completely, had insomnia to a fearful degree, bordering on insanity. Old professional friends advised me to visit Florida. When I arrived in the quaint old city one Christmas Eve I was nearly exhausted. I could not walk a mile, and only with great fatigue at all. Appetite was fitful, energy gone, and though I was longing for rest, yet I dreaded the experience of a night of sleeplessness. One who has never had the misery of such a state of health can form no conception of such a deplorable condition. I began improving the first week, walking with less fatigue daily, and improved in appetite and spirits, and in six weeks I could tramp with dog and gun twenty miles. It was truly a renewal of life. Instead of my life work being abandoned, I put on the harness again and began to offer aid and encouragement to all who, like myself, had become discouraged and almost sick of life. The limit of this paper forbids my enumerating many interesting facts experienced from year to year. I am sure that I know a number who, by going to St. Augustine, ward off from winter to winter hereditary disease which a severe climate would awaken and develop.

In the early days in St. Augustine a more quiet and restful spot could scarcely be found, and it was always attractive, making little change and seeming to desire none. Now all has been altered, since several gentlemen of wealth and enterprise have become interested and located there. Among them none have become more conspicuous or accomplished more for St. Augustine than Mr. H. M. Flagler of New York, Mr. Franklin Smith of Boston, and Mr. W. G. Warden of Philadelphia. All of these gentlemen first sought the South in search of health and to avoid our inclement winters. Besides building fine residences in St. Augustine Mr. Warden and Mr. Smith became interested in building up the city generally, and Mr. Flagler may be truly said to be the founder of a modern St. Augustine, so completely has he been identified with the vast improvements of the city. Since the appearance of these gentlemen the old Spanish town has awakened from a Rip Van Winkle slumber of hundreds of years. New life has been infused into the rather indolent natives, and real estate has risen beyond the capacity of most individuals. Beautiful churches have been built, and grand edifices that would grace the capitals of the world have appeared as if by magic. The Ponce de Leon Hotel and the Alcazar, built by Mr. Flagler, surpass in their architectural beauty and elegance any public buildings in the country. To give an adequate idea of these unique and surpassingly beautiful structures would require the knowledge and pen of an accomplished architect. In truth, one must see and study the different parts, which will occupy many leisure hours, and the study will give exquisite pleasure, as all of the various beautiful details are viewed. The dining hall of the Ponce de Leon is said, by those competent to judge, to surpass in beauty the palaces of the Old World. My object and aim is not a description of these wonderful structures—which is far beyond my power—but to point out the advantages of the climate of Florida to the weary and the sick, and to show them what may be their gain from the warm sunny atmosphere of St. Augustine.

With the continued improvement in drainage, which is daily progressing, with an inexhaustible supply of water from many artesian wells, there is no reason why St. Augustine should not be one of the healthiest cities in the world. Every surface well should be closed and filtered cisterns substituted; these wells, scarcely six feet deep, are many of them on a level and near objectionable structures, which in a sandy soil percolate through and pollute the water. These necessary and indispensable structures ought to be cleansed daily, and a system of scavengers should be arranged to carry off all offensive deposits into the country, or better, out to sea, thus removing all dangerous sources of disease. The water used in the hotels is from artesian wells, and its supply is absolutely beyond the reach of any pollution. If those who have used the sulphur water of the artesian wells, both for drinking and for bathing, have received the same benefit from its use that I and many of my patients have experienced, it will not be long before St. Augustine will be resorted to for the use of these waters alone. When it is generally known that Mr. Flagler has instituted a most elaborate and costly system of baths, not only of the sulphur waters but also of salt water, this surely will be sufficient to draw people from all parts of the Union for their use; add to all the other advantages which surround the Ancient City, the attractions of the most unique and beautiful oriental structures and there is little else to be desired to make an elysium.

For the lovers of outdoor field life let me add that the sportsman will find here his happy hunting grounds. The fishing is unsurpassed; as a gentleman expressed it in answer to inquiries to his success, "it was like dropping a line into a great aquarium." The quail and snipe shooting is remarkably fine, and there is no end to the duck shooting in the rivers and inlets south of the city. If larger game be the object of the sportsman, wild turkeys are in abundance, and he can chase the deer, riding after a pack of hounds, within a few miles of the city. If his ambition still soars after greater triumphs, and more lordly game, he can by beating the swamps arouse the wildcat and the bear, and I hope his experience may not be that of a friend of mine, who, instead of sending bruin up a tree, in his excitement lost his gun and was himself treed by the bear, and was kept shouting for help many anxious hours, until his friends rescued him. Now if you want to raise a storm you have only to ask him about that bear hunt.

The delightful sunny climate of Florida, with its ever-blooming roses, its fragrant orange blossoms and its golden fruit, invites the invalid, the weary and the overworked man of business, as does no other place I am acquainted with; and if recreation only be sought and whiling away the time be the aim, this is said to be the "paradise of loafers." Horseback exercise is always health-giving, and the choicest saddle horses can be had, well trained for ladies and gentlemen; and in the beautiful bay of St. Augustine one can handle the oars if he desires, or at any time enjoy the poetry of motion in any of the sailboats, well managed, awaiting the visitor. This bay stretches out toward the North beach, where the wild waves whisper and where the breakers dash madly on as beautiful a beach as any on the Atlantic coast. The bay or river also extends south, reaching Matanzas, eighteen miles away, where the fishing is superb. If it is desirable horses can be crossed on a boat for a ride for miles along the South beach, on which the horses' hoofs scarcely make an impression, so firm and compact is the sand; and if new life and vigor cannot be gained in such an atmosphere, then it is useless to seek for it in any other quarter on this side of the ocean.

I hope those who find it necessary to seek a warmer climate than this in winter to avoid the risk of northern storms, or those who think they must migrate with the birds, or even those who, like the butterfly, prefer to spread their wings only where the flowers are perpetually in bloom, will not mourn as those having no hope because of the epidemic in the sunny land of Florida; nor give up the idea of resorting thither and seek some other home in distant lands, nor even make the long westward journey to California. When the first frost comes it will be the death knell of the scourge. History proves this so fully that the statement requires no further argument. It will not affect the usual health of the other towns in the State of Florida and Georgia where it has not visited. On the contrary, those places are likely to be more healthy than in former years. For every town and village has been swept and garnished. No sanitary device is known that has not been put in force. All places within hundreds of miles of Jacksonville are as clean and pure as the ingenuity of man can make them. Therefore I would not hesitate to go to Florida as usual, which I shall do the last of November; neither would I decline to advise any one to seek his accustomed Southern home. It might be well to avoid those places where the fever has been until after January, and even then those unaccustomed to the climate had better not venture into them. When the fever visited St. Augustine some few years ago I spent the winter there, reaching the city about Dec. 1. The old Spanish town was as healthy during the remainder of the season as I have known it before or since. I could almost venture to affirm it will never be healthier than the coming season, if human caution, device and untiring watchfulness in a sanitary point are any security against disease.

HORACE CARUTHERS, M.D.

TARRYTOWN, N. Y.

We see an occasional copy of the St. Augustine *Evening News*, and in its columns, along with reports from the shotgun cordons and quarantine stations which surround the town, are frequent notes of the fishing. Here are some excerpts:

Mr. Fritchie Monson, captain of the guard on North Beach, says that he and his corps revel in fish—fried, boiled, chowdered, stewed and every other way of decoction. He says that he goes out in the morning and catches a bushel of big mullet with one cast. That you can rake 'em out with a bucket. Bass, he says, are plentiful.

Joe Baya was seen on Charlotte street yesterday, weary, footsore, sunburned and hands blistered. But Joe wore a smiling face as he lugged behind him a big bass. The bass was tugged up to Genovar's store and tipped the scales at 23lbs. to the ounce.

Some time ago Dr. Alexander obtained some fish that were thrown out of the big well in the Ponce de Leon grounds. The doctor put these fish into an aquarium with some goldfish, and has succeeded in raising a cross between the two specimens. The doctor will put some of these new species in the Alcazar fountain pool.

Mr. Fritchie Monson, from the North Beach quarantine station, reports a large school of trout which passed that point yesterday going south. He says from 11 A. M. till dark the school continued to pass.

Sam Lyons, while out in a boat fishing yesterday morning, felt a slight tug at his line, and drawing it up found a small fish upon it. Just as he had it nearly to the surface of the water a big trout, which he thinks must have weighed 10lbs., darted out from under the boat and began making off with the catch. Lyons was a little disconcerted by the surprise, and about 20ft. of line spun out before he checked the big fish and began hauling him in. A big black fin was showing above the water a few yards away, and in an instant a 10ft. shark pounced upon the trout and made off with fish, line and all.

Streeper, the undertaker, undertook to go fishing yesterday and came home with an 18lb. trout.

Walter Gerard produces two mosquitoes caught on the north cordon which are big enough to lug off an ordinary sized infant.

Capt. Allen reports plenty of quail over on North Beach.

Two colored men with a tightly nailed box between them, from which emanated the ominous warning of a rattlesnake, were the center of a crowd on St. George street last night. R. C. Rawls had captured his snakeship out on the north cordon, and was conveying it home, expecting to start out in the show business. He described it as being 5½ft. long and having seven buttons.

Between the hours of 1 and 2 o'clock this morning the little steamer Dart might have been seen scudning over the bay making her nightly tour of inspection. She first proceeded up North River, found all the guards wide awake. At Gardener's wharf we disembarked and plodded our way across to the beach. Here the guards were also wide awake and sitting around a big fire warming themselves. Then back and again on the boat we visited all the different pickets and found them every one doing their duty. About 2 o'clock the weather became quite cool and we could distinctly hear the cry of geese overhead, flying south.

Sept. 27.—In conversation with one of St. Augustine's old boatmen the other day on the prospects of the weather he said that there would be an earlier winter this year than we had ever had in a score of years. His reasons were these: "The fig and many other trees are shedding their leaves and preparing for autumn. At night if you listen you can hear the plaintiff note of the kildee as it flies south to the warm sun. The kildee generally comes about three weeks hence. There are many other signs that emphatically forecast an early winter."

Monsieur Pierron, whose airy gallery fronts on the bay, relates a remarkable incident regarding a white pointer he gave away a year ago to a man living in the country, fourteen miles from the city. A few days ago the dog returned to him after a year's absence. Stranger yet, the family cat, an old stand by, with arched back and flashing eyes, took up a hostile attitude in the corner, but soon a look of recognition stole over the feline countenance, and bounding over to the side of the old dog Master Thomas began kissing and rubbing up against her in the most affectionate manner.

TWO MONTHS A COWBOY.

(Continued from page 263.)

SUNDAY, while the others were out rounding up, I staid in camp to sleep, but spent the afternoon on "horse herd," *i. e.*, to keep the one hundred and fifty horses from wandering off. It is mean work, necessitating continued moving about, and it is tiresome for your horse; but I was relieved, and putting hobbles on the horses we turned them loose and went to enjoy supper and a cigar, which the boss of the round up gave each of us in honor of his having won the steer the previous night.

Around us were the Bald Hills before referred to, wholly destitute of timber and covering an immense space of country, over which roamed a herd of about twenty wild horses. These were once owned by ranchmen, but jumping the pastures they had wandered off into that region, where they roamed at their own sweet will and lived but to eat. Many attempts have been made to run them down, by several men stationed at different intervals with fresh horses, but with poor success, only three or four having been captured.

The round up next day was a hard one, being up among some high buttes, which made it late when we moved. The night was cold and the ground where we camped very stony and sloping down hill, making an uncomfortable bed. It rained very often, and during that night my cousin and I woke at the same time (for we bunked together) with a feeling that the ground was damp. Striking a match we found that one edge of the blanket was out under the tent and caught the rain as it ran off the rope, making a stream between, which soaked the blanket. The country was beautiful, the trail at one time running several hundred yards through a cut only wide enough for three to ride abreast, owing to a stream which occupied most of the space between the two walls of stone nearly two hundred feet high.

Holding cattle is even worse than holding horses, for they are more accustomed to stray, not being as hungry as the horses, and used to more freedom. Some broke loose from me, and the boss wanted to know "Had I been driving long?" It nettled me, for I wanted to be thought a good hand, but even such things as herding and driving cattle need experience which cannot be learned in a day. To each in turn comes the task of driving, so it fell to my lot that day, and in company with another we moved the horses some fifteen miles due east toward Pike's Peak. To the beauty of that peak full justice cannot be done. The sun sinking in the west cast its rays eastward and striking the sides of the peak gave it a brilliant hue which deepened as it found its way to the top, where the little remaining snow took on a tint of blood. Then a sudden gloom covered us as of a light going out, shutting out forever the day's doings, whether good or bad, and leaving only the remembrance, which yet remains, although many suns have since set.

At "Witcher's," where we were on the 30th, I had a new experience, that of a "nor'wester." The morning was bright and warm, the riding steep and wooded, bringing well into use our chaperajos to keep from tearing our trousers, as we rode among the trees. I saw a bluejay fluttering on the ground, and jumping down, caught it. Having in my saddle bags some leather strings for use in case anything should break about the saddle, I tied one about the bird's foot, attaching the other end to the pommel of the saddle. There he sat looking around in the most bewildered fashion, but tiring of one position he tried to walk out on the horse's mane just as we neared the herd, but slipping, fell to the ground, breaking the string. Forgetting for an instant I leaped down and ran to put my hat over him, but no sooner did the cattle see me on foot and the large sombrero floating in the air than they all stampeded, many having never before seen man and horse separated. Quickly gaining my prize I was soon on horseback and fast after the other boys, who headed the cattle, but not without some trouble. I had a good lecture read to me ("the — little Yankee"), but they all laughed heartily at a little bluejay scaring a bunch of steers. The poor bird did not survive long, for we found him frozen stiff in his cage one morning.

The weather was so warm that we all had our coats off, when suddenly a cloud passed over the face of the sun, chilly wind sprang up, accompanying the rain which speedily turned to hail. It made me shake and shiver for I was wet to the skin, but I untied my "slicker," which was always carried behind my saddle, and put it on for protection. Nevertheless the cold passed right through, but the poor horses had to take it with their heads turned from the wind and storm. This lasted fifteen minutes and passing on left us in the bright, warm sun, as half an hour before. The "day herd" was growing entirely too large, so Martin cut out our cattle and drove them back that night to our range.

On the 1st of August at the invitation of a "granger" we camped on his claim, by a clear cold stream, which he utilized for irrigating, thereby growing some excellent potatoes, a rarity, for up at our ranch nothing in the way of vegetables will grow. I spent Sunday morning digging them, while the others were out hunting cattle. Don't think I stole, for he said, "Help yourself," conveying a more charitable meaning than the sign which hung in the dining room at the ranch, "The Lord helps him who helps himself, but the Lord help him who gets caught helping himself around here."

Dick was a funny fellow, he was forty years old if he was a day, but had not a hair on his face; about which we joked him a good deal. By his pasture was our next camp and there we had a jolly good time. Supper over we dug a hole, and filling it full of wood there soon blazed out a warm and cheery fire. We gathered round and each one had to sing a song or "talk it," tell a story or in some way make himself agreeable. Several had good voices and when "The Dying Cowboy" was sung all was still except the clear voice of Dick as he sang:

"Oh bury me not on the lone prairie,
Where the coyotes howl, and the winds they blow."

How the hillsides did throw back a wild and weird echo there in the semi-darkness as the loud tones of the others joined in the chorus. A feeling akin to sadness came over me as the boys dropped off one after the other to bed and I was left alone.

Reaching Four Mile Creek next day, I asked permission to go fishing instead of going out driving, which favor was granted me. Success did not crown my efforts for I only caught four trout; grasshoppers, their favorite food, were scarce, I was obliged to use half a dozen flies I had brought with me. The white-miller I found to be the best.

I had a fight there with one of the boys. We were lying on the ground by the tent, I face downward, when I felt a spur enter my back, and turning quickly gave my tantalizer a dig with my own, which I always wore. This playful amusement continued for a few minutes, when Williams (6ft. 3in. in his stockings) jumped on top of me and began to use his fists. Martin pulled him off and I jumped up. You may be sure I was mad and struck at Williams, who avoided the blow but returned it, hitting me under the chin, so that I stumbled over the tent ropes and fell. Then the boys stopped the fight, but I am afraid the sun went down on my wrath that day.

Seeing some of the boys joking with a man, I rode over and found they were examining and laughing at his jockey motion and "frying pan" saddle. They soon dispersed, and I spoke to the man, asking if he was an Englishman? He said "How did you know that?" To which I answered, "Well, you look like a Johnny Bull, having their ruddy complexion, ride jockey fashion, and besides your accent is unmistakable." With this introduction, we rode along together, talking meanwhile. We were soon good friends, for I told him of my visit to Old England. When we broke camp in the afternoon he invited me to stay over night with him, and I rode away, telling the outfit I would meet them next day at Jack Rabbit Spring, eight miles away.

His cabin was about half a mile off the main trail. He had built house and barn in a natural meadow up on the bank, some 50ft. from an icy brook. I was very much surprised upon entering his cabin, after caring for my horse, to see one side covered with shelves of books—histories, biographies and novels by the standard authors. It amazed me to find such in a ranchman's house, ten miles from the post office and forty odd miles from the D. & R. G. R. R. right across Pike's Peak to Colorado Springs, the nearest station. He was a great walker, and told me he often made the trip over in a day and back the next, packing on his back 20 or 30lbs. of provisions. I followed him to the beaver dam, in which he plunged and bade me follow. This I did willingly, having had no chance to take such a bath as this for quite a time. Whew! but it was cold, and how he did laugh at me. Looking up the stream I noticed it found its way from the "Snowy Peak," and saw how it was that my limbs were benumbed and the blood seemed to stop circulating. I crawled ashore and stood on the bank while a sudden glow passed through me, but sort of envied him as he splashed around like the trout he scared away. With such flies as I had left we caught nine trout for supper just close by the house.

His strip comprised two hundred acres, taking in the best part of the stream, in which he allows no one to fish but his friends. The timid fish seem to feel the security of the deep pools in his homestead and pre-emption. For my entertainment he made some apple-dumplings, and with hominy, fish and excellent coffee, all made in the open fire-place, we had a very enjoyable meal. The hours passed swiftly as we talked of the East and his adventures since leaving London, where for nine years he sat upon a stool as clerk, and "he blessed the Lord every day for the privilege of living in this free country," where he could have a little herd of cattle and a dozen horses, besides the fertile meadows upon which he grew some oats and wheat by irrigating. Books were his companions, and with his walls p sted over with colored pictures from the London *Graphic*, and an occasional letter from home, love of the Old Country still burned in his breast. At midnight, a late hour for cowboys, we rolled up in our blankets and were soon asleep. By nine the next morning we were fishing again, and soon had twenty-five trout. I lost a leader and two flies on a big one, but the largest I caught weighed half a pound. At one o'clock I very reluctantly said good-bye to my English friend and rode away to meet the outfit. Although I have never seen him since, we exchange a letter once a month, and I take a lively interest in his welfare and the growth of his herd.

Riding what I thought to be eight miles, given as the distance to camp, across a lonely yet rough and beautiful country, and meeting no one, I judged they had moved, and was confirmed in my opinion by tracks of shod horses. I started to trace them, having many misgivings as to whether I was right. So when I saw a house and barn away ahead I put spurs to patient, willing Danie, and was soon there, but found no one home. None dismayed I pushed on and soon neared another cabin, about which I saw some one moving. A hard run put me near them, and I found to my joy they were the boys of the outfit, who had lingered behind to see "the petrified stump."

Receiving from them glowing accounts of this wonderful formation, and directions where to find camp four or five miles further on, I turned back and rode to a foothill a short way off. Dismounting I threw my bridle over the horse's neck, to keep him from running away, for as it is long enough to drag on the ground, in attempting to make off the horse's front feet would get caught and a fall probably result, all this being taught in the breaking in. A shed was built over the stump to prevent its wearing away. I made twenty-three long paces in going around, and its height was about twice mine (5ft. 9in.), having been dug down to that depth. When it was first discovered only a cropping showed above ground. One like it close by was sawed into four pieces and shipped to the Centennial in '76, where perhaps you may have seen it. So woodlike was it that touch alone would convince me of its petrified state, and specimens I brought away give ocular proof of its woody look.

Supper was nearly ready when I reached camp, having experienced no difficulty in finding the rest of the way.

I gave Joe the trout I had caught, and sitting down felt really at home again. I think the boys must have seen me cleaning the fish in a brook near by, for when Joe started to cook them our tent was the center of attraction. They hovered around like vultures, and when Joe had gone for some wood and I by chance had my back turned, they made a dash, and catching the fish out of the hot frying pan ate them like cats. However, Joe was no fool, and understood them better than I did, for he produced three or four from a pan where they had been placed to meet just such an emergency. It was a good joke on us and created considerable merriment, but when we told of those hidden away they saw we were not so badly left after all. One of the boys had broken away in the afternoon, and proceeding to a neighboring town, consisting of a post office and saloon, where he had imbibed considerable liquor, besides bringing away with him two bottles of whisky, he was in a happy humor, and, although he could not walk straight, said he would "bet two dollars he could beat the whole —— outfit running." I having with ease beaten one of the boys at the ranch in a 50-yard dash, they asked me to run and let them win the money. This I was very reluctant to do, but was at last persuaded just for the fun. Off went my boots and his trousers and boots. Sixty-five paces were measured off in the best possible place, down hill over prairie-dog holes. No one could have helped laughing to see him move up to the scratch, falling, rolling and hallowing like mad. Clasping hands, the starter said "Go!" and, cutting our hands apart, away we went. You should have seen him run and heard the yell he gave as he crossed the line ahead of me by a yard. He collected cash for his bets, and those who had put their money on me were downhearted, although it served them right, and I was glad, for they had thought to win easily. Other races were run, but none created like interest.

G. F. Blandy.

[TO BE CONTINUED.]

SIERRA NOTES.

THE town of Placerville, California, does not appear, at first glance, a first-rate starting point for an expedition in search of the fish, flesh and fowl that abound in the middle Sierras. It lies in the upper foothills, and is, in every sense of the word, a mining town. The south fork of the American and all streams tributary to it are thick with the washings of mines, and give no promise of trout. The middle Sierra of Placer, Amador and El Dorado counties are not in the regular route of tourist or sportsman, and hence game is more abundant than in the more frequented regions of Lake county and about the headwaters of the Sacramento. From Placerville there are two ways into the heart of the game land—one, via the old Virginia and trans-continental stage road to Strawberry Park, Strawberry Valley and Lake Tahoe; the other, through Georgetown and by the Upper American River to French Meadows and Soda Springs, to a region of wild and glorious scenery, where we catch the breath of pines and tamaracks and feel the chill of midsummer snows.

Good fortune rather than a previous knowledge of the country induced us to locate our July camp in the French Meadows, some miles above the nearest mines. The middle fork of the American River is here from five to ten yards in width and abounds in deep pools and foaming rifts, so that it is no trick to get a mess of trout varying from six to fourteen inches in length. Throughout July they seem to prefer the more brilliant flies, and I obtained much better results with the scarlet-ibis than with sober hackles. While the trout appear more brilliant than the Eastern *S. fontinalis* I do not believe them to be identical with the small rainbow trout of the McLeod River region. Nor are they so large as those that may be seen lower down the river, lazily sunning themselves as though tempting the feathered fly.

Deer are plenty. The does and fawns are here all day long. The bucks come only to spend the heat of the day. Night and morning find them twenty miles nearer the confines of civilization, visiting their favorite licks on the Georgetown and Forest Hill divides. The French Meadows are about a mile above the sea level, and are nearly a day's ride from the nearest settlement. Were it not for a few Indians, who engage in the illegitimate occupation of packing hides, all game would be practically undisturbed. Black and cinnamon bears are not rare, and in winter a few trappers gather a rich harvest from the pelts of silver-gray foxes. Snow leaves the meadows early in June, though it remains on the neighboring peaks and in the deep cañons throughout the year. California quail and grouse stay here until October, when they migrate to the warm foothils and to the Sacramento Valley. Shoshone.

Placerville, California.

Natural History.

ECONOMIC ORNITHOLOGY.

[Department of Agriculture, Washington, D. C.]

WE have received from the Commissioner of Agriculture his Report of the Ornithologist and Mammalogist for the year 1887. The work of the Division consisted as usual in the collection of facts, showing the relation of certain birds and mammals to agriculture, horticulture and forestry, and in the preparation of two important bulletins, namely (1) on the English sparrow; (2) on bird migration in the Mississippi Valley. There is a special report by Dr. A. K. Fisher on the food of hawks and owls, exhibiting a tabular statement of the stomach contents of over a thousand of these birds, all confirmatory of the earlier investigations of Dr. H. B. Warren, of Pennsylvania. Of the 1,072 stomachs examined 89 were empty; of the 983 containing food, 57 contained poultry, 20 game birds, 177 other birds, 528 mice, 137 mammals, 51 reptiles and batrachians and 255 insects. The species which feed in part on poultry and birds are the sharp-shinned, Cooper's, duck and pigeon hawks and the great horned owl.

The English sparrow has engaged a large portion of the attention of the Department, Prof. Barrow having been occupied the whole year in preparing for publication the enormous mass of material in hand. Over 3,000 replies were received to the circulars distributed the previous year, and the information contained in the correspondence is being abstracted and arranged under its proper heads. The results of the investigation are not given, but as one of the heads of the forthcoming report is "Methods of Restriction and Suggestions for Extermination," there is no room to doubt that the sparrow is regarded as an unmitigated nuisance which should be exterminated if possible.

Dr. A. K. Fisher was deputed to visit northern Iowa, southern Minnesota and southern Michigan for the purpose of procuring information in regard to the depredations of blackbirds and gophers in the grain fields of that region; and writing from Heron Lake, Jackson county, Minn., he reports that no corn can be raised in that locality on account of the blackbirds, and that it is hard work to get a crop of oats, wheat or flax without more or less injury from them. Dr. Fisher expresses the opinion that the extermination of the blackbirds, especially the yellow-headed, red-winged and purple and rusty grackles would be of great benefit to the farmers, but that the unwillingness of the family to allow a gunner within shooting distance, and their alleged abstemious habits in respect of poisoned grain render this desirable end very difficult of achievement.

Attempts have been made to utilize hawks for the purpose of frightening the bobolinks from the Southern rice fields. These experiments have been only partially successful, owing, it is said, chiefly to the fact that the Department was unable to secure the services of an experienced falconer to train the hawks and take charge of the experiments. The conclusion is that hawks would be very valuable if they could be trained to fly about the field, but this is no part of a hawk's ordinary training. The falconer never throws his hawk off except to strike at its quarry, and it is only when it misses that it sometimes soars aloft of its own motion, the falconer doing his best to lure it back. Small hawks used in hawking are thrown at the birds as they rise, and being allowed to eat the brain to encourage them, may be kept in pursuit for hours at a time, but this necessitates tramping through the field. The report on the migration of birds in the Mississippi Valley was not ready for publication in this report.

Passing to mammals, the coyotes are described as a great bar to successful sheep farming in Minnesota; and the striped gopher as committing great ravages in the grain fields, cutting off the head, just tasting the milky seed, and then cutting another and another. The habits of other members of the gopher family were carefully noted, and the description makes very interesting reading, but economically they are of no importance.

THE GOPHER[illegible]ED RATS.—II.

[illegible] SHUFELDT.

PASSING next to the family *Saccomyidæ*, I would say of the two genera of pouched mice mentioned (*Perognathus* and *Dipodomys*), that I have had better opportunities to secure specimens of the little yellow pocket mouse (*Cricetodipus flavus*) than of any of the others. These are quite numerous about Fort Wingate, in New Mexico, and I have before me a number of specimens taken here on various occasions, while several others are in alcohol in my collection.

My eldest son captured a very fine pair of these beautiful little creatures for me, and from them I made the life-size drawing which accompanies and illustrates this paper. All the burrows of this species I have seen and examined seem to be a single tunnel, terminating in an enlarged extremity, in which they build a soft little nest of the usual materials employed by allied species of rodents. They are a gentle and quiet little mouse with very conspicuous cheek-pouches, which open externally, and when seen from either the front or side view lend to the face of the animal a very quaint appearance. Every one of the alcoholic specimens before me contains some kind of food or other in both cheek-pouches; one that I examined contained at least four or five different varieties of plant seeds and bits of leaves. I am inclined to think from my observations that these little fellows lay up a store of food against the "rainy days," and no doubt hibernate during the colder winter months. Their tracks have never been seen by me on the snow during this season, whereas it is not uncommon to find such evidence to prove that True's piñon mice and motomas have been about. It gets to be much colder even in these low latitutes than most people think, for instance, for two winters here at Fort Wingate, New Mexico, I have seen the thermometer fall to 15° F., which is enough to keep most mice at home, and encourage them to try and sleep such inclemency by in their burrows.

Never having been so fortunate as to find one of these mice with young, I cannot at present say as to how many form a brood, nor do I know whether they litter more than once during a season. Such works as I have at hand also fail to inform me upon this point; indeed I am of the opinion that much yet remains to be written about these little creatures. Possibly such data is given in Allen and Coues's large work on the North American Rodentia, but I regret that that volume is not available to me at the present writing.

This little yellow pocket mouse is one of the smallest of the pouched rodents in existence, though I believe the least pocket mouse (*C. parvus*) is the smallest of all. An adult specimen of the first-mentioned species before me has a very large head as compared with the size of its body, with very small eyes, which are wide apart and situated on either side, about half way between the ear and nostril. The ears are rounded and sufficiently conspicuous, while a tuft of whiskers composed of white hairs of varying length spring on either side from the prominent upper lip. As in the case of the eyes, the ears are also wide apart, and the fronto-parietal region of the head broad and rounded between these two pairs of organs. Measuring the animal from tip to tip I find the total length to be 10 centimeters, of which the head measures 2.2cms., the body 2.9cms., and the tail 4.9cms. Soft and mousey, the coat above is of a tawny ash color, with all the nether parts pure white, while a light buffy tan color divides the two on the sides, and is particularly conspicuous about the base of the tail. This latter appendage is rounded, and fairly well covered with short grayish white hairs, the terminating pencil extending 2.5 millimeters beyond the tail proper, and these were included in the total length of the animal as given above. As for the feet, they are covered with white hairs, sparsely so in the case of the hind pair, more generously so in the fore pair, and in both cases a few straggling white hairs are to be discerned on the soles. A forefoot has four well-developed clawed toes in front of nearly equal lengths, and a clawless rudimentary thumb. Further, this pair of feet are notable for their prominent pair of posterior footpads and insignificant anterior pair. In a hindfoot the small hallux is clawed, while the outside toe reaches but to the middle point of the digit next to it. Footpads here are all small, with the anterior pair best marked. Upon examining the upper pair of incisors I

A PAIR OF YELLOW POCKET MICE (*C. flavus*)—DRAWN LIFE SIZE FROM NATURE BY THE AUTHOR.

find them co[illegible] for their entire lengths adown their mi[illegible] the case with the lower pair. Beneath the [illegible]er internally, is a median integumental rap[illegible]ivides the cheek-pouches. The plan of the m[illegible]is characteristic of the genus to which this specie[illegible]s. The bare part of the snout about the external n[illegible]pertures is of a pale flesh color, and these parts ar[illegible]ery prominently developed.

I have been thus particular in pres[illegible]g some of these best marked external characters, and [illegible]her features in this little species, as I was desirous of g[illegible]ng those of my readers who may be in need of such inf[illegible]ation, a guide to the kind of data which should be car[illegible]lly entered in the field note book of the collector of mammals. In addition to what I have presented, fuller measurements are highly desirable, measuring the body, limbs, between ears, eyes, etc., in all directions, and their separations and so on, as well as height of ear and similar data. Then, too, it is always well to take the weight of a specimen when it can be accurately and conveniently accomplished. In recording color it is well to adhere to some authoritative standard of nomenclature, and although I have no copy of the work before me, I feel perfectly safe in recommending Mr. Ridgway's little volume on the nomenclature of colors for such assistance.

While upon this subject, I would add a few words in reference to the collecting and preserving of these small mammals, for I am very much in hopes that my efforts here will induce many persons in various parts of our Territorial districts to secure such specimens; note their habits as fully as possible, and see that their observations come duly into the hands of science in order that the data may eventually be preserved to our common stock of useful knowledge.

Skins of mammals are valuable, of course, but alcoholic specimens of them are incomparably more so, so if one should be so fortunate as to secure a new or rare species I would advise by all means consigning it to strong alcohol. After entering in the note book the data advised above, a label should be attached to the specimen bearing a number or some distinguishing mark identifying the latter with the former, then we should make a careful *median* incisian along the abdomen of our specimen from a point opposite the base of the lungs to the genitals, and part the lips of it so as to insure the spirit getting thoroughly inside, and about the viscera. The label should give sex, age, date and locality of capture, etc., with name of collector in full, and similar data. See to it that the alcohol more than covers the specimen, as it will surely absorb a quantity of it and thus become exposed, and if not under the eye of the collector daily, damage may ensue. In sending small specimens of mammals to persons engaged in describing them for publication, they go very well indeed if taken out of the alcohol, carefully wrapped in absorbent cotton moistened with the spirit, and then again wrapped in a kind of thin gutta percha that comes in the shops. Chloroform is used along the free edges of this latter, which will make it stick securely and thoroughly to prevent evaporation of the moisture. Dr. Geo. E. Dobson, F. R. S., of the medical staff of the British Army, put me in possession of this method and I have found it to do admirably.

Another genus in our family *Saccomyidæ* is *Dipodomys* containing two species of "kangaroo rats," and about a year ago Mr. F. Stephens added to these a third species from California, where he collected it.

Kangaroo rats are western representatives of the family we have under consideration; in them the cheek-pouches open externally, and they derive their name from their mode of progression, which much resembles the jerboas of Egypt and other countries (Gr. *dipous*, two-footed, and *mus*, mouse). They have long hindlegs and a pair of short fore ones, while their tails are characterized by being finished off with a pencil of hair of considerable size, forming a conspicuous tuft at the termination of the appendage.

A writer at my hand describes Phillips's pocket rat by saying that it "is about as large as the chip-squirrel, having a body five inches long and a tail six and half inches; the color is light brown above and white beneath. The whiskers are rigid and numerous, hindlegs very long, the fur silky, the eyes bright, the form and appearance like a very minute kangaroo. It hops about on its hindlegs, often taking considerable leaps. It lives in holes in the arid plains of Sonora and Southern California, seeming to prefer stony slopes, and frequently comes around the tents of travelers with a sort of confiding gentleness and familiarity. It seems to go forth chiefly at nightfall."

Some very interesting features mark the skeleton, and more especially the skull of these kangaroo rats, but our space will not admit of entering upon such descriptions in the present connection.

Of *Heteromys*, the last genus in our family *Saccomyidæ*, we have no representatives that occur within the confines of the United States, they are consequently not represented in our fauna. They are to be found only on the island of Trinidad and in the West Indies (*H. anomalus*), or in Mexico and Venezuela (*H. longicaudalus*), or finally in Guatemala (*H. desmarestianus*). There is an evident tendency toward hispidity in the first-mentioned species, and it possesses a long scaly tail of a deep black color; their cheek-pouches are not large; and of the several species mentioned none are larger than a good-sized rat.

In my next contribution I trust to touch upon the remaining few families of the suborder Simplicidentata, and pass to the suborder Duplicidentata, which contains the pikas and hares, and thus bring this numerous order of the Rodentia to a close.

A RUFFED GROUSE IN TOWN.

CAMBRIDGE, Mass., Oct. 28.—The attention of our family was this morning attracted by the sight of a partridge perched in a tree on our premises, corner of Hancock street and Broadway, this city.

The bird, a young one though well grown, as unconcerned as if in its native woods, remained in the same tree for ten or fifteen minutes, walking along one limb and pecking at the elm buds; and then flapped across to another, where it stood with crest erect, eyeing us with mild curiosity, not twenty feet distant. From that tree it soon after flew across the street to another, twenty-five or thirty yards distant, and then to the ground.

The presence of such a visitor less than two and a half miles from "Boston's gilded dome," in the very middle of a city of over 60,000 inhabitants, is very much to be wondered at, especially as there is no locality for several miles where the ruffed grouse is found even as a straggler. Was the bird a stranger come in search of higher education here under the shadow of Harvard?

It is to be regretted, however, that in the evident desire of the bird to become better acquainted with our city, it did not remember that the Puritans' Sunday observance is no longer in vogue at the present day; for shortly after the echo of a fowling piece disturbed the devotions of a neighboring church congregation. HENRY J. THAYER.

[A ruffed grouse recently flew into the house of Mrs. Ruth A. Talman, Garden street, Medford, Mass. It went through the window, breaking the glass and cutting its throat; and was served up for dinner.]

WHOSE HAWK WAS THIS?—Seaconnett, R. I., Oct. 17.—*Editor Forest and Stream:* On the 25th inst. there was shot by Mr. Warren Kempton, at Warren's Point, R. I., not far to the eastward of the West Island Club's pleasant quarters, a pigeon hawk. On each leg was a small round brass bell, together with a light leather strap some 6in. in length, and on the right leg a light brass ring. Mr. Kempton's astonishment when he came to inspect his victim may be imagined. I mounted it for him, with its outfit undisturbed, and perhaps some of your readers can tell us where it came from.—NEWTON DEXTER.

BIRD PORTRAITS.

UNDER the title "Some Native Birds for Little Folks," the Forest and Stream Publishing Co. have just published a handsome imperial octavo. The author is Dr. W. Van Fleet, who is known as a frequent contributor to the magazines on ornithological subjects. He has written brief and untechnical biographies of fourteen of our native birds—Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Bluejay, Woodcock, Nuthatches, Meadow Lark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills. Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken an appetite for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. (Forest and Stream Publishing Co. Price $3.)

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

THE CAMPAIGN.

Wildfowl Near St. Louis.

ST. LOUIS, Mo., Oct. 20.—*Editor Forest and Stream:* The heart of the duck shooter was made glad the fore part of last week by the arrival of a good flight of the web-feet. A drop of several degrees of the temperature in the northern country was the cause of it. Parties who were out while the ducks were in this locality were well paid for a trip in quest of them. But they did not stay here any length of time. The wind, which had been making its starting point the north, changed to the south, and soon all effects of the cold wave disappeared. This sent the ducks back up north again, and the duck shooters were sad. Yesterday the cold wave signal was floating from our court house flag staff, and sure enough it came, and the ducks came with it. Fast and swift telegrams came pouring in from various quarters, that a big flight of ducks had made their appearance. This report caused considerable activity to manifest itself among the nimrods. If the present cold spell of weather will hold on for a while, there is no doubt that the duck shooters will make matters quite warm for them.

The lakes around-about here are in fine condition for duck shooting. Food is said to be plentiful in all of them, and all that is wanted is the ducks to make things satisfactory, so far as the duck shooters are concerned.

Snipe have been very scarce in this vicinity, so far this fall only a few small bags have been reported. The market has been moderately well supplied with them, but they have been shipped here from points north.

Quail are said to be plentiful throughout the State and fine sport is promised on them this fall. The season in this State opened last Monday and a few small bags have been reported up to date.

Parties who have been out hunting complain of the weeds being too thick yet. When a good frost and snow visits this section and breaks them down, no doubt better results will be the rule. UNSER FRITZ.

Trapping for Fur in Maine Woods.

CAMP PARKER, Me., Oct. 18.—My last week's FOREST AND STREAM finds me here at Camp Parker, which is at the outlet of the Big Richardson Pond, one mile by a fine woods walk from the head of the Mollechunkamunk (Richardson) Lake and four miles from the Upper Dam. This is a cosy little private camp, the property of a gentleman who has a fine residence on the shore of the Mollechunkamunk Lake, five miles from here, where he and his family are spending the autumn. He has a private steamer on the lake, and when he wishes to spend a few hours or days at Camp Parker the trip is easily and quickly made.

Every fall since I was large enough to go into the woods and to shoulder a fuzee of any kind, I have done more or less still-hunting for deer and caribou; but quite a number of falls have passed without my doing any trapping. Now the proprietor of Camp Parker agrees to make trapping profitable once more, and here we are, Alva Cooledge, of Upton (one of the best guides and hunters of the region), and myself, hunting for mink, otter and sable signs, with a backload of steel traps, on the same grounds and in the same way as we did thirteen years ago. In one month that fall we caught twenty-three mink, besides considerable other fur. In those days dollars came hard and looked large; and mink skins brought about $5 apiece, so we made a very satisfactory fall's hunt. We have just returned from a three days' trip, in which time we have run a sable line from the head of this pond to the north as many miles as we could cover in that time and set the traps and blazed the line. On the trip we saw the tracks and marks of moose, caribou, deer and bear. When the snow gets deep enough for still-hunting we shall try to see the animals that made the tracks. F. C. BARKER.

A Good Quail Crop in Georgia.

AUGUSTA, Ga., Oct. 3.—*Editor Forest and Stream:* The season for quail opened here on the 15th. The weather has been quite warm and dry, and not much shooting has been done yet. I was informed to-day by a gentleman in this city that he found nine coveys in a day's hunt last week, from which he got twenty-two birds. From all quarters in this section I have favorable reports as regards quail. Country people tell me there are more this season than usual. The breeding season was favorable, and keeping up the hogs has conduced to the advantage of a good crop of birds.

Wild ducks are now coming. A week ago I was on the river bank and saw three large flocks flying down the river. Very few have been killed around here, however, as they were going further south.

Some few snipe and woodcock have been killed, and I have seen several robins.

The wild geese have not yet made their appearance.
J. M. W.

In Boyhood's Haunts.— Connecticut Pot-Hunters.

BROOKLYN, N. Y., Oct. 27.—Having occasion, about the first of October, to visit the place in Connecticut where I spent my early life, and knowing the season opened at that time for shooting, I took along dog and gun, hoping to bag a few birds. One day's trial satisfied me that I was too early, for the leaves were as thick on trees and bush as they had been in July, precluding the possibility of seeing game once started in cover more than twenty feet away. Still I wandered alone from place to place over the old familiar ground, and thought of bygone days, when others who have now "gone hence" were with me and helped to make the rarest joy known

to sportsmen. So, thanks to memory, which I believe to be immortal, I was not alone.

Seeing the folly of attempting to shoot in cover so thick, I returned to business, and on the 13th went back to finish my little outing. Then the rain kept me indoors most of the time, but between showers I put in a pleasant and very profitable week; not in the value of the game I bagged, but in building up soul and body; and only those who enjoy such outings know how well and truly they lift a man up. Quail and partridge were fairly plenty, though the latter were scattered, the cold not having been severe enough to drive them into warm and sheltered ravines. Woodcock were unusually scarce, probably from the same cause, not having been driven by the cold from their northern summer haunts. Still it takes but a few birds to make rare sport for one who loves it simply for the sport and good there is in it.

I wish to say a word in relation to the law in Connecticut against taking game out of the State. My shooting was done at Haddam, where I found two young men devoting their whole time to shooting for the Hartford market. There were others who shot occasionally and trapped, sending their game to the same market. Hunters and trappers in other towns are doing the same thing, finding ready market in New Haven and Hartford. May I ask the State club for the protection of game at Hartford if these birds are all consumed at these two points? One man, whom I met on the Shore Line R. R., on his way to New Haven with game, told me that last fall he took to New Haven over 2,000 game birds. Remember that this is only one, and from one point; and when you multiply the number of market men and market hunters as the case will reasonably bear, you will see that the two large towns of the State must consume a very large quantity of game, or—ship it somewhere else.

I examined some of the partridges this man was taking to New Haven and found that every one I examined had been killed by the deadly snare. If those interested in the preservation of game in Connecticut, who have an opportunity, will look into this matter, they may find a very large hole through which much game leaves the State in violation of the law. The few birds I shot I divided with my friends there, bringing none home with me, as the law prevented my doing so, although I have sent several dozen live quail there years ago, when the native birds had been nearly exterminated by a severe winter, that the stock might be kept up. I may be just a little selfish in my remarks, but I am quite certain I like a square deal. A.

On the Borders of Indian Territory.

SENECA, Missouri, Oct. 25.—The shooting season is now open, and the prospects bid fair for plenty of fine sport with quail and chickens. We have an extra supply of quail, something unusual. They have raised as many as three hatchings this season, which, I think, increases the supply fully one-third. I have only been out twice this season, each time for chickens. On my first trip Mr. Walker went with me. We took the train at 8.30 o'clock in the morning and soon landed at our destination, eighteen miles west. It was a fine day for the dogs to work. When we got off the train a friend met us, and without delay took us straight to a fine covey of chickens. Our dogs, Rove and Sport, did some fine work, Sport pointing the chickens and Rove backing him in fine style; a prettier sight never greeted the eye of a sportsman. The birds flushed as nice as we could ask for. I took out an extra shell to be ready for a third shot, and it came in good play, as just three came my way. I dropped them as they came, W. only got two. The covey scattered out in great shape. We soon followed up, our dogs doing fine work, pointing and retrieving beautifully. We did not do so well on our next round; but it would not do to kill every shot. However, we got nine down and then went to dinner. We had sent some of the birds on before, and the lady at the camp had them dressed and cooked in fine style, which was "enough to make a hunter smile from a way back."

Our friend and his family were camped on the prairie, making hay. The camp was very close to a fine spring under a large lone elm tree.

After a short rest we were off for the afternoon hunt. We had quite a tramp over some fine prairie country, and at last our dogs came to where the chickens had been feeding; and in a short time they came to a dead point, standing side by side. This time the birds flushed a little wild and we did not do very much good. We only got four, but they scattered out, and we each took our own course, dropping the birds right and left in fine shape, until we wound up the day's shooting to meet the train at 5 P. M. We had thirty-four fine birds; and it was an excellent day's sport.

Our next trip was not so profitable. We did not get off in time to reach the chicken country, but we had some fun shooting quail. The supply was abundant, but we found that the birds were of three sizes, which made it difficult shooting. It is reported that further west you can see chickens by the thousand, and ducks are beginning to come in, which will soon make our shooting as good as the best. Should any of the readers of this want information about the shooting grounds they may address the secretary and treasurer of the Seneca Gun Club. X.

Deer in Northern New York.

ELIZABETHTOWN, N. Y.—The deer hunters of this town and vicinity had great sport during the hounding season which closed Friday, Oct. 19. The greatest enthusiasm prevailed throughout the season. An army of hunters turned out the first day and the various hillsides were kept pretty well covered until sunset on the 19th inst. Some days the weather was disagreeable, but still the "old-timers" kept up the chase. Everybody talked deer and most everybody shot at deer. Venison was plenty in the forests of northern New York this season, and the hunters did not have much trouble in starting; and, as much rain had fallen, the hounds could easily follow the track and usually the deer would take to water as soon as possible. Of course as the season was nearing its close hunters were doubly diligent, as a result a large portion of the venison was brought down the last week. More than twenty deer were killed in this town, some of which weighed, when dressed, 225lbs. Chas. H. Palmer, foreman in the office of the Elizabethtown *Post*, shot two fine specimens during the last four days of hunting. On Monday, Oct. 15, he brought down a three-year-old doe, and on Friday he secured a buck, which weighed, when dressed, 220lbs. G. L. B.

Failure of the Woodcock Flight.

SPRINGFIELD, Mass., Oct. 28.—In this region the flight of woodcock is a failure so far, with no indications that we are to have a "fall flight" anything like that in former years. The birds are not only not here, but industrious search in the covers shows that but few birds have stopped in them.

The October moon is the chosen time for the nocturnal migrations, and for this locality from the 10th to the 25th of the month the dates within which we find our birds. A fair number of local-bred birds were found in September, but since then depopulated covers are the rule. This is also the condition of things in Berkshire.

I hope that sportsmen in different parts of New England may be stimulated by this letter to give us the result of observations in different localities. If we may get advices from our coast, Maine, Vermont and New Hampshire, it will be interesting.

My own theory for the scarcity of the birds is the blizzard of March 12. Woodcock in limited numbers were here before the blizzard. It must be that the whole migration were ready and largely on the way north before the storm came. Were those that were here when it arrived killed? And were our home-bred birds the product of a later detachment arriving after the tempest?

The snow remained all over New England for two and three weeks after the great storm. How was it possible for the birds to go far north to breed? If none or but few birds were bred to the north, it accounts for the light flight this fall. If the bulk of the migration last spring was hindered by the storm, it would seem that in New Jersey we should hear of unusually good shooting now or when the close time is off. Will some one observe and give us the facts?

At the time of the March blizzard the birds must have been pressed for the nesting and laying. I have known here of young birds hatched as early as the last of March in favorable seasons.

Although it is inevitable that the woodcock must decrease rapidly, the sudden drop of this season must be accounted for otherwise than by natural and proportionate depreciation. E. H. LATHROP.

A Campaign that Should End before Nov. 6.

SACRAMENTO, Cal., Oct. 23.—Our dry season is hanging on very late. No rains yet and no frosts. Quail shooting in such dry weather (no rain since last May) is, of course, very stale sport. There is no inducement as yet for one to start out, though it has been tried. The weather conditions, however, do not have much effect on the California hide-hunters who mean business. It is reported by parties who have returned from the neighborhood of the Rubicon within the past few days that a most outrageous slaughter is going on among the deer in that vicinity. It is said that there are now at Uncle Tom's Cabin, south of the Rubicon, in El Dorado county, thirty-five miles above Georgetown, over one hundred doe hides and hundreds of pounds of jerked venison. It is reported the men who are doing this work are four brothers from Plymouth, Amador county, and that the most of the deer were killed on Long Cañon, about Big Meadows and at the head of the North Wallace, in Placer county. The Placer county officials should see to it that these men are prosecuted. SHOT.

Shore Birds and Quail on Cape Cod.

BOSTON, Mass., Oct. 27.—Shooting around here in eastern Massachusetts as far as I have learned is quite poor, though in early summer we anticipated the reverse. I suppose, however, that the almost unheard of amount of wet weather has "damaged the crop." I went to the Cape for four days, Oct. 12 and 13 for marsh birds and Oct. 15 and 16 for quail. Only found one bevy the two days (and got five out of a dozen) and came back much disappointed. I learn that it is better down in Plymouth and this end of Barnstable counties, but the cover is too thick to do much in until later. Partridge are quite scarce and the woodcock more so. H. J. T.

Quail of Late Broods.

TOWANDA, Pa., Oct. 27.—Six of our most prominent sportsmen, divided in pairs of two each, went out for quail on Oct. 15, the opening day of our season in this State. One party found two small coveys, bringing four to bag, another party put up two broods, one bird to bag. The third party, although told by a resident of the neighborhood that a large covey could be found on his farm, failed to find or put them up and scored an entire failure in the quail line but brought two ruffed grouse to bag instead. The birds killed were small (quail) showing them to be late broods. Rabbits reported to be in fair numbers. Season opens Nov. 1. SUS. Q. HANNAH.

Led by Buffalo Bill.

EARLY in this month Col. W. F. Cody, more familiarly known as Buffalo Bill, Col. Hughes-Hallett, Marshall P. Wilder, Col. Thomas P. Ochiltree, Col. John A. Cockrill, Mr. John Hecksher, Lord Charles Beresford, Lord de Clifford and Lord Mandeville, will organize a hunting expedition to extend from Col. Cody's ranch near North Platte, Neb., through the northern part of Mexico, over the Sierra Madre to California. Gen. Beale will be of the party and they will be entertained at Senator Hearst's ranch and other famous places on the Pacific coast. Gen. Nelson A. Miles will furnish an escort.

Ducks at Devil's Lake.

BISMARCK, Dakota, Oct. 24.—If any of your readers have the "duck fever" let them come to Dakota on a health tour. We have the remedy out here. The wild-fowl are in hosts at Devil's Lake, forty miles west of Bismarck, on the Northern Pacific Railway. Gunners are flocking there from all quarters. The fun is fast and furious and the bags are big. BLUE WING.

Work for the League.

WHITMAN, Mass., Oct. 22.—The Fish and Game League at New Bedford will I doubt not find warm supporters in this place. Certainly such a league will meet with the hearty indorsement of all sportsmen in this vicinity who believe in the killing of game in proper season, and no man deserves the name of sportsman whose only claim to the title is that he kills game with a gun. We have suffered here year after year from pot-hunters and those who snare the game. Indeed an ardent sportsman and reliable gentleman (did you ever notice that these titles always go together?) told me the other day that more partridges are snared before the law is off than are shot afterward. It is a pertinent fact, too, that here where ponds abound and where the wood duck should be plenty, the law-abiding gunner rarely sees one after the 1st of September. All hail to the League and may it find allies in the Old Colony and Cape gunners. Several parties who own shooting stands at the pond have lost valuable decoys, and woe to the wary mink, the guilty rascals, when they are caught. A blue heron was shot at the Essex street bridge the other day and measured a trifle over six feet from tip to tip of wings. Dr. H. F. Copeland and Aaron Healy are on the Cape indulging in their annual shoot, and W. H. Weston, Geo. Loring and Rod Powers are enjoying the sport in Maine. Some fine gunning is reported from Brant Rock. CHOKEBORE.

A Large Buck Shot on the Megantic Club Preserve.

BOSTON, Oct. 26.—One of the largest bucks ever killed in the eastern portion of the Province of Quebec was shot a fortnight ago in the Spider River near Rush Lake, between Spider and Megantic lakes, on the territory of the Megantic Fish and Game Club. Dr. Walter L. Hall, of Medford, one of the club members, accompanied by Mr. Latty, the fish and game overseer, were going into Rush Lake looking after duck and came upon the deer swimming across the river. He weighed 340lbs. upon a Fairbanks platform scale. This weight is authentic. I should be pleased to learn from any of your correspondents if they have a record that is reliable of deer exceeding this weight, and what is the weight of the largest *Cervus virginianus* on record. MACANNAMAC.

A Michigan Bear Score.

EAST SAGINAW, Mich., Oct. 22.—You may look out for an account of the last "Pilgrimage of the Saginaw Crowd." We had a grand time; took in a few days' shooting in the Little Missouri River in the "Bad Lands," then a few days on ducks and geese. Our local paper reports this bear story: "Eli Brandell, of Whitemore, Iosco county, shot seven bears in 12 minutes on Wednesday. Three were full-grown animals and the other four were last spring's cubs. It is the champion bear story of the season, but John C. Brown, of East Saginaw, vouches for its truthfulness." PILGRIM.

A Possible Catastrophe.

HELENA, Mont. Oct. 27.—Isadore Myer and Guillaume Ladure of Helena built a small boat here for a hunting trip on the Missouri River, and last Tuesday started with their boat on a wagon. They set sail from Stubb's Ferry, about twelve miles from Helena, and have not been heard of since. It is feared they have been drowned.

Pennsylvania Quail and Grouse.

COLUMBIA COUNTY, Pa.—The outlook for quail is very fine. Although last autumn there were but few birds, and we were afraid the hard winter had used them up, yet from all accounts there are more than for several years. Grouse are very plentiful; so we look forward with much pleasure to the October days. GUNNER.

The Outlook in Ohio.

IRONTON, Ohio, Oct. 20.—The quail are here in unusual supply this season, and other varieties of small game keep up their average, and perhaps a little more. The reports I hear from various adjacent quarters are all of the right stamp. T. D.

Ziegler Pays His Shot.

BANGOR, Me., Oct. 27.—W. Ziegler, of Saratoga, N.Y., who killed a cow moose in the Moosehead Lake region last June, was arrested by a Bangor game warden Tuesday and fined $200. The animal was followed by a sucking calf.

SOUTHERN MASSACHUSETTS LEAGUE.

NEW BEDFORD, Mass., Oct. 23.—*Editor Forest and Stream:* In response to the invitation sent out by Mr. Geo. H. Palmer a number of gentlemen met at Mr. Palmer's office yesterday and organized a new game and fish protective society, under the title of the Southern Massachusetts Fish and Game League.

The constitution provides that the objects of the league shall be actively instrumental for the passage of laws to regulate and protect fisheries and game and to prohibit the use of traps, pounds, nets and seines, and all other injurious and destructive methods of catching fish in the waters of the Commonwealth, and the indiscriminate hunting and trapping of birds and animals, and the enforcement of such laws as now are or hereafter may be enacted to that end; to investigate the conditions on which depend the increase, growth and proper distribution of the valuable food fishes of Massachusetts, and to publish the results obtained from time for the information and instruction of people interested; to inquire into the market value of such fish, wholesale and retail, and to collect all possible information when and where they are sold and to what extent they are wasted, to the end that reliable information may be given to those whose duty it is to legislate upon the subject, and generally to inquire into all matters and things which affect directly or indirectly the preservation of the fisheries and game, and with this end in view, to invite citizens of other States to assist in carrying out the objects of the league; that the officers of the league shall consist of a president, two vice-presidents, secretary (who shall also be corresponding secretary), treasurer, executive, advertising and printing, membership and statistical committees; that the president shall preside at meetings, and in his absence the duty to devolve on the vice-presidents in the order of their appointment; the president and secretary to call special meetings, and the president to be ex-officio chairman of the executive committee; in case of the death, resignation or any disqualification of the president, the first vice-president shall preside for the remainder of the year or

until his successor is installed; the secretary in addition of other duties to give notice of meetings to members in this city and Fairhaven by advertisement in the papers, and to those in other places by letter; to be permanent secretary of the executive committee when in session and to be ex-officio a member of that committee; the executive committee to have general supervision of the affairs of the league, have referred to them all applications for membership and report them at the next regular meeting, and to have full power to employ counsel, and approve all bills against the league and issue their warrant to the treasurer for the payment of all moneys appropriated; the constitution may be amended by a two-thirds vote of all the members present at any meeting called for that purpose upon a notice of one week having been given.

The officers chosen for the first year were: President, Arthur Ricketson; Vice-Presidents, L. LeBaron Holmes, Robert Bennett; Secretary, George H. Palmer; Treasurer, John B. Hussey; Executive Committee, the President and Secretary, ex-officio, and Robert Bennett, James H. Tallman, Gideon D. Gifford, Francis Hathaway, Joseph L. Sisson.

Mr. Palmer read letters from gentlemen in New York and Washington, cordially approving the objects of the league, sending their names as members, and one of them donating $25 to assist in the work. A temporary organization having similar objects to the league had left $67.25 in a bank in this city under control of a committee, and the members having joined the league this money will be covered into its treasury. Nearly fifty persons have already joined the league and its success is assured.

Adjourned to the second Monday in November at 11.30 A. M., at Mr. Palmer's office in this city.

ARKANSAS RESORTS.

TO enlighten shooters and fishermen as to the attractions of Arkansas resorts, reached by the St. Louis, Iron Mountain and Southern Railway, the General Passenger Agent, H. C. Townsend, of St. Louis, has issued a circular which says:

To enable either the disciple of Nimrod or Sir Izaak Walton to make a choice of such place where he may consider that he can regale himself with pleasure and joy to his heart's delight, this leaflet has been compiled with accurate information as to the different resorts in that State on the line of the Iron Mountain route and branches, where good hotel and camping accommodations can be found, with the character of the game and fish incident to such locality, and the means of reaching the same.

Corning is the first noted hunting and fishing point in the State, and is known as the "Sportsmen's Retreat," "Deer Range," near the town, abounds in deer, as its name implies. turkey, ducks, squirrel, and all the smaller game. Corning Lake and the famous Black River are well stocked with croppie, perch, bass and pickerel. Boats can be obtained and huts have been erected along the river which are rented at small cost to hunting parties.

Knobel has good hotel accommodations, game, deer, turkey, ducks, squirrels, etc. Black bass, jack salmon, croppie, perch, etc., are caught in Mill Lake, Maiden Lake, Allen Lake, Black and Cache Rivers.

Walnut Ridge is the next good point below Knobel. Hotel accommodations, all kinds of game from deer down, in the Black and Cache Rivers bottoms, and on the borders of the numerous lakes, in which are found in large quantities, bass, perch, croppie, trout, buffalo and catfish. Finest sporting grounds in the State. All the varieties of fish of Northern Arkansas are found in the Cache River and numerous lakes in the vicinity.

St. Francis River.—This river flowing through Eastern Arkansas and emptying into the Mississippi above Helena, is the most famous duck hunting resort in the United States. Flocks of duck, brant, geese, swan and smaller water fowl swarm this river and its backwaters from Big Lake to its mouth throughout the winter season. This river is accessible from Wynne, Earle and other points on the Memphis extension, and from Forrest City and Marianna on the Helena branch.

Swifton, further south, has a large tract of thinly settled country, both to the east and west, that abounds in bear, deer, wolves, wild cats, and all small game. Cat and buffalo fish, trout, bass, croppie, white and sun perch, are found in large quantities in Black, White, Cache and Strawberry Rivers; Hollingshead and Clear Lakes.

Newport is a large town with good hotels—excellent hunting in the vicinity—all kinds of game, such as bear, deer, quail, teal, woodduck and mallards are very plentiful in season. Fish, such as black bass, croppie, jack salmon, channel cat, etc., are found in great quantities.

Batesville is west of Newport on the White River branch. It is a large town in a new and mountainous country, abounding in all kinds of game and fish. White River, Polk Bayou, Spring and Miller's Creeks and Spring Creek Lake team with catfish, goggle-eyed perch, trout, pike, striped bass, black bass, croppie, salmon, white perch, sturgeon, buffalo and drumfish. Hunting unsurpassed, good hotels.

Traskwood is south of Little Rock. Small game is abundant. Large quantities of redhorse, catfish, perch, pike, buffalo and shad are caught in the Saline River.

Danaldson is the first station south of Malvern. Game consists of deer, bear, turkeys, squirrels, rabbits, quail, etc. The waters of Stillwater Lake, Ouachita River and Pine Flat Creek are pure and clear as crystal, on account of which gigs are used for fishing, and all varieties of fish found in the southern part of the State are caught in this manner.

Atkins is northwest of Little Rock on the L. R & Ft. S. Railway. Boston Mountains abound in deer, bear, turkey, squirrel, rabbits and all small game. Trout, bass, perch, drum, cat and buffalo fish are found in large numbers in the Arkansas River, Gallo Creek, Point Betnore Creek and Fish Lake.

Piney is northwest of Atkins. Deer and bear hunting in the mountains, and all varieties of smaller game in the bottoms of the Arkansas River, Big and Piney Creeks, the waters of which are clear, and are well stocked with trout, bass, salmon, cat, drum and perch of all kinds.

Fort Smith has the finest of hunting ground all around it, both in the State of Arkansas and the Indian Territory. Bear, panther, cougar, wolves and wild cats are frequently encountered; while deer, foxes, turkeys, ducks, quail and chickens are abundant. The country is well watered, and the streams abound in all kinds of fish.

Special rates have been made via the Iron Mountain Route to hunting parties of three or more. Tickets are good for thirty days with stop-overs at pleasure and 150lbs. of baggage, with guns and dogs, will be carried free of charge. Hunting cars having sleeping accommodations for about thirty with cook, cooking utensils, dishes and full equipment may be chartered by parties, and which will be side-tracked at any point desired.

Game Laws of Arkansas.—Section 1. That it shall be unlawful to catch, kill or injure, or pursue with intent to catch, kill or injure, or pursue or chase with dogs without such intent, any wild buck, deer, doe or fawn, in this State, between the first day of February and the first day of September in any year; and it shall also be unlawful to catch, kill or injure, or pursue with intent to catch, kill or injure, any wild turkey, between the first day of May and the first day of September in any year, and it shall also be unlawful to catch, kill or injure, or pursue with intent to catch, kill or injure, any pinnated grouse, commonly called prairie chicken, between the first day of February and the first day of September in any year, or any quail (sometimes called Virginia partridge), between the first day of March and the first day of October in any year.

ABOUT SQUIRREL SHOOTING.

CHARLESTOWN, New Hampshire.—I am glad my last letter drew out "Iron Ramrod" on the subject of gray squirrels, and I can fully agree with him that it takes two gunners to hunt them successfully.

This is one of the points of the "woodcraft" I spoke of, and the looking for the "sign" is another. I well remember, many years ago, with a boy of my own age as a companion, getting four out of one outlying oak in the edge of a cornfield, in which they had probably taken refuge on our approach, while engaged in plundering the cornfield.

When I first began to shoot squirrels I usually carried a small-bore rifle, but it was one of the old Kentucky sort, and took some time to load it, besides getting pretty heavy at the end of a day in the woods, and we boys of that day usually resolved ourselves into pairs, one with the rifle, and the other with an old-fashioned, long-handled "shotgun," as we who considered ourselves rather crack shots, somewhat contemptuously called it. Still, it was far better for firing into a nest than a rifle, and especially useful in finishing a wounded squirrel struggling to get into a hole.

However, my days for rifle shooting are long past, although I believe I might make a fair target by the help of the Lyman sights, and my work of late years on squirrels has been done with the old muzzleloading double-barrel I have mentioned.

On one point I differ from "Iron Ramrod," I always use No. 6 shot. I once used No. 4, but I find No. 6 effectual with plenty of good powder behind it, say 3drs. in a 12-gauge, and there are fifty per cent. more shot in an ounce, but I usually find some of them lodge under the skin on the opposite side.

However, these are merely reminiscences. I have not shot a squirrel these three years, nor had any good sport with them since the autumn of '83, when they were very plenty, and I got a number. They have been practically extinct in this part of the State for three years, whether from the great destruction of the old oak and chestnut woods, which once covered the hills, or from the remarkable severity of the last two winters, I will not undertake to say. They are singular animals, and given to migrations *en masse*, and I have known the region deserted, or nearly so, several times before.

They were very plenty here in 1840, 1851 and 1867, and again in 1883, and may have been in other years when I did not happen to be here in the season for them; but I have known of other years not noted when there were few or none to be found. If these rambling notes serve to draw out some one else on the subject of "squirrel migration," no one will enjoy reading their notes more than VON W.

VIRGINIA FIELD SPORTS ASSOCIATION.—The officers for the year are: President, John J. Wise; Vice-Presidents: Lower Tidewater, Harry Williams, of Norfolk; Northern Neck, E. S. Ruggles, of King George; South Side, Dr. Armistead S. Taylor, Amelia; Piedmont, Wm. J. Hubbard, Bedford; Upper Valley, C. Bargamin, Staunton; Lower Valley, H. H. Downing, Clarke; Southwest, Windham G. Robertson, Roanoke City; Secretary, Barton H. Grundy; Treasurer, John W. Pierce; Executive Board: W. Miles Cary, Richmond: John L. Grubbs, Chesterfield; W. S. Archer, Richmond; Richard C. Selden, Goochland: and Polk Miller, Richmond.

Camp-Fire Flickerings.

"That reminds me."

242.

WHILE passing down the street I was very much amused at the wit displayed by a newsboy, a ragged little fellow, standing on the corner trying to sell his papers. There happened to drive past two reverend gentlemen by the names of Woodcock and Partridge. The former clergyman, stationed a few miles out of the city, was driving the latter out to dine with him. As soon as they turned the corner and came opposite to where the little newsboy was standing, he cried out at the top of his voice, to the great amusement of those in the vicinity knowing the names of the reverend gentlemen, "Shoot the parsons!" Although the gentlemen were hit they did not seem to mind it much. L.

KINGSTON, New Brunswick.

TUSCALOOSA, Ala., Sept. 15, 1888.—*United States Cartridge Co., Lowell, Mass.:* Gentlemen—The two hundred Climax shells sent me have been tried with Schultze and Black powder. I am very much pleased with same. Could not get good results with Schultze in any other shell. Will use no other shell so long as you keep this at its present standard. You are at liberty to use this or any other recommendation I can give you. Most respectfully, (Signed) W. C. CROSS.—*Adv.*

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

SALMON IN PUGET SOUND.

LA CONNER, Washington Territory, Oct. 2.—*Editor Forest and Stream:* The salmon season is now at its height on Puget Sound. Boats can be seen in all directions trolling for this, the king fish of American waters. At all hours of the day the splash of fish can be heard in the sloughs and bays. The run began about two weeks ago at the upper (southern) end of the sound, and has gradually worked northward. Last Saturday the run began in the vicinity of Fidalgo Island and the mouth of Skagit River. Before this an occasional salmon would occasionally show his silvery sides and disappear again with a splash; but last Saturday morning they could be seen and heard everywhere. Swinomish slough, a channel some 500yds. wide, separating Fidalgo Island from the mainland, on which your correspondent was located, seemed literally alive with them. Boats were soon manned, and spoon hooks spinning through the waters. The turn of the tide, however, soon put a stop to the trolling, as the waters became somewhat muddy, and they returned with only a light catch. Early Sunday morning all who could overcome their religious scruples were astir, and numerous small craft were soon drawing their white trails over the placid waters of the slough and the bays outside. The absence of wind necessitated the use of the oars. Occasionally a huge dog salmon (worthless as food) would display his yellow sides for an instant, springing a foot or more in the air; but more frequently could be seen the glittering white sides of the silver salmon, which is perhaps the finest of the many varieties of salmon to be found in these waters. Numerous good hauls were made Sunday, as well as yesterday and today. Standing on the wharf at La Conner, where the whole scene can be taken in at a glance, a person can see a fish hauled into one of the boats almost every moment early in the morning.

The hook that gives the best satisfaction in salmon trolling is a large brass spoon (silver is not so effective as brass), 3½x1½in.. entirely devoid of feathers, with only one hook. The triple hook, so commonly used for pickerel trolling in Eastern waters, is found to give the fish a purchase which enables him, if he is a large one, to break it by the direct pressure of his powerful jaw. The hook is trailed behind the boat some fifty or one hundred feet, and the balance of the line coiled up on a reel or in a box. When a salmon strikes the hook the line is rapidly hauled. The use of either a gaff or landing net is always necessary. The gaff is preferred, as a very large fish is hard to land with a net, but when once the cruel gaff sinks into the sides of a salmon something must come. Some fishermen run to beach and land their fish on a sand bar if he is a large one. A short time ago a Tyce salmon was captured here that weighed 43½lbs., and shortly afterward another weighing 28lbs. As the Indians are all away in the hop fields there is not much seining being done except by regular employes of the salmon canneries.

There has been less trout fishing in this vicinity than usual this year, and I have heard of no remarkable catches thus far. Last year a party of nine persons caught with hook and line over 300 brook trout in the Samish River in a few hours, using salmon eggs for bait. A good catch of trout was made in Lake Whatoom, about 30 miles north of here this summer, but I have lost the figures. JUNE.

SPORT AT BLOOMING GROVE PARK.

THE annual tournament of the Blooming Grove Park Association took place at their club grounds, in Pike Co., Pa., on Saturday and Monday, Oct. 27 and 29. The fly-casting was called on the first day, and by chance the hours selected were about the only ones during the meeting when a damp east wind, which brought either fog or drizzle, did not prevail. The wind during the casting was light, when there was any, and came from nearly behind the casters. This club, composed largely of New York gentlemen, some of whom are also members of the National Rod and Reel Association and have cast in the tournaments in Central Park, has improved on all methods of measuring the casts, and has abolished the use of the measuring line, which was liable to stretch or shrink, and also to turn the floats over so that the numbers could not be seen. The new device consists of strips of board about four inches wide, which are bolted together at their ends until they make a length of one hundred feet, and as these float upon the water the numbers can be plainly seen on the upright blocks which are let in on one side. The numbers are placed at every foot, and the blocks at each fifth and tenth foot are higher. Class A, for rods made especially for distance casting, was omitted because of the absence of Mr. Robert B. Lawrence, who, with the exception of Dr. Nash, is the only member who owns such a rod. There were gold and silver badges as first and second prizes in each class.

Class B.—Open to all, but especially those who have a record of 70ft. or over. Rules of the N. R. & R. A. to govern. Distance only to count. Judge, Fred Mather. Referee, Daniel D. Youmans. Time keeper, Charles R. Hedden:

Dr. Spencer M. Nash.....71ft. Nathaniel S. Smith.....66ft.

Class C.—Open to those who have never cast 70ft. Rules and judges the same as in the other class. As there were but two prizes the ties were not cast off:

	Ft.		Ft.
Dr. G. M. Eddy..	69	E. H. Clark	51
Benj. T. Fairchild	65	E. M. Youmans ..	51
E. H. Booth....	63	W. H. McCord....	50
A. J. Post....	61½	B. E. J. Eils....	50
C. C. Worthington..	58		

SEA BASS.—New York, Oct. 23, 1888.—Mr. J. M. Otter, manager of the Park Avenue Hotel, is just in receipt of a fine bass weighing 53lbs. The bass was caught in Westport Harbor, Mass., by one of his guests, Gen. Gilbert H. McKibben, with rod and reel.

CANANDAIGUA ASSOCIATION.

CANANDAIGUA, N. Y., Oct. 27.—*Editor Forest and Stream:* At a meeting of the Canandaigua Anglers' Association, the following officers were re-elected: President, Dr. C. T. Mitchell; Vice-President, J. S. Crawford; Secretary, Chas. P. Lapham; Treasurer, Mack S. Smith; Executive Committee, Robert Dixon, James Menteth, W. H. Fox and Dr. C. T. Mitchell. The name of H. Seymour Cooley was added to the executive committee.

The banquet was a great success. Dr. C. T. Mitchell read an original poem descriptive of Canandaigua Lake and outlet. It was received with the appreciation due to its great merit, and the other persons present were then called upon in turn by Toastmaster Crawford for speeches or fish stories. Most of the responses were brief, but, under the inspirations of the occasion, all were lively and mirth provoking. Messrs. Crawford and Lapham spoke at some length of the objects of the association and the progress already made.

One of the best things listened to was this letter of regret sent by the veteran Thomas M. Howell, in reply to an invitation to be present:

I fully appreciate the invitation. My apology for its non-acceptance will appear in the following communication, through you, to the members of your association. By the invitation memory is aroused and I am carried back to October, 1818, when, with Mike Lampman, a fisherman of "Ye Olden Days," I dropped for the first time hook and line into the 200ft. waters of our beautiful lake at Deep Run for salmon trout. Never was a prouder boy afloat when I "yanked" the hook into the mouth of a 30lb. trout, and by main strength pulled it to the surface amid the plaudits of Mike—alas! only to hear him exclaim "* * * * it; he's gone." Don't open your eyes and whistle whew! Large trout in Canandaigua Lake were plenty in those days, and Mike swore the one I hooked and brought to the surface would weigh at least 30lbs. We caught a score, more or less, that day. Landing nets or gaffs were not in use then, so I lost my first prize.

There were no poachers about the shores of the lake in those days. Fishing—angling—meant work and sport.

"But why are these but memory's themes,
Of joys expired, but lingering dreams,
The ghosts of what were mine
When each low wave now strikes mine ear,
A mournful voice I seem to hear,
'These joys no more are thine!' "

In days past I should have been with your society, on invitation, as boon companion, and held my own with the best of ye, in the "wee sma' hours;" but now my seventy-seven years admonish me, "Sleepy couch will best suit your old frame."

The element in which your society seeks sport—the water—is the eldest daughter of creation; the element upon which the spirit of God did first move; the element which God commanded to bring forth living creatures abundantly. I say through you to the members of your association, gentlemen, seek pleasure and rest from the work of the dry world in the waters, but protect creatures that inhabit them from prowling poachers. A verse or two from old Izaak Walton may not be out of place:

"Oh, the gallant fisher's life,
It is the best of any.
'Tis full of pleasure, void of strife,
And 'tis loved by many.
Other joys
Are but toys,
Only this
Lawful is;
For our skill
Breeds no ill,
But content and pleasure.

"In a morning up we rise
Ere Aurora's peeping;
Drink a cup to wash our eyes,
Leave the sluggard sleeping.
Then in a brook,
With a hook,
On a lake
Fish we take;
There we sit
For a bit
Till we fish entangle."

Days of my early manhood, filled with visions of hunting and fishing, before the sound of the axe and steam whistle had startled and made shy the game and fish, crowd upon me, and I feel that—

"Man's life is but vain,
For 'tis subject to pain
And sorrow, and short as a bubble;
'This a hodge-podge of business,
And money, and care,
But we'll take no *care*
When the weather proves fair;
Nor will we vex
Now, though it rain,
We'll banish all sorrow,
And sing till to-morrow,
And angle and angle again."

As the last but one of "The Black Pointers," famous as mighty hunters and fishermen about the hill and waters of Canandaigua Lake—the chosen spot of the fierce and warlike Iroquois—I bid you and your associates God speed in all your sports in those hills and waters, and in your efforts to protect them from prowling poachers after game and fish. THOMAS M. HOWELL.

Application will be made by the association to the State hatchery for 500,000 trout fry for the lake.

SALMO.

ALBANY FLY-CASTING TOURNAMENT.

ONCE a year the Albany Fly-Casters' Association holds a tournament, when split-bamboo rods, silk enameled lines, automatic reels and other fine fishing tackle are brought out both for an airing and wetting. Yesterday the second annual tournament was held on the park lake, and a very successful one it was too. The members of the association and their friends were the sole occupants of the lake between the hours of 10 A. M. and 4 P. M. The water was muddy, muddy, muddy, but the sky was mantled with blue and the sun shone brightly all day long. It was just such a day as fishermen like when they are upon the water, and in what striking contrast was the weather as compared with that of Wednesday, when occasional showers fell from early morn till late in the evening.

Now, then, as to the character of the Fly-Casters' Association. Some of our readers who have not the distinguished honor of being classed as expert anglers may ask what is a fly-caster? He is, as a rule, a jolly good fellow, who takes a day off for trout or bass fishing whenever he gets a chance, and, best of all, the hooks he uses are not baited with worms, frogs, etc., but are neatly trimmed with feathers of various colors grouped to resemble flies, such as in certain seasons float upon the surface of a brook or river. With his fly attached to a delicate snell, which in turn is placed upon a "leader" from two to three yards long, with a strong but fine line and a rod with the right amount of stiffness, and with a reel that works with a spring, the fly-caster starts upon a scientific fishing expedition as it were. He casts his flies upon the water, taking good care that they fall gracefully and before the line strikes. Further, if in the course of his casting he is favored with a "rise," he must keep the spot in view and cast upon it again. If he falls short of his imaginary mark, or goes beyond it, he is considered by a brother caster as deficient in accuracy. Then again, should a fish rise away off from where the caster is located, he must be prepared to stretch his line the necessary distance. With this little pen picture of a fly-caster and the skilled work required of him, the reader must have some idea as to what the members of the Albany Fly-Casters' Association were up to yesterday. They were not after fish, but competed with one another as to distance in casting and accuracy and delicacy.

Alongside of the float in front of the boat house a smaller one was placed, and upon this each contestant stood while giving an exhibition of his skill. There were fifteen entries; ten in what is known as the amateur class and five in the amateur second class. The latter is for those who have never previously taken part in a tournament in Albany or elsewhere.

Positions being drawn for, Mr. H. A. Goffe came to the front in the amateur second class. He displayed a rod of his own make. He occupied eight minutes of the ten allowed him for distance, and scored 57ft. He was followed by B. F. Reese, of the amateur class, who, like Messrs. H. Paddock, W. G. Paddock, Frothingham, T. W. Olcott, Story, Vine, Whitbeck, H. M. Olcott, Stark and Speir, used a Spalding rod. Mr. Reese showed more science in his casting than at the first tournament, but evidently lacked strength in the wrist, and after reaching 67ft. gracefully retired. Mr. Frothingham's casting was done with ease and grace, and the same may be said of Mr. T. W. Olcott. All eyes were turned upon the buoyed course when the name of Howard Paddock was announced, and he came forward amid the cheers of his admirers. Before his ten minutes were up he scored 78ft., and that record made him the champion long distance caster of the tournament. No one scored more than 16 points out of a possible 25 for delicacy, nor more than 20 points out of a possible 25 for accuracy. For both delicacy and accuracy the gentlemen were carefully examined, and while a few did tolerably well, most of the number in striving for points in accuracy made great sacrifices in delicacy. The appended score tells its own story:

	Length of Rod. Ft. In.	Weight of Rod. Oz.	Distance, Feet.	Delicacy.	Accuracy.	Total.
AMATEUR CLASS.						
Thomas W. Olcott	11 5	9½	70½	16	15	101½
W. D. Frothingham	11 5	9½	70½	9	19	98½
W. G. Paddock	11 6	9½	68	10	20	98
Howard Paddock	11 6	9½	78	5	15	98
Dayton Ball	11 6	9	65	8	18	91
B. F. Reese	10 8	8	67	8	8	83
Stuart G. Spier	11 6	7	59	5	18	82
Dr. H. L. Whitbeck	11 6	9½	64	6	8	78
H. M. Olcott	11 5	9½	63	2	9	74
Moses Stark	10 6	7	56	0	4	60
AMATEUR SECOND CLASS.						
Chas. L. Gove	10 8	8	62	6	8	76
H. A. Goffe	10 7	9	57	9	8	74
John M. Quinby	11 6	9	63	0	7	70
Wm. Story	11 6	9½	62	5	2	69
E. W. Vine	11 6	9½	65	0	0	65

The judges were James H. Manning, Chas. B. Andrews and W. W. Byington. There were eleven prizes, which were awarded as follows:

Association class—Thomas W. Olcott, first prize, a Spalding split-bamboo rod; W. D. Frothingham, second, a W. Mills & Son standard split-bamboo fly-rod; Wm. G. Paddock, third, an automatic reel; Howard Paddock, fourth, a Bray fly-book; Dayton Ball, fifth, 50yds. metallic center enameled line; B. F. Reese, sixth, two dozen trout flies; Stuart G. Spier, seventh, a trout basket.

Amateur second class—Chas. A. Gove, first, an L. Levison fly-book; H. A. Goffe, second, a lance-wood fly-rod; John M. Quinby, third, a Gogebic reel; Wm. Story, fourth, pocket tackle case.

The Albany Fly-casters' Association is a live and active organization, and in the good work it is doing it deserves the support of every angler in this city.—*Albany Argus, Oct. 28.*

STRIPED BASS IN HELL GATE.

Editor Forest and Stream:

On Oct. 18, while trolling along the Astoria shore of Hell Gate, Mr. Chas. A. Stewart caught a striped bass weighing 14½lbs., length 34in., girth 18¾in., and depth 8in. I was with him at the time and can vouch for the truth of the big catch. On the same day Mr. Cartier, of the New York News Co., caught one weighing, as he tells me, 9¾lbs. Several boats in our vicinity had two and four fishes weighing between 3 and 4lbs.

On the 19th two gentlemen trolling, with Tyler Gibson as boatman, secured fifteen handsome bass, the smallest of the lot weighing 1½lbs., and two weighing respectively 2½ and 5lbs. Besides these there were caught one of 8lbs., two of 5lbs., and one of 4lbs.

The trolling has been unusually good this year. I have only given you the weights of the larger ones. Any quantity of bass weighing from ¾lb. to 1½lbs. have been caught. The reason why we have such good fishing is, I think, due to two causes; first, the absence of oil with which the river was formerly flooded; and second, the cessation of blasting operations at Flood Rock. A letter of our worthy mayor had the desired effect with the gas company, and now they use the formerly discarded oil in lieu of fuel. Should this condition of affairs continue who knows but that in a few years trolling in Hell Gate may recover its former renown as portrayed by the late Genio C. Scott in his "Fishing in American Waters?"

DR. DAN SCHMIDT.

ST. LOUIS ANGLERS.

ST. LOUIS, Mo., Oct. 25.—Fishing in this part of the country is now quite the rage. Hardly a day passes without recording the departure of a party of anglers to some one of the various fishing places. It is somewhat distant to the best fishing streams, but the distance does not appear to be an objection so long as the anglers are rewarded with a good catch of fish for their pains, expense and time counts for naught.

Current River, in the southeastern portion of this State, just now is getting the largest share of the disciples of Izaak Walton. Next on the list is Black River, in Arkansas. Then high, in the opinion of many, comes that famous resort of the fisherman, the Gasconade River. All three of the above mentioned places have great reputations, there being very little difference between them.

The Gasconade and Black rivers are perhaps more easy of access than Current River, and partly for this reason are the more visited. One of the main reasons why Current River at present has the call is that deer are more plentiful, as well as the fisherman.

A party comprising Messrs. G[illegible]iams, of this city, returned from [illegible] part of the week with a handsome [illegible] bass and pickerel. No large fish [illegible] tlemen. The largest was a jack [illegible] 6¼lbs. The bass, of which the p[illegible] aged close to four pounds. All t[illegible] themselves as well pleased with t[illegible] to pay Current River another visit.

A large party of gentlemen are[illegible] trip to Black River. Next week w[illegible]. Every fall the gentlemen composing [illegible] River a visit and their catch is usua[illegible] in by any party from the city.

Looking the field carefully over, [illegible] of a fisherman or field sportsmen, [illegible] stated, without fear, that the pro[illegible] most promising and encouraging.

TROUT AT THE UP[illegible]

Editor Forest and Stream:

That dark story about trout being [illegible]res and the kennels Dam, Maine, toward the last of the fi[illegible]d suitable escapes to be a mistake. Warden Huntoon, [illegible]safety if the hare that on a certain day a certain gentle[illegible] which therefore of his guide, had taken illegally three[illegible]tion of cruelty to Upper Dam. He went there and co[illegible]alities. When a what trout he found in the gentlema[illegible]te of the close, found none that had any marks on t[illegible]ehind the gate. they had been taken otherwise than fairl[illegible]re loosed and The gentleman pledged the warden his ho[illegible]es are driven he nor his guide had taken fish contrary t[illegible]running, and word is surely all the proof any of his [illegible]go down the would wish for. He has been a regular [illegible]s are made of region for a great many years, and he is f[illegible]bank of earth trout other ways than fairly. As to jig[illegible]e speed of the there, the "horse stalls" were not in conditi[illegible]r of injuring this fall, if there was any one that was [illegible]posed, as the water was not high enough.

The readers of the FOREST AND STREAM [illegible]he Saginaw that the record of trout I have given them [illegible]days' shoot- as having been taken at the lakes was a clea[illegible] Lands," then were taken fairly. F.

HABITS OF LANDLOCKED SALMON.—Plymou[illegible] Tues- H., Oct. 22.—*Editor Forest and Stream:* Concerni[illegible] suck- discussion on landlocked salmon, in recent numb[illegible] FOREST AND STREAM, I would say: In New Hampshire the[illegible] fish frequently come to the surface and swim with [illegible] tails and dorsal fins showing in the air. In this State[illegible] landlocked salmon grows to a weight of 18lbs. in nine [illegible]since On Saturday last I took the eggs from a 6lb. fish and[illegible] The numbered 4,500. No milt of this species being availabl[illegible]vent used that of an 8lb. Penobscot salmon, for all except[illegible] and which were milted with a 2lb. brook trout.—ELLIOT[illegible]ectly HODGE.

STARFISH AND OYSTERS.—The U. S. Fish Commission Steamer Fish Hawk will investigate the ravages of the starfish on the oyster beds of Long Island Sound, and its officers will try to devise some means to save the oyster from its most formidable enemy. If this can be done it means a saving of much valuable food and of millions of dollars to the oystermen.

FISHCULTURE IN NEW HAMPSHIRE.—The trout at Plymouth, N. H., have begun to spawn, and Col. Hodge has already 250,000 eggs on the trays. Last week he took 60,000 eggs of the Penobscot salmon, 14,000 being taken from one fish.

Mr. Fritchie Monson is slowly recovering from the recent northeast gale, during which it is thought that he got somewhat sanded. He gives a graphic account of their experiences at his camp on North Beach, where they were exposed to the full fury of the blast. Their pile of sweet potatoes was completely wrecked, the sand blowing clear through them, leaving them like a sponge. No fish could they catch, and for two days they lived on coffee, soda water and cigars, after which they had to scratch around and satisfy their hunger on palmetto berries, or gone off and died. Better have gone off and died. The spout of the coffeepot had to be stoppered to keep the sand out, and when a man lay down at night he chained himself to a log for fear of being blown away. A shotgun was left leaning against the side of the camp, and when examined two days afterward it was found that the bore was full of sand. A hole dug in the side of a sand dune before the storm began was blown right out and next morning not a trace of it could be found.—*St. Augustine Evening News.*

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Eley's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

ERICAN COURSING CLUB MEET.

(Concluded from last week).

WEDNESDAY, OCT. 17—CONTINUED.

ise crowd which gathered about the club house at
er time, and the general hilarity and good fellow-
p prevailed, spoke volumes for the established suc-
s American Coursing Club as an event of the great-
r interest. The members of the club looked about
wonder. It began to be apparent that they had
etter than they knew. What was at first derided as

...hall had been anxious for a strong hare, and he got it.
d also repeatedly offered to wager that in any course
ast would be the first dog to the hare. He found a
ere which beat him up, and he also found such a dog
ers other occasions; which shows how naughty it is
, and how unsafe it is to talk of your dog too con-
ly. Mr. Williams judged this course.

Miss Smart and Rich and Rare made a no-course of seventy yards. On the next hare Miss Smart was better off, though both were wide. Miss Smart had three go-bys and had scored ten points before Rich and Rare got in. The Denver dog, as usual, required a forty-acre field to turn in, but got extended in a long course, quite his sort of race, began to score lightly, and ran four and a half miles. The judge, Mr. Nash, got unsighted and held it no course. Two courses later these dogs were ordered in again, but Rich and Rare had been sent to the club house, and Miss Smart was declared winner.

Lady Milly Glendyne beat Reno Pilot almost pointless in a long course. Following his dog on his hunting horse, old John, Mr. Allison got a decidedly ugly fall, and would have been crushed but for the horns of his cow saddle. The heavy saddles seem best for this work. Mr. Williams judged.

SECOND SERIES OF THE DERBY.

Miss Rare and Plymouth were slow to their hare. Plymouth scored light for one and a quarter miles, and placed Miss Rare, who led for one and a half miles, not scoring. The hare went to earth. It is not plain where Mr. Nash found points to give Miss Rare the course. Plymouth ran till the hare was lost, and neither scored in the long follow.

Master Rich and Goldy ran a give-and-take course, in which Goldy won three go-bys, but Master Rich held possession longer, finished stronger, killed and won. Mr. Williams judge.

Minnehaha was not on hand when called in with Reno Pilot, and time elapsing the course was claimed for Reno Pilot by his owner, Mr. Allison, and so awarded. Mr. Van Hummell objected to this. He would have done the same thing for Mr. Allison's dog, and would have had a right to do so. Objection to the enforcement of a rule is all wrong; the only deplorable thing is that they should not be enforced strictly in every case.

Reno Pilot was now placed for a bye. Dr. Van Hummell at once offered Minnehaha to run, saying he "would show him how she could run around Pilot." And this she certainly did. Mr. Allison claimed Pilot was out of condition, and drew him to prevent his making another holy show of himself.

There was more or less drunken rowdyism on the grounds during the day, a great many fellows of the baser sort seeming to think the runnings were simply "dog races," and not the meet of a coursing club composed of gentlemen who kindly threw the grounds open to the public. Deputy sheriffs were after this sworn in to act as marshalls. This had not been thought necessary at any time earlier, but the growth of the meet had begun to attract such crowds that legal means of enforcing order were seen to be an imperative want. One or two young merchants of Great Bend were that night cautioned that they must thereafter take their whisky elsewhere for a lark, and come to the grounds only with such speech and conduct as are fit in the presence of ladies. It began to be seen that the club meant business in the matter of order and decency.

THURSDAY, Oct. 19.—By common consent of the public, Thursday seems to be set apart as the great field day of the coursing meet, and this was indeed a great and flattering day for the club. The public schools were dismissed, and poured their legions of troublesome young folks over the grounds. The day was clear and warm, and a continuous stream of riders and vehicles flowed through the gates till late in the day. Since the event is now so evidently one of the greatest popular interest it is quite fit that FOREST AND STREAM should mention its purely social features as well as those of technical sporting character. Following are the names of a few of the ladies seen in the field:

Mrs. Frank Doan, of St. Louis, Miss MacDonald, of St. Louis, Miss Bessie Chamberlin, Miss Jennie Rice, Mrs. Branch, Mrs. Jones, Miss E. Jones, Mrs. Chamberlin, of Cleveland, Ohio, Mrs. D. C. Luce, Mrs. D. Teed, Miss Potter, Miss Taylor, Mrs. W. W. Carney, Mrs. Laidlaw, Mrs. Tounsley, Mrs. Chappel, Mrs. Heizer, Miss Butler, Mrs. Davidson, Mrs. Schermerhorn, Miss Clara Johnson, Miss Conkrite, Mrs. Saport, Mrs. Yettick, Mrs. Bain, Mrs. Wells, Mrs. Culver, Mrs. Moses, Miss Tounsley, Mrs. Earley, Mrs. Carr, Mrs. Dickinson, Mrs. Anna Johnson, Mrs. Heckebee, Mrs. Woodridge, Mrs. Tilden, Miss Clement, Mrs. Sclack, Mrs. Willson, Mrs. G. N. Moses, Mrs. E. R. Moses Mrs. Butler, Mrs. W. Dodge, Mrs. John Winstead, Mrs. Berks, Mrs. Willis Winstead, Mrs. Ed Crail, Mrs. L. Nimicks, Mrs. Judge Nimicks, Miss Welch, Miss Rosco, Miss Saport, Mrs. Smart, Mrs. Josie Johnson, Miss McKinner, Mrs. Dr. Shaw, Miss Atterbury, Miss Kline, Mrs. Kline, Mrs. Cornell, Miss Bolinger, Miss Ruhe, Miss Moon, Mrs. Lowards, Miss Lettie Lowards, Miss Rial, of Penna., Miss Buchanan, Miss Goold, Mrs. Goold, Miss Nichols, Miss McTaggart, Mrs. Del. Gillham, Mrs. Bolinger, Mrs. Hedges, Mrs. F. J. Long, of Col., Miss Armstrong, Mrs. Berchfield, Mrs. Loyd, Mrs. Hall, Miss Lillie Cornell, Mrs. Maud Clayton, Mrs. Meacham, Mrs. Sumners, Mrs. Dennie Meacham, Mrs. Geo. Meacham, Mrs. Will Miller, Mrs. Jennie Castle, Miss Willner, Mrs. Brinkman, Miss Lillie Brinkman, Mrs. A. P. Parr, Mrs. Benedict, Miss Ursula Benedict, Mrs. Niblo, Mrs. Tomphson, Miss Agness.

It would be impossible to give the names of all the gentlemen and ladies who came from almost every State in the Union to attend the meet, but among others the FOREST AND STREAM'S representative met visitors from Detroit, Mich., Chicago, Ill., Boston, Mass., Denver, Col., New York, and from all points of Missouri, Nebraska, Kansas and other Western States. One feature noticeable was the growing style and *clan* of the assemblage. Mention of costumes would be tedious, but it will do to say that there is a growing movement toward cords and tops among the gentlemen and to correct habit among the ladies. Mr. Doan, of St. Louis, the secretary of the club, to whose efforts much of the present year's growth is directly attributable, marshaled an attractive party of St. Louis people. Mrs. Doan, a most pleasant and winning lady, appeared to distinct advantage in habit of green facings, and chaperoned an easy and confident horsewoman in her friend Miss MacDonald, of the same city, who rode in full park costume, hat, boots and habit.

Cousin Frank and Lee, therefore, were the focus of a large and distinguished assemblage when they strained at the slips in the

SECOND SERIES OF THE DERBY.

Lee led up and took two turns. Frank drew in and scored, but the hare was lost, and no course was held. After the bye race for this series, in which Locks showed well over his mate, Cap, Cousin Frank and Lee went down again. Lee was again the better up, and the two traded turns. Frank held ahead for two miles, neither dog doing much. The hare escaped. Mr. Nash gave Lee the course, as showing better at the start. Reno Pilot being drawn, there remained only Dr. Van Hummell's four dogs, Master Rich, Miss Rose, Locks and Lee, in the Derby. He decided to run them out.

THIRD SERIES AMERICAN FIELD CUP.

Bessie Lee played all around Sandy Jim, who loped along with his ears up, and was beaten pointless. He is no longer of any earthly use at a coursing meet. Bessie killed unaided, and began to earn place as a favorite. Mr. Williams judge.

Dick Taylor and Rowdy had a long course directly past the club house. Rowdy had the better for a half mile, but the scarred black wolfdog passed, scored, killed and won.

The weather being very warm, the dinner hour was prolonged. Some views were made of the assemblage by a photographer.

Lavina and White Lips went in. White Lips at once went to the hare, and worked her for the greatest two miles ever seen in America. White Lips clearly showed herself a wonderful bitch. At two miles, however, Lavina took a go-by and began to score. The hare was lost in a corn shock. In another mile Lavina might have cut down the fifteen points White Lips had rolled up, for the latter was clearly done. White Lips won. Mr. Williams, judge.

Young Golddust and Miss Smart were held back from a young jack and started a moment later on a good one. Mr. Lighthall, owner of Golddust, rode between the hare and Miss Smart, unsighting her. She had much to do, but got in and scored well. Mr. Nash thought the course good enough for Golddust, and did not order the dogs in again, claiming that he only began the count after Miss Smart got place. Another course would have made better feeling, though technically unnecessary had not the totals been so close.

Imported Lady Milly Glendyne ran a bye with imported Trales, and showed better. The hare obligingly ran among the crowd for the finish.

THIRD SERIES OF THE DERBY.

Master Rich beat Miss Rare in a long course after a demon whitetail. Miss Rare stopped at the club house. Master Rich won. Mr. Nash, judge.

Locks and Lee went in, but found no hare. A blizzard cloud came up, and the crowd of neighing and restless horses became unmanageable. For three-quarters of an hour there was not a field officer or officer of the club in sight, and only the judge and one reporter followed the dogs, whose owner was absent with the rest at the club house. The day closed.

FRIDAY, Oct. 19.—The cold morning cleared off kindly and a fair day was presented for this, which was likely to be the deciding day of the meet. Only six courses remained to be run.

THIRD SERIES OF THE DERBY.

Locks led Lee up to the hare, turned, had the better of it, killed and won. The dogs coursed and killed a second hare before they could be secured. Mr. Williams judged.

FOURTH SERIES AMERICAN FIELD CUP.

Lady Milly Glendyne and Bessie Lee got off on a close hare. Lady Milley led up and placed Bessie, who scored a wrench or two and a kill to win before Bessie could recover on her turn. The course was not over 100yds. Mr. Nash gave the course to Bessie Lee. The alternate judge and everybody else thought it too short for a decisive course; and so it clearly was.

Great interest was manifested as homely but likely-looking Dick Taylor went into the slips with beautiful English White Lips. There were whispers that White Lips could not stay over two miles. They got a strong hare, to which White Lips got like a thunderbolt, and in her absolutely lovely style rolled up eleven points within two miles. She was quite too fast at first for Dick Taylor, who, however, drew by and began to score, White Lips following him just as he had her at first. Dick worked in well, tripped and killed, scoring seven points. Had he waited 100yds. to kill he might have won. Mr. Lowe rather ungraciously remarked to Mr. Carney that "his duffer of a dog allowed White Lips to pump himself all out and then came in to kill the hare." This is quite unjust. Dick Taylor ran as honest as any dog could. He made every turn that White Lips made, but she was too clever for him, and kept inside. It is perhaps fairer to say that the equal of White Lips has not been seen in this country, but that she is too lately over to be well used to the rarer air of the plains, and so fails in lung power at the finish of a long course. In any event, it would sit far better on Mr. Lowe to be quietly proud of his great bitch, and not openly contemptuous of other gentlemen's dogs, who certainly did their best to beat him fairly.

Young Golddust ran a cracking bye with Dinah Black, the latter showing a suspicion of waiting.

DECIDING HEAT OF THE DERBY.

After dinner Master Rich and Locks went in for the honors of the Derby. Both dogs were in horrible condition and hardly had three legs between them. Master Rich led up, making five points in all. Locks killed at end of a long course. Master Rich won the Derby; Locks runner-up. Master Rich is a strong brindle and white dog of Snowflight points, and barring perhaps Miss Rose is the best of Dr. Van Hummell's dogs. He is a trifle long, and turns too wide, though infinitely better than Rich and Rose. Locks is an ordinary looking black dog, but went into the meet in the best condition of any dog on the grounds. He was bred and raised by R. D. Williams, of Lexington, Ky., who owns old Snowflight. Locks is clearly a good one; he ran a great course after two stinging ones in the morning.

Mr. W. W. Carney, owner of the great plain on which the club grounds lie, and to whose courtesy the success of the club is directly due, led off for dinner at his hospitable home. Mr. Doan's St. Louis party, and the FOREST AND STREAM'S representative, joined them for its annual diuner with Mr. and Mrs. Carney, not the least pleasure, surely, of the meet. On return to the grounds the dogs were found in the slips for the

FIFTH SERIES OF THE AMERICAN FIELD CUP.

Young Golddust and Bessie Lee were matched here. Young Golddust, though known by some few to be far from perfect in health, was thought an easy winner of the stakes over White Lips if the hare lived over a mile and a half. It was supposed that he would, of course, beat Bessie Lee, who had already run further down than she belonged on merit *per se*. Quite to the surprise of all, Bessie Lee's lead and scoring for one and three-quarter miles were never cut down by Golddust, although he took a possible go-by and worked the hare by himself for a half mile. The hare went to earth. Bessie Lee won clearly and unmistakably, although the course was a singular one. Mr. Nash judged. Mr. Lighthall took Golddust to town, and in the evening complained that there had all along been a combination to beat him. He soon regretted this unfortunate language, on being shown plainly that any possible current against him had been excited by his own over-free vaunting of his own dog. It is to be hoped that next year all the gentlemen will come to the meet with never an expressed wish except that the best dog may win. Golddust is a good dog and beat good ones. He had rather the best of the judging in two courses, one by each judge, but was a favorite for first or second place.

White Lips now ran a bye with Minnehaha, and for once lost place early in the race to her mate, who actually did give her a bit of work. The judge now held his decision some time, apparently to give White Lips more time than the thirty minutes' law after the decision for the final course.

DECIDING COURSE FOR AMERICAN FIELD CUP.

A great roar of expectancy swept over the long line of beaters and spectators as the last brace went down, and the little bitches Bessie Lee and White Lips pressed gamely forward into the collars. One or two knowing ones laid wagers against the English bitch, on the strength of the fact that the pads were badly torn on three of her feet, and that she had had hot work for any but a great stayer. Had the course been held over until the following morning no odds would have been taken against White Lips, who is easily the best coursing Greyhound ever seen here. A start on a strong hare was made, the hare running diagonally across. There was no test in the run-up. White Lips ran the outer curve, the hare turning slightly in Bessie's favor to White Lip's possible wrench. Once in, however, Bessie showed the greatest speed and took the hare for more than her half of it, turning the better over three-quarters of a mile. Bessie was as clever on a corner as White Lips, speedier at the close and killed, winning by two points, or perhaps one and a half. It was a close course, but no objection was heard to Mr. Williams's decision, since it clearly and easily belonged where given. It was not generally known that White Lips's feet were unfit for work.

When it became evident that the Great Bend bitch had won the championship, the greatest excitement prevailed, and cheer after cheer arose, while hats and handkerchiefs were flung wildly into the air. Mr. Luse's tall white hat was banged down over his eyes, while all crowded about Mrs. Luse—who owns Bessie Lee, and who rode every course to take her up—to catch a glimpse of the game little one who had won Great Bend her glory.

Bessie Lee is a fairly well made brindle bitch, weight forty-three pounds. She is hardy and likely, with forelegs which plainly date back to Flink, a nondescript who was always thought the fastest quarter dog in the West. She is by Flink out of Toots. No one knows where Flink came from. He was bought from some gypsies.

White Lips is a black and white bitch, weight fifty-five pounds, whose worst fault is a tail slightly lacking fineness. Her back and legs are good, she is wonderfully well sprung in the ribs and her head is very fine. She is a beautiful, muscular bitch, a wonderfully tidy worker, and full of quality. She was first to the hare in every course she ran.

Mr. Luse, the nominator of the winner of the American Field Cup and championship, certainly deserves the highest credit for his perseverance and eventual success in these annual coursing meets. He has brought better and better dogs to the slips each year, and this year furnished the winner. There is a general supposition that next year he will crowd the puppy stakes very hard, since he this year went to the trouble and expense of importing the famous English bitch Dick's Darling (out of Daylight by Coleraine Diamond). From this good one he now has a good litter of eight puppies by imported Trales, and among these little fellows there will be some likely ones indeed. It is to be hoped that

others will follow Mr. Luse's example, which is in the direct line of improving coursing in America.

There were not any entries for the Consolation Purse, as the members were too game to see any glory in that. Dick Taylor and Midnight, however, ran a side race, in purport for a purse of $100. Midnight won, much to Col. Taylor's delight, who is a great believer in that dark-hued fellow. This closed the field work of the meet. A wolf hunt was held on the flats on Saturday, but no wolf was started, though several hares were killed.

Throughout the running the smaller dogs had the best of it. The big fellows will do for field work, but do not score fast enough at a coursing meet. It is of interest also to note that the winners were fed and trained on Spratts' well-known patent biscuit.

Following is the summary of the meet:

SUMMARY.

THE CARD AS DRAWN.

AMERICAN FIELD CUP.

Red.		*White.*
A. S. Allen's white and red bitch Ruby,	against	A. C. Schermerhorn's brindle dog Dandy.
M. E. Allison's red dog Sandy Jim,	against	S. J. Shaw's bitch Skippie.
D. C. Luce's brindle bitch Bessie Lee,	against	Waterloo Kennels' blue bitch Humming Bird.
Q. Van Hummell's white & red bitch Minnehaha,	against	Joseph Roetzell's bitch Jenny.
Q. Van Hummell's brindle & white dog Master Rich,	against	I. Zutavern's red dog San Pedro.
M. E. Allison's red dog Rowdy,	against	Q. Van Hummell's white & b'dle bitch Miss Rare.
D. C. Luce's red bitch Paulina,	against	Frank K. Doan's brindle and white dog Danger.
Frank K. Doan's white and blue bitch Daisy,	against	W. W. Carney's black dog Dick Taylor.
A. Johnson's black bitch Dinah Black,	against	M. E. Allison's red dog Terry.
T. F. Foncannon's black and white bitch Meta,	against	D. C. Luce's red bitch Lavina.
I. D. Brougher's blue bitch Honey Bee,	against	C. G. Page's black bitch Lady.
H. C. Lowe's black and white bitch White Lips,	against	Waterloo Kennels' white and brindle dog Trales.
C. G. Page's black bitch Topsy,	against	A. C. Lighthall's red dog Young Golddust.
Waterloo Kennels' brindle bitch Little Lady Glendyne,	against	Joseph Roetzell's white and red dog Keno.
Q. Van Hummell's brindle and white bitch Rich and Rare,	against	David Taylor's blue dog Bobolink.
Joseph Roetzell's dog Cap R.,	against	Robert Smart's blue bitch Miss Smart.
M. E. Allison's fawn dog Reno Pilot,	against	Frank K. Doan's red dog Modesty.
Waterloo Kennels' black bitch Lady Milly Glendyne,	against	a bye.

THE GREAT BEND DERBY.

E. L. Branch's brindle bitch Mary Anderson,	against	Q. Van Hummell's white & brindle bitch Miss Rare.
David Taylor's black dog Plymouth,	against	Waterloo Kennels' white and blue bitch Ariel.
A. Laidlaw's red and white bitch Goldy,	against	C. F. Culver's white bitch Queen of Kansas.
Q. Van Hummell's brindle & white dog Master Rich,	against	A. C. Fair's brindle and white dog Davy Crocket.
Joseph Roetzell's bitch Bell,	against	Q. Van Hummell's white & red bitch Minnehaha.
M. E. Allison's fawn dog Reno Pilot,	against	Frank K. Doan's red dog Pattie.
Q. Van Hummell's blue and white dog Lee,	against	D. C. Luce's brindle bitch Katy Did.
C. P. Townsley's dog Cap,	against	Q. Van Hummell's black and white dog Locks.
C. E. Rowe's white dog Cousin Frank,	against	a bye.

GRAND PARENT STAKE.

R. S. McDonald's red bitch Gyp,	against	Frank K. Doan's red and white bitch Fleet.
D. C. Luce's black bitch Thorna,	against	a bye.

THE RACES AS RUN.

AMERICAN FIELD CUP.

First Series.

Sandy Jim a bye.
Bessie Lee beat Humming Bird.
Minnehaha beat Jenny.
Master Rich beat San Pedro.
Rowdy beat Miss Rare.
Paulina beat Danger.
Dinah Black beat Terry.
Lavina beat Meta.
Honey Bee beat Lady.
White Lips beat Trales.
Young Goldust beat Topsy.
Little Lady Glendyne beat Keno.
Rich and Rare beat Bobolink.
Miss Smart beat Cap R.
Reno Pilot beat Modesty.
Lady Milly Glendyne a bye.
Ruby beat Dandy.
Dick Taylor beat Daisy.

Second Series.

Sandy Jim beat Ruby.
Bessie Lee beat Minnehaha.
Dick Taylor beat Paulina.
Rowdy beat Master Rich.
Lavina beat Dinah Black.
White Lips beat Honey Bee.
Young Golddust beat Little Lady Glendyne.
Miss Smart beat Rich and Rare.
Lady Milly Glendyne beat Reno Pilot.

Third Series.

Bessie Lee beat Sandy Jim.
Dick Taylor beat Rowdy.
White Lips beat Lavina.
Young Golddust beat Miss Smart.
Lady Milly Glendyne a bye.

Fourth Series.

Bessie Lee beat Lady Milly Glendyne.
White Lips beat Dick Taylor.
Young Golddust a bye.

Fifth Series.

Bessie Lee beat Young Golddust.
White Lips, a bye.

Sixth Series.

Bessie Lee beat White Lips and won.

WINNINGS.

Bessie Lee won the cup, the championship of America and $300; White Lips won $100, Young Golddust won $20, Lady Milly Glendyne $20, Dick Taylor $15, Miss Smart $15, Lavina $15, Rowdy $15.

Bessie Lee is by Flink out of Toot. She by Bruce out of Big Fly.

White Lips, imported, is by Hotspur out of Kiss, by Misterton.

THE GREAT BEND DERBY—PUPPY STAKES.

First Series.

Miss Rare beat Mary Anderson.
Plymouth beat Ariel.
Goldy beat Queen of Kansas.
Master Rich beat Davy Crockett.
Minnehaha beat Bell.
Reno Pilot beat Pattie.
Lee beat Katydid.
Locks beat Cap.
Cousin Frank, a bye.

Second Series.

Miss Rare beat Plymouth.
Master Rich beat Goldy.
Reno Pilot beat Minnehaha.
Lee beat Cousin Frank.
Locks, a bye.

Third Series.

Master Rich beat Miss Rare.
Locks beat Lee.

Fourth Series.

Master Rich beat Locks and won.

WINNINGS.

Master Rich won $150, Locks $50, Lee $20, Miss Rare $20, Cousin Frank $5, Reno Pilot $5, Goldy $5, Plymouth $5.

Master Rich is by Rich and Rare out of Minnie, by Roger's Jack.

Locks is by Snowflight out of imported Lady Scott.

GRANDPARENT STAKE.

First Series.

Gyp beat Fleet.
Thorna a bye.

Second Series.

Thorna beat Gyp and won.

WINNINGS.

Thorna won the cup, value $100; Gyp $40, Fleet $5.

Thorna is by Swift out of Daisy.

Gyp is by imported Nelson out of Pendleberry's Nellie.

THE BUSINESS MEETING.

The regular business meeting of the club was held at the Morrison Hotel Friday and Saturday evenings. The following officers were elected for the ensuing year: President, Col. David C. Taylor of Emporia, Kas.; Vice-President, Hon. D. N. Heizer of Great Bend, Kas.; Secretary, Frank K. Doan, 1210 Olive street, St. Louis, Mo.; Treasurer, J. V. Brinkman of Great Bend, Kas.; Executive Committee, Messrs. W. W. Carney and D. N. Heizer of Great Bend, Mr. H. C. Lowe of Topeka, Kas. State Vice-Presidents chosen were: Col. R. S. MacDonald for Missouri, Mr. G. S. Parvin for Ohio, Mr. A. C. Lighthall for Colorado, Mr. C. G. Page for Nebraska, Mr. N. Rowe for Illinois, Mr. A. Fred Nash for Michigan.

Votes of thanks were extended to Mr. N. Rowe for his aid and support of the club, to FOREST AND STREAM, through its representative, for its regular and full reports of the meet, and to Messrs. Nash and Williams for their conscientious and satisfactory judging. Mr. E. Hough for services in past and present reports of the meet was elected an honorary member of the club. Dr. G. Irwin Royce, for numerous past services and cheerful help, was freed from further annual dues of the club.

It was agreed that the field stewards for next year should be sworn deputy sheriffs. It was also decided to charge an admission fee to the grounds. Notice was given that some changes in the by-laws would be voted on next year. It was passed that the secretary should procure for each member a copy of the new national coursing rules.

Action was taken whereby the stakes for next year will be largely increased. Discussion was also had to import hares for the grounds from California, the supply being perceptibly scarce this year.

It may be interesting to note that the secretary answered three hundred and ninety letters in regard to the club during the past year and sent out over five hundred mail and express packages, which certainly shows an interest in the club. The running expenses of the club, aside from the stakes, are about $300 for each meet. The club is now quite free from all debt. There will be over $500 gate money next year, counting out all lost by parties entering the field by gaps in the fence; the annual dues will aggregate $300 more, at least. Great Bend ought by right to contribute at least $400 or $500 to the stakes as a town. Great Bend does not realize, nor do all members of the club stop to realize the greatness of this institution which began in nothing. FOREST AND STREAM is willing to go on record that the sport of coursing in America is just beginning, and will grow more rapidly than any one will like to predict. Next year the American Coursing Club will double, and will bring 10,000 people together. It will be the greatest sporting dog event of America. The success of this year and the constant growth of enthusiasm altogether warrant this statement. The club is a bigger affair than most are aware of, and deserves the careful and attentive report FOREST AND STREAM has tried to give it. There will be persistent effort made during the year by the members to yet further popularize and make better appreciated the comparatively little understood but really truly and naturally American sport of coursing.

Following is a list, published by FOREST AND STREAM before any other paper, of the membership of the American Coursing Club:

LIST OF MEMBERS OF AMERICAN COURSING CLUB.

Col. David Taylor, President, Emporia, Kas.
Hon. D. N. Heizer, Vice-President, Great Bend, Kas.
Frank K. Doan, Secretary, 1210 Olive street, St. Louis, Mo.
J. V. Brinkman, Treasurer, Great Bend, Kas.
W. W. Carney, Chairman Exec. Committee, Great Bend, Kas.
Dr. G. Irwin Royce, Topeka, Kas
G. N. Moses, Great Bend, Kas.
D. C. Luse, Great Bend, Kas.
A. C. Schermerhorn, Great Bend,
Edwin Tyler, Great Bend, Kas.
F. Zutervan, Great Bend, Kas.
N. Rowe, Chicago, Ill.
C. G. Page, Minden, Neb.
Col. R. S. MacDonald, St. Louis.
J. B. Martin, San Francisco, Cal.
H. W. Huntington, Brooklyn.
J. E. Thayer, Lancaster, Mass.
R. F. Jones, Minneapolis, Minn.
H. W. Clark, Providence, R. I.
C. D. Webber, Newark, N. J.
R. D. Williams, Lexington, Ky.
T. B. Terry, Cleveland, O.
A. C. Lighthall, Denver, Col.
W. E. Stevens, Pontiac, Mich.
W. J. Dixon, Cimarron, Kas.
M. E. Allison, Hutchinson, Kas.
B. M. Mutersbaugh, Ellinwood,
Amos Johnson, Ellinwood, Kas.
J. H. Jones, Troy, Kas.
Dr. Q. Van Hummell, Omaha.
R. D. Salisbury, San Diego, Cal.
T. F. Foncannon, Emporia, Kas.
James Halloway, Denver, Col.
C. Hallowly, Greensburg, Kas.
H. C Lowe, Topeka, Kas.
R. Smart, Ellinwood, Kas.
J. R. Price, Topeka, Kas.
T. W. Bartell, Denver, Col.
C. P. Townsley, Great Bend, Kas
O. B. Wilson, Great Bend, Kas.
J. W. Brown, Great Bend, Kas.
A. S. Allen, Great Bend, Kas.
R. P. Typer, Great Bend, Kas.
I. D. Brougher, Great Bend, Kas.
A. J. Buckland, Great Bend, Kas
Clark Gwinn, Great Bend, Kas.
E. W. Moses, Great Bend, Kas.
C. F. Culver, Great Bend, Kas.
E. R. Moses, Great Bend, Kas.
W. W. Winstead, Great Bend.
L. Weaver, Great Bend, Kas.
A. C. Fair, Great Bend, Kas.
L. Zutavern, Great Bend, Kas.
R. Plager, Great Bend, Kas.
A. Massey, Great Bend, Kas.
E. A. Rowell, Great Bend, Kas.
Hon. B. Ogle, Great Bend, Kas.
A. Laidlaw, Great Bend, Kas.
E. L. Carney, Great Bend, Kas.
G. Spencer, Great Bend, Kas.
G. D. Brown, Great Bend, Kas.
L. J. Shaw, Great Bend, Kas.
J. H. Clements, St. Louis, Mo.
C. A. Stix, St. Louis, Mo.
J. B. McCormick, St. Louis, Mo.
S. R. Peters, Newton, Kas.
L. J. Loomis, Hannibal, Mo.
T. A. Scott, St. Louis, Mo.
J. W. Munson, St. Louis, Mo.

E. HOUGH.

A WORCESTER KENNEL CLUB.—Worcester, Mass., Oct. 27.—*Editor Forest and Stream:* I have recently conferred with a large number of gentlemen in this city and vicinity with the view of organizing a kennel club. All are very enthusiastic on the subject. A meeting will be held at my office, 288 Main street, Nov. 7, at 8 P. M. All breeders, owners and others interested in this movement are cordially invited to be present.—H. R. SURLES, M. D.

NATIONAL COURSIN

[From our Special

HUTCHINSON, Kan., Oct. day, Oct. 23, at Hutchins in an American inclosed coursin fornia meets have greater magn the National Coursing Associati and grown into anything worth character. To the contrary, it is from this little beginning in the the West, there will arise a move sport of coursing into more rapid shown in the record of any field sp

Enough has been said in the STREAM descriptive of the sport o less to go into its general details in mind, however, that an inclose ent in its nature from open co American Coursing Club, whose Great Bend, Kan., and a short de son grounds may, therefore, be qu

The association has inclosed a level ground lying at a distance of center of the pleasant little town most of the active members. T rounded by a rabbit-tight woven-wir ter of the tract, extending about t and being on an average of about 1 the running track, also inclosed by of this track is the small close for th for the competing dogs. At the lowe are provided for the hares, which o can stand the pace for three quarters quite rid the inclosed meet of all imp animals, or of any unsportsmanlike qu course is called, the hare is driven from the ga the dogs being held in slip at a point a trifle b The proper start having been given, the dogs a the course terminates quickly in the finish or hare. In a properly conducted meet, the har over the course several times before the day of once having learned the way of escape they course at a wonderful burst of speed.

In the rightly made inclosed course the wall boards, and at the end of the course a six foot is thrown up with a gradual slope, to break th dogs, which otherwise would be in great dange themselves against the boards of the escape. The Hutchinson course is not yet a correct one, and should be completed. The wire fences on the sides of the course were covered with burlaps, as a substitute for boards, and to prevent the hares from attempting escape through the meshes of the wire. This burlaps is constantly tearing loose and flopping about in the wind. The escape is not provided with a bank. This will probably be left until some valuable dog, fast enough to get close to the hare, has ruined himself against the boards.

The managers of the association were unable to obtain their wire fence until very late, and owing to this fact and the death of some hares they had shipped in, there were thought to be only about forty hares on the half section when the meet began. Of these, ten good ones had been secured in the close on the day before the meet, but during the night all but one of these crawled out through a hole which a careless workman had left. The inclosed meet began, therefore, with one jack rabbit sitting in solitary grandeur, waiting to entertain the crowd of perhaps 500 persons who paid gate money to witness the sport of coursing. This old one, however, quite knew her business, and shot through the course so rapidly that the two loafing dogs, Mr. M. E. Allison's red bitch Reno Belle and Mr. G. I. Joyce's white dog Cousin Frank, who made the first brace slipped, never got the first turn upon her. It was thereupon announced that the runnings would be continued inside the grounds, but outside of the inclosed course; and the begun the purely unsportsmanlike proceeding of hares within a wired inclosure no longer than a mi direction, where no possible means of escape was This was a thing which did not please even the ignorant of the details of a regular meet.

Mr. D. C. Luse's red bitch Paulina and Mr. Wm. white fawn bitch Belle R. were slipped on a yearl Paulina tried to see how slow she could run; Be little. The hare ran to the wire fence, saw the t died with heart broken before Paulina killed, to merit.

Mr. M. E. Allison's white fawn dog Reno Pilot Wm. Garrett's red dog Frisk showed a bit better w stronger hare. Frisk led, Pilot did the more work an with no merit shown for either. Pilot won.

Reno Belle and Cousin Frank went down for their undecided course, and killed a poor lumpy hare which had been crippled. Ordered down again, Frank led and killed to a win, Belle working but little. A demon of the slows seemed to have gotten into all the dogs, and the only real struggle was for last place. This closed the day.

TUESDAY, Oct. 24.—At about 1 P. M. it was announced that a half-dozen had, during the morning, been driven into the close, and accordingly a crowd of perhaps a hundred persons or so assembled to witness the running. It now became apparent that the meeting was not to be a regul meet, and that the stakes would not really be run out, the hares were not at hand in sufficient numbers. original drawings were not observed, but enough dogs down to show the spectators how the sport is pursued, to prove to the association that the plan will work perf when a few minor details have been attended to, aga which it was impossible to guard on such short notice.

Mr. J. S. Branham's semi-greyhound black dog Sharp and Mr. D. Watts's red dog Tim W. went down and followed a hare through to the escape, Sharp running a little slower than Tim. Mr. M. E. Allison's red dog Reno Chief led Mr. Wm. Garrett's red dog Prince to the hare, but lost place, and Prince wrenched, killed and won. Mr. D. C. Luse's red bitch Lavina and Mr. Allison's red dog Rowdy made a very pretty neck-and-neck run for a quarter of a mile, Rowdy by half a length taking the first wrench. Lavina turned, wrenched and placed Rowdy to kill. Rowdy was given the course. Dr. G. I. Royce's blue and white dog Goldy led, did it all, killed and won over Mr. Allison's red dog Terry, who lagged up all the way. Mr. J. R. Price's red bitch Sylph lost to Dr. Royce's blue and white Heroine, who led and won, placing Sylph to kill.

It was now announced that no more running would be attempted, since the jacks were not in hand, but the crowd were told that on the following day they would be treated to a display of open coursing on the flats outside the grounds. The card was therefore practically suspended. Two wild coyotes, taken yesterday, were announced to be hunted on Friday.

It should be remembered that this meet followed directly on the heels of the Great Bend event, and this, instead of being an advantage, would appear to have been the contrary. The dogs of the American Coursing Club were worn out and torn up, and quite unfit to run. The gentlemen who had already spent a week or more from business had not time to attend the Hutchinson meet, which would require a week more. There were, therefore, not the best of dogs entered; whereas an inclosed meet, with its short, quick course, clearly demands the best and liveliest greyhounds to show sport. Let it not for a moment be supposed, however, that the first meeting of the National Association is any criterion, for it is not. There will be a meeting held next spring which will be a rouser. By that time details on the

ground will have been perfected, a plenty of hare will have been secured, and the good greyhounds of the country, rested and fitted by their winter's work, will be only anxious to run well for substantial purses. It should be reiterated that the inclosed coursing meet is destined to be a great affair in this countrry. Our people of the great cities cannot travel half across the continent to see a meet, but they will pay to see a meet brought to their doors and shown on their well-known parks and driving tracks. It is here that the inclosed meet will find its place, and it is here that within the next five years it will make history for itself. The meet at Hutchinson, crude as it necessarily was, is the beginning of all this. Therefore, the best criticism—beyond the general admonition that the public wants results and not excuses—is a word of commendation for the pluck shown by the association in going so far on in an undertaking which can only be held entirely commendable by every one interested in a grand sport.

THURSDAY, Oct. 25.—After dinner a crowd of perhaps 500 persons assembled on the flats east of the coursing grounds to witness an exhibition of coursing in the open. A score card was printed and distributed, but not adhered to, the knowledge now being general that the stakes of the meet would not be run out. The dogs present were largely non-descripts.

Dr. Royce's Goldy and Mr. Hickock's Black Tiger coursed each a hare by himself, two starting up just at the point of slipping. The latter dog is a big black, half greyhound. He killed his hare, a lumpy one.

After two or three false starts Mr. Wyatt's Tim W. beat Mr. Garrett's Prince. The latter gentleman wished to stake $10 that he couldn't do it again. It grew hourly more apparent coursing was in its infancy at Hutchinson. Trouble also was experienced from the pushing and crowding of the unruly mob of spectators, who have not yet learned that it is not the correct thing to drive over the dogs.

Dr. Royce's Heroine and Mr. Allison's Reno Chief ran a no-course, which was given Chief to appease the crowd, who wanted to know "which dog killed the rabbit."

Mr. Luse's Lavina and Mr. Allison's Rowdy filled the expectations of those who knew them, and ran a beautifully even course, Lavina winning by one point.

Mr. Luse's Paulina and Mr. Royle's Belle R. made a long course with little scoring, Paulina winning by a kill in the corn. Paulina came out of the corn with the hare in her mouth and carried it to her owner.

Goldy and Black Tiger went in again, and Goldy beat the black creature, passing when he liked. This closed the exhibition of the day. E. HOUGH.

CHESAPEAKE BAY DOGS.

Editor Forest and Stream:

While I have neither the time nor inclination to write a treatise on the origin and breeding of the bay dog, yet as an old Maryland sportsman and dog fancier, it gives me pleasure to note some points that may serve "G. E. S." in making choice of a retriever.

Like the Newfoundland, the Chesapeake Bay dog is still to be found—with the same capacity and aptitude for his calling—in several strains, sizes, coats and colors, long-haired, short-haired and curly-coated; red, brown and yellow or sedge grass in color. Having gunned on one of the choicest shores of the Gunpowder River for more than twenty years, and consequently outlived many early prejudices, I can say that by far the most satisfactory dog for a true sportsman is the medium-sized, "otter-coated," dead-grass color, the shade of your shooting suit. This settles the question of color advantage.

They do not carry dead water to shake over you like any long-haired animal, and consequently suffer less from cold themselves, having a fine fur next the hide. They are powerful, fast swimmers with scent equal to the best dog of any breed. The large dog tires quicker, is hard to keep out of sight, and of course is in the way about the blind. The endurance of these dogs as a breed and their intelligence for their business is almost beyond belief. But they are unsatisfactory for any other purpose; they know duck—duck and nothing else.

The cross attempted with a first-class imported fifty-guinea English retriever was an utter failure. The dogs so obtained were very fast and smart, but lost the heavy coating and could not stand floating ice.

While all styles and strains are in use at the many clubs on the rivers, these "otter-haired" dogs have been much bred and used on the Gunpowder River, at Maxwell's Point Club, John Lynch manager; Graxe's Quarter, Joseph Newkirk manager; Chases, Baltimore county, Md. As to where best strains can be had, let me advise that a dog or puppy may be of a good strain and yet not of individual excellence. Buy no dog from a dealer unless you see him work. Like other game dogs they sell for from $20 to $100.

Many duck shooters, like partridge hunters, though honest, are totally obtuse on the main points of their dog stock, and do not see how their own differs from a vastly superior animal.

I know of no one breeding duck dogs about Baltimore for sale. An advertisement in FOREST AND STREAM or the Baltimore *Sun* would probably bring a reply.

GEO. BALDWIN.

ST. BERNARDS AT RICHMOND.

Editor Forest and Stream:

The awards of specials at the Richmond show, as recorded in your issue of Oct. 18, do not contain the special for best kennel of St. Bernards, which was awarded to my dogs, champion Hector, champion Daphne, Gemma I. and Alpine Chief. The omission was no doubt due to the fact that this special was competed for and awarded on Friday only.

The Virginia Field Sports Association had offered a kennel prize of $25 for the best kennel of St. Bernards, rough or smooth. I made my entries accordingly, one brace of smooths and one brace of rough-coats; but when the time came, my dogs were not allowed to compete because, in the catalogue, the special was specified as follows: "for the best kennel of four St. Bernards, rough or smooth *(best, whether rough or smooth, to be all of one kind)*" [the italics are mine].

On being informed of what had taken place I immediately entered a protest on the following grounds: Bench shows are given on the basis of an agreement (contract) between the clubs and the exhibitors. A club, in order to secure entries, offers certain prizes ("promises to pay"). This is one side of the agreement. The exhibitor, on the strength of the "promises to pay," made by the club, enters his dogs, subject to rules governing the show, and pays his entry fees. This is the other side of the agreement. This contract becomes binding to both parties by the fact of the club accepting the entry fees.

It is evident, therefore, that a club has no right to make any alterations in the premiums offered; for, if it does, the club violates its part of the contract, except the exhibitors be duly notified, before closing of entries, of such changes.

Mr. J. S. Wise, president of the association, appreciating the justice of my claim, decided that the special, as originally worded by the club, should be competed for. The competition took place on Friday.

I wish to thank Mr. J. S. Wise publicly for his love of fair play, all the more so because, as I have learned since, he paid the kennel prize out of his own pocket, the "catalogue-special" having been duly awarded on Tuesday and paid for by the association. K. E. HOPF.

ARLINGTON, N. J.

ST. PAUL DOG SHOW.

THE second annual exhibition given by the St. Paul and Minnesota Kennel Club closed its doors last Friday night. In point of quality this was a better show than the first attempt; and it speaks volumes for the dog men of the Northwest when they can bring together a fair lot of dogs without receiving much support from the Eastern fanciers. There were 296 entries, with very few absentees; in fact, there were more dogs on exhibition than at Syracuse. While the quality was not up to that seen at the great gathering at Buffalo, it was decidedly better than I expected to find at a show held hundreds of miles beyond the reach of a majority of owners. Twelve dollars is more than most people will pay for express charges on one dog. There are others who will not take the risk of sending their dogs so far away from home without an attendant, and still others who believe that long distance traveling, especially, wears a dog out, and that it may be fruitful of worse results to bitches that have been bred.

In regard to the management, nobody will deny that this was one of the best conducted shows that has ever been held in this country. No fuss, no hollowing, most perfect cleanliness, every little detail attended to without anybody seeing or knowing just how it had been done; in fact, a model show in many respects and one that reflects great credit to Mr. Chas. Weil, the superintendent, and to the show committee, Messrs. J. E. Stryker, H. T. Drake, W. G. Whitehead, J. W. Stevens and P. H. Gotzian.

Spratts looked to the feeding, and, as is usual, supplied the benching. I venture the opinion that a number of dogs went home pounds heavier than they came. One fellow in particular had a rare time at St. Paul, and if he didn't put on 6 or 7lbs. in the four days it was neither his fault nor Spratts'.

Prominent members of the club assure me that there were only two regretable features in connection with the show—a wet day, and a number of insulting, dictatorial and bull-dozing letters received from a rabid Detroiter, who evidently intended to run the show for the benefit of the "holy brotherhood." The club's worthy secretary, Mr. Stryker, is a prominent lawyer and is said to be an expert at handling this class of cranks; so it will be safe to predict that when the doctor's patent plaster shall be again unfolded to the public eye it will be found sticking to a diseased fragment of a defunct Michigan kennel club and not to the brawny and brainy sons of Minnesota.

MASTIFFS—(MR. MASON).

Taken as a whole this was a good class. While there was nothing of superlative merit, like the great Minting for instance, the quality was vastly better than I expected to find, and there were fewer spike-nosed camels than are usually found at the shows in this country. Championship honors were defended by Wacouta Nap and his old kennel companion Wacouta Rose. Both were in good condition and of course won. For points good and bad your readers need only to refer to previous reports in this paper. The open class for dogs was madeup of a useful and level lot of twelve, and so close in point of merit were the first three, that they gave me some trouble. Tiger Royal proved a winner, but with very few points to spare. He is of excellent color, has beautiful coat, and his markings are correct throughout. He is a little longer in foreface than I liked, and would be improved by volume of skull and muzzle. Lips, hanging perfectly; eyes, first-class in color, size, position and expression; ears, too large; wrinkles not well defined, but should improve; neck, well set but rather light; good back shoulders, loin and quarters; slightly weak below the hocks; not straight in forlegs; feet fairly well formed but turning outward; pasterns light; good tail, carried rather high; light in bone; moves fairly well; shows considerable quality and some character; is of more than average size and has a fine disposition; a useful second classs-pecimen that should improve; sire, champion Homer; dam, Florence. Breeder, Mr. J. E. R. Boudreau. The Moor, who was runner-up, is also a dog of far more than average merit. Color, fawn; black points, not very well defined; muzzle not long but should be blunter and wider; skull decidely above average, yet too flat in cheeks; forehead wide and flat, but not first-rate in wrinkle; color of eyes a shade or two too light; ears too large; expression pleasing; lips not well hung; neck should be stronger; chest well-formed and would be better with more width; good middle; excellent behind the hips; the right sort of a tail; forelegs well placed and straight, but flat and light in bone, instead of round and heavy; excellent coat and skin; moves freely; is of more than average size. A dog that has improved considerably. It is more than probable that he will beat the first prize winner if they meet twelve mouths hence. Sire, Ilford Caution; dam, Juno. Breeder, Mr. E. H. Moore. Edwy, vhc., is also a fawn with black points, but the ear color is not good. Skull square but rather deficient in volume; muzzle having the same failing as the skull, yet much above average; ears too large; color of eyes too light; expression would be good if color of eyes were darker; neck short and strong; chest deep and would be better if the ribs were more sprung; back and loin (which were much admired) of wrong formation; both show strength, but a greyhound outline is to be avoided in dogs of this breed; good hindparts; stands well and moves well; coat coarse; a well-grown young dog of a sort that should improve with age. Sire, Orlando; dam, Countess of Woodlands. Breeder, Mr. W. Wade. Lord Raglan, vhc., is a dog that would have won all before him in 1881, but the mastiff class is not now as it was then, and his lordship was clearly beaten, although not in type. Muzzle should be shorter, deeper, wider and better lipped; skull would be improved by size, especially width; wrinkles should be more prominent; ears, eyes and expression fairly good; neck powerful; chest deep, wide, and well rounded in the right place; loin strong and massive; hindparts muscular and truly formed down to hocks; hocks straight; stands on good feet; strong in limbs; not quite straight in front. An undersized specimen showing character and good breeding in his defective head, and having a cylindrical and well-knit frame set on to short legs. His formation behind the head is more nearly correct than that of any dog in the class. Sire, Crown Prince; dam, The Lady Rowena. Breeder, Dr. J. Sidney Turner. King Homer, vhc., shows character in head but is undersized, large and heavy in ears and crooked in front. He is a low-standing dog that shows he has good blood in his veins. Sire, Homer; dam, Florence. Breeder, Mr. J. E. R. Boudreau. Prince Cole, hc., deserved another letter. He has more volume of skull than any dog in the class, but is slightly dished in muzzle, also too long, and his light eyes give a rather bad expression; ears too large and not correct in carriage; no wrinkles; good neck, back, chest, shoulders and loin; fairly good hindparts, except tail, which is not well carried; stands on strong, good limbs; coat not first-classcolor s; mutty. He bears a slight resemblance to his sire, old champion Beau, but is much below the high form that was shown by Mr. Beaufoy's typical but undersized dog. Turk, hc., lacks in volume and muzzle, eyes wrong, carriage of ears not correct, has few wrinkles, lacks character, is somewhat slab-sided and rather light behind the short ribs. He has merit in other points, size included. Bruce, hc., is defective in muzzle and ears and has bad coat. Corsair, a winner at Milwaukee and Toledo, was unnoticed. He has small, bad head, lacking in nearly every essential point, is undersized and shown in wretched condition. It is perhaps as well to say that he would not be a winner under my judgment no matter how good his condition. Nero, c., is undersized, bad in coat, round in forehead and out of condition. He has merit in other points, more especially in ears, which are small and neat. I gave first in bitches to Vistala, that was first in the novice class at Barn Elms, 1887, and reserve at Warwick, 1888, and I was not a hair's breadth from withholding the prize for want of merit. Color light fawn with mask not well defined and ears fawn instead of black; skull too small for bulk of body; muzzle very small and pinched; wrinkle fair; eyes and expression good; ears small, but not right in bur and not lying as they ought to; strong neck, compact body, very light in bone, leggy, coarse in coat. A specimen that shows good breeding and some character through all her defects. Sire, Montgomery; dam, Nell. Breeder, Mr. A. Andrews. Frankie, second prize, is too light all over, muzzle, skull, body and limbs. Sire, Ilford Caution; dam, Bess. Breeder, Mr. E. H. Moore. Clytie, unnoticed, is houndy, large in ears and smutty in color. Bran, unnoticed, is weedy and bad in head. Phædra, unnoticed, is lame or would have won; she shows character in head, is low set and strong, with capital wrinkle. Lack of size is her weakest point. I did not consider either of the puppies worth a first. Duke, second prize, while large and massive, is round in forehead, large in ears, smutty in color, wrong in expression, defective in muzzle and shows the haw. He is not of a sort that I wish to see multiplied. Sire, Prince Cole; dam, Victoria.

ST. BERNARDS—(MR. MASON).

Champion rough-coats were represented by the well-known Lady Athol who was well shown. Folko II., a new one to me, was first in the open class of dogs. He held the same position at St. Paul and Milwaukee, 1887. Cheeks a trifle full; muzzle not quite clean below the eyes nor as deep in stop as it should be; eyes would be better if deeper set; correct ears well placed; expression pleasing and benignant; neck would be improved by more length; chest would be better if wider; back and loin strong but too short; hindparts too straight and rather light in proportion to bulk of foreparts; forelegs straight and set into truly formed feet; stern carried too high, it should be longer; coat showing slight curliness on quarters; rather light in bone; does not stand over sufficient ground; markings nearly correct; color excellent. A rather good-fronted, second-class dog showing character and having a fine disposition. Sire, Rollo; dam, Ouida. Breeder, Mr. A. King. Rex, second prize, is a number of points below the form shown by Folko. Markings irregular throughout and of course not correct; muzzle dished; forehead round; stop too deep; chest should be wider and back longer; hindparts somewhat light and hocks not well bent; stands on good legs and feet; coat rather curly. An undersized specimen that is not quite first-class in any point. Sire, Bernhard; dam, Belina. Breeder, Mr. Rittmann. Le Roy hc., has fairly good head and good forelegs, but he is of washy color, has hound ears and is not right behind. Rex, hc., lacks in markings, muzzle, forehead and eyes. He has good body and limbs. Donatello, hc., has plain head, badly carried ears and is curly in coat as well as being undersized. Cæsar, unnoticed, is a dark sable dog. His only recommendation consists in his being entered in the St. Bernard class. Otto II., also unnoticed, is a low standing, good bodied, crooked legged, but heavily boned dog with a head that—well, came to him from Otto I. and Irma. He won first and second Milwaukee 1885 and 1886, and second St. Paul 1887. He is a massive tawny dog, and some persons consider him a St. Bernard. Rough-coated bitches were a very uneven lot and a hard class to judge. Just look at them. Chequasset Minna, my second prize winner at New Haven and Buffalo, was as thin as a rail. Noble Ida, first Glasgow and Dublin, was as fat as a pig and as flabby as dough, in addition to having a blemish in one eye. Thora refused to budge an inch and lay down in the ring. Torie is a seven-mouths-old puppy. These were the pick of the lot. Thora, a rather undersized one, with correct markings, a fairly good head and average body, limbs and coat, won. But I waited a full half hour before she could be made to stand up and move across the ring. Minna and Ida were pegged back on account of condition, and this left the puppy Torie, that was in elegant condition, the best at the time of judging. She has capital body, good tail and excellent coat, but is not right in head, and probably never will be. The forehead is too prominent, muzzle not deep enough, and set of ears not quite the thing. Her color is faint, and she is not perfectly straight in front. This last defect will, I feel sure, be outgrown. Sire, Folko II.; dam, Belle. Breeder, Mr. J. H. Schultz. The winner is by Folko II. out of Barrina, and was bred by Mr. W. H. Dent. Noble Ida is of more than average size and stands on good limbs. Her head is too mastiff-like, also expression, and she is not straight in coat. Naiad, vhc., shows houndiness in head, but has good body, legs and feet. Barrina, c., has plain head and wrong expression. Torie, second in the open class, was an easy winner among puppies. Queen, vhc., is wrong in markings, round in skull and not square enough in muzzle. Rex, vhc., was hc. in the dog class (open). Victor Joseph was absent from the champion class for smooth-coats, and Blanca was the only one in the open class, Pluto being absent. She is fairly good in head and body, but stands over little ground; is a trifle leggy, and neither as good in bone, feet nor tail as she should be; coat correct, carriage free. Sire, Belisa; dam, Furka. Breeder, Mr. E. Baur.

LEONBERGS AND NEWFOUNDLANDS—(MR. MASON).

Monarch, the first prize Leonberg, is a grand big dog, with truly formed body, good coat; most excellent forelegs and feet and fairly good hind ones. Newfoundlands a bad lot as usual. Withheld first prizes in both classes. Life is too short and space too valuable for one to waste over every large black dog he sees at a show.

GREAT DANES—(MR. MASON).

This was a good class, the best by far that I have seen in America. Don Cæsar, that did a lot of winning at the Western shows in 1888, was a worthy competitor for championship honors. He was in tiptop condition. I gave first in the open class for dogs to a blue of fair size. Muzzle of good length, but showing slight weakness; skull correct; color of eyes too light; expression not correct; neck throaty; chest would be improved by depth, but is not badly formed; loin true in outline but somewhat too light; quarters decidedly better than average; there should be more strength from the second thighs downward; stands on most excellent forelegs and feet; is fairly active and shows some quality. Moro, second prize, is a black. Stop not correct, too deep; muzzle should have a cleaner cut appearance all the way from nose to eyes; expression not just right; neck long and strong, but not quite clean; ribs too flat; loin should be stronger; stifles and hocks too straight, good shoulders, forelegs straight but too light, especially about the pasterns, toes should be more arched, moves fairly well, coat hardly of first quality, a gamer looking dog than the winner. Grand Duke, vhc., is short in head and will be cheeky, he is also too small and light in bone for his age, thirteen months. Count Vladimir, hc., is a rather coarse-headed brindle. Donna Minca, first in bitches, is a good fawn, and if shown will do a lot of winning. She has nice clean head, with correct expression, strong, well-set neck that is clean as a sword and properly carried; back, chest and loin much above average, second thighs rather light, shoulders not well placed, and forelegs not set quite right, feet should be deeper in pads with toes closed and well arched, coat could not be better, shows character and quality, the best bitch that I have seen in America. Teufel, second prize, pressed the winner very close. Her excellent forelegs and feet, fair head and better than average body will always keep her well to the front when she is shown in fairly good company. Flora, vhc., shows much quality, especially in head, but her rather weak

back, bad shoulders, light limbs and defective feet put her back. Cosette, c., is an undersized fawn with wrong muzzle and expression. I withheld first in puppies and awarded second to a rather plain-headed one that will not, I fear, make a record in the class for all ages. The rest were decidedly defective in head.

DEERHOUNDS—(MR. DAVIDSON).

Mac, that was always a good one, yet not first-class, won the champion prize without competition. Fergus was a good winner in the open class for dogs. Head should be larger and stronger looking; good eyes and fairly good expression; ears too large; neck, chest, back, loin and quarters much better than average; hocks should be set lower; shoulders should be set further back; straight legs and good feet; light in bone; coat on sides of body should be harder; a rather leggy specimen that does not stand over sufficient ground. Oscar, second prize, like nearly all of the Van Hummell dogs, is bad in coat. To be a good one he should have better head, smaller ears, longer neck, better sprung ribs, more bend in hocks, better shoulders and more size. First in bitches went to Phillis, an undersized and rather weedy bitch. I preferred the vhc. Heatherbelle for the place. Hylda, second prize, was lucky in beating Heatherbelle. She has neither the size nor the strength of the vhc. bitch and has a nasty soft coat. The two puppies shown will never make a mark in good company.

GREYHOUNDS—(MR. DAVIDSON).

A weak class of three. The winner in the dog class has a very plain head and lacks power behind. The second prize winner is one of the parlor sort, a pretty dog with beautiful coat, but not quite a greyhound. Only one bitch was shown, and she is not first-class in any of the more essential points.

CHESAPEAKE BAY DOGS—(MR. DAVIDSON).

These were considered a good class. If lack of uniformity of type is a leading quality of the breed they were a marvellous lot. Frankly, are these dogs anything more than a lot of honest, hard-working and faithful mongrels? And may I ask which is correct, a head like a mastiff's, English retriever's, greyhound's or Great Dane's? Should the chest be wide like a bulldog's or deep and narrow? Should the eyes be yellow, black, brown or of what color? Is the correct carriage of tail high, low or straight out? Do the animals resemble each other in anything but texture of coat and ability to work? Where is the standard for judging, and where can be found the man that is able to describe a good specimen? I am after information. Well, gentlemen, ten brown dogs were shown; they were every one of them the best, the decisions were correct, and would have been whichever of the lot had won, and the judge was Mr. Davidson. I asked him a few questions and soon found that he is quite at home with the breed; that is to say, he knows almost as little about it as anybody else, owners included. Drake, owned by the Osceola Kennels and catalogued at $100, won second prize. Water, from the same kennels, and catalogued at $40, won a first. Duck, another $40 worth, didn't get a card. Dundee, from the same kennels, took vhc., and is catalogued at $250 and entered as being of "perfect type" (I never saw one like her before). There is seldom any "kicking" over the awards in this class, because the exhibitors know so much about nothing that they don't deem it wise to say anything; and the judges invariably assume a know-nothing demeanor which it would be exceedingly impolite to disturb. Dog shows have been held in this country during the past fifteen years, and during that time exhibitors and judges have decided that the Chesapeake Bay dog is a brown dog. Will they teach us as much during the next fifteen years?

POINTERS—(MR. DAVIDSON).

First in the heavy-weight dog class went to a wide-headed, round-barreled, bad-shouldered son of Sensation and Rose. He was as good as anything in the class, but is not a show dog. Dash Ranger, with little else than a fairly good head to commend him, was second, and Cato, a coarse dog with average head, was vhc. Bill Bow, hc., is shallow in head, wrong in stop, light in body and weak in back. Bello, c., has coarse, plain head, heavy neck, flat loin, bad tail, and is long cast and wrong behind. The awards in favor of dogs like Sensation and Croxteth, over sterling pointers like Bow and Faust, has resulted exactly as any judge of the breed must have foreseen. With the exception of the dogs that have been recently imported, there are scarcely any decent-looking large pointers on the show bench. Bitches were better than dogs, but there was neither a Flirt, a Maggie nor a Lady Isabel among them, in fact none are of correct type. Venice, the winner, is a white and lemon, showing far more quality than strength and character. She is round in forehead, not quite clean below the eyes nor deep enough in foreface, rather throaty, wider in front than I like, rather heavy in shoulders, with legs not set just right and limbs rather light in bone. She is fleshy and strong, has good back and loin and stands on good feet. Lady Shultz has a fairly good head, but lacks bone and substance and is straight behind; she was rightly placed second. Fanny, vhc., shows hound character, but has a good top. Light weights were decidedly better than the heavy brigade. Queen Bow, who is well-known, was the only champion bitch; she was well shown. Donald IV., winner in the open class for dogs, was first in puppy class at Boston, 1887; he has grown wide in front gets his tail up very high and has fallen off generally. He still shows good breeding and stands on proper legs and feet. Tom, second prize, is a flashy looking white and lemon that does not improve on acquaintance. He is too light all over, especially in second thighs and hocks, which show weakness. Western Bang Bang, c., has a very coarse head and is not up to show form. Bitches brought out a rather smart one in Lady Price, a daughter of Graphic and Mealy. Small, but a pointer every inch of her; the defects are in stop and stifles. Countess Flora K., second prize, is defective in muzzle, ears, forehead, neck, chest, position of elbows, and in loin. She is also underhung and lacking in true character. I thought her outclassed by the winner. Floss Bang has inherited her sire's black nose and coarse head and neck, and is flat in loin. Queen Bangor, c., has bad head and is throaty and shelly, she stands on fairly good legs and feet. Idstone's Fancy is not, I can assure the owner, of a sort that would have suited the lamented judge and author whose *nom de plume* she bears. Weak head, bad ears, straight hocks, shelly. Not a show bitch. Puppies were a very poor lot. Mr. Davidson handled the classes well.

SETTERS—(MR. DAVIDSON).

First in dogs went to Manitoba Gladstone, a son of Mark J. and Cambria. He is a blue belton, and while not up to high class form has the appearance of a workman; in fact is of a useful sort. His defects are light eyes, muzzle of average length and fairly well formed, yet not as neat as I wish to see; rather tight in lip, a bit plain in stop, carriage of ears not just right, yet not bad; set of forelegs might be better, tail carried somewhat too high. In other respects he will do. Dick Bondhu, from the same kennel, was second, rightly placed; he is a rather undersized white and black that shows more quality than strength. Head not badly formed, but not just right in expression and somewhat deficient in character, neck rather short, good chest, back and shoulders, a trifle weak from the second thigh downward, tail too long and carried high, light in bone, moves freely; a useful-looking second class dog. Sire, Dashing Rover; dam, Duchess Primrose. Count Henricks, vhc., is too plain in head to get to the front of a good class. Gladiator, hc., has poor head, light loin, is tucked up and lacks in position of shoulders. Dick Berwyn, c., has a fairly well formed head, but it is too large in proportion to the size of his body; bad eyes, throaty, great bone. A big, strong dog, built on good lines, but too coarse all over. Clan Warwick, c., is very coarse in head. The others were honest-looking field dogs that have no business in good company. Mr. Davidson got the right one first in bitches. She is a white, black and tan bitch, showing far more quality than power. Muzzle a trifle too light and not clearly cut below the eyes; stop should be deeper and eyebrows a little more prominent; skull well formed; ears good in quality, position and carriage; eyes and expression nearly all that mind can wish; neck long, clean and elegant; back a trifle hollow; loin should be arched (slightly) not flat; short ribs should be deeper; clean shoulders; forelegs not perfectly straight; second thighs light; coat rather short but free from curliness; heavily feathered below the hocks; feet not first-class; moves freely; tail long and badly carried; a specimen that has more than average merit. Sire, Lug-Dhu; dam, Pickles. Manitoba Belle, second prize, a field trial bitch, was rightly placed over her kennel companion Cambria, being better in all points except coat and bend of stifles and hocks. She has a good head, with true setter eye and expression, and would have excellent forelegs if the knees were stronger; feet excellent; body better than average; stern well set; stifles not well bent; hocks very much too straight; coat of good quality but showing curliness throughout; carriage gay; size medium; coat and hindlegs will always put her back when she meets a strong class. Cambria, vhc., is shallow in skull and muzzle, short in ears, not right in eyes, light in bone, wrong in tail, and her forelegs are not in good position; good back and loin; truly formed feet; straight coat of fair quality. An undersized and wiry-looking specimen that has the appearance of a fast mover. Sire, Cambridge; dam, Pet Laverack. Polly, vhc., is sheepish in expression and light in quarters. Pearl Bondhu, vhc., is fairly good in head, stands on good legs and feet, but lacks in coat and in a number of more important points. Lady F., hc., is bad behind. Her head shows some character, but too closely approaches the pointer's in outline and in expression. Dashing Flora, hc., is defective in head, carriage of ears, shoulders and hocks. Kate Gladesse, c., is deficient in head, eyes and ears, but is not badly put up. Western Queen, c., is rather coarse in head and is flat in loin, wrong in set of forelegs and straight behind. Of the four puppies shown I doubt if any will be heard of in the future. Blarney and Nellie graced the Irish setter champion classes. I do not think that the class was much better than at Syracuse or Richmond. There were more entries, but the quality was not much higher than at those shows. Red River Glencho, first prize, is a strong but rather coarse dog. Skull too wide and heavy and not well peaked, muzzle not clearly cut below the eyes and showing slight coarseness from eyes to nose, it is not lacking in length and has sufficient depth and well hung lips; color of eyes too light; ears well formed and properly set; neck should be longer and cleaner; ribs should show more bend, and the short ones should be deeper; back and loin strong; rather light from second thighs to toes; hocks too straight; good shoulders, forelegs and feet; rather leggy and short between the couplings; coat rather short; color rich and bright; stands and moves well. Red River Prince, second prize, is flat in head and his muzzle is too wide; it is not a narrow, clean cut, neat and stylish head like one wants in a dog of this breed; good eyes and expression; ears should be of finer quality, the leather is too thick; neck rather heavy; chest and loin fairly well formed; quarters excellent; good stern and merry tail action; back near loin showing a weak spot; shoulders not just right; useful size; color not first-rate. A useful looking second-class specimen. Mike, vhc., is plain in head and flat in loin. Irish Tom, vhc., has a coarse, stumpy head, is straight behind, flat in loin and gets his tail too high. Red River Jim, hc., has a coarse, sour head, notwithstanding that his sire was that typical headed little dog Bruce. In back and loin there is room for improvement, and he is too straight behind. Mat C. is coarse in head, throaty and wrong in coat, but is useful looking. Nellie H., first in bitches, was, I thought, rather lucky in winning over Berna and Lou III. Defects: Skull flat; stop too wide; muzzle should be deeper; ears too high; expression not quite right; travels too close behind; thick through the shoulders, tail not well carried; color rather too light. She is quite up to show form in other points but her head is too plain to allow of her winning in fairly good company. Berna and Lou III. have been fully described, and recently. Flossy, vhc., is plain in head and bad in color, but has good body. Red River Jessie, vhc., was not on the bench when I called. Juno hc., is snipy, and weedy throughout. One of the puppies, Kildare Maud, may be heard of again; sweet head; fine eye; straight pins; fairly good body; light in bone; bad tail. A five months old specimen showing much quality. Gordons a weak class as usual. Don and Rose the winning champions are well-known. Neither would be in the champion class in England, but here, where anything that is black and tan can win prizes and be described as typical, they are as good as the average. Rory, first in open dog class, is a very coarse dog. I could improve upon him in every point. Jack, second prize, lacks true Gordon character, is very faulty in head, neck, ribs, hindquarters and tail and lacks general quality. Vic, first in bitches, would be outclassed by good ones and the winning puppy would be dear at the catalogue price, $25.

SPANIELS—(MR. DAVIDSON).

Irish water were a useful-looking lot. Two are prize winners at other shows, but I want something vastly better than either. Head, eyes and expression wrong; too small; wrong in back, loin and quarters; too short in legs; coat open instead of close and tight in curl. Not at all the proper thing, gentlemen. Brant and Juno W., looking well, won the champion prizes for cockers, and the bitch, probably on account of being longer in legs than the dog, won the special, the runner-up being Mike, who is about thirty points in a hundred below Brant's form. Life is too short to allow a man to follow "Honest John" through his spaniel judging, but it won't do to have Mike on record as a better specimen than Guy, second prize. I will fully describe both of these dogs. Mike, black with white spot on breast; muzzle neither deep nor clearly cut; ears of good quality and average length, but set too high; eyes and expression just fair; head well carried; neck of wrong formation; chest as flat as a Bedlington terrier's; ribs set in like the legs of a milking stool; loin long, narrow and flat; hindquarters similar to those of the cat, being flat and narrow; stifles and hocks too straight by far; tail carried way up; forefeet flat and turning outward; fairly good coat; travels very close behind; leggy; not a show dog. Guy, although a long way from being a good one, is many points ahead of the winner. He is a black dog with white streak on breast and throat, cheeks a trifle full, muzzle should be deeper and blunter, good ears and expression, body truly formed except that the loin is a trifle light in proportion with build of forepart, excellent behind the hips, stern well set and properly carried, forefeet a trifle out, flat coat, moves well. Busy was best in the bitch class, muzzle snipy, otherwise a fairly good one. Lady, second prize, is very crooked in forelegs and weak in knees and pasterns, snipy and tight lipped; up to show form in other points, but not perfect in any. Clumbers and field spaniels did not show up.

COLLIES—(MR. MASON).

Scotilla, Flurry II., Charleroi II. and Flurry III. took the first prizes in the all-age classes, their only competitor being Fanny Royle, who shows quality and character, but is wretchedly bad in hindlegs. Scotilla, not in good coat and Flurry II. getting worse for wear, left Flurry III. a rather easy winner of the special for best collie in the show. She has improved since I placed her first at Boston and in her present condition can beat any collie in America; a great credit to her breeder. Hold on to this Mr. Harrison—a good one. The winning puppy has good head and general quality but will be weedy when developed.

TERRIERS—(MR. MASON).

Bull-terriers were weak classes and I gave the special to a puppy that out-classed the others in head and is fully as good in other points. Nick, first in fox-terrier dogs, is a very useful terrier, rather weak in foreface, not so strong in loin as he should be and a trifle open in coat, good skull and ears, stands well on good legs and feet. Cotswold Jacko is not first-class in head, stands a bit wide and might be better in legs and feet, nice size, good body and fairly good coat. Zero, first in bitches, is a useful-looking wire-haired one with good body, average legs, moderate head and coat too soft. Fly, second prize, is defective in head, expression, legs and coat. Puppies a poor lot, with Zero an easy winner. The winners in Scotch, Dandie and Irish classes are all well known to readers of FOREST AND STREAM.

TOY DOGS—(MR. MASON).

There were some good ones in these classes. Dr. Cryer won most of the prizes with his well-known team, and there was a very promising youngster in the open class for dogs. His name is Kash. Fairly good skull; muzzle rather long but not pointed; good ears; eyes of more than average size and of good color; wrinkles would improve him; body should be heavier; the outlines are elegant; excellent stern; a trifle leggy; beautiful color; coat could not be better; very gay; the best son of Bradford that I have seen and very much like his sire. Peggie II. crowded Myrtle in the bitch class, and may beat her by and by; quite a promising puppy. Yorkshires bad as usual; short in head and body coat and wrong in color. Philadelphia Charlie, the first prize King Charles spaniel dog, is weedy and deficient in head properties. Topsy, first prize in miscellaneous class, is not right in texture of coat, still she is the nearest approach to a Maltese terrier that I have seen in America. Following is a list of the

AWARDS

MASTIFFS.—CHAMPION—*Dog:* E. T. Woodcock's Wacouta Nap. *Bitch:* Wacouta Kennels' Wacouta Rose.—OPEN—*Dogs:* 1st, Chas. E. Thompson's Tiger Royal; 2d, W. P. Rigg's The Moor. Very high com., Dr. G. B. Ayre's Edwy, C. E. Thompson's King Homer, Wacouta Kennels' Lord Raglan. High com., Chas. E. Thompson's Turk, Henry J. Moreton's Prince Cole, Mrs. C. E. Fowler's Bruce. Com., Henry J. Moreton's Nero. *Bitches:* 1st, Wacouta Kennels' Vistula; 2d, G. W. Freeman's Frankie. *Puppies:* 2d, H. L. Alexander's Duke. Special for best kennel not less than four, Wacouta Kennels.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* No entry. *Bitch:* R. J. Sawyer's Lady Athol.—OPEN—*Dogs:* Hiawatha Kennels' Foiko II., 2d, Herzog Bros.'s Rex. High com., Jesse H. Soule's Le Roy and Rex. F. G. & W. A. Topliff's Donatello. *Bitches:* 1st, Wm. H. Dent's Thora; 2d, Hiawatha Kennels' Torie. Very high com., Jesse H. Soule's Naiad, Coughcura Medicine Co.'s Noble Ida. Hiawatha Kennels' Chequasset Minna. Com., Coughcura Medicine Co.'s Merchant Princess, Hiawatha Kennels' Barrina. *Puppies:* 1st, Hiawatha Kennels' Torie. Very high com., Jesse H. Soule's Rex and Queen.—SMOOTH-COATED—CHAMPION—*Dogs:* Absent. *Bitches:* No entries.—OPEN—*Dogs:* Absent. *Bitches:* 1st, Herzog Bros.'s Blanca. *Puppies:* No entries. Special for the best kennel rough or smooth-coated, not less than four, Hiawatha Kennels.

LEONBERGER.—*Dogs:* 1st, Miss Mary Wellesby's Monarch. *Bitches:* No entries.

NEWFOUNDLANDS.—*Dogs:* 1st, H. E. Hullsick's Nero. *Bitches:* 2d, Rachel A. Soule's Gyp.

GREAT DANES.—CHAMPION—*Dog:* Osceola Kennels' champion Don Cæsar. *Bitch:* No entries.—OPEN—*Dogs:* 1st, Wm. H. Thurston's Cæsar; 2d, Herzog Bros.'s Moro. Very high com, Geo. H. Bushnell's Grand Duke. High com., Osceola Kennels' Count Vlademir. For the best kennel not less than four, Osceola Kennels. *Bitches:* 1st, Osceola Kennels' Donna Minca; 2d, Herzog Bros.'s Teufel. Very high com., Osceola Kennels' Flora. Com., Osceola Kennels' Cosette. *Puppies:* 2d, Wm. H. Thurston's unnamed.

DEERHOUNDS.—CHAMPION—S. W. Skinner, Jr.'s Mac.—OPEN—1st, S. W. Skinner, Jr.'s Fergus; 2d, S. W. Skinner, Jr.'s Oscar. *Bitches:* 1st, A. G. Stoddard's Phillis; 2d, S. W. Skinner, Jr.'s Hylda. Very high com., S. W. Skinner, Jr.'s Heatherbelle. *Puppies:* 1st and 2d, A. G. Stoddard's unnamed. Best kennel not less than four, S. W. Skinner, Jr.

GREYHOUNDS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Wm. F. Peet's Launcelot; 2d, W. H. Crary's Pegg. *Bitches:* 1st, W. H. Crary's Pearl.

CHESAPEAKE BAY DOGS.—ROUGH-COATED.—*Dogs:* 1st, J. W. Stevens's Dick; 2d, Osceola Kennels' Drake. *Bitches:* 1st and 2d, Osceola Kennels' Miss Fortune and La Porte.—SMOOTH-COATED—*Bitches:* 1st, Lake Side Kennels' Gympsc; 2d, Osceola Kennels' Traitress. Very high com., Osceola Kennels' Dundee.—*Puppies*—ROUGH AND SMOOTH-COATED—1st and 2d, Osceola Kennels' Water and Foam. Best kennel Chesapeakes, Osceola Kennels.

POINTERS.—LARGE—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Dr. Hansen's Duke; 2d, L. C. Gould and J. M. Ingraham's Dash Ranger. Very high com., Dr. Hansen's Cato. High com., Northwestern Kennels' Bill Bow. Com., Otto Adler's Bello. *Bitches:* 1st, B. F. Lewis' Venice; 2d, Lakeside Kennels' Lilly Schultz. Very high com., Otto Adler's Fanny.—SMALL—CHAMPION—*Dogs:* No entries. *Bitches:* Columbus Kennels' Queen Boyd.—OPEN—*Dogs:* 1st, Des Moines Pointer Kennels' Donald IV.; 2d, Frank Simpson's Tom. Com., Northwestern Kennels' Western Bang-Bang. *Bitches:* Des Moine Pointer Kennels' Lady Price; 2d, Northwestern Kennels' Countess Flora. Very high com., The Elms Kennels' Floss Bang. High com., Columbus Kennels' Idstone's Fancy. Com., The Elms Kennels' Lady Queen, John Ure, Jr.'s Queen Badger.—PUPPIES—*Dogs:* 1st, King Don Pointer Kennels' Lad King Don. High com., The Elms Kennels' Knight of Elms. Com., The Elms Kennels' Rex of Elms.—*Bitches:* 1st, Northwestern Kennels' Queen Bow; 2d, W. S. Monroe's Lady Anna. Best kennel of pointers, Northwestern Kennels.

ENGLISH SETTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st and 2d, Manitoba Kennels' Manitoba Gladstone and Dick Bondhu. Very high com., J. J. Snellenburg's Count Henricks. High com., Edward Edmunds' Gladiator. Com., Charles Thompson's Dick Berwyn, The Elms Kennels' Trumpeter.—*Bitches:* 1st, The Elms Kennels' Countess Amelia; 2d, Manitoba Kennels' Manitoba Belle. Very high com., Manitoba Kennels' Cambria, B. F. Lewis' Polly, Columbus Kennels' Pearl Bondhu. High com., A. A. Bogen's Dashing Flora, John Pfister's Lady F. Com., John Ure, Jr.'s Kate Gladesse, A. A. Bogen's Western Queen.—PUPPIES—*Dogs:* 1st, Northwestern Kennels' Duke of St. Paul; 2d, The Elms Kennels' Monk of Li nem. *Bitches:* 1st, Ed Edmunds' Ice Palace Beauty; 2d, F. J. Chipman's Gladiator Kate. Best kennel not less than four, Manitoba Kennels.

IRISH SETTERS.—CHAMPION—*Dog:* E. W. Clark, Jr.'s Blarney. *Bitch:* Chas. H. Thompson's champion Nellie.—OPEN—*Dogs:* 1st and 2d, Hanly Bros.'s Red River Glencho and Red River Prince. Very high com., The Elms Kennels' Irish Tom and Northwestern Kennels' Mike. High com., Hanly Bros.'s Red River Jim. Com., Chas. M. Seebrock's Mat. *Bitches:* 1st, Henry Schubert's Nellie H.; 2d, Dr. E. E. Kirk's Berna. Very high com., Hanly Bros.'s Red River Jessie, Oscar Jones's Flossy and Columbus Kennels' Lou III. High com., John J. Ahern's Juno. Com., The Elms Kennels' Jess.—PUPPIES—*Dogs:* 1st, Lake Side Kennels' Minnie Morris *Bitches:* 1st, Lake Side Kennels' Kildare Maud; 2d, R. J. Goette's Belle. Best kennel not less than 4, Hanly Bros.

BLACK AND TAN SETTERS.—CHAMPION—*Dog:* W. E. Rothermel's Don. *Bitch:* Walter S. Hammett's champion Rose.—OPEN—*Dogs:* 1st, Northwestern Kennels' Rosy; 2d, E. L. Shackford's Jack. *Bitches:* 1st, B. F. Lewis's Vic. *Puppies:* 2d, Northwestern Kennels' Nellie Gordon.

IRISH WATER SPANIELS.—CHAMPION—B. F. Lewis's Jess.—OPEN—*Dogs:* 1st, The Elms' Kennels' Dan J. *Bitches:* 1st, The Elms Kennels' Mollie S. *Puppies:* 2d, Miss Nettie Pfister's Joe Murphy.

CLUMBER SPANIELS.—No entries.

FIELD SPANIELS.—ANY COLOR, OVER 28LBS.—No entries.

COCKER SPANIELS.—OVER 28LBS.—CHAMPION—*Dog:* Brant Cocker Kennels' Brant. *Bitch:* Brant Cocker Kennels Juno W.—ANY COLOR EXCEPT BLACK.—OPEN.—1st, Brant Cocker Kennels' Pearl; 2d, Osceola Kennels' Patter, Very high com., G, G

Thorne's Gyp. High com., H. B. Thorne's Shena. Com., Wm F. Peet's Dora.—BLACK—OPEN—*Dogs:* 1st, Brant Cocker Kennels' Mike; 2d, Osceola Hennels' Guy. Very high com., J. W. Stevens' Ben. High com., Osceola Kennels' Tanie. *Bitches:* 1st, Brant Cocker Kennels' Busy; 2d, Brant Cocker Kennels' Lady. Very high com., Osceola Kennels' Black Sis. High com., Osceola Kennels' Daughter. Com., Osceola Kennels' Flora. *Puppies:* 1st, Osceola Kennels' Maude. Best kennel of cockers, Brant Cocker Kennels.

BEAGLES.—CHAMPION—Woodbrook Kennels' Lou.—OPEN—No entries.

DACHSHUNDE—1st, B. F. Lewis's Jill; 2d, J. S. Haack's Grit.

FOXHOUNDS.—*Dogs:* 1st, Chas. Lehmann's Schneider; 2d, Miss Anna K. Stryker's Fritz.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' champion Scotilla. *Bitch:* Chestnut Hill Kennels' champion Flurry II.—OPEN—*Dogs:* 1st, Chestnut Hill Kennels' Charleroi II. *Bitches:* 1st, Chestnut Hill Kennel's Flurry III. *Puppies:* 1st, Hugh A. Wetmore's Effie. Best kennel not less than four, Chestnut Hill Kennels.

BULLDOGS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, J. W. Niblette's The Judge. *Bitches:* 2d, Thos. Patter's Hillside Queen *Puppies:* No entries.

BULL-TERRIERS—OVER 25LBS.—CHAMPION—No entries.—OPEN—2d, John Callahan's Ned.—UNDER 25LBS.—2d, Wm. Mariner's Venture. *Puppies:* 1st, Wm. Mariner's Vic; 2d, The Elms Kennels' Ruth.

FOX-TERRIERS.—*Dogs:* 1st, Louis W. Hill's Nick; 2d, W. B. Robinson's Cotswold Jacko. Very high com., Louis W. Hill's Pete. High com., W. H. B. Medd's Frank. *Puppies:* 1st, W. H. B. Medd's Zero; 2d, Louis W. Hill's Pete. Very high com., W. H. B. Medd's Raffle. High com., W. H. B. Medd's Frost, A. E. Pitt's Blemton Deacon, G. C. Maclagan's John L. Sullivan. Best kennel, not less than four, L. W. Hill.

SCOTCH TERRIERS.—*Dogs:* 1st, John H. Naylor's Lowrie Dunbar. *Bitches:* John H. Naylor's Rosie.

DANDIE DINMONT TERRIERS.—*Dogs:* 1st, John H. Naylor's Border Clinker; 2d, John H. Naylor's Bonnie Briton. *Bitches:* J. H. Naylor's champion Pansy.

SKYE TERRIERS.—1st, Dr. M. H. Cryer's Gladstone Boy; 2d, John H. Naylor's Dollie.

IRISH TERRIERS.—1st and 2d, Chestnut Hill Kennels' Breda Tiny and Breda Jim.

BLACK AND TAN TERRIERS.—No entries. For best collection of terriers not otherwise classified, J. H. Naylor.

PUGS.—CHAMPION—*Dog:* Dr. M. H. Cryer's Dude. *Bitch:* Dr. M. H. Cryer's champion Bessie.—OPEN—*Dogs:* 1st, A. E. Pitts's Kash; 2d, Dr. M. H. Cryer's Othello. Very high com., Mrs. John S. Barnes's Oscar. *Bitches:* 1st, Dr. M. H. Cryer's Myrtle; 2d, Geo. Gillivan's Peggie II. Very high com., Fred. E. G. Fischer's Pinkie. High com., Coughcura Medicine Co.'s Tony. *Puppies:* 1st, Geo. Gillivan's Peggie II.; 2d, Mrs. John S. Barnes's Ruby. Best kennel not less than four, Dr. M. H. Cryer.

KING CHARLES SPANIELS.—1st, Robert Crissy's Philadelphia Charley.

BLENHEIM SPANIELS.—1st, Morris Dallett's Little Banjo.

YORKSHIRE TERRIERS.—1st and 2d, Mrs. Thomas Race's Jack and Gypsy.

MISCELLANEOUS.—OVER 25LBS.—Withheld.—UNDER 25LBS.—Miss Ida Ormo's Topsy.

SPECIAL PRIZES.

Best mastiff owned in St. Paul, Tiger Royal; puppy, Duke; in open class, Tiger Royal. St. Bernard owned in St. Paul, Folko II.; in show, Lady Athol; best collection, Hiawatha Kennels. Great Dane in show, champion Don Cæsar; collection of Great Danes, Osceola Kennels. Kennel deerhounds, S. W. Skinner, Jr.; in show, Pearl. Best Chesapeake Bay owned in St. Paul, Dick and Gympse equal; Chesapeake puppy in show, Water; Chesapeake dog or bitch in show, Dick and Gympse equal; collection of Chesapeake dogs, Osceola Kennels; Chesapeake Bay dog exhibited by member of the club, Dick. Pointer dog or bitch, Lady Price; owned in St. Paul, Dash Ranger; collection from Minnesota, Wisconsin or Dakota, Northwestern Kennels. English setter puppy in show, Duke of St. Paul; English setter, Countess Amelia; pair, Manitoba Gladstone and Manitoba Belle; puppy, Duke of St. Paul. Irish setter, Blarney; puppy, Kildare Maud; collection from Minnesota, Wisconsin, or Dakota, Hanly Bros. Black and tan setter in open class, Vic; puppy, Nellie Gordon; collection, Rory and Nellie Gordon. Irish water spaniel, Jess; collection, Dan J. and Mollie S. Cocker spaniel, Juno W.; puppy, Maude. Beagle, Lou. Foxhound, Schneider. Collie, Flurry III.; kennel, Chestnut Hill Kennels. Bulldog or bitch, The Judge. Bull-terrier, Vice. Fox-terrier owned in Minnesota, Nick. Pug, Dude. Most creditable entry from Minneapolis, Monarch. Best entry by a lady, Monarch. Sporting dog from Minnesota, Wisconsin, Dakota and Iowa, Lady Price. Best setter, Blarney. Toy dog, Dude. Collection of non-sporting dogs, Chestnut Hill Kennels. Largest collection sporting dogs, Elms Kennels. Collection of terriers, J. H. Naylor. Largest dog in show, Monarch. Collection of water dogs, Osceola Kennels. Dog or bitch unclassified under 25lbs., Topsy. Decorated stall, Mrs. Race. Largest collection of Chesapeakes, Osceola Kennels. Largest showing of setters, Elms Kennels.

DOG TALK.

THE Robins Island Field Trials will be run Dec. 17, 18 and 19. Entries will close Nov. 15, and should be sent to Mr. Samuel B. Duryea, 47 Remsen street, Brooklyn. The prizes in All-Age Stake are silver-mounted belt, silver-mounted whip and silver whistle; in Derby Stake, silver collar, and Brace Stake, silver cup. Entry fee, $5. The Robins Island Club trials are one of the most enjoyable field trial events of the year. The members gather in the handsome club house and good fellowship reigns supreme.

Mr. J. W. Renfroe advises us that reduced railroad fares will be secured for those who attend the Southern trials.

The National Dog Club has announced to the American Kennel Club an expression of its readiness to co-operate with the latter in advancing kennel interests. The great majority of individual breeders would rejoice to see harmony reign, and they will approve the manly course of the National's committee in this latest step, which indeed is exactly in line with what has been the policy of the club since its organization.

"Clumber" wishes us to say that in his note on the dog's sense of smell, in our last issue, he wrote wily grouse instead of early grouse. The grouse is both wily and early, and one has to get up early in the morning to get ahead of him.

In Indiana field trials entries King's Girl named as owned by J. H. Lewis, is the property of Mr. John H. Law, of Cincinnati, O., who has done so much as a State Fish and Game Commissioner, to advance the interests of sportsmen in Ohio. King's Girl is a lemon bitch, by King's Boy out of Dadie L.

The Pacific Coast Field Trial Club anticipates a very successful meeting in January in Kern county. Birds are plentiful, and a large tract of country is being preserved and looked after by the Knights of the Trigger, a wide-awake club of Bakersfield sportsmen.

Dr. Ayers, of Omaha, Nebraska, says that the liveliest interest is being taken in the improvement in dogs in that city, and that a kennel club has lately been formed for the breeding of the English mastiff. A grand bench show is contemplated by Omaha for next year, as she does not wish to be behind Kansas City if she can help it. This is a good idea. There are numbers of good dogs of all classes scattered throughout the Mississippi Valley.

The Jacksonville *Times-Union* tells this story of one of the humors of the yellow fever times: Among those home physicians who have worked untiringly, day and night, throughout this long epidemic, none is deserving of more praise than Dr. Joseph A. Pacetti. From the very outset his services have been constantly called into requisition, for his thorough acquaintance with yellow fever in every form inspired confidence in his ability to deal successfully with it. Not until recently has he been given any rest. His services have been rendered to all alike, rich and poor, and although the number of patients under his charge aggregates several hundred, this practice has not yielded him a revenue one-half so large as has been the case during the same months in previous years. This, in general, has been the experience of the home physicians—but they make no complaints, nor do they rush to City Councils and Boards of Health to get resolutions passed in their favor. Dr. Pacetti has been remarkably successful in his treatment of yellow fever so far; his average death rate will be found quite as low, if not lower, than those of any of the Jacksonville physicians. A neighbor of Dr. Pacetti's tells this story on him: One night last week a man rang the Doctor's door-bell furiously at about 12.30 o'clock—just as he had fallen to sleep. He awoke and rushed to the window to learn who was sick or dying. The visitor said: "Your brother's dog is poisoned. Come quick and see him." This was too much for the tired Doctor. He yelled out: "I haven't any brother in Jacksonville, and they haven't left any dogs here. If you've got a sick dog, give him a dose of castor oil. Now get out!" "But, Doctor, supposin' the oil don't do any good? I'll be back again soon!" "You come back here and I'll shoot you!"—and down went the window with a slam. "I have to draw the line on dogs," said the Doctor to his neighbor next morning.

Mr. Chas. D. Cugle, of the Capitol City Kennels, Hartford, Conn., has lost by death his St. Bernard Dom Pedro. He writes that the dog died of diarrhœa, contracted going to the Richmond show, and pneumonia brought on from exposure and neglect coming from the show. "He lost 24lbs. going down, coming home Adams Express Co. had the kindness to keep him on the road for three days, when he should have come through in twenty-four hours."

Mr. F. F. Dole has recently imported a black and tan terrier dog that he is greatly pleased with, and thinks he is good enough to clean out all competitors at the shows next spring. He is about 15 months old, and is by the well-known Halifax General and out of Lady Lattle. He was purchased for Mr. Dole by Mr. L. P. C. Astley.

The sire of Fritz III., No. 6569 A.K.R., is Zoe, not Doc.

THE SPANIELS.

Editor Forest and Stream:

Thanks, many thanks to Mr. Fellows for his invitation to come "out of my dense cover," but while I am a long way from being ashamed of my name and residence, I don't propose to disclose them at his command. It is my business, not his, if I choose to write under a *nom de plume*, and it is my custom always to follow my own line, not that dictated by others.

I would preface my remarks by apologizing fully to Mr. Fellows for the statement I made which he states to be incorrect. Five years is a good long time to remember minutely a thing of that sort, and I must have mixed up the $100 and multiplied it by ten. However, that is neither here nor there, and, as is my custom when in the wrong, I apologize. To Mr. Fellows's first question I would say that I have not $1,000 to put up on a dog race. In the noble game of "draw" the bold player with a long purse often "bluffs" out a better hand. Mr. Fellows appears to be pretty dab at "polker talk" and I presume knows that. I for one was "shut out" and unable to "call" Mr. Fellows's hand. That mythical $1,000 "choked" me. By the way, I see that "Onlooker" too thought the challenge for $1,000. What have I been doing the last five years? Mr. Fellows asks. Why, working my dogs all my spare time each fall, showing them now and then, and always winning, too.

I note that according to the challenge as given by Mr. Fellows, Silk and Daisy were backed against any "brace of cockers in America." How in the name of common sense can Silk be "champion field trial spaniel" in that case, when Irish water, Clumber, Sussex and field spaniels were barred? Will Mr. Fellows kindly explain and insert the word cocker in the title. Then again the challenge was for a brace and Silk is therefore but one of the "champion brace of field trial cocker spaniels by default." No, Silk has no right to the title Mr. Fellows claims for him.

Yes, I've put in some of the five years at training and accept Mr. Fellows's congratulations as offered with thanks, for I'm quite confident in my own mind that from what I have heard that I own two, three, yes, perhaps four dogs able to give Silk points and a beating.

I thank Mr. Fellows for his "spider to the fly" invitation to go to Hornell for a match. Really, Mr. Fellows's "nerve" astounds me. No, if ever my dogs run in a match it will be on neutral ground, under neutral judges. I will not ask nor give advantages, no matter how certain I may feel of winning. Perhaps he would wish me also to use a strange gun, while he uses his own old stand by.

I had thought, erroneously as it seems, that Mr. Fellows would have been the first to support me in my demand for regular spaniel trials. He has written so much on the deterioration of the modern cocker as regards work afield, both in prose and verse (?) that one would suppose he would be in favor of showing up the "dachs-weasels." But, alas for human judgment, it is not so.

When the Spaniel Club or any other reputable club holds spaniel field trial I will be there and hope to meet Mr. Fellows and his dogs also. QUESTER.

Editor Forest and Stream:

I fail to see just what "An Onlooker" is barking at. "Quester" thought he had treed something, and now the "Onlooker" barks up the same tree, but he is like all skulkers, *i. e.*, those who hide as they do behind a *nom de plume*. The proper thing for me to do would be to pass all such boys by and pay no attention to their lucubrations.

I did not make a name and repution on paper, but by practical breeding and exhibiting. It is now thirteen years since a cocker I bred won first at a bench show in America. Your correspondent should stick to facts; they are stubborn things that no amount of personal vituperation can alter. I have never yet exhibited but what I won something; and at Buffalo in the best class of cockers ever seen at a show, in any other color than black I won first, second and third, first in puppies and special; special for best kennel of red or buff spaniels; should have had first in novice class only for the clerk's mistake. One of Hornell Silk's get won the highest honor in America, the National Dog Club medal. So it is safe to remark that instead of not winning I did win at the 'Buffalo district." I can win at Boston. So, Mr. "Onlooker," you come out of your hole. Neither of us know who is to judge there. I name Hornell Fancy, Buff, Velda, Dick and Martha. I shall expect you to name your string the week after this appears; the stake to be a medal or piece of plate. If any other kennel thinks we have no good dogs to suit the present style, I will show one each of the following colors: black, black and white, liver, liver and white, red, buff, and black, white and tan, or black and tan, same place and stakes.

Let "An Onlooker" read the standard and discuss it in a decent manner. I aim to be a gentleman at all times. I shall "write no book" nor shall I "sit down" until the sporting spaniel is in its proper place. Now let some of the kids who are ashamed of their names whack your special London reporter who started this thing. J. OTIS FELLOWS.

HORNELLSVILLE, N. Y.

INDIANA KENNEL CLUB.

INDIANAPOLIS, Oct. 29.—*Editor Forest and Stream:* The real difference between Mr. Anthony and the Indiana Kennel Club may be of some interest to the public, and while in process of settlement should not be obscured by a cloud of personalities entirely irrelevant to the subject.

That a better understanding may be had, and simple justice done all concerned, the club offers this plain statement of facts, together with a brief resumé of the case from the beginning:

The question originally at issue was whether or not Mr. Mitchell should be allowed to handle dogs in the forthcoming trials at Bicknell; and it is admitted that the club first broached the subject. The gist of the correspondence is here reproduced and the "deadly parallel columu" is used as the most effective method of presenting it.

INDIANAPOLIS, May 1.—*Jas. L. Anthony, Esq.:* * * * While this club has no grievance against Mr. Mitchell * * * ye cannot consent to his handling at our trials until he is reinstated by the Eastern Club. * * * P. T. MADISON, Sec'y.

NEW YORK, May 3—*P. T. Madison, Esq.:* * * * As I have already informed Mr. Isgrigg, I do not blame your club for the position they take. * * * With kindest regards, very sincerely yours, JAS. L. ANTHONY.

It will be seen that in the beginning the club's position was firmly taken and plainly stated, and that it had at least the negative approval of Mr. Anthony, who kindly refrained from blaming us. His letter closed with an excess of cordiality that was appreciated, and it was followed by another the very next day, in which he said "I would gladly do anything I could in any way to add to the success of your trials," etc.

Granting the gentleman's sincerity—and no one then questioned it—it is plain that his subsequent displeasure with the club had its origin in something other than the refusal to recognize Mr. Mitchell. Proof of this is found in the following extract from his letter of July 12 and the club's rejoinder, dated July 24:

NEW YORK, July 12.—*P. T. Madison, Secretary:* I am informed that your club has refused to allow Mitchell to handle at your trials, having sustained the action of the Eastern.

If, of course, the charges sent you by the Eastern are in your opinion sufficient to sustain your action, you are the sole judges. * * *—JAS. L. ANTHONY.

INDIANAPOLIS, July 24.—*Jas. L. Anthony, Esq.:* * * * The question before us was whether our club should sustain the action of other clubs in general, and the Eastern in particular, in placing bars on handlers for what they consider sufficient grounds. * * * Our club sustained the Eastern in the matter.—P. T. MADISON, Secretary,

The remainder of the letter of July 12 offers the first glimpse of Mr. Anthony's actual interest in the club's action.

The complaint that the Eastern Club had refused Mr. Mitchell and his friends a copy of the charges against him, and the insinuation that the Indiana Club was guilty of injustice in declining to divulge what had been intrusted to it in strict confidence, created the belief that Mr. Anthony's real purpose had been to obtain from us the information denied him by the club directly interested, and that whether or not Mitchell was allowed to handle was a minor consideration.

(Right here, the club disavows Mr. Samuel's statement that it thought Mr. Heath and Mr. Farnham were in the conspiracy. There was absolutely nothing to justify the inference).

Here the Mitchell matter ended, and with it Mr. Anthony's prospective career as a field trial judge. He was guilty of a gross and unwarranted imputation against the club's fairness and honesty, and the resentment found quick expression in a unanimous vote of dismissal.

The suspicion that Mr. Anthony had sought the appointment grew out of the fact that his selection was due to Mr. Isgrigg, and the latter's oft-repeated statement that after the appointment was made Mr. Anthony sold him a dog at greatly reduced figures in order that he might be run in the Indiana trials. The inference was plain, and together with what appeared to be suspicious interest in the Mitchell case, confirmed the growing belief that the club had been imposed upon. The publication of the correspondence between Messrs. Anthony and Isgrigg dispels that belief, and the club retracts the insinuation which the former gentleman complains of as libelous.

While jealous of its good reputation and quick to resent aspersions upon it, the Indiana Kennel Club is equally ready to undo a wrong to any individual. If Mr. Anthony had corresponded with the club on club business, instead of one of its members, this trouble would never have occurred. It had its origin, its continuation and its culmination in his misplaced confidence in an irresponsible mischief-maker.

By order of the Board,
P. T. MADISON, Sec'y. D. C. BERGUNDTHAL, Pres.

LET THEM WHICKER.

Editor Forest and Stream:

Some one who has been interested in the cry of the coon suggest that the writer mistook the cry of the little flitting owl for that of the coon. My experience goes a little further than guess work, having not only heard the coon, but having on a good many occasions watched him while exercising his voice. SUBSCRIBER.

PHILADELPHIA, Pa.

Editor Forest and Stream:

At a meeting of the Elmira Sportsmen's Club, held at their rooms Tuesday evening, Oct. 23, fifteen members present, it was unanimously voted to let 'em whicker. Does not this settle the important question? If not we will call another meeting. I voted on this question in 1840. NILMAH.

ELMIRA, New York.

"THE GREYHOUND" is the title of a monograph by Hugh Dalziel, treating of the modern greyhound; coursing, breeding, rearing and training. An appendix gives a list of the Waterloo winners. It is a valuable and helpful work for breeders. The frontispiece is a life-colored lithograph of Mr. D. H. Owen's Lady Shrewsbury (Happy Lad—Rowena). For sale at his office; price $1.25.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 20 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Ingomar and Yonnie. By Hornell-Harmony Kennels, Covert, N. Y., for black, white and tan beagle dog and bitch, whelped Aug. 31, 1888, by Royal Krueger (A.K.R. 6364) out of Una (A.K.R. 1324).

Ralph and Leslie. By Hornell-Harmony Kennels, Covert, N. Y., for black, white and tan beagle dogs, whelped Aug. 14, 1888, by Royal Krueger (A.K.R. 6364) out of Betty (A.K.R. 2910).

Zazel, Velvet, Kathleen and Vanessa. By Hornell-Harmony Kennels, Covert, N. Y., for black, white and tan beagle bitches, whelped Aug. 14, 1888, by Royal Krueger (A.K.R. 6364) out of Betty (A.K.R. 2910).

Lady Vegas. By C. W. Littlejohn, Leesburg, Va., for lemon and white pointer bitch, whelped Aug. 10, 1888, by Bang Bang out of Tele Doe (champion Fritz, A.K.R. 1551—Virginia, A.K.R. 1357).

Rural Boy, Rural Ranger, Rural Pride and Rural Rip. By Rural Kennels, Wakefield, Mass., for one black, white and tan, one

lemon and white, and two black and white English setter dogs, whelped Sept. 3, 1888, by Leigh Belton (Yale Belton—Princess Lily) out of Rural Neva (Pride of Dixie—Fairy Belle).

Rural Girl, Rural Nellie and Rural Lily. By Rural Kennels, Wakefield, Mass., for one black and white and two lemon and white English setter bitches, whelped Sept. 3, 1888, by Leigh Belton (Yale Belton—Princess Lily) out of Rural Neva (Pride of Dixie—Fairy Belle).

Lady Foreman. By Jas. W. Wood, Poughkeepsie, N. Y., for lemon and white ticked English setter bitch, whelped May 28, 1888, by Prince Foreman (Foreman—Jolly Nell) out of Countess Peg (Fairy King—Countess Floy).

Iron King. By J. S. Millspaugh, Williamsport, Pa., for dark red Irish setter dog, whelped April 21, 1888, by Redstone (Shot—Katie Gates) out of Lillie Ban (champion Glencho—Lillie Malone.

O'Donovan Rossa. By Michael Flynn, Jr., Bristol, R. I., for dark red Irish setter dog, whelped June 27, 1888, by Sarsfield (Garryowen—Currer Bell II.) out of Nino (champion Elcho—champion Noreen).

Westchester County Breeding Kennels. By Geo. J. Rupprecht, New York, for his kennels of mastiffs and St. Bernards.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Fan—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Fan to their Royal Krueger (A.K.R. 6363), Oct. 11.

Pussie—Royal Krueger. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Pussie (A.K.R. 5983) to their Royal Kruger (A.K. R. 6364), Oct. 7.

Flora—Kilmarnock Bruce. Dr. W. A. Hitchcock's (Malden, Mass.) collie bitch Flora to Kilmarnock Collie Kennels' Kilmarnock Bruce (champion Marcus—Drumlin Isle), Sept. 19.

Nydia—Edwy. Dr. Geo. B. Ayres's (Omaha, Neb.) mastiff bitch Nydia (Clement—Ashmont Queen) to his Edwy (champion Orlando—Countess of Woodlands), Oct. 19.

Ashmont Queen—Edwy. Holmes & Taylor's (Omaha, Neb.) mastiff bitch Ashmont Queen (Major—Clio) to Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands), June 15.

Molly Beaufort—Fashion. R. E. Westlake's (Waverley, Pa.) pointer bitch Molly Beaufort (Robert le Diable—Beau Beaufort) to Jacob Pentz's Fashion (champion Donald—champion Revel III.), Oct. 13.

Nell Gwynne—Fashion. F. S. Underhill's (Newark, N. J.) pointer bitch Nell Gywnne to Jacob Pentz's Fashion (champion Donald—champion Revel III.), Sept. 27.

Jane—Fashion. F. J. L. Lane's (Newark, N. J.) pointer bitch Jane (sensation—Lill) to Jacob Pentz's Fashion (champion Donald—champion Revel III.), Sept. 3.

Lillias—Beverwyck Tippler. Jas. E. Unks's (Bowling Green, O.) fox-terrier bitch Lillias (Splaugor—Blemton Lilly) to Beverwyck Kennels' Beverwyck Tippler (Bacchanal—Blemton Thyme), Oct. 27.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Jessie. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Jessie (Ranger—Lucy II.), Oct. 21, six (four dogs), by their Jupiter (champion Lee—Saad).

Kate W. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Kate W. (A.K.R. 6363), Oct. 19, five (two dogs), by their Royal Krueger (A.K.R. 6364).

Baby W. Hornell-Harmony Kennels' (Covert, N. Y.) beagle bitch Baby W. (Cameron's Racket—Pussie), Oct. 10, six (three dogs), by their Royal Krueger (A.K.R. 6304).

Nan. J. P. Swain, Jr.'s (Bronxville, N. Y.) pointer bitch Nan (A.K.R. 855), Oct. 21, six (two dogs), by C. J. Peshall's Nick of Naso (A.K.R. 4391).

Natation. Hornell-Harmony Kennels' (Covert, N. Y.) pointer bitch Natation (Nick of Naso—Temptation), Oct. 6, nine (eight dogs), by Dr. C. C. Sears's Bang's Royal Rock (Trinket's Bang—Bell Devil).

Patti Rosa. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Patti Rosa (Croxteth—Patti M.), Oct. 22, four (three dogs), by his champion Fritz (Beaufort, A.K.R. 634—Spot, A.K.R. 1351).

Sally. Geo. Langeran's (Yonkers, N. Y.) Irish setter bitch Sally (Chief—Princess Alice), Oct. 14, seven (six dogs), by Dr. W. Jarvis's Elcho, Jr. (Elcho—Noreen).

Blondella. H. R. Turnure's (Closter, N. J.) Irish setter bitch Blondella (Snap—Forster's Maud), Oct. 5, eleven (three dogs), by Miss Turnure's Handy Andy (Glencho—Tara).

Bell. E. G. Carleton's (Boston, Mass.) Yorkshire terrier bitch Bell, Sept. 25, two bitches, by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jupiter—Nightshade whelps. Two beagle dogs, whelped July 6, 1886, by Somerset Kennels, Bernardsville, N. J., to L. A. Coupia, New York.

Kilmarnock Angus. Black, white and tan collie dog, whelped Aug. 20, 1888, by Bruce of the Fylde out of Drumlin Isle, by Kilmarnock Collie Kennels, Braintree, Mass., to A. L. Thorndike, Brookline, Mass.

Empress of Wacouta. Mastiff bitch (A.K.R. 6377), by Wacouta Kennels, Chicago, Ill., to H. C. Walton, Gananoque, Ont.

Protection. Mastiff bitch, age and pedigree not given, by Wacouta Kennels, Chicago, Ill., to Jas. B. Sturtevant, Stillwater, Minn.

Wacouta Sybil. Mastiff bitch, age and pedigree not given, by Wacouta Kennels, Chicago, Ill., to N. C. Royster, Birmingham, Ala.

Beech Grove King Agrippa. Fawn mastiff dog, whelped May 20, 1887, by Rover II. out of Jule or Julie, by Geo. Jackson, Beech Grove, Ind., to Mrs. Wm. G. Harley, Minneapolis, Minn.

Trinket. Dark fawn pug bitch, age not given, by Dandy out of Bang Blossom, by Warner & Hamilton, Canaan Four Corners, N. Y., to Willis Cure, Hudson, N. Y.

Royal Albert II. and Princess Royal. Blue belton English setter dog and blue belton and tan bitch, whelped June 9, 1887, by Royal Albert out of Maida, by G. L. V. Tyler, West Newton, Mass., to Dr. Jas. E. Hair, Bridgeport, Conn.

Tory Paul. Black, white and tan English setter dog, whelped June 24, 1888, by Paul Gladstone out of Alida, by Mt. Washington Kennels, Pittsburgh, Pa., to Jas. McKnight, same place.

Gun—Dora Gladstone whelp. Black, white and tan English setter dog, whelped June 4, 1888, by Chas. York, Bangor, Me., to F. D. Brown, Mt. Morris, N. Y.

Iron King. Dark red Irish setter dog, whelped April 21, 1888, by Redstone out of Lillie Ban, by A. W. Pearsall, Huntington, L. I., to J. H. Millspaugh, Williamsport, Pa.

Somerset Mike—Tussle whelp. Fox-terrier bitch, whelped May 7, 1887, by Somerset Kennels, Bernardsville, N. J., to R. H. Post, Cambridge, Mass.

Beverwyck Trap. White, black and tan fox-terrier dog, whelped March 14, 1888, by Dusky Trap out of Daze, by Beverwyck Kennels, Albany, N. Y., to Jas. E. Unks, Bowling Green, O.

Sir Wallace.—Editor Forest and Stream: I see among the sales of dogs, in your issue of Oct. 11, that of Sir Wallace. The following mistakes, which are very misleading, occur, and I shall be obliged if you can spare space to correct them: First, Sir Wallace cannot well have been whelped on Dec. 7, 1888, as we have not yet arrived there. Of course it should be 1887. Second, the names of the purchasers are Messrs. Arthur Wallack and Wm. Yardley, not Walseck; and third, their address is the Waverley Kennels, Noroton, Conn., not Newtown. I know my excellent friend A. R. Kyle's cacography is responsible for these mistakes. —W. YARDLEY.

DEATHS.

Daisy. Whelped April, 1880, by Glenmark out of Girl, owned by F. Scott.

Dom Pedro. St. Bernard dog, owned by Capitol City Kennels, Hartford, Conn.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

A. S. H., Wakefield, Mass.—My setter puppies from their birth seem to have a sort of humor that covers the body, and matter discharges from it and dries on the coat. The bitch does not seem to have it, but did have the same on tips of ears some time ago. The pups are very rugged and strong, but I do not like the matter on their bodies and legs. Ans. The puppies are too young to dose with medicine or even wash yet. Give the mother a few (5) drops of Fowler's solution of arsenic in her food twice daily.

ALL ABOUT FERRETS AND RATS. A complete history of Ferrets, Rats and Rat Extermination, etc. By Sure Pop (Adolph Isaacsen). Paper, 15 cents. Adolph Isaacsen, 92 Fulton street, New York. Adolph Isaacsen, who makes a business of breeding ferrets, has issued a very instructive work on ferrets and rats, and the efficacy of the former in getting rid of the latter. The book concludes with an amusing speculation as to the origin of the two creatures and the distribution of the species.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Oct. 27.—The bullseye hunters were numerous today at the rifle range, and some fine scores were made, though as usual of late the weather conditions were rather poor. Following are the best scores finished:

Military Match, 200yds.

F J Lounsbury	4	4	4	3	4	3	5	4	4	3—38

CREEDMOOR.—New York, Oct. 29.—The 14th Marksman's Badge match was shot at Creedmoor on Saturday, Oct. 27. The weather was very bad, raining hard all day; the attendance, however, was very fair. The scores, on account of the rain and the bad light at 500yds., were not very high. Following were the winners:

Medals.

	200yds.	500yds.	Total.
W A Stokes, Co I, 23d Regt	21	23	44
O W Vatet, Co F, 22d Regt	20	23	43

Cash Prizes.

C H Smith, Co B, 71st Regt	18	24	42
Val Werner, Co H, 13th Regt	18	23	41
H W Janssen, Co A, 7th Regt	19	22	41
J T Kirby, Co A, 7th Regt	19	21	40
F W Perkins, Co F, 7th Regt	20	20	40

T M Harvey, Co G, 13th Regt	21	18	39

ST. LOUIS, Mo., Oct. 27.—The St. Louis Pistol Club held its regular weekly shoot on last Wednesday night, and the attendance was very fair. The scores made are not large, still the average is good as a whole. Mr. W. Bauer made 84, which proved high for the night, and consequently the gold medal will be in his possession for the coming week. All the shooting is done with a .22cal. gallery pistol, and the target is a reduced standard American for 20yds. pistol practice. The following are the scores made at the last shoot:

W Bauer	9	7	10	9	10	7	10	7	7	10—84
L V D Perret	7	10	10	7	7	9	7	9	10	6—82

UNSER FRITZ.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW YORK SUBURBAN SHOOTING GROUNDS ASSOCIATION TOURNAMENT.

THE Suburban tournament is a thing of the past; the shooters have fired their last shot, packed up their guns and gone, carrying with them very pleasant recollections of their visit and with the determination to come again when the Suburban gives another shoot. Some months ago the plan for a new shooting grounds to be situated near the city, handy for New Yorkers, a place to be open for practice shooting or match races every day, was agitated by a few gentlemen prominent in shooting and matters appertaining. That they have successfully carried out their plan was proved by a visit to the grounds this week. A large plot of land has been secured on the New Jersey Central R. R., at Claremont, N. J., eighteen minutes distance from City Hall; this has been all fenced in and a platform built at the junction of the railroad, so that with a few steps from the train one is right in the grounds. A plank walk leads directly from the gate to the club house, a commodious building, in which will eventually be every arrangement for the comfort and convenience of visitors. A fireproof gun room is to be built as a safe repository for guns, ammunition, etc., so that the business man, who is fond of shooting and can spare an hour or two of an afternoon, can run out to the grounds without burdening himself with a load of traps, find his gun ready, traps, targets and trappers on hand enjoy his little shoot, lay his gun away safely until next required, and be off to the bosom of his family, refreshed by his short outing. Above the club house is the grand stand, capable of accommodating a large number of spectators. Given pleasant weather and we have no doubt its capacity will be taxed to the utmost, when the grounds are in use. The secretary has a little office at one end of the house, where entries for the various events are received, winnings made up and paid, ammunition, etc., sold, and for the transaction of his other manifold duties. Here also are accommodations for the press representatives, who will no doubt be called on to occupy their positions there quite frequently. Information is promptly furnished by the secretary and every facility given them for the rapid accomplisment of their work.

At the other end of the house is the restaurant, under the management of Mr. Bowers, who controls the dining room at the Central R. R. depot in Jersey City. Everything was well cooked, served in first-class shape and his prices moderate. He is under contract with the association to Jan. 1, and we trust his venture will prove remunerative enough to warrant him in continuing the arrangement.

The shooting is done from platforms in front of the club house and at both ends. The present tournament was shot under Keystone rules, under the guidance of Mr. H. A. Penrose, who was on the grounds and offered his assistance to the management. The main feature of these rules—the style and rapidity of shooting—has been fully described in our trap columns. It is very simple and wherever shown has found favor.

The shoot lasted four days; two days at bluerocks and two at live birds.

The weather prophet might have shown a kindlier feeling and thereby increased the attendance and the association's exchequer, but he has exhibited a singularly contrary disposition this usually beautiful month, and all the tournaments have felt its effects.

The guaranteed events were run off as per programme though none of them filled. However, considering the fact that this tournament was the inaugural one, it was successful and the management were satisfied.

Tuesday, Oct. 23.

The weather this morning was extremely disagreeable with a drizzling rain which drove every one indoors, and with a heavy mist which made some of the targets almost invisible, particularly as there was not wind enough to drive the smoke away. In the afternoon it brightened somewhat, much to the comfort of the shooters. Five regular events were shot besides a number of extra sweeps. It was intended to run one event (No. 7) under the new S. A. Tucker pool system, but darkness fell before that was reached and it was not shot at all.

Extra sweep No. 4, at 9 bluerocks, $1 entrance, four moneys:

Budd	8	McMurchy	7
Schmitt	6	Brientnall	8
Quimby	4	E D Miller	8
Collins	8	J Cope	3
Tee Kay	3	Dart	7
E Soper	8	Peacock	6
Brantingham	8	C Richards	5
Apgar	8	Mitchell	8
Luther	5	Alice	3
Sigler	8	Lindsley	6
Yerrington	7	J F Richards	7

First shot off and div. by Brantingham, Apgar and Miller, second and third div., fourth won by C. Richards.

Event No. 1, at 9 single bluerocks, open to all, $1.50 entrance, four moneys:

T F Richards	001100100—3	Brientnall	111101111—8
Schmitt	011010000—3	Folsom	100111111—7
Alice	111101101—7	Yerrington	111111111—9
McMurchy	100111111—7	Rockworth	111101111—8
Woolsey	111011110—7	Budd	011111111—8
Albee	111111010—7	E D Miller	111101111—8
Dart	111101110—7	Mosher	110001110—5
Bristol	111011111—8	Collins	110111101—7
Mitchell	111111110—8		

Yerrington wins first. Ties on 8 shot off and div. by Mitchell and Budd. Ties on 7 shot off and div. by Alice, McMurchy and Collins. Fourth won by Mosher.

Event No. 2 at 9 single bluerocks, open to all, $1.50 entrance, four moneys:

Brientnall	111111101—8	McMurchy	001111111—7
T F Richards	101010001—4	Budd	101101110—6

McMurchy	9	J Wolstencroft	7
Yerrington	9	Tee Kay	9

First and fourth div., second shot off and div. by Brientnall and Peacock, third shot off and div. by Alice and Wolstencroft.

Wednesday, Oct. 24.

Light rains early in the morning, but cleared away before the time for shooting, and a strong variable wind from the north and northwest set in, blowing at right angles across the traps, adding speed to the flight of the targets, but at the same time carrying the smoke away quickly. Contest No. 6, left over from Tuesday, and six regular events besides six extra sweeps were shot.

The fight for the Atlantic Ammunition Co.'s diamond watch charm trophies was settled to-day. Two of these were offered, one for experts in Events No. 3 and 10, and one for amateurs in Events 4 and 11. The classification committee decided that an amateur was one who had never broken over 85 per cent. This rather severe ruling narrowed the contests down, and there were but few entries. The amateur trophy was won by Brantingham, of Plainfield, N. J., with a total score of 25 out of 30.

Three men tied in the expert class, each with a score of 28 out of 30, and shot the tie off at 10 birds, with score as given below. R. H. Brientnall, of East Orange, N. J., shooting out both Budd and McMurchy and winning the trophy.

Event No. 6. FOREST AND STREAM guaranted purse, at 10 singles and 5 pairs bluerocks, for amateurs, $2.50 entrance, $50 guaranteed, 3 moneys:

Fargo	1001111100	10 00 00 10 10— 9	
Schmitt	1110011010	00 10 10 01 00— 5	
Mosher	1110011101	10 11 10 00 11—13	
Tee Kay	1000111110	10 11 01 00 00— 8	
H Wood	1001001100	11 10 10 10 01—10	
F Meyer	0100501101	11 01 10 10 10—10	
Albee	1011011111	10 10 11 10 10—14

Hunt	7		

Ties div.

Extra sweep No. 4, at 9 bluerocks, $1 entrance. four moneys:

McMurchy	7	Alice	5
Brientnall	6	Stephens	8
Mitchell	7	Albee	7
Peacock	4	Budd	7
Zigler	8	Collins	5
E D Miller	7	Luther	3
Apgar	6	Yerrington	8
Dart	7		

First div., second shot off and div. by McMurchy and Brientnall, third won by Apgar, fourth div.

Extra sweep No. 5, at 9 bluerocks; $1 entrance, three moneys:

Yerrington	3	Sigler	7
Albee	4	Budd	6
Brientnall	7	McMurchy	8
Mitchell	6	Peacock	8
Miller	8	Collins	7
Still	2	Heritage	7

First div., second shot off and won by Brientnall, breaking 6 straight, third div.

Extra sweep No. 6, at 9 bluerocks; entrance $1, four moneys:

E D Miller	7	Hathaway	5
Brientnall	8	Tee Kay	6
Budd	8	S G Smith	7
Lindsley	9	Mitchell	7
Peacock	5	Yerrington	8
McMurchy	3	Farrow	3
Apgar	8	Collins	8
Sigler	8	Still	5
Albee	7		

First shot off and div. by McMurchy, Apgar, Sigler and Yerrington, second shot off and div. by Miller and Smith, third won by Tee Kay, fourth div.

Thursday, Oct. 5.

Weather clear, slightly cool, light wind from northwest. Birds poor as a lot, but some few hard drivers among them. Fair attendance of on-lookers in the afternoon, among whom were noticed Annie Oakley and husband and A. H. Dimick, of U. S. C. Co.

The arrangements for live bird shooting were not as good as might be. The traps were set on a raised narrow platform, and as the birds were poor ones, many refusing to fly, they simply dove under this platform when liberated and were as safe from the gun as if in the Jersey barnyards, where they are raised for the trap. This occasioned much loss of time. Then to avoid further delay the birds in the big sweep were not retrieved as shot, partly because of the numerous pools of water which abounded, and the general damp state of the ground, which necessitated the use of hip boots, consequently some of the wounded birds were allowed to lie ungathered. This was all due to the unfinished state of the grounds, which allowed of the accumulation of water during the recent rains, and it was practically impossible to do otherwise and finish the event before night. No such objection will arise when the grounds are raised and completed. Ever bird will be retrieved as shot and the wounded ones promptly killed. We mention this because there was some adverse criticism of the management, which we feel they did not deserve. We drew them up to a humane men who would be among the first to object to any cruelty.

The element of luck was apparent, as in all live bird contests. In the big sweep Smith's second bird was hard hit with a body charge by second barrel, but had strength enough to carry the load a foot out of bounds, where it fell stone dead. Brewer's lost bird was a rapid blue twister, hard hit with both barrels, dead just over the fence. Budd's twenty-third bird, a right quarterer, left the trap at railroad speed, carrying first barrel charge 20yds., where his head was cut off with second. Squires's luck carried him through with a straight score, though it seemed sure that his twentieth bird, which was slightly wounded with first barrel and missed with second, alighting on the ground, would fly out if challenged, but no one offered to do so. Charlie Smith had a straight up to his twenty-fifth bird, which was a contrary-minded blue dodger, twisting in a dozen different directions and going at a speed which defied shot, so Charlie had to content himself with a piece of second money.

Extra sweep No. 1, at 5 live birds, $3 entrance, four moneys:

J L Brower	11111—5	E D Miller	11111—5
W Sigler	10110—3	McMurchy	11111—5
Kleinz	11110—4	Penrose	11111—5

Friday, Oct. 26.

Beautiful day, with a clear and bracing atmosphere, but many of the shooters had departed for home and the attendance was small. According to programme the morning was to have been occupied with a shoot-off of ties for the Atlantic Ammunition Co.'s New York State Trophy, a diamond watch charm. Three men had made score of 100 straight in the contest, Geo. Luther and Al. Spangler, of Syracuse, and A. Baker, of Poultney, but as Luther was the only one of the three on the grounds, the trophy went to him by default. It is open for challenge from any New York State sportsman for one year, to be shot for at Syracuse. In lieu of this contest a number of live bird sweeps were shot. During the progress of event No. 4, Mr. G. F. McAneny, President of New Jersey State Society for the Prevention of Cruelty to Animals, appeared on the grounds and demanded that the shooting be stopped. This occasioned considerable excitement among the shooters and much talk on the part of the management. Finally Mr. Chas. Richards mounted the scorer's stand, and addressing Mr. McAneny, said that he wished to take all the responsibility on himself, as President of the Suburban Association, and that he should call the gentlemen to the score to shoot some birds which were his individual property. It was necessary that these birds should be delivered dead in New York that night, and he chose a shotgun as the method of killing, assuming any liability for violation of the law himself. This Mr. McAneny would not agree to, and at first insisted on arresting every man who shot a bird, but finally decided to arrest but one, and Mr. Larue, a member of the Association, offering himself as a victim, was notified that he was under arrest to appear at a justice's court Monday morning, Oct. 29. The association intends to make a test case of this and to finally settle the question whether the shooting of live birds is illegal. It is understood that a number of New Jersey clubs have offered their assistance and will join with the Suburban in fighting this matter. Six live bird sweeps were shot and the tournament was over.

Extra sweep No. 1 at 7 live birds, entrance $3, three moneys:

Sigler	1111117	Winans	1111106
Class	1111111—7	Luther	1111101—6
Leddy	1110110—5	Richards	1111110—6
Schmitt	1111111—7		

First shot off and div. by Sigler and Class; second shot off and won by Luther; third won by Leddy.

Extra sweep No. 2 at 7 live birds, $5 entrance, two moneys, 60 and 40 per cent.:

Sigler	1011111—6	Richards	1101100—4
Class	1111011—6	Winans	0110111—5
Leddy	1110101—5		

Sigler and Class div. first and Leddy and Winans second.

Extra sweep No. 3, at 4 live birds; $2 entrance, three moneys:

Class	1011—3	Richards	0021—2
Sigler	1111—4	Vogelsang	1202—3
Leddy	1101—3	Lindsley	1101—3
Winans	1111—4	Willis	1100—2
Schmitt	1112—4		

Ties div.

Extra sweep No. 4, at 4 live birds; $2 entrance, three moneys:

Sigler	1111—4	Winans	0101—2
S G Smith	1111—4	Lindsley	1102—3
Major	1100—2	Schmitt	1112—4
Vogelsang	1101—3	Richards	2112—4
Leddy	0102—2	Willis	0111—3
Class	2212—4	Farrow	0111—3

On the shoot-off for first money Schmitt and Richards dropped out and the others div., second shot off and div. by Vogelsang and Farrow, third shot off and won by Major.

Extra sweep No. 5, at 4 live birds, entrance $2, four moneys:

Major	1112—4	Willis	2200—2
Farrow	1210—3	Class	1211—4
Peacock	1011—3	C Smith	1002—2
Kilpatrick	1121—4	S G Smith	2102—3
Richards	2010—2	Winans	0010—1
Schmitt	1112—4	Lindsley	0121—3
Sigler	1110—3	Leddy	1202—3
Forest	2121—4	Squires	2111—4

First shot off and div. by Class and Squires, second shot off and div. by Peacock, S G Smith and Sigler, third shot off and won by C Smith, fourth won by Winans.

Extra sweep No. 6, miss and out, $1 entrance:

Seehnson	0	Kilpatrick	0
Forest	10	Peacock	0
Squires	0	S G Smith	0
Rouschert	0	C Smith	111
George	10	Class	111
Major	111	Farrow	111
Sigler	111		

Those who killed 3 div. $13, less the cost of birds, $6.25.

FRANK MASON.

Since this report was written Mr. Larne's fate has been decided. He was on hand with his counsel Monday morning to face the music, and was promptly discharged, the society having decided to change their mode of operation; and it is said that the responsibility is to be placed upon the Surburban Shooting Association, and they, in the person of Mr. Chas. Richards, the president, will be proceeded against. No date has been set for the trial, but due notification will be given Mr. Richards to enable him to prepare his defense. F. M.

After numerous postponements a decision was reached at Burlington, N. J., on Thursday last, in the suit of the Society for Prevention of Cruelty to Animals against the Riverton Gun Club tor cruelty for shooting live pigeons at a match a few weeks since. The club was fined according to the statute.

Owing to the prominence of the members of the club, whose membership includes Edwin M. Fitler, son of Mayor Fitler, and other well-known Philadelphia sportsmen, and the fact of its being the first case of the kind ever tried in the State, much interest was centered in the result. The hearing was made before Justice Naylor, of Burlington, N. J. Allan H. Gangewer, of Burlington, represented the society, and Samuel H. Grey, of Camden, was counsel for the Riverton Gun Club.

The defense admitted shooting the pigeons, but denied the charge of cruelty, and therefore claimed they had not violated the statute provided for such cases.

Judge Naylor in rendering his decision said the question in this case was not as to whether any cruelty was practiced. The charge was that the pigeons shot at the match were needlessly mutilated and killed. "If they had been killed for the purpose of using them for food it would not have been a needless killing, but to my mind the killing of the pigeons for mere sport is needless killing under the statute. A shooting match is usually arranged for the amusement of those participating, and while it is not necessary to go farther into this view of the case, it seems to me that the statute is perfectly clear."

The Justice then quoted the statute and concluded: "I am of the opinion that the defendants have violated the thirteenth section of the act and the supplement thereto as charged; and I adjudge that the defendants shall pay the sum of $50 fine and $5.85 costs of suit."

The Riverton Club will carry the case to the Court of Errors and Appeals. If this decision is allowed to stand, the Riverton Club will disband, as the sentiment of the members is against the shooting of live pigeons, if such shooting is declared to be a violation of the law. The Society for the Prevention of Cruelty to Animals propose to stop the shooting of live pigeons in any part of the State of New Jersey.

THAT CARTER—GRAHAM MATCH.

BALTIMORE, Md., Oct. 25.—*Editor Forest and Stream:* The much talked of match between L. S. Carter of Hammond, Ill., and Wm. Graham of England, now a resident at Annapolis, Md., which was to have been shot here to-day, proved to be merely a hippodrome and a scheme, to wring a few dollars out of the dear unsuspecting public, which scheme by the way, did not work. Some weeks ago it was publicly announced that a match had been made between these men, at 100 live birds each, for $200 a side, Hurlingham rules to govern. At this time Carter was shooting a 10-gauge gun, but had ordered a 12-bore, but it was doubtful if it would be ready by the date fixed upon, so the proviso was made that Graham could take 2yds. with his 12-bore against Carter's 10. This point is mentioned here to show that it was considered by them and arranged for. Well, the first date fixed was Oct. 6 at St. Louis, at the close of the Fodde tournament, when they evidently thought the city would be crowded with shooters anxious to witness their skill, at the rate of 50 cents a head. Such did not prove to be the case, a baker's dozen being all that appeared on the grounds, so the race was postponed, ostensibly because Carter had not received his 12-gauge, Graham refusing to take 2yds., but in reality because of the lack of gate money. The St. Louisians were "on" and refused to be beguiled into giving up their ducats, so the present time and place were fixed upon with the very evident idea that Baltimoreans were more gullible and that a big gate could be secured.

Acton's Park on the Patapsco River, a very pleasant resort about a half hour's ride from the heart of the city, was the chosen field of battle. The programme called for a number of live bird sweeps commencing at 11 o'clock, and 2 P.M. the race was to be called. A few shooters were on hand to take part in the sweeps and the morning wore away very pleasantly. As the appointed time drew near, the expected crowd did not gather, only about one hundred spectators appearing, and it was soon seen that there was no anxiety to shoot the match on the part of either Carter or Graham. They withdrew to one side, conferred together a long time and finally agreed to call the match off, and shoot at 15 birds each for $50, as a sop to those present. Mr. Lee Clark of the Baltimore *Sun* had agreed to act as referee, and he so announced their decision, and called them to the score. Considerable disgust was manifested by the crowd and there was much talk of a very plain character to try and force them to shoot the match as agreed, but it was no go; there was not enough gate money to pay for the birds let alone anything else, so what would you have? We understand that Graham claimed to be out of condition, as an excuse for not shooting the race, but his record in the 15 birds shot at did not show any lack of form as both he and Carter made straight scores. True, the birds were duffers, nearly every one refusing to fly except when put up, but 85 more could just as well have been shot at, had the match been a bona-fide one. Carter made a weak demand for his share of the stakes, claiming that he came there to shoot and was ready to do so. This was ridiculous, as had there really been any money up he was entitled to the whole amount, if Graham refused to shoot. As the 15 bird race resulted in a tie, it was announced that $50 of the stakes would be drawn, leaving $150 to be shot for at Erb's Park, Newark, N. J. on Thursday, Nov. 1, provided the grounds and the birds could be secured for that day. As a matter of fact, we doubt if any money was ever put up; if it was up a string was attached to it.

A hippodrome of this kind causes suspicion to rest on every straight match in the country and does more to injure trap shooting than anything else. There are enough abuses now which all are trying to find means to correct, without adding this one. True, it is by no means a new idea, but of late hippodrome shoots have been very scarce, and we hope lovers of the sport will not encourage their revival by their presence. F. M.

BROOKLYN, Oct. 25.—There was a large crowd present to-day at the annual shoot of the Coney Island Rod and Gun Club at Woodlawn Park, Gravesend, L. I. This was a new departure, the club having its annual shoot and dinner at John Stillwell's, Coney Island Creek, during the past four years, but it was decided to have the shoot at Woodlawn and the dinner afterward at the new headquarters of the club, No. 155 Lawrence street, near Fulton. After the shoot all hands then hastened to catch a special car that was provided by the Culver Railroad management, and were conveyed to the city and thence to the club headquarters, where a first class fish and game dinner had been prepared for the hungry shooters. The president of the club, Mr. H. Laughlin, who was in the chair, led the merry-making, and Messrs. Van Pelt, Schlieman, Meyer, Donnelly, Davenport, Lanzer and Dr. Schwartz were the principal artists, and the time passed away very quickly. The president presented the handsome fishing-rod and reel to Mr. Van Pelt, for the largest bass and weakfish caught with rod and line that day in waters of Gravesend Bay during the season. The bass weighed 3lbs. 4oz. and the weakfish 2lbs. 12oz. The full score is as follows:

H McLaughlin (26)	1101111—6	H P Donnelly (25)	1111101—6
D Monsell (26)	0111101—5	C Plate (27)	1011110—5
A Schwartz (30)	1011011—5	C Dellefsen (27)	0010101—3
E Sungam (27)	1111111—7	J J O'Brien (22)	0000111—3
W Weber (22)	0110001—3	Capt Meyer (24)	1111111—7
H Blattmacher (25)	0110110—4	J E Lake (27)	1010111—5
Q Davenport (25)	0101111—4	P Ward (25)	1011111—6
A Rockfeller (25)	1010110—4	J Schilleman (26)	1011111—6
T Kerrigan (21)	1100101—4	F Lanzer (26)	1111101—6
G James (25)	0110000—2	D Northridge (25)	1001111—5
H Morrison (23)	1101000—3	A G Nason (25)	1101011—5
E Rockfeller (25)	0101001—3	W Green (21)	1000010—2
J C DeFraine (27)	1110101—5	P Bessinger (23)	0001100—2

Ties for first: Captain Meyer 2, E. Sungam 1. Ties for second: H. McLaughlin withdrew, H. P. Donnelly 0, P. Ward 1, J. Schlieman 1, F. Lanzer 2. Ties for third: D. Monsees 0, A. Schwartz 1, L. Davenport 6, J. C. DeFraine 5, C. Plate 6, J. E. Lake 1, D. Northridge 2, A. G. Nason 0. Referee, Mr. H. McLaughlin; scorer, Mr. Post Van Pelt.

NEW YORK, Oct. 23.—Emerald Gun Club of New York city, regular shoot at Scaview Park, New Dorp, S. I.; weather foggy; 10 live birds, 5 ground traps, 21, 25 and 30yds. rise, 80yds. boundary. Emerald Gun Club rules, three prizes:

Dr Hudson (30)	1111101111—8	G Remsen (30)	1111011111—8
T P MacKenna (25)	1111101101—8	N Neasel (30)	1011111101—8
R Regan (25)	0.00101001—4	A McHale (21)	0001111001—5
J Measel, Jr (30)	0001001111—5	S McMahan (25)	0001110001—4
T Crystal (21)	0110111110—7	H Rubino (25)	1111010000—5
J Howard (21)	1111000900—4	F Schraider (30)	1001111011—7
P Butz (30)	1110101001—6	M W Murphy (25)	1011100011—6
Col J H Voss (32)	1111001001—6	L C Gehering (30)	1111101110—8
P J Keenan (25)	0011010011—5	T Codey (30)	1010001110—5
J Klein (25)	1110110311—7		

Ties on 8 for first at 2 birds, 30yds., use of both barrels, but second barrel scores ½ bird: Dr. Hudson ½ 0, G. Remsen 1 0, Nic Measel 1 ½, L. C. Gehering 1 0. N. Measel wins first prize, a gold medal, for first time. T. P. McKenna won second prize, a gold medal, for second time, at 25yds. T. Crystal won third prize for third time, and the medal is now his own property; won on 7 birds, 21yds. Col. John H. Voss is handicapped by being put at 32yds. and to shoot from 5 traps, having won the first medal at last shoot. Dr. Hudson, referee; P. J. Keenan, scorer.—T. P. MACKENNA, Rec, Sec,

WELLINGTON, Mass., Oct. 27.—A disagreeable mist prevailed at the Wellington Range to-day, yet the shooters kept bravely at the traps and won as follows:

Six bluerocks, Bert, Wild and Melcher; 6 pigeons, Wild; 6 pigeons, Snow, Bert and Swift; 6 bluerocks, Chase and Sanborn; 10 bluerocks, Bert, Melcher, Field and Wardwell; 10 pigeons, Bond, Perry, Wardwell and Swift; 10 pigeons, Moore, Snow and Nichols; 3 pair pigeons, Perry; 6 pigeons, Wild, Perry and Nichols; 6 bluerocks, 24yds. rise, both barrels, Scott; 6 bluerocks, 30yds. rise, both barrels, Bert, Lee and Scott.

The badge match was closely contested, Sanborn winning the match with 18, closely followed by Melcher, Moore and Snow with 17.

In merchandise match, 10 bluerocks and 10 pigeons, to-day's contest gave the eight prizes as follows: Wardwell, 19; Chase, Bert, Perry and Bond, 18; Melcher 17; Moore and Scott, 16; Swift, 15; Wild and Field, 14; Sanborn and Nichols, 14; Conant, 12.

BLOOMING GROVE PARK.—The annual shooting and fly-casting tournaments of the Blooming Grove Park Association were held on their grounds in Pike county, Pa., on Saturday and Monday, Oct. 27 and 29, during which time an easterly wind, alternating between fog and rain, threatened to prevent the rifle shooting contest, but it fortunately cleared up on the afternoon of the last day, and the target could be plainly seen. Match at 20 clay-pigeons. In shooting off the ties the gold badge went to Mr. F. Engle and the silver one to Mr. Youman's: F. Engle 15, C. R. Hedden 15, E. M. Youmans 13, Dr. S. M. Nash 13, N. S. Smith 12, E. H. Clark 11, Dr. G. M. Eddy 11, E. H. Booth 10, H. F. Crosby 8, N. H. Evans 7, F. Mather 4.

Match at 15 single live pigeons, for gold and silver badges. In shooting off the tie for second prize it was won by Mr. Eagle: C. R. Hedden 12, F. Engle 11, Dr. S. M. Nash 11, Dr. G. M. Eddy 10, C. R. Worthington 10, E. H. Clark 9, N. S. Smith 8, E. M. Youmans 8, B. T. Fairchild 6, W. H. McCord 5, R. G. Park 3, H. G. H. Tarr 2.

Rifle shooting, 200yds., hunting sights, off-hand, possible 50, gold and silver badges. The wind was unsteady and the sky was overcast: C. R. Worthington 26, A. J. Post 23, Dr. S. N. Nash 16, Dr. G. M. Eddy 15, B. D. Smith 14, J. M. Eastman 12, E. H. Booth 9.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $5. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

NINETY VERSUS FORTY FEET.

IN VIEW of the efforts made only a year since by the New York Y. C. to restrict all contests for the America's Cup to a special class of 90ft. yachts, thus encouraging this class at the expense of the best interests of yacht racing, it is highly amusing to see how rapidly the class is disappearing and how ineffectual have been all such ill-judged efforts to alter the fixed laws of supply and demand. It is apparent to even a casual observer that yacht racing is as yet an "infant industry," and about as much in need of "protection" as any branch of manufactures, and this "protection" must come from the larger clubs through a close and intelligent study of the wants and requirements of those yacht owners who are willing to race, and an earnest effort to meet them. In the 90ft. class all the powerful stimulus of three international races has brought to the front only half a dozen men who are able and willing to put their money in such craft; and a very much smaller number who have shown themselves capable of racing them with any degree of success; in fact, it may as well be said that Gen. Paine is the only one who has done so. This season has shown that in the present condition of American yachting it is impossible to carry through a fair amount of racing in the largest class, and that it will even be difficult to do so in the 70ft. class, as witness the paltry entries in all the principal regattas of the year. It would have been far wiser had the revisers and improvers of the deed of gift but moderated their ideas to a practical limit and thrown the influence of the Cup races into the 70ft. class, where it is at least as badly needed as anywhere else, and where it would not have been worse than wasted, as at present.

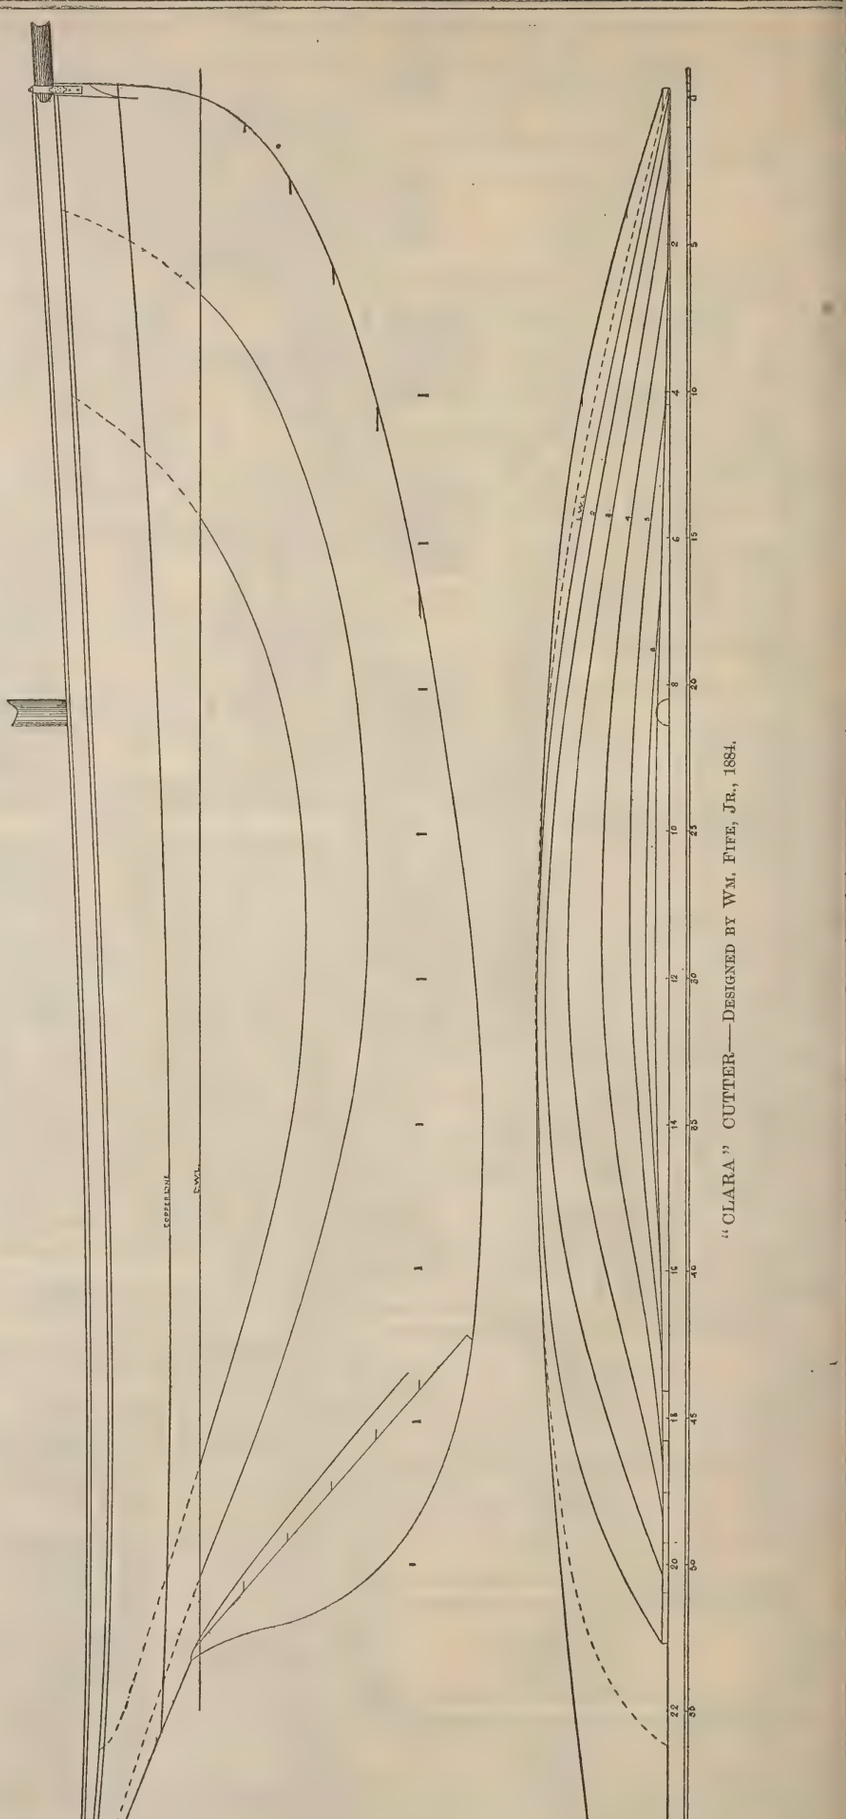
The season just closed, though bare in any definite results as to the superiority of any particular boat, or even any special type, has been marked by two important features: the decline of yacht-racing in the larger singlestickers, and a proportionate increase in popularity of racing in the smaller classes. In spite of all that has been done to foster and encourage it, the racing has been dull and spiritless in the large class, no *bona fide* challenge seems likely to crystalize out of the vague roorbacks of altered Thistles and antipodean flyers; while the class, which has dwindled down to three yachts, is to be lessened still further. Vice-Com. Morgan, owner of the Mayflower, has at last decided to go ahead with the changes in rig proposed last spring, and next year Mayflower will join her old classmate, Priscilla, as a "fast cruiser" with two sticks. Not only will the large class be robbed of its second best boat, but at the same time the 40ft. class will be increased by the addition of a new boat for Mr. Morgan, who will use her exclusively for racing, keeping Mayflower for cruising and occasional racing.

The growth of the 40ft. class, and especially at the time when the fame of the large American singlestickers has spread everywhere, is in itself most instructive. It has been not only spontaneous, entirely unaided by the clubs, but at the same time it has been rapid and vigorous, with every prospect of permanency. The class was practically born last winter, but now it includes seven new yachts, three or four old ones, and is likely to be increased by four or five more at least before spring.

At the present time, yacht racing is practically dead in the largest class, 80 to 90ft., and also in the old 55ft. class, made famous by Clara and Cinderella; while even in the 70ft. class it is devoid of all life and activity. A challenge for the Cup would no doubt galvanize for the time the large class into a revival; the 70ft. class is certain to grow in numbers and to be permanent, while it is very probable that the 55ft. class will be revived some day with success; but as matters stand now, the only prospect of any real racing next year lies in the 40 and perhaps the 30ft. class, and it will be well if the clubs recognize this fact by extending a little encouragement to the former class in particular.

It has been considered a matter of course that all international yacht racing practically begins and ends with the New York Y. C. and the America's Cup; but it is by no means improbable that in the hands of some active and energetic club the excitement of the international races may be transferred to the 40ft. class. There are already some British yachtsmen who would gladly send a 40-footer across to race for any suitable prize, and should the America's Cup be left too long in Tiffany's vaults its guardians may wake up some day to find that its value as an international trophy has departed.

DELAWARE RIVER.



COOPER'S POINT, Oct. 25.—*Editor Forest and Stream:* The keel schooner yacht Leona started to-day from Cooper's Point, Camden, N. J., bound South for the winter, the objective point being Jacksonville, Fla. The little craft is 25ft. over all, 21ft. load line, 6ft. beam, 3ft. draft and 22in. least freeboard. She is a Boston built boat, having made the run to Philadelphia outside. Captain Robert Lutz is the owner, who, with Elmer Whiting as mate and crew, will navigate the little vessel on her southern voyage. The Leona is full rigged, carrying topsails on both sticks and is fully supplied with other light sails. She is a little beauty, but is too small for the type. As I will be in communication with the Captain I will occasionally send you a brief account of his progress.

While the little ones are preparing for a cruise in the Delaware and Chesapeake bays, I find many of the larger craft already laid up for the season. The early September drizzle has sent the "social" summer lounge from the river side club house to his more genial winter quarters in town where he belongs. A yacht club made up of this kind of stuff is "no good."

Go to Kensington, Southwark or Cooper's Point on the first day of the new year, and if the river is not blocked with ice you will see tuckups and fifteen-footers out sailing. But then these people are sailor men, pure and simple, and don't know any better. In the early spring before the huge boulders of "falls ice" have been forced down into the lower Delaware, the Kensington boys are out racing around the island "for somethin' hot." The larger cabin yachts, first and second class, are not seen before the "grand regatta" in June and then scarcely in a healthy condition. The aquatic blood has not yet been warmed into life. But these people you know are fancy yachtsmen and belong to social clubs, the taint of the sailor is not yet upon them.

The Corinthians will probably have another race this season around Reedy Island. Commodore Cook's challenge has not yet been withdrawn. The nineteenth race of the Corinthians took place from Cooper's Point Oct. 23, starting at 3:55 P. M., wind light S.E., raining and thick. The Item, Capt. H. King, turned home stakeboat 5:08; Wilkins, Capt. R. Stay, 5:10; Alimond, Capt. W. Cook, 5:11:30. Another race will be sailed on Oct 30.

R. G. WILKINS.

"CLARA" CUTTER—DESIGNED BY WM. FIFE, JR., 1884.

CLARA.

THE accompanying designs show the 20-ton cutter Clara, whose description was given in the FOREST AND STREAM last week. The interior plans will be published shortly. The lines form an interesting study in connection with those published in the FOREST AND STREAM of Dec. 2 and 9, 1886, of a similiar but wider cutter, and designed by Mr. Fife.

PROSPECTIVE CHALLENGES FOR THE CUP.

IN default of any genuine challenges for the America's Cup, the usual crop of rumors is now flourishing, there being now three rather airy challenges afloat. One of these is based on nothing better than a brief inquiry from a Mr. Phelps, N. A. of England, who certainly has not attained any great fame or prominence as a yacht designer, as to whether a vessel drawing 17ft. could sail the course, an answer being requested by postal card. The second rumor has for foundation the report, which is probaby true so far as it goes, that Thistle has been hauled out under a shed to be deepened; though that she will have a centerboard, that she is owned by Mr. Coats, or that she will challenge again for the Cup, are entirely matters of conjecture. The third rumor comes from the presence of Mr. Walter Reeks, of Sydney, in New York and Boston. Mr. Reeks has been looking for information in regard to challenges and races for the Cup, but there is very little probability that the New York Y. C. will be called upon in the near future to consider a challenge from Australia, and at present there is no reliable indication of one from any other source.

"CLARA"—SAIL PLAN.

NEW YORK Y. C.

THE last regular meeting of the year was held Oct. 19, at the club house, with Com. Gerry in the chair. The following members were elected: W. A. Gardner, J. M. Sears, Truman H. Newberry, W. M. Harriman, Daniel R. Fearing, Henry E. Abbey, August Belmont, Jr., E. H. Weatherbee and Francis T. Underhill.

The following nominating committee was appointed: James D. Smith, Lloyd Phœnix, Edward M. Brown, Ogden Goelet, E. T. Auchincloss, John R. Platt, Alexander Taylor, Jr., Henry C. Ward, Edward E. Chase and Frank T. Robinson.

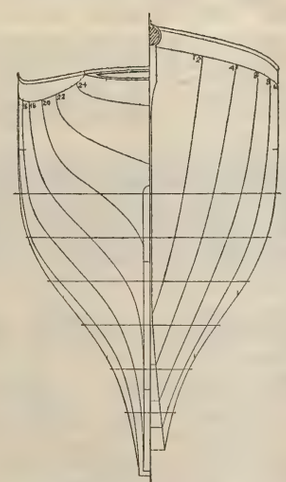
The following letter was read by the secretary:

"NEW ROCHELLE, N. Y., Aug. 9, 1888.

"*John H. Bird, Esq., Secretary of the New York Y. C.:*

"DEAR SIR—Being in possession of the prize won at the first regatta of the New York Y. C. by the yacht Cygnet on the 17th of July, 1845, it has occurred to me that the club is the most appropriate repository for the safe keeping of this interesting relic.

"It will, therefore, give me great pleasure to present this trophy to the club should they desire to possess it. Very truly yours,



"R. W. EDGAR."

A motion was made to accept Mr. Edgar's gift with thanks. A letter was read from Mr. S. G. Doran in regard to his use of the club colors, not being a member of the club, and a motion was carried that no action be taken in the matter by the club. A letter was also read from Mr. E. C. Benedict, owner of the Oneida steam yacht, suggesting that yachtsmen should unite in the establishment of a "black list" of sailors, requiring a certificate of character from every man employed. After discussion a committee of five was appointed to consider the subject and report to the club at the next meeting. A letter was also read from a Mr. Phelps, an English naval architect, announcing his intention to design a cutter that might challenge for the America's Cup, and asking whether a draft of 17ft. would be allowed and would be possible over the course, in answer to which it was resolved to mail Mr. Phelps a copy of the last deed of gift. A letter was also read from Lieut. Hunker, U. S. N., in relation to a proposed anchorage for yachts only at the foot of Twenty-sixth street, East River, the present anchorage being now used by vessels of all classes.

PIRATES ON THE HARLEM.—On Oct. 24 before Justice Welde in the Harlem Police Court, William, alias "Farmer" Glynn was held in $1000 bail for stealing four overcoats from the yacht Crescent, and Michael Ammond was held for stealing a boat from David Conlin's boathouse, East 121st street, East River. It is claimed that Glynn is the head of a gang of thieves whose headquarters is near East 101st street, where six catboats and rowboats were found. Many robberies have lately taken place about the East River, the yachts Peerless, A. J. Allaire, Welde, Zoe, Theresa and Mystery, besides various boat and club houses, having been robbed by this same gang.

THE ADELAIDE—PROVIDENCE COLLISION.—The reports of the Local Steamboat Inspectors, Messrs. Marsland and Fairchild, made public last week, condemns the pilots of both the Adelaide and Providence for violation of the rules of the road; the Adelaide in particular not stopping in time, and not carrying a range light or having a watchman on deck. The pilot of the Adelaide, Wm Mongomery, is suspended for 80 days, and the pilot of the Providence, Benjamin Whiting, for 20 days.

KNICKERBOCKER Y. C.—The formal closing of the season was celebrated by the Knickerbocker Y. C. on Oct. 27, at the club house, Port Morris, by a clambake.

"CLARA"—BODY PLAN.

A MEASURED MILE FOR STEAM VESSELS.—A correspondent of the *Field* criticises the speed of American yachts as follows: "If even 75 per cent. of all that is written about American steam yachts be true, their builders could give valuable hints to the builders of Etruria, Ariette, Reine Regente and many others; in fact, it would be worth these gentlemen's while to come out here and find out how it is done, and if they do, it would be just as well to bring out a foot rule to measure the distances with. However, now that the Secretary of the Navy, a man who knows what he is about as thoroughly as any one, English or American, has ordered (knot) miles to be marked off on the Delaware and elsewhere, there being no such marked distance in America, perhaps we shall find out the real meaning of the hackneyed phrase, eighteen miles an hour." There is a good deal of cold, hard truth in these somewhat sarcastic remarks, and it is time that steam records were made in some fairer way than the New York style—taking the vessel through Hell Gate with a favoring wind and tide astern. We understand some of the builders of fast steam vessels do not look with marked favor on Secretary Whitney's proposals.

CHANGES OF OWNERSHIP.—The Herreshoff launch Jersey Lily has been sold by Mr. N. L. Munro to Mr. A. J. Riker, of New York, for $4,500....Stella, steam yacht, formerly Leila, has been sold by Mr. W. W. Kenyon to Mr. Henry E. Abbey. She will fly the flag of the New York Y. C.

TOM BOY.—Mr. Archibald Rogers's new cutter Tom Boy arrived at New York on Oct. 26, after a rough trip around the Cape, having left Boston at 11 P. M. on Oct. 18. The run to Vineyard Haven was made easily, but from there bad weather, westerly winds and heavy seas were encountered for the rest of the trip through the Sound, the yacht being sailed at times under trysail and staysail. Her crew consisted of Capt. A. E. Harding and Chas. Morrison. The boat behaved well, being stiff and dry in the seas. She is about 29ft. 6in. l.w.l., 10ft. beam and 7ft. draft, with clipper stem and a long counter. The freeboard is very high, but the sheer is fair and pleasing, and the boat is one of the best-looking of the new craft, resembling Baboon. She has a large rig, cutter, of course, the staysail having a club on the foot, with a single sheet. The main shrouds are set up with turnbuckles. There is no cabin house, but a very long cockpit. Below is a large forecastle, a very convenient pantry and one large cabin, with standing height under a low skylight. The deck seams are payed with marine glue and the outside is painted white.

ELECTRIC LAUNCHES.—A large electric launch for passenger use was launched at Chiswick, Eng., on Oct. 8, her dimensions being: Length, 65ft. 6in.; beam, 10ft., draft, 1ft. 10in., with eighty passengers, on a displacement of 12½ tons; the speed being six miles per hour. The motive power consists of 200 accumulators, with two 7½ H. P. motors and two Thornycroft propellers with three blades each. All the machinery is below the deck, leaving a clear space for the passengers, as well as a cabin, with dining table, etc., amidships.

LANCASHIRE WITCH.—The steam yacht Lancashire Witch, in which Sir Thomas Hesketh made the voyage around the world, has been on a cruise in the Kara Sea, calling at Novya Zembla. She rescued three sealers from the ice, towing them out. In an excursion her steam launch was crushed by the ice, the crew saving themselves in a Spitzbergen boat, after dragging it for twelve knots over packed ice.

NEW YACHTS.—Perkins & Blaisdell, of Bath, Me., will build a 50ft. launch for Messrs. G. A. and J. L. Gardner, of Boston.... At Port Huron, Mich., Love & Scofield are at work on a 60ft. steam launch for their own use.....At Bay Ridge, Mumm is at work on a Burgess 40-footer, similar to Baboon, for Mr. N. D. Lawton.

BALLYMENA.—The new Herreshoff yacht Ballymena, owned by Mr. George S. Brown, of Baltimore, reached New York on Oct. 27, in charge of Capt. D. J. Anthony. She is 140ft. over all, 124 l.w.l., 18ft. beam and about 12ft. draft, with a 5 cylinder engine. The interior is very handsomely fitted up.

VOLANTE, steam yacht, formerly the Rosalie, has been sold by Mr. Alfred Box, of Philadelphia, to New York owners.

CYTHERA.—The will of Mr. Cornelius Smith Lee, who was lost on the Cythera, has been filed for probate.

Canoeing.

AN AMATEUR CANOE.—The latest addition to the fleet of the Rutherfurd C. C. is a handsome Notus canoe, built from the lines in the FOREST AND STREAM by her owner, Mr. J. T. Holden. The Elouise is smooth-skin, and a very neat piece of amateur work.

OHIO AND MISSISSIPPI RIVERS.—A correspondent asks where charts of these rivers can be had and also their cost.

MY THUNDERSTORM CRUISE.

(Concluded from page 276.)

THE Fort Ti Transportation Combine had contracted to deliver the Inez on the shores of Lake Champlain, but as far as I could make out, in the somewhat dim morn light, the place where they left her resembled more a mythical frog pond than anything else I could think of. However, I was tired, and I do not believe it took me fifteen minutes to get my canoe tent up and get into bed. What happened from the time I made the last tape fast to the time when I was awakened by a series of awful "hi yies," I do not know. I stuck my head out of the tent to find a small procession of buggies and light wagons halting opposite me. I was camped beside the road leading to a steam ferry—and every rig was occupied by from two to eight very curious-looking persons.

I stared at this impromptu audience and they stared at me, until a very comfortable fat old granger, whose chief characteristic was a very high shirt collar and a very high stove-pipe hat, remarked that he "guessed I wus one of them canoe cranks that he'd read about bein' up to Lake Geourge." I said I "calculated that I wus," and when I saw how many pretty girls were admiring me I felt like adding that as a general rule I preferred to be "hi yied" at a quarter of an hour before I gave an entertainment.

Then my interlocutor put one leg over the side of his wagon, fitted his chin into the hollow of one hand, his elbow into the soft spot in his knee, and proceeded to cross-examine me. Where was I from anyhow, how old was I, how much did my canoe cost, were my teeth sound, and so on *ad infinitum*. At last he wound up his investigation by remarking that "the ladies were very anxious to see how I fixed my victuals and slept in that little concarn, and if I had no objection theyed come down and see."

I said that I had no objections if the ladies would kindly look the other way until I got my—well, got dressed to receive company. This perhaps too plain statement of the facts of the case had the desired effect, the procession moved on, and I got into my flannels with as much dispatch as possible.

I had intended going on down Lake Champlain as far as possible, but we had been so long doing Lake George that instead of three I had only two clear days at my disposal. I was without a billy, the bread bag was empty and the cracker bag held nothing but crumbs; worst of all, I found that both the bow and stern compartments were full of water, and I had forgotten to bring a piece of rubber tube to syphon it out with. There was nothing for it, therefore, but to get to a store, and as I wanted to explore the ruins of old Fort Ticonderoga, I thought it advisable to abandon my cruise down the lake and go back to Fort Ti. I spent a very pleasant morning looking about the ruined fort, gathering water lilies in the creek and loafing about the village, and got back to the steamboat wharf just fifteen minutes before the boat was to start for the other end of the lake.

The steamboat wharf at Fort Ti is about eight feet high, and there is not the vestige of a slip in the vicinity. No time was to be lost in discussing ways and means, so by vigorous yelling I got a couple of steamboat men to come to one end of the wharf where there was a float. They passed me down the ends of a couple of heaving lines, I threw a bow line on them, got one under each end of the canoe, with all her stores on board. 'Twas a desperate portage that, but the Inez was not even scratched let alone being strained during her aerial cruise. There are some advantages about a double-skinned canoe after all.

There is no need to say anything about a trip down Lake Champlain in the Vermont on a glorious day in August, but I wonder who the hero of this incident is.

"On our up trip, day or so ago," said the French-Canadian mate to me, "we pas' two canoe about Westport. The steersman he take the boat up pretty close to them, so as give passengers a chance to see, and one of them he have nothing on 'tall but a piece of old pair trousers 'bout his middle. His back was brown, brown as anything, and his legs were *rouge*, what you call red. That too much or a good thing, he'd go too far. He'd ought to wear a shirt."

It was seven o'clock when we got to Plattsburg, but as I was anxious to get on, I decided to run the three miles to Government Head and camp there for the night as the day was very dark when I got the canoe rigged up again; the wind was fresh, but it was steady, and there was not enough sea on to make any trouble. As soon as I got beyond the piers I saw that I could not make the Head without tacking, so after running half a mile to the westward I went about, prefering to get to windward along the main shore, so as not to lose the light I was aiming for.

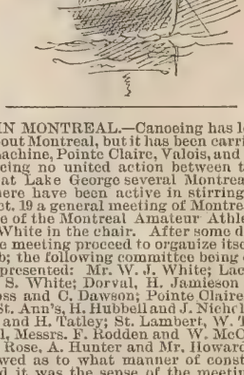
When I started out I saw a thunderstorm brewing to the north, but it seemed a long way off. When I went about, however, a bright flash of lightning warned me that if I wanted a dry shirt that night I should get ashore.

I had been sailing with one reef in the mainsail, as prudence dictated, but now prudence seemed to dictate that I should get ashore before the wind changed with the storm, and I shook out that reef. I suppose I had a mile to sail, for I kept her well to windward, while letting her go through the waters. The wind had freshened, with a chill in it, and I found that the Inez was not anxious to accommodate more of me than my feet for the time being. It was a match race between canoe and thunderstorm, in the dark, and the canoe won. I enjoy the memory of that event now; it was glorious, the wild plunging of the little boat, the tearing strain of the sheet, the black darkness about me, only relieved by the white crest of a breaking sea, and the wild flash of the lightning behind; but I admit that I did not enjoy it then, and when I eased her up and let go the halliards as near to the shore as I dared to go, I was decidedly glad that it was over. I did not waste any time hunting for a camping place either, but landed her up on the first bit of firm land I came to.

A worse camping place could hardly be imagined, it was merely a beach of rough gravel a few inches above the water level, and behind was a swamp and a railway viaduct. I got my tent up, scratched together a few chips, and managed to get a billy of coffee boiled before the rain came. When it did come however, it came with a vengeance, and the thunder and lightning was like unto the rain. After I had satisfied myself that the tent would stand, I devoted myself to sleep, not to the storm, and with success.

The wind was blowing straight down the lake when I turned out, and without stopping for breakfast, I made a start under all sail. Before I got to the head I made up my mind, that I would be careful and pulled a reef, and after I got round the head, and put her before the wind, I wished I had pulled another. The breeze was steady, and the sea long. The Inez behaved better than she generally does before the wind, her worst point of sailing, and I must have put eight miles behind me before I ran in behind a bold headland that promised a good lea, to get something substantial to eat. Before starting again I put a block of chocolate into my single pocket, as I did not intend to stop again until I had reached Isle aux Noix, and that was a long thirty miles off. As soon as I got beyond the shelter of the point I found that the wind had freshened and was driving in a sea from the "Broad Lake" that would not have disgraced old Ontario. I pulled in another reef and found I could could carry the whole jigger and reefed mainsail, and all went well for a while, although the strain was considerable.

The Inez is like the majority of modern canoes, without a foot steering gear, and I have been in the habit of supplying this lack by making fast a couple of short lines with loops at the ends to fit over my feet to the cross bar of my deck tiller. As both my topplinglift and tack are fixed affairs I could not hoist the reefed sail high enough to allow it to clear the tops of the seas, and therefore I dared not get inside and steer with my feet fast in the cord loops for fear the boom would roll me under.



It grew worse instead of better as I went on, and at last the crisis came. A big sea that had swallowed a couple of smaller ones, caught her under the counter, she heeled to it and drove right into the back of the sea in front. The green water swept her decks to the cockpit rail; for a second it seemed to me the whole of the little craft was submerged, and the boom with its mass of reefed cotton plunged deep into the foaming head of the sea that had done the mischief. I put the helm over, hauling in the mizen sheet as I did so, and slowly she righted herself as the next sea rolled under her. I got the mainsail off her at once and lashed it inboard, got out a half paddle, and waiting for a long, clean roller, I put the helm hard up, slacked away the mizen sheet and dug into it with the paddle for my life. She went round like a top, and getting down into her, went at it with rudder and paddle to keep her straight before the sea, with the jigger set aft.

After that I had no more trouble until I reached Isle La Motte, where I got a lee and a beam wind that tempted me to try a single-reefed mainsail again. When I got out from under the island, however, I found the sea almost as bad as it had been in the open reach above, and again had to drop my mainsail. I also found to my disgust that I could not house my head, and I had to run three miles under my jigger with the board down. I found a lee at out three miles above House's Point, and made a landing near a farmhouse, the inhabitants of which were evidently of an aquatic frame of mind, for the very worst specimen of a steam launch I ever saw was anchored there, and a very ancient canoe reposed on a pile of lumber near by. I succeeded in getting my centerboard into the boat, and there and then registered an oath by oak and ash and thorn, to so arrange matters that I would have a folding centerboard to dispose of before a month was over, and a canoe with a plate board to cruise in next season; and I have kept my vow.

The remainder of my day's run was uneventful, and I beached the Inez on the green turf of Isle aux Noix, in the Richelieu, thirty-eight miles from Plattsburg, just in time to get under shelter before another thunderstorm, almost as bad as the one of the night before, broke overhead. I had no time to cook anything, however, and had to turn in after a very unsatisfactory meal of bread, cheese and chocolate in the block.

It rained at intervals during the night, and morning broke gray, dismal, and with a chilly, squally and altogether unpleasant northwest wind howling through the big elms. I got myself up a good breakfast, treating myself to an omelette wherein four eggs were reinforced by a large quantity of grated cheese and potted tongue, and then devoted an hour or more to investigating Fort Lennox, a work which, although now disarmed and ungarrisoned, was, prior to the days of railways, one of the keys of Canada. Then came twelve miles of hard work, for although in nearly every reach of the river I had a slant from one shore to the other, the wind was puffy and variable, and even under close-reefed canvas I had all I could do to prevent the Inez from turning turtle. By one o'clock, however, I was through the swing of the railway bridge at St. John, and my four days' cruise on Lake George and Lake Champlain came to an inglorious end when I berthed the Inez on the nastiest mud bank I had encountered since we capsized together off the Isle of Mud the year before, in the "Lac Two Mounting." So ended a cruise in which I loafed more, worked harder, ate the most and the least, and discovered more virtues and defects in the Inez, her rig and outfit, than in any other short cruise I have ever made. I must also confess that during this same cruise I discovered more defects in myself and my seamanship than I thought I had to contend with. The special defects I discovered in canoe, rig and outfit and the methods I propose to use in amending them, may form the basis of another article. As for the defects in the canoeist, I will try to satisfy my conscience by finding fault with the other canoeists, as is the way with weak humanity.

RETAW.

CANOEING IN MONTREAL.—Canoeing has long been a most popular sport about Montreal, but it has been carried on by a number of clubs at Lachine, Pointe Claire, Valois, and other suburban resorts, there being no united action between them. Since the A. C. A. meet at Lake George several Montreal canoeists who were present there have been active in stirring up canoeing at home, and on Oct. 19 a general meeting of Montreal canoeists was held at the house of the Montreal Amateur Athletic Association, with Mr. W. J. White in the chair. After some discussion it was resolved that the meeting proceed to organize itself into the Montreal Canoe Club; the following committee being chosen from the various clubs represented: Mr. W. J. White; Lachine, Mr. W. A. Shearwood and S. White; Dorval, H. Jamieson and A. G. Frye; Valois, J. G. Ross and C. Dawson; Pointe Claire, J. L. Wiseman and D. A. Poe; St. Ann's, H. Hubbell and J. Nichol; Chateauguay, H. W. Reynolds and H. Tatley; St. Lambert, W. Tietor and A. R. Scott; Longueuil, Messrs. F. Rodden and W. McClare; Laprairie, A. Walker; Ste. Rose, A. Hunter and Mr. Howard. An informal discussion followed as to what manner of constitution the club should have, and it was the sense of the meeting that it should not become associated with the M.A.A.A., that the committee should be composed of representatives of the branch clubs, and that if possible the fees should cover not only membership in the club but in the American Canoe Association. After a vote of thanks to the directors of the M.A.A.A. for the use of their club room, the meeting adjourned to the call of its chairman. The new club is likely not only to further the interest in canoeing about Montreal, but to add new members to the A. C. A., as it will be well represented at the general meet in the Northern Division next August.

A. C. A. MEMBERSHIP.—Central Division: A. R. Porte, Ogdensburg, N. Y.

New Publications.

WISHING CAP PAPERS. So many new books of greater or less merit and interest are annually issued from the press, that, in the effort to keep pace with the current literature of the day, the most voracious reader finds so much of his time encroached on, that he has no leisure to familiarize himself with the writers of a generation ago, and nothing to guide in the selection of their best works. This difficulty is being met, the selection of the best writings of the past has become a special branch of the publisher's calling, and the flowers of English literature are being culled and presented for our edification and delight. The "Wishing Cap Papers," by Leigh Hunt, is one of a series of volumes now being published by Lee and Shepard, Boston, and entitled "Good Company." It is a series of essays in a conversational style on well known places and persons, and affording familiar insight into the personal characteristics of all the most prominent personages in English life and literature from the days of good Queen Bess down to Leigh Hunt's own time. Leigh Hunt is a genial writer, and his essays, graceful in style, evidence a high measure of literary culture.

FIRESIDE SAINTS is the title of another of Lee and Shepard's Good Company Series, and is a selection from the writings of Douglas Jerrold, including those charming little vignettes, Saint Sally, Saint Becky and the other Fireside Saints from which it takes its title. Other papers in the selection are: Mr. Caudle's Breakfast Table; An Old House in the City; The Little Great and the Great Little; Silas Fleshpots, a Respectable Man; Michael Lynx, the Man who Knew Himself; etc. In these papers there is a great deal of that caustic humor and merciless lashing of the hypocrisy of life which is generally considered the author's leading characteristic; but as Leigh Hunt justly remarked, "if Douglas Jerrold had the sting of the bee, he had also his honey." It is one of the prime joys of life for humanity to see the vices of others exposed, and Douglas Jerrold undoubtedly owed a large measure of his popularity to his possession of the bee's sting, but the great charm of his writings must be sought in these permeated with the honey. The "Fireside Saints" are unrivalled in their way, and leave no possible doubt that their author was a very lovable man.

UP THE NORTH BRANCH; or, A Summer's Outing. By Captain Charles A. J. Farrar. Author of "Eastward Ho," "Wildwoods Life," etc. Boston: Lee and Shepard. There is an abundance of moving incident by flood and field in Captain Farrar's "Up the North Branch." A party of nine young gentlemen, more or less initiated into the freemasonry of the woods, go into the Maine wilderness beyond the Forks of the Kennebec in search of excitement, and find an inexhaustible supply of it from the start to the finish, bagging moose, bear, wolves, catamounts, and having a good time of it generally. In this as in other works of the series, Captain Farrar interweaves with the narrative an amount of information of practical value to amateurs, and the present work is sparkling and well up to the standard of the previously published works of this popular series.

ROCHESTER AND ITS SUBURBS is a handsome collection of illustrations, drawn by C. K. Darrow from photographs made with the "Kodak" camera, and sold at 25 cents by C. L. Sherrill & Co., of Rochester. Added to its interest as a display of the points of the Flower (erstwhile Flour) City, is the demonstration it affords of the excellence of the wonderful "Kodak."

SONGS FOR OUR DARLINGS. Uniform with the above is a selection of juvenile melodies, illustrated with over a hundred engravings and designed to reach and stimulate the moral nature of children old enough to distinguish between right and wrong. Milk for babes calculated to exercise a wholesome influence upon their moral development.

ROBERT ELSMERE. By Mrs. Humphrey Ward. New York: Macmillan & Co. Price, 50 cents. That "Robert Elsmere" was written by a woman will be a matter of astonishment to many people. In spite of woman's invasion of field after field of intellectual labor, there has remained a general conviction that with her emotional nature, the critical faculty would never prove strong enough to admit of a dispassionate review of the evidences for and against the religious system or systems with which she has been associated; but in "Robert Elsmere" we have a novel of intensely dramatic interest portraying the struggles of a clergyman of deep religious convictions who, in the course of his literary labors, is impelled to the cultivation of the critical faculty, until he is insensibly led to the conviction that Christianity is incapable of standing the tests by which secular history is investigated. The interest of the story centers in the conflict between science and religion so characteristic of the age; and the bitterness of the struggle in which the hero is impelled by uncontrollable forces to do violence to the religion he has regarded as sacred, and which he has hitherto deemed the source and support of all the higher aspirations of his nature. In every such struggle no one can fail to realize that the bitterest blow of all is the lament of his past associates over his downfall, their denunciation of his rash step, their prayers, and evident horror at the thought that he has placed himself in the power of the evil one; and in the story under review the interest is intensified by making Robert Elsmere's wife the impersonation of the principle of the Christian religion, presenting only its best aspects, but morbid in its intensity. We have no space for a more detailed analysis of the story, but we have no hesitation in saying that in its display of intellectual power and dramatic interest the work has won for its author a right to rank as the acknowledged equal of George Eliot, perhaps the only English-speaking woman writer who can be classed together with her.

A DEVIL OF A CRUISE; or, The Log of the Yacht Champlain, as kept by Col. J. Armoy Knox. Several passages in this remarkable book lead it to be inferred that he author was born a sailor, for in no other way can we account for such entries in the log as for instance that "her anchor fouled in a parallel of latitude" and other nautical incongruities; but candor compels us to admit that he kept both his eyes open during the cruise, and saw a great deal more than most voyagers, all of which is truthfully recorded in the log and so admirably illustrated by Worth, that between the story teller and the artist, the average reader would get more fun out of reading the log than making the voyage. The author has made his mark as a humorist. The contents of this volume have been already published as a series of letters in the New York *World*, Boston *Herald*, and half a dozen other papers, and achieved a popularity that justifies the author in re-collecting them himself and assuming that the public would like to recollect them also, and we may safely say that for those who have already smiled their broadest over the original text, the added illustrations will restore all the charm of novelty. (National Literary Bureau, New York. Price, 50 cents.)

BROKEN LIGHTS, by Frances Power Cobbe, another of the same series, is an inquiry into the present condition and future prospects of religious faith. In this work the author tells us she has sought the direction in which our Ark of Faith is going forth, and speculated on the region of opinion in which it will rest at last with some such feelings as may have swelled the hearts of the Israelites of old when the Philistines sent forth the Ark of the Covenant, to be carried wherever the cattle might be Divinely guided. The conclusion to which she points is that general enlightenment and scientific criticism will tend to sweep away the rubbish which overlies the fundamental conception of God, not only among Christians, but among Jews, Hindoos, and Theists of all creeds. But the writer urges that Theism, to be a religion at all, must be a religion of prayer, and not a philosophy. For her science may subserve the function of subverting a false religion, but is inadequate to the construction of the term. She is a powerful, clear and logical writer, and to people who have cut their moorings and are drifting about aimlessly, the influence of so decidedly constructive and calmly confident a mind as Francis Power Cobbe's cannot fail to be both attractive and soothing.

BRITISH REPTILES AND BATRACHIANS. By Catharine C. Hopley. Author of "Curiosities and Wonders of Serpent Life," "Aunt Jenny's American Pets," etc., etc. London: Swan, Sonnenschein, Lowery & Co. Price, one shilling. There is no very great display of reptile life in England, but the chief types are all represented. It has its poisonous and non-poisonous snakes, its toads, frogs, natter jack, newts and lizards, and these have effectively served the author as texts for describing the distinctive characteristics of the group, and their relationship with the fish below and the warm-blooded vertebrates above them. Miss Hopley has domesticated and made pets of all the creatures described, with the exception of the viper, and is thus enabled to describe them familiarly as well as scientifically. There are some very excellent illustrations, and the work forms a fitting addition to The Young Collector Series, in which it is included.

RELIGIOUS DUTY, by Frances Power Cobbe, is another of Lee and Shepard's Good Company Series. It is the second edition of a deeply religious work by a writer whom it was once the fashion to regard as an Atheist. Frances Power Cobbe's religion is an exalted Deism, which finds in natural religion not merely moral duty as apprehended by intellectual insight into the ultimate consequences of conduct in its action and reaction; but also as apprehended by spiritual insight. On the intellectual side the author is metaphysical; on the religious side she is essentially Christian, her rejection of the Divinity of Christ in no way shaking her faith in the spiritualism of the Christian religion, but regarded by her rather as comparable to the removal of a scaffolding necessary to the development of spiritual insight, but as such subserving only a temporary purpose.

MOTHER GOOSE'S MELODIES. Mrs. Partington's edition of "Mother Goose's Melodies," edited by Uncle Willis, presents the children with old friends glowing in the added light of pictorial illustration which brings out the meaning of the melodies with a clearness not to be apprehended by juveniles who have to picture the scenes to themselves with no other aid than words. (Boston: Lee and Shepard, paper 30 cents, boards 50 cents.)

Answers to Correspondents.

F. J. C., Siasconset.—See our game columns this week.

A READER, St. Louis, Mo.—The gun you name is a good one for the purpose. See the Arkansas notes in our shot columns.

W. M. C.—The trouble is probably in the grade of powder used. Try some first-class, clean powder, and see if that does not give the remedy.

G. B., New York.—Go to some of the stations on the railroad back of Fishkill on the Hudson, or go to Meacham Lake, in the North Woods.

J. W. S., California.—The Sunflower river region of Mississippi is one of the famous game districts of that State. Go by steamer from Vicksburg.

W. K. S., Easton, Pa.—In northern district of New Jersey the hare or rabbit season opens to-day; in the southern district it will open Nov 15.

H. N., New York.—Mt. Vernon is in Westchester county, where the shooting grouse, quail, etc., is confined to the month of November. No game may be marketed.

H. S. W., Rochester, N. Y.—Dr. Ellzey's address is Woodstock, Ind. You will find the merits of Osage orange wood discussed in Mr. H. P. Wells's "Fly-Rods and Fly-Tackle."

N. T. R., Manchester; N. H.—Mr. Robinson's new book, "Sam Lovel's Camps," is in the hands of the compositors, and you may look for an early announcement of its publication.

T. L. F., Liberty Hill, Ga.—The manufacturers of guns and rifles supply duplicate parts of locks, etc., and have regular scales of prices for the same. These are usually given in their catalogues.

D. F. E., Atlantic City.—The Pamlico river district in North Carolina, reached by steam from Norfolk, is at this season and later a great resort for wildfowl; and you will find deer, turkeys and quail there too.

O. H., Union Center.—You will find good shooting in northern Louisiana, and capital sport in Washington Territory, but in selecting a home you must be governed by your preferences of climate, etc. From your letter we judge that Washington Territory would be the better.

F. E. A., Waterbury, Vt.—Read Bogardus's "Field, Cover and Trap Shooting." It contains many excellent hints. We have printed many articles in back numbers, and one of them specially useful will shortly be reprinted in book form. D. W. Cross's "Fifty Years with Gun and Rod" has some plain and practical instructions.

S. W. S., Boston.—1. Does the present breech-loading shotgun shoot as hard as the old muzzle guns? In several books concerning guns I have seen it stated that the muzzle shot harder than the breech gun when it was first on the market. 2. Does nickel in any way hurt the steel of a shotgun and tend to weaken it? Ans. 1. Yes. 2. No.

Dead Finish Waterproof Braided Silk Fly Lines.

For Salmon, Trout and Black Bass.

These lines, which have given such general satisfaction, have been subjected to the most severe tests during th past two seasons, and are now made better than ever. They do not crack, chip or become tender, but remain so and pliable; they are waterproofed through and through, not merely on the surface, and are decidedly the best line for fly-fishing ever offered to anglers.

Send 10 cents to cover postage, and we will mail you our 140 double page illustrated catalogue.

ANSWERS TO CORRESPONDENTS.

SHALL ADIRONDACK DOES BE SPARED?

CONSIDERED with respect to the numbers of hunters who annually resort to it for deer, the Adirondack region of New York bears a close relation to the deer forests of Europe. If the game supply of the Adirondacks is to be conserved it is reasonable to assume that the rules which obtain in the deer forests should be in force there. One point in the code of ethics governing deer hunting in the European forest is that the stags only are legitmate game; the does are spared. No deer stalker in Scotland would think of killing a female deer; this feat would be the last thing in the world about which he would make boast. By the operation of this rule the supply of game is kept up from year to year; the deer could never be exterminated by the allowed killing of male deer of a certain age.

In this country many have made it a rule in big game hunting to refrain from killing the females. With a certain class of the best and foremost sportsmen this is a point in the code of field ethics on which they hold strongest convictions. The sentiment is a growing one, that in the Adirondacks and similar regions, where by indiscriminate slaughter of bucks and does the game supply is endangered, this rule of sparing the does should be adopted by all classes. Certain of the Adirondack clubs have a rule on their books forbidding the destruction of does. There ought to be a law on the statute books to that effect. It would mean a material advance in the solution of the deer preserving problem.

We would be glad to have the views of our readers on this subject. Unless we mistake the attitude of those who concern themselves not alone with the question of where they can find a deer to-day, but also the consideration of where others can find a deer ten or twenty or fifty years hence, the time is ripe for a law to forbid doe killing and for practice in conformity with such a law.

FORESTS OF THE ROCKY MOUNTAINS.

III.

THE report of George B. Sudworth on the forest flora of the Rocky Mountains is a valuable contribution to our knowledge of the botany of the region, and Prof. E. J. James contributes a carefully considered and powerful argument on the duty of the Government to assume control of its forests, and administer them systematically. Dr. B. E. Fernow laments the present system of neglect of the forests, their reckless spoliation, and the utter inadequacy of Government measures to avert it. He insists that State control of forest operations is indispensable, and the only means by which the people can utilize the usufruct, while preserving to the forest its forest character in perpetuity. All this is quite true, but it is not immediately practicable. The Government is not ready to embark its surplus millions in an enterprise of the proper conduct of which it knows nothing; and even were it willing, we have no trained department adequate to the proper administration of this vast property. Forty-five million acres of forest distributed over seven times that area of mountain region call for professional knowledge and a great deal of administrative ability, not merely in the head of the department, but in a very large staff of deputies. It is all very well to assert as an abstract proposition that the public interests require that the forests be administered by the Government. The assertion cannot be reiterated too often or too emphatically, but Dr. Fernow may go on reiterating it until the last acre of Government forest is cut over, and no practical results must be looked for until he is prepared to demonstrate not merely the desirability but the feasibility of government administration.

Let us look at the problem in all its bearings, not merely with the object of comprehending it intellectually, but with a view to determine the practical measures best designed to awaken the Government to the realization of the feasibility of embarking in the administration of its forests with prospects of financial success. So far as we can ascertain, no such practical proposals have yet been submitted to the Government. Grants of a few hundred thousand dollars have been asked for with the object of preventing depredations on the forests, but we never heard of any proposal designed to demonstrate experimentally that the head of the Forestry Division is capable of keeping the market supplied with fuel and timber, and of improving the forest area from which it is drawn at the same time.

That is the problem. We have in the Rocky Mountains an area of forty-five million acres, more or less, of forest, whose influence upon the regulation of the water supply is such as to render its maintenance as forest absolutely indispensable to the future well-being of the whole region. As natural forests, they yield no annual increment, growth and decay counterbalancing each other from age to age. To render them productive it is necessary to remove the old timber and restock the cleared area with young growing plants.

Natural reproduction can generally be relied on for restocking cleared areas, but we have abundant evidence to support the view that the operations of the lumberman are not followed by reproduction. The forest area is contracted annually by the area cleared. There is considerable local demand for timber for mines and building, railway construction and maintenance, and for fuel for smelting and for domestic purposes; but the demand, although considerable, is probably far below the productive capacity of the forest area. According to Colonel Ensign, the timber consumption of the area is about 25,000,000 cubic feet per annum, or little more than half a cubic foot per acre for the whole forest area. Or, if we approach the problem from another side, from 10,000 to 20,000 acres of sound mature trees would carry a stock equal to a year's requirements in timber, and from 1,000,000 to 2,000,000 acres suffice to maintain the draft permanently. But in our present imperfect knowledge of the condition of the forests, no reliance whatever is to be based on conclusions drawn from figures. Of one thing at least we may be assured, and that is, that in the absence of proper conservative measures and systematic treatment, the forest will be exterminated in a few decades at most.

As far as regards the maintenance of the forest for its influence upon the retention and distribution of the water supply, there is nothing necessarily objectionable in the lumberman's system of forest clearance; all that is necessary is that it be complemented by artificial replanting from nursery raised plants. The only or at least the prime obstacle here is the financial difficulty. At a very moderate estimate it would cost thirty dollars an acre to restock the cleared areas by planting, and in the present state of the timber market the standing stock cannot be worked out to sell at a profit of one-half, and perhaps barely one-fourth of that amount. Under these circumstances artificial restocking is out of the question.

But the forests can be restocked by natural reproduction in the course of exploitation. The lumberman makes a clean sweep of his selected area, and if any crop springs up after the clearance it is unable to stand the exposure to which it is subjected; but the forester with an eye to reproduction, thins out his forest to encourage the germination of seedlings on the forest floor, makes another thinning a year or two later to let in more light, and makes the final clearance after a sturdy young crop has got full possession of the forest floor. This makes the getting out the timber somewhat more costly and inconvenient because it necessitates the extension of operations over a much larger area.

So much for the distinction between the forester and the lumberman in their treatment of high forest; that is, mature timber. In working out small timber, such as is used for telegraph and telephone poles, mining, etc., the benefits of system are still more apparent. The lumberman wants a million poles, and clears, let us say, ten thousand acres to get them; the forester might take the same number of poles from fifteen thousand acres, leaving half a million standing, that is one-third of the original crop, evenly distributed over the whole area. Following the lumberman's operations the cleared area would remain practically bare, while a few years after the forester's operations the remaining trees would have closed up and be probably equal in timber contents to the stock as it stood before thinning.

It will now be readily intelligible that a government, by its trained officers, could operate its forests with greater economy as to yield and secure reproduction at a very moderate advance upon the costs increased by the lumberman in clearing them and laying bare the exploited area. We arrive now at these propositions:

First, it is, if not absolutely indispensable, at least of first-class importance to the immediate prosperity of the region, that its timber and fuel resources shall be rendered available for the people.

Second, that the maintenance of the forest area as forest is absolutely indispensable to the development and lasting prosperity of the region.

These requirements cannot be harmonized except by intrusting the administration of the forests to a skilled executive; to place it under the control of an inexperienced and consequently incompetent staff would be worse than useless.

Forty-five millions of acres are a large area, and even on the perfectly legitimate assumption that the local requirements in fuel and timber would not exceed the usufruct of five million acres, the working of this smaller area would still entail a large outlay. At a very moderate estimate we should need a hundred skilled forest officers, each in charge of a forest division of 50,000 acres or thereabout, and a staff of 500 foresters under them, entailing a cost for establishment of about $750,000 per annum. Estimating the cost of getting out the timber at, roughly, $10 per hundred cubic feet, this would call for an outlay of $2,000,000 per annum for timber operation, and probably as much more would be required for fuel—say $5,000,000 per annum in all.

In working out fuel the Government should not only have no difficulty in covering its expenditure, but should be able to saddle it with a moiety of the costs of the supervising establishment, but there is no guarantee of similar results in working out its timber, first, because the treatment for reproduction involves higher costs than are incurred by lumbermen; second, because it will be constrained to work out all the timber in the area under treatment, while the lumberman would work out only the one or two most marketable species; and in competition with outside timber which costs nothing beyond the costs of bringing to market it is very possible that until the price of timber advances, these forests could not be worked for timber at any profit upon their working expenses, and that to balance income and expenditure it would be necessary to advance the price of fuel, but this might be done safely without detriment to any interest.

But what reasonable prospect is there that the Govern-

ment would make an appropriation of five million dollars annually for forest administration, and sanction the importation of a competent staff of European officers? It is practically useless to advocate it, the country is not ripe for it. As little may we hope to do any good by providing an establishment for the control of lumbermen's operations. A small establishment might be sufficient to guard the forests if they were absolutely closed and the laws against trespass rigidly enforced, but to sanction exploitation and attempt to direct and control it would require a much larger establishment than would be required to work it governmentally. It is impracticable, and any money expended in that direction is waste.

If the forests continue open to private exploitation, reproduction by departmental agency is the best use to which the annual grant can be applied.

In face of the general indifference with which this important problem is regarded by the Legislature, it appears to us that the measure best calculated to bring about a system of reform in forest management would be for the chief of the Forest Division to select a block of forests conveniently situated for the supply of fuel to some mining works, which could not conveniently be supplied from any other source, work this together with the timber in the block by governmental agency, leaving the remainder of the forests uncared for, and devoting every energy to working the experimental division or block at a profit, while making all necessary provision for reproduction. A well-chosen and compactly timbered block of a hundred thousand acres or so would suffice for the experiment, and this being worked at a profit for three or four years and the problem of uniform reproduction solved, the difficulties of extending the system would disappear like mist before the sun.

The Sportsman Tourist.

NOTES ON WESTERN FLORIDA.

I.—DOWN THE CHATTAHOOCHEE RIVER.

SOME years ago, during one of my spring rambles in the South, I chanced to drift, on a rather primitive steamboat, down the Chattahoochee River into the western arm of Florida. I made quite a stay at Apalachicola, and from that quaint old place as a center, explored by numerous expeditions the surrounding wilderness and adjacent coast.

It is a strange country, a land of mysterious swamps and silent, awe-inspiring pine forests, a land uninhabited, and, I fear, almost uninhabitable; just a bit of romance may here be found, too, for in direct contrast to its present savage condition, the would-be explorer is constantly coming upon the remains of past civilizations that speak of the Spanish rule of long ago. It is one of the few parts of this great Union of ours that has receded rather than advanced in the last fifty years. Old natives will tell you of a time, long "befo' de waw," when this was a settled country, and if you penetrate far enough into the barrens to the west of Apalachicola, yours will be the novel sensation of standing on the site of a once populous town of which not a vestige now remains—verily no common experience in America.

I found the country, the people and the shooting so attractive that I have returned with every spring, and have hunted, fished, walked, sailed and canoed over a great portion of the country and down the Gulf coast. During several of these trips friends have accompanied me and have yielded as readily to the peculiar fascinations of the land as did I. As a hunting ground I know of none superior to it, while the fishing is exceptional. The following series of articles are some of the results of observations during the past three years.

Permit me to introduce you to a trio, not Faith, Hope and Charity, but a real live three, with perhaps a quota of those virtues but not the virtues themselves. First, Bondclipper, a rare sportsman, one who, notwithstanding his years of business, yet preserves his old boyish love of sport, and who brings down his bird with as much skill as he bags the much more agile dollar. In the adventures that succeed this introduction Bondclipper is supposed to be in search of health. It seems to be a common failing of humanity always to search for what we already possess, and all of us have our hobbies that it would be the refinement of cruelty to take away. So it is with Bondclipper; he is always ill, and notwithstanding the fact that he can tire down any ordinary athlete in a day's hunt, he doses himself as though death were very imminent. Not that I would have you understand that he is one of those tiresome hypochondriacs, who are forever talking of dying and other unpleasant things and boring you with a graphic account of their sufferings, real or imaginary; he suffers in silence, and his moans fall on no ears save his own.

Next, Rusticus, a hunter from the ground up, one who has spent the best of forty hale, hearty, vigorous years in the fields and forests with his shotgun, etc.; one by whom, if dog, gun and ammunition be given him, naught more is asked. His creed is to keep his gun clean, his dog well fed, never to miss a fair, open shot, and to avoid having anything to do with a rifle. That is his strong point, a vigorous contempt for a rifle; his hatred for that accurate weapon is boundless. Now, as Bondclipper and I are fair rifle shots and have a preference in that line, we are continually the objects of scorn and ridicule from Rusticus; this we return to the best of our ability, but somehow our repartee seems to strike him, like the weapon we uphold, in only one place, while he strikes us all over with the fine, stinging shot of his satire; perhaps, however, our wounds are the deepest.

As becomes my great modesty, allow me, lastly, to introduce myself. Of my characteristics and peculiarities I shall say nothing, leaving the reader to judge them as he may choose. Unknown quantities are designated by X., why should not unknown qualities receive the same letter? So I shall figure in the future as "X."

We three, one spring day, after a hard winter's work, decided that it was absolutely necessary for our physical well-being that we take a hunt. Where? This was a hard point to decide, but after mature deliberation, and a vast deal of study of guide books and railway folders, partly through my advice, we made Florida the point of our expedition. All of us are hunters used to roughing it, and we all yearned, with that feeling that sometimes comes to even the most refined or rather the least savage of us to get absolutely away from civilization and the beaten track of tourists. On the St. John's we knew the inevitable horde of exquisitely gotten up sportsman would he ever present, shooting at every sand snipe that chanced to show its unwary head, and in fact that but little good hunting country was left in northeastern Florida. The western portion of the State, however, is one vast wilderness, in certain places unknown and almost unexplored. Great possibilities existed for us in those clear places on the maps, that indicated the thinly settled country, so we finally decided upon the following plan. We would go to Eufaula, Ala., take the steamboat down the Chattahoochee River to Apalachicola, and thence guided by circumstances we would seek sport wherever found.

One April morning found us bag and baggage in Eufaula, awaiting that rather uncertain means of transportation, a Southern river boat. The sleepy little town did not present a very progressive picture of the New South, the busy season being virtually over, cotton all sold and everything dependent upon and awaiting the coming crop, now just planted. For the next five months the place would slumber in the sun, dead to all appearances of trade, and then would spring once more into commercial life animated by the influx of the great mainstay of the land—King Cotton.

It is a typical Southern town, and a very beautiful one with its wide streets and grand avenues of superb old oaks. I never have seen such trees anywhere else outside of England. They line the sides of every thoroughfare in Eufaula, and some of the streets have a row growing right in the middle, whose branches joining those of the sides, make tunnels of living green that afford pleasant protection from the noonday sun.

The regulation Southern homes are everywhere painted the inevitable white, with green blinds; stiff and ungainly enough would they be elsewhere with their square box-like architecture; here, however, set amid groves of magnolia trees and literally covered with rose vines they are beautiful and picturesque. Dame Nature tones down the glaring white and rounds off the unsightly right angles with her ever charitable hands.

We managed to while away the long day somehow, playing billiards on somewhat antiquated tables and strolling about the quaint old streets. We were not sorry, however, when at five in the afternoon a whistle announced the coming of the boat; and away we went in a rickety old hack down the almost alpine road that leads from town to the landing. We reached there just in time to see the little steamer rounding the bend. Down the narrow winding stream she came, puffing and blowing like a porpoise. The landing was effected with all the commotion and confusion that one sees on the floating palaces of the Mississippi, the mate swore quite as hard, the stevedores sang as cheerily, and from the ringing of bells and shouting of orders, one might have supposed that the Great Eastern was "laying to."

We embarked, and having seen to the stowing away of our somewhat extensive baggage, sat down to supper. These Chattahoochie River boats are run under excellent management and the fare on all of the steamers is very good, much better than on many of the more traveled streams of the North; indeed the trade of this somewhat obscure river is eagerly sought after, as there are several lines, the competition has produced a most happy effect for passengers.

I know of no stream in the South more inviting for a tourist than the Chattahoochee. The scenery is almost, if not quite, equal to the famed St. John's of eastern Florida, and while Southern rivers do not present much variety of landscape, the vast expanses of woods and cypress swamps have a beauty and fascination all their own.

The moon was full, and after supper we lounged around the deck, enjoying the balmy softness of a Southern April and watching the dark wall of forest slipping by. There was but little talking, and the only noise that broke the stillness was the weird chorus of the deck hands. A careless, happy lot these stevedores, working night and day for a bare subsistence, singing, laughing and joking from morning till night, their tongues going as steadily and as tirelessly as their limbs. Occasionally we stop at some wood yard, where a sign over the heaps of pine indicates that the pine may be bought at a dollar a cord. Pine flambeaux are lighted, two gang planks are run out and over them the streams of dusky porters hurry. First they carry one stick at a time, then two, then some ambitious fellow shoulders three, until vieing with each other, five of the huge sticks form a load. Fast and furious they work, while the great pile fairly melts away to the tune of their melodious improvisations. It is a picturesque sight, as lighted by the ruddy fitful glare of pine torches, which softens down the coarser features of the scene, makes the dark background of woods seem like the boundary of the world; and playing on the ebony faces and gnarled corded arms of these Hercules brings to one's mind some of the tales of the Calibans of Hungarian forests. What a pride these stevedores do take in their strength; they seem not like ordinary drudges, but rather athletes, striving the one to outdo the other. Great burdens are hoisted on muscular shoulders as if the merest trifles. Constantly and over all sound their wild songs, improvised chants of meaningless words and monotonous air that rise and fall in weird cadences vibrated with pathos and full of peculiar beauty and passion, born of that talent inherited from savage ancestors of African wilds.

The mate of a steamboat, that rough and ready, hard swearing magnate, is a most interesting character. In his person is centered the negro's idea of the summit of earthly ambition and power. He is looked up to and obeyed as little less than a god, and in point of fact he is a most tremendous personage. Watch him a while and be convinced of his greatness. Heard you ever such a wonderful command of profanity? Not the ordinary, weak expletives of a luxurious and effete civilization, but great, strapping, four-jointed oaths that fly to the mark like a streak of lightning and fairly rend the air with their intensity. He swears at everything, at the men, at the cargo, at the weather. He adds a syllable to every word, a rope, for instance, is a "damrope." From morning till night he keeps up one continual blue stream. But it is harmless and hurts no one. The negroes rather enjoy it; it affords amusement to the passengers and satisfaction to the mate, so are is content and the boat moves on by the combined force of steam and oath.

The banks of the upper river are abrupt and very beautiful; sometimes they tower to great height, their precipitous sides variegated by band-like strata of rock and their summits crowned with the brightest of spring foliage. Hundreds of clear brooks meander through picturesque cañons and mingle their clear waters with the dark current of the larger stream. Occasionally through openings in the forest we see plantations with their broad plowed fields and clusters of white-washed houses. In these river bottoms are some of the finest cotton and corn lands of all the South.

At Fort Gaines the cliffs tower to an exceptional height and on their summit is perched the pretty little town. All the villages of the upper river have some such elevated position, for these Southern streams that glide along in such a lazy apathetic manner during the dry season, become fierce as Alpine torrents when swollen by the rains of spring.

The upper river is very difficult of navigation on account of the numerous sandbars, and also because of the constant shifting and changing of the channel. A place that may be passable on the down trip of a boat will perhaps ground her high and dry on the return. Every high water erodes great masses from the banks, and the *debris* is carried away to be deposited on some forming bar that will cause the pilots to seek new passes. Then there are a great many snags—trees that have grounded on the bottom of the stream, and whose branches project above or remain concealed a few inches below the surface of the water—a serious danger to many captains. There have been many accidents, and the life of a Chattahoochee boat does not average five years. A few years ago the Everingham was burned between Eufaula and Columbus with a loss of some twenty-three lives.

The next morning by ten o'clock the bluffs had almost disappeared, and we steamed all day through a densely wooded and perfectly level country. The stopping places are few and far between. Occasionally we would tie up at a bank where no signs of human habitation could be seen, and leave a lot of supplies to be gathered by the owner whenever he might chance that way. Several times, in answer to hails from the shore, we stopped to take on some solitary passenger; as an accommodation boat our craft certainly filled every requirement.

We passed an enjoyable, lazy day, sitting around the deck, popping with our rifles at occasional ducks and divers, and watching with interest the phases of an almost changeless scene. There were but few passengers besides ourselves—two or three planters, several lumbermen, a local politician, and that inseparable parasite of railways and steamboats, a drummer. The portion of the long cabin allotted to ladies was monopolized by a poor, forlorn, yellow-looking little country woman, with the complexion of a pumpkin and an air of constant embarrassment. She spent all of her time in the deep contemplation of her shoes, to judge by her eyes; and did not stir out of the hot, stuffy cabin all day. A boat is an excellent field in which to study human nature; brought by the confining limits of a deck or cabin, whether you will or no, into communication with all classes, one may see much that is novel and interesting in even the most unpromising of companions, and may realize that, after all, different classes of people, animal-like, have each their respective habits, which are almost as universal and regular as are the ways of different species of beasts. Our comrades were no exception to this natural law, but true to their several kinds, acted accordingly. The planters spoke of "befo' de waw" and crops, and made numerous visits to a certain cabin (No. 23, I think) from which they would emerge with a great clearing of throats and wiping of mouths, in a manner most plain in its meaning. The lumbermen, green as the timber they cut, were perhaps the most original of all, being true representative of that class that gives the lower Chattahoochee what importance it possesses in a commercial sense.

The local politician was evidently on the canvass; he was the essence of politeness to every one; talked lumber to the lumbermen, talked tariff and other stupendous problems of government to the planters, drank whisky with every one, condescendingly spoke to the vision in yellow of the cabin, to her great and evident terror; and, in fact, made himself generally amusing—and natural. It is not necessary to add that this great and awe-inspiring personage had a very red nose, and was distinguished from common humanity by the wearing of an antiquated Prince Albert coat, of about the luster of a looking-glass. That genial animal, the drummer, after spending an hour vainly trying to get up a flirtation with the galvanized corpse of the saloon, finally turned to his own sex, became acquainted with every one in a very few minutes, told numerous stories, more or less shady, and made himself generally popular. True, he would insist on trying to impress upon our minds the grandeur and sublimity of the firm of A. & B., and brought into his anecdotes the tale of how he had sold such and such a bill of goods here and such there; but all in all he was very agreeable—at least I thought so, until, at whist, he persistently led from his short suit, then in righteous wrath I cut his acquaintance.

Once, when we stopped for an hour to take on an unusually large load of wood, my two companions and I took our guns and stirred up a covey of quail in an adjacent field. After killing six between us we were obliged to leave the rest and return to the boat. The quail shooting for the entire length of the river is most excellent, birds everywhere and very tame and easily gotten at.

At 1 o'clock we reached Chattahoochee, a most dismal looking place, consisting of little more than a hotel and depot; it is right in, or rather over, a swamp, for the houses are perched upon high piles to keep them above the periodical freshets, though I understand that a mile or so away there is quite a little town. The Pensacola & Atlantic R. R. here crosses the river on a fine iron drawbridge. Our passenger list was largely augmented here by the coming on board of a comic opera company. Verily, this is a world of contrasts. Here, as we supposed, far away from everything of the kind, in the midst of a wilderness, it was somewhat startling to come upon so high an evidence of civilization, almost as un-

expected as must have been the finding by the early Spaniards in Mexico of a civilization as great as their own. A rattling good company they were, too, who, being temporarily "out of a date," and having nothing else to do, had resolved to visit Apalachicola, and wake that sleepy old place with some modern music. They had been waiting for our boat all day long, and they gave the most graphic pictures of the stupidness of the town and the size of the mosquitoes. From this point south, alligators are numerous, and Chattahoochee is quite blessed with a great abundance of them. Some time previous to our visit one huge fellow actually had the audacity to come into the kitchen of the hotel, where he was ignominiously slaughtered by the cook, though greatly to the detriment of the furniture and cooking utensils. This item should be copied by naturalists, as proving the tremendous powers of digestion of the alligator; any animal that, unprovoked, will attempt an attack upon the kitchen of a west Florida hotel must have the powers ascribed to goats and ostriches.

ALEX. M. REYNOLDS.

TWO MONTHS A COWBOY.

(Concluded from page 284.)

ON the way to our next camp I stopped often to eat of the wild gooseberries; they abounded there and were of a delicious flavor. The spruce trees, of which there were also a great number, were bare of their bark to a height of ten feet or more, a thing that struck me so forcibly that I sought an explanation. Two were given. One being, that in attempting to climb, the bears had torn away the bark, and the other, that lumbermen had done it to see if the trees were sound enough to be made into lumber. The gum was gathered, and for want of chewing tobacco the boys used it as a substitute until that delicacy could be again obtained. Tobacco is to cowboys their greatest luxury, and to obtain it they will ride miles. Near our ranch, eighty miles away, one man was known to buy it by the box, and to him for supplies the boys rode from miles around. Every one chews out there, and our cabin floor was the greatest trial of the cook's life, until I procured a box, filled it with sand and placed it in the middle of the floor, where it was a mark for all those joining the family circle. Plug is the sort most met with, fine cut catering to the Eastern taste, and when one rides up to you and asks for a chew, should you deny him a taste, having some about you, good-by to popularity, for generosity is a trait greatly admired and appreciated by the boys. Also should he cut away a piece from your plug and put it in his pocket, say nothing, for he would expect the same of you. So, too, those going from place to place, night overtaking them when near a cabin, go in, join the conversation, and when it comes time to "turn in" roll themselves up in their own or borrowed blankets, sleep till morning, and after breakfast move on, not thanking you for your hospitality, taking it all as a matter of course, and expecting the same when you pass their way. Some presuming on the custom abuse it, but they in time reach the end of their rope, for giving them too much they will hang themselves.

A deserted cabin with only the chimney standing gave the name to the neighborhood of our camp, the Lone Chimney. The settler had selected a beautiful site for his home, in the midst of a winding, green and watered valley, encompassed by low summit timbered hills, which sloped gradually down to the Platte River, there a rushing rocky stream.

We gathered round the fire, and thanks to the fertile brain of one of the men, were held there, while he told an interesting story, during which those who were noisy were immediately sat on, in the literal sense of the word, and held down until they promised to keep quiet. Old songs were re-sung until those tiring of the repetitions would start a cry of "rye straw," answering the same purpose as "chestnuts" with us, which being joined in by the rest, all chanting, would make an echo one could hear go bounding down the valley from hill to hill, until it was lost in darkness and distance.

The morning drive was a long and hard one, nearly to the Platte through Wagon Tongue Gulch and little rocky cañons. The feeding spots were few and far between, being only in the clearings, scattered amid that closely timbered country. To chase a steer at a headlong gallop through thick brush and a hilly country is not easy, as I found, and others also, my horse being well nigh "petered out" when time came to change. We ran into a bunch of grouse and Sims killed a brace with his revolver. Luckily for us the cattle did not take to that part any more than we did, for the round up was a very small one and we moved on that afternoon to Sims's pasture, our last gathering and the place of disbandment.

Many were the whispers and bunchings together on that afternoon of which I at first thought nothing. But at last my suspicions were aroused, and when one spoke up, the most practical joker of the crowd, as well as the kindest-hearted, and said, "Well, Tenderfoot, we have let you off mighty easy so far, but you must now ride one of these yearling heifers [wild as the country through which they roamed] or pay the penalty," I was in a way prepared. The penalty was not a desirable one, the process being to strip me and daub my body over with black wagon grease, which could not be easily removed, having to wear off by constant application of water; and judging by themselves, this being a not by any means too frequent occurrence, meant several months of darkened skin. Seeing there was no alternative and debating which of the two evils to accept, I chose the former, as I knew were I successful so much more honor and at the worst only some bruises and scratches, while by the latter I would carry about with me marks of a different nature. I expressed my decision, and riding forward Martin selected the most frisky one in the herd, and having roped her, held fast while the rest were driven on. I must acknowledge I felt rather nervous, but strove to conceal this weakness as I threw my bridle on the ground and dismounted. One held the heifer's tail while I climbed on to her back. Clasping both arms about the dear creature's neck with a deathlike grip, I gave the word to pull off the rope. No sooner did she feel free again than with a bound into the air which threw me on her side, she started on a run to join the herd, bucking meanwhile. I did not remain long to enjoy this rough motion, for having gone some twenty yards I again found myself on the ground, but this time face downward, and an acute pain in my back where, as a parting reminder, the yearling had placed her sharp hoof none too lightly. Hearing roars of laughter from my companions, I arose, feeling very sore from several bruises and a stiff leg. This I hid as best I could, walked to my horses, mounted and tried to think it was a good joke and to laugh with the rest. They said that now to be a cowboy and a "bad man" I had only to ride up to one of them and say, "I'm tough and don't give a — for anybody," and whipping out your revolver to shoot him through the heart. This as I give it is a true saying, word for word, but was of course only meant to keep up the farce. I took it all in good humor, for what else could I do?

The next day, having rounded up Sims's pasture of ten thousand acres, which was an easy task, for it was partly fenced and held many together, by night we were ten miles toward home. The ride that afternoon was the most beautiful one we had. To our right as we journeyed homeward stretched the Platte Valley many miles in width, and midst the rolling hills the river made its wandering course, going sometimes two miles, whereas in a straight line it was only one. It really seemed to make a platte of water, whence its most appropriate name. On the other side of the valley rose the Rocky Mountains as a bleak and snowy background to the Breckinridge Range. Prominent was Silver Heel Mountain, at the foot of which is Fairplay and also Haystack Mountains, the head of the gulch noted for its rich washing of gold and silver. The town of Leadville, under the very streets of which veins of silver have been found, was probably at the foot of some peak which I saw, but knew it not.

When the time came to turn to the left and enter a ravine which led off toward the ranch, I stopped a moment to impress upon my memory the beautiful scene. I watched the sun, as it gradually sank behind the rocky barrier, lighting up the Marshall Pass off toward the south, and had I been close enough I could have seen the glitter of its rays on the polished rails of that pretty Denver and Rio Grande R. R., which uses that pass as a gateway to the Pacific Slope beyond. Buffalo Peak, still further south across the Arkansas River, was pointed out to me, and in its many "pockets" or hollows another herd of wild horses find their home. The range of my view was fully fifty miles, and in that clear atmosphere and mellow light the outlook was grand and magnificent.

Filled with such thoughts as the view gave me, it was rather a shock to enter the camp, which was all bustle amid the sulphurous air occasioned by curses, to do my part in hobbling horses and chopping wood.

By an accident (?) one of the boys the following morning broke a heifer's neck while playfully dragging her out of a corral with his rope. "It is an ill wind that blows no one good," and dividing the carcass we set off, having a good stock of fresh meat on hand. They seldom kill for ranch eating, while on the round-up a yearling would only last two or three days, the men needing meat for hard work. One of the calves gave out on the drive and three of us staid behind, kindled a fire, and with a branding iron carried conveniently attached to the saddle, branded her and again caught up. Should no wood be around to make a fire a knife is the branding instrument, the skin being cut away in the shape of the brand.

I had a good deal of trouble with an old white horse which would not keep with the rest, so I had to lead him. Once, when going through some timber I took in slack rope to pass between two trees, but the horse I was leading attempted to pass on one side. This brought the rope taut and the saddle to my horse's haunches, almost breaking the foreward cinch or girth, pulling him on his hind feet. I managed to stick on until I could let out some rope, having a half hitch around the pommel, and then dismounting, fixed things up. Agate Gulch was like home, and when we reached it the few more of the fifteen miles from our last camping place were soon passed and the cabin hove in sight. Our hearts were glad, and to celebrate our return Joe made a choice dinner of fried meat and bacon, corn, tomatoes, hominy, stewed prunes and apples. What more could we want? The horses' shoes were removed and the faithful beasts turned loose in a pasture of fine grass to get some flesh on their poor bodies.

Missouri Bill, the fellow who had staid at the ranch to take care of things, was very glad to see us, for the provisions were running low and he wanted some one to go with him to the railroad and bring up a consignment of canned goods, bacon, oats, butter and lard.

My assistance I readily offered; we brought in a team of mules, put in the wagon our blankets and provisions, and were off early the next morning. I got a shot at some antelope, but they were 300yds. off and running like the wind; so, naturally, I missed. There being no special hurry, as it was a two-days' trip, we reached the station about sundown, but pushed on to Haver's Meadow, where we picketed the mules.

I caught a couple of trout in a stream made by the Buffalo Springs, dressed and ate them for supper. It was raining, so stretching a piece of canvas, which was to have been our mattress, over the wagon bed from side to side, curled up underneath on the soft ash boards and fell asleep. The bright sun woke us in the early morning, and while Missouri Bill made the fire I caught some fish, which I saved for lunch, having first washed them in a convenient salt spring. Our neighbor was on a like errand to the railroad, so by helping each other the wagons were soon loaded. Ours was a large load, 2,500lbs.; but who ever saw a Studebaker Bros.' wagon which would not carry all you put on?

Bill fell asleep and I took the reins. A stream about a foot wide had to be crossed to our lunching ground, and when reaching it I touched up the mules, hoping to go over quickly and easily. The wagon got stuck, and Missouri awoke to find himself on the ground under the mules' feet, where the shock had thrown him. You should have seen him crawl out. Repeated efforts failed to budge the wagon, so we hitched Muloch's horses to the wagon pole, and as this did not work, we were obliged to unload before we got over.

After lunch we separated from Muloch and soon came to a hill such as are found all over the plains. When half way up the mules balked, refusing to pull at all. So I jumped down and blocked the wheels. After resting a while we touched up the beasts, but they would not move, nor did all the known ways of starting mules besides one invented on the spot of tying head and tail together and whipping them round in a circle, succeed.

"Well," said Bill, "you take one mule and I the other and go to Pea Springs. Get your coffeepot full of water, while I go on to the ranch and get a couple of horses."

No sooner said than done. It was a comical sight when, after going twenty rods, Missouri's mule's heels went up and he over her head. Fortunately he was not hurt, and picking himself up he said: "I think it would be safer did we change mules, as I have a long way to go." The exchange was made, but I was not tired and walked the two miles. It gave me an appetite, which was barely satisfied with what was left of the biscuits and coffee. I ground the coffee in a cloth on the wheel tire with the butt of my pistol.

It was late, so with one of the mules' collars for a pillow, I lay down under the wagon, and with a rifle by my side and a pistol under my pillow, fell asleep, feeling rather lonely out there on the prairie. At midnight I was awakened by a sound of hoofs clattering on the stony ground, and rising quickly soon distinguished Bill with the horses, for it was moonlight. He being tired we deferred moving until daylight, and stretching out went to sleep again.

I woke first and saw, not 50ft. away, a coyote feeding on a jack rabbit killed the night before. Quietly arousing my companion, he being the best shot, I put a cocked pistol into his hand. Maybe it was because he was not quite awake, but he missed and away went the swift prairie wolf.

We reached the ranch about noon. The 15th was Sunday, and more like such a day should be than any I had spent since being in the State. I spent the afternoon picking wild strawberries and raspberries, of which there were plenty. Strange, was it not, that I should gather berries in August, but most persons relish fruits out of season and I am no exception.

Monday morning I left the ranch and started for Salida, leading a horse for my brother, whom I was to meet, he also being on a trip of exploration. Taking with me only such money as would be needed for a day, it ran out very soon, as the train was delayed several days by washouts, and I was obliged to change quarters from the pleasant Monte Christo Hotel to a lodging house, where I slept, or rather did not sleep at all one night.

The ride back to the ranch was a hard one for a sick person, and I was obliged to lie down several times; but when the pasture was reached I "spruced up" and felt all right. My brother only stayed one day, not liking it as much as I did. I hated to see him go, and feeling lonely, rode up in the timber as far as I could, to the mountain's bluff, 11,000ft. high. An outfit passed us going to Buffalo Peak to run down some of the wild horses.

I only went to the post-office twice, a ride of eighteen miles, losing myself once on Old Sway who bucked around the yard, much to the amusement of the boys, who swore he was as gentle as a lamb. The other time I had better directions and made the trip in less than five hours. My shirts were all ragged and torn, for upon the first day I wore one a boy while examining it said: "Is it strong stuff?" proving it was not by teasing the sleeve out.

On Aug. 28 I took my last ride in the neigborhood. Starting at 8 A. M. with directions to a neighbor's, I rode until noon, delivered one note, then moved on ten miles and delivered another. It was late in the afternoon and I was asked to stay over night, but said no, as I thought I could make home by dark.

All the country had a familiar look, for Black Mountain stood out as a landmark from miles around. I rode and rode, first a walk, then a trot, until I thought I was in about the place to cross the trail. No trail appeared, however, and as night was falling fast I rode on top of a commanding hill, where I got my direction and proceeded onward. Just as darkness closed down I found the trail, and giving my horse loose rein let him find the way. This he did, bringing me to the ranch at 9 o'clock, after a long, tiresome fifty-mile ride.

Sunday night I put a horse in the corral, and tied on behind my saddle what remained of my clothes, having sent my trunk to town a week before by "Billy the Kid," who was up with a wagon; bade all the boys good-by, and turned in. I was off at 2:30 next morning. It was bitter cold, the ground was covered with hoary frost, and my fingers were so numb that I had great difficulty in buckling on the saddle. It was dark, and, as on two nights before, I hung the reins on the pommel and let the horse take his gait and way. After I had gone eight miles the sun rose and shed light and warmth about me. I gave him a hearty welcome, rubbing my cold hands in his warm rays. My cowboy days were over, and it was not without regret that I left the boys, the ranch, and all the many healthy pleasures that I had had. It was an experience I thoroughly enjoyed, and as the train took me away at noon that day I wished I was back.

G. F. BLANDY.

NEW YORK.

"We used to have a 'coon' living with us," continued the hunter, "who swore he'd never shot a duck, yet he would go out in the morning and come back in the evening with as big a bag as both of us. It was a mystery how he got them. My partner thought he was a duck charmer, but my experience had taught me that there ain't nothin' can charm a duck 'cept a good load of No. 4 shot. That thing bothered us a good bit, and we determined one day, toward the close of the season, to track the man and see how he done it. He started about 4 o'clock in the morning, and before he was out of sight we were following. There's a little creek makes up in the shore 'bout a mile and a half from here, and it was toward this he led us. Fearing that he would see us we took a round-about path, and hid in a clump of trees borderin' on the creek. The coon wasn't in sight, and we were about to move on, when my pard touched me on the shoulder and whispered 'Look thar.' Not more than seventy-five yards from the shore there was as fine a bunch of gray mallard as you ever sot your eyes upon. There was a rustle in the bushes across the creek to our right, and looking over I saw the funniest sight in all my life. There was our man stark naked, with a big pumpkin hollowed out over his head. We were guessing what he was going to do, when he stepped into the water and waded out. It looked like a pumpkin adrift. One old sentinel on the edge shied when he saw it and quacked a little, but it looked so harmless he soon got over his fright and swam close up to it. He didn't go no further, 'cause he was snatched by the legs and hauled under. The rest of the flock thought he had dived, and upward of a dozen were snatched, when we burst into a roar and the flock took wing. That's the greatest duck story I ever heard of, and if I hadn't a seen it I would't have believed it." When the hunter finished his yarn his partner, who sat by puffing an old pipe, smiled grimly as he described the disgusted look the colored man wore when he removed his pumpkin head.—*Washington (D. C.) Evening Star.*

Natural History.

THE WAYS OF SNAKES.

Editor Forest and Stream:

In the natural history department of your issue of September 13 Mr. N. Starkweather advances a theory in regard to the spring of the rattlesnake, but says that he has never studied them except in captivity. Perhaps the observations of one who has studied the rattler in his native haunts might be interesting. The notion is commonly entertained, even by those who live in a rattlesnake country and therefore should be conversant with their habits, that they spring from a coil. This is not true, and I feel warranted in asserting that it is utterly impossible for them to make much of a spring from such a position. On the great plains of Nebraska and in the mountains of Wyoming I have frequently teased them with sticks, and from my observations have drawn the following conclusions: That if a rattler coils up he will not strike, but, if crowded will uncoil and glide away; but if he is closely followed he will crouch or crumple himself up in zig-zag folds, strike viciously, and then draw back for another spring. I have frequently seen them strike three or four times in succession with almost the rapidity of lightning. Then their movements can hardly be followed with the eye. They do not jump, as is generally supposed, but simply straighten themselves out to their full length. Though poisonous in the extreme, the rattler is not generally vicious. It is only when crowded that they will turn on a person. At other times, if left to themselves, they will quietly glide away. I am inclined to think, however, that the small rattler of the plains is much more spiteful and vicious than the larger and more sluggish ones that are found in the timber. But we must give them both credit for one thing—they never strike without first sounding their rattle. Many lives have undoubtedly been saved by that feature. But should a rattlesnake lose his rattles, which will occasionally happen, he then becomes exceedingly dangerous, especially at night. As is generally the case with venomous reptiles and beasts of prey, their habits are not generally known, as whenever encountered they are immediately dispatched instead of being closely studied. But perhaps it is as well, for we are told that familiarity breeds contempt, and contempt for poisonous reptiles may mean death.

There has been a story current for many years to the effect that the Indians living between the Cascades and Rockies formerly poisoned their arrows by teasing a rattlesnake until he stung himself to death, then sticking the arrows in his putrid flesh. I confess I am rather skeptical in regard to that. Of course, the bow and arrow have passed out of use, and the old Indians disagree about it. The testimony of the Indians is unsatisfactory at best, and when they disagree it is rendered the more unreliable. I very much doubt whether the rattlesnake could commit suicide with his own poison. I find that the Indians living further south formerly inserted their arrows in a piece of liver and allowed them to remain till the liver became thoroughly putrid, and it is very likely the tribes living further north did the same.

While discussing venomous reptiles it will perhaps not be out of place to add a little information which seems to me remarkable, and which will be news to nearly all who live east of the mountains. When I arrived on Puget Sound I was informed that there were neither poisonous serpents, insects nor plants on the shores or islands of the Sound. Having never seen a place entirely devoid of poisonous animal or vegetable life I was rather inclined to doubt the assertion, though assured by many old settlers, as well as new, that such was the case. However, a careful investigation since then has convinced me that it is true. In all my hunting and fishing expeditions I have never seen a specimen of poisonous reptile, insect or plant. I notice an entire absence of both poison oak and ivy, which I have heretofore encountered wherever I have been. As far as I can learn, what I have said in regard to Puget Sound also holds true of all the country lying west of the Cascade range.

LA CONNER, Washington Territory. JUNE.

Editor Forest and Stream:

Let me add my mite to the fuud of evidence in favor of snakes swallowing their young. While walking with a companion along a dusty country road we were startled by a cry of, "Oh, come here, and see these little snakes running down the big snake's throat!" The speaker was a young lad who accompanied us. Unfortunately we were too late to witness the swallowing process; but found the snake, a gartersnake, of say 20in. in length, moving slowly away with the youngsters performing a war dance around it. A blow or two on the head soon ended its crawling, and then out from the wounded neck (or mouth, it is impossible to say which, as the blow from the stick had changed the neck and head to a shapeless mass) came a number of little snakes, from 3 to 6in. in length. Their movements were so rapid that it was impossible to count them, but that they came from the bruised portion of the snake I could make affidavit, while the youngster is equally willing to testify that he saw them run into the old snake's mouth. SUBSCRIBER.

PHILADELPHIA, Pa.

Editor Forest and Stream:

Several years ago Mr. A. B. Caswell, then a resident of Wareham and one of the best guides and gunners on the Cape, came across a blacksnake lying stretched out basking in the bright sun, with about thirty small snakes playing about it. So quietly had Mr. Caswell come upon the snake that it had neither seen nor heard him. He watched the sight a moment, then made a slight disturbance in the brush at his side. The mother snake immediately made some sort of a noise, and Mr. Caswell distinctly saw the young reptiles hurrying into the old snake's open mouth. After all the snakes had sought this refuge, Mr. Caswell killed the old snake and more than thirty little ones were found inside of it. My informant, Mr. James A. Caswell, is a resident of this place and an ardent gunner, and a son of Mr. Caswell who figures in the preceding incident. He was kind enough to relate the following also, and as the matter treated is pertinent to our subject, I give it to you. That some snakes lay eggs is definitely settled in Mr. Caswell's mind, and here is the reason: Some years ago Mr. C., who was out following his favorite pastime, came upon a black watersnake in a sunny sand hole. He killed it, and found in the sand about a dozen eggs. He opened the snake and found in the body other eggs at the point of being discharged, and still others in process of formation.

The item in your issue of Oct. 11, as to the large blacksnake killed by your correspondent Chas. L. Norton, led to Mr. Caswell's relating this incident: Some twenty-five years ago he and a companion (Clement Hammond) were traveling over Great Neck, Marion, when their dog, by his excited action around a stone heap, attracted their attention. Caswell, who knew the dog, told Hammond to make ready to kill a snake. They commenced dislodging the stones, and finally came upon and killed the reptile. They laid the snake, which was of the common black species, out straight and measured it with a foot rule. It measured, without allowing for contraction of muscles, 7ft. 4in. Its great size attracted much attention, and about everybody in Marion had a look at it.

CHOKE-BORE.

WHITMAN, Mass.

Editor Forest and Stream:

I have read the articles on snakes in your paper with much pleasure, and hope we shall have more of them. I usually spend a few days each spring hunting rattlers and blacksnakes at the dens on Masomsic Hills, in the eastern part of the town of Portland, Conn., and get a few each year. I usually go for them in May. A hot, smoky day is the best. They are then found lying among the dry leaves and are sluggish. I generally shoot them. The largest rattlesnake I have yet killed measured 4ft. 1½in. in length and nearly 7in. around the body; it had but three rattles, the rest having been torn off. The largest blacksnake yet killed was found at one of the dens, where many rattlers have been killed in years past; it was of the racer variety and measured 7ft. 2in. in length; it was of a bright, glossy color, and probably had shed its old skin but a short time before. This was killed May 22, 1885. I brought it home, and it was afterward given to the Wesleyan University at Middletown, Conn.

PORTLAND, Conn. C. H. N.

Editor Forest and Stream:

Score another point for Miss Wolcott, on the question of "Snakes and Their Young." One of our village school teachers, Miss H. of Newport, N. H., took tea with us a few evenings since, and inquired particularly for "Sam Lovel," she having been one of the audience to whom I read "Uncle Lisha's Shop," and "Sam Lovel's Camps" last winter. Miss H. expressed a hope that Mr. Robinson might give us an account of Sam's expected wedding, such as a country wedding was, in the old days in Vermont 50 years ago. The conversation then turned to the present contents of FOREST AND STREAM, and I told her of the snake controversy. She at once asked to be put on record, in Miss Wolcott's behalf, saying, that when walking with her brother some years since, her attention was called by the latter to the roadside, where she distinctly saw two small striped snakes disappear down the throat of an old one, which lay motionless, with mouth wide open, until the last one had disappeared, and then vanished into the brush herself. Miss H. has no idea how many had preceded the two which she saw, as her mother had been struck by the performance at first and then spoke to her to look at it, but her evidence on the matter is reliable and unquestionable.

CHARLESTOWN, N. Y. VON W.

Editor Forest and Stream:

I was born and reared in central Massachusetts, where blacksnakes were quite common, and the blacksnake with the white ring is no fiction, though they are not as common as the other blacksnakes. The white-ringed snake is more bold, will not run when in close quarters, and many times I have had them dart at me from a coil, and if wounded they will fight as viciously as a rattlesnake. They are a slimmer and longer snake than the common blacksnake, can run faster, but will seldom run when come upon in close quarters; and many people are much afraid of them. If you will take a little trouble and offer a reward you can have a capture made, dead or alive, that will assure you that they have a place in nature if not in natural history. G. W. H.

SACRAMENTO, California.

Editor Forest and Stream:

I dislike snakes as thoroughly as any loyal daughter of Eve, but as I was so unfortunate as to miss a recent call from your correspondent, Mr. N. Starkweather, of Hartford, I will, while the fringed gentians he brought in are still regarding me with their soft blue eyes, take the liberty to corroborate the story of Miss Emily M. Wolcott, which is printed in his interesting defense of snakes in FOREST AND STREAM of the Sept. 6 issue.

One summer day, at my Forest Edge home in West Northfield, Mass., a group of young people under an apple tree in the old orchard espied a common striped snake of rather large size lying quietly in the short grass. The customary yell, "A snake! a snake!" brought a brave defender with a croquet mallet, and then and there I saw that mother snake open her mouth and six or seven small striped snakes that we had not observed before ran like a flock down her throat, exactly as chickens run for safety to the shelter of their mother's wings. The snake was killed and the older people came out and witnessed the disgorgement of the interesting family.

Last summer my husband killed a large checkered adder in the highway near the farmhouse of a neighbor. As he drove away the children ran out to see the dead snake, and a bright little girl of ten told us that when she reached the place there were several little snakes crawling around the large one. She ran after the hired man to continue the slaying process, and when they returned to the place a large adder, the mate evidently, was with the little ones, regarding their defunct relative.

I have heard my father say that one winter while moving gravel on a hillside for a section of new road in West Northfield, Mass., a large number of blacksnakes were found. When thrown out with the shovel they were stiff like sticks, but after lying in the sun for a little while they would revive and crawl slowly away on the snow. I have myself thawed out mice that were in winter dug out of a sand bank near my home. One I kept for a long time in a flower-pot in a sunny window and he grew to be quite tame, but one unlucky day the cat, Priscilla, put an end to his enjoyment by making a lunch of him. Any observant person living in the country will continually note traits new and strange in the wild creatures about them. And as mice are so much less objectionable than snakes let me tell this. Last winter my husband and I went for a walk to the woods late one bitter cold day. We crossed the fields and woods on the solid snow crust, and the only living creature we saw in our walk was a tiny gray mouse that our beagle, Sancho, surprised, as it was out for an airing. The little thing eluded the dog, and running up a small oak tree hid itself in what seemed to be a bundle of dry leaves, but which on investigation proved to be a curiously constructed nest, soft and warm. I never heard of such a thing before or since, but that poor little waif could not have been a solitary specimen. These are only a few of a large number of incidents so remarkable in their way as to be worthy of note that have come under my own observation among the animals and birds about my hilltop home. ANNIE A. PRESTON.

MAPLE CORNER, Willington, Conn.

THE DOMESTICATION OF GAME.

Editor Forest and Streau:

Few things in connection with natural history have had more fascination for me than the idea of doing scientifically what our remote ancestors must have done in an accidental or haphazard way in domesticating wild animals. What sportsman has not wished as he held in his hand a superb ruffed grouse or prairie chicken, the trophy of his skill, that this fine bird might be made to lose its fear of man and be induced to add its beautiful presence to the farmyard and lawn. I have often wondered about the real history of our domestic fowl and animals. Who first, away back in the dim dawn of history, tamed the jungle cock in India or the great islands of the East? Who first overcame the suspicion of the wild burrowing dog of the Asiatic hills and gave to man the most loving and faithful of his animal friends? Who were the first tamers of the wild horses and cattle and sheep? It was one of the first triumphs of man and one of the first steps toward his own kingship of the world.

It seems as though we ought to know all about some of the most recent of these feats. Who first tamed the wild turkey? It is an American gift to the world. Why was it called "turkey?" Did the Indians of the United States have any domesticated birds of any sort? Did Montezuma or the Incas of Peru have tamed turkeys?

All these questions come to me with interest, and I wish some one would answer them for me in your pages. From my earliest boyhood I have had it given out as a truth almost axiomatic that the ruffed grouse could not be domesticated. I have never believed it. I know the wildness of this bird and the behavior of the young chicks in the presence of man. They will hide under leaves when scarce free from their own shells. But in spite of that I have always felt since that the time would come when we should have it breeding in confinement and with its feral instincts so modified that it would take its place with the other fowls which we breed and delight in. I have, therefore, for a long time taken the keenest interest in the experiments of your contributor, Mr. J. B. Battelle, of Toledo, and his several times almost scored success in rearing ruffed grouse in confinement. I have enjoyed much correspondence with him and have made many attempts to supply him with birds with which to experiment. Though I have not yet been able to send him a bird I have rejoiced when any one else has done so, and have watched his reports with great interest. When he has succeeded so remarkably in overcoming the shyness of a ruffed grouse as is proved by his letter in FOREST AND STREAM of Oct. 25, it certainly seems as though he needed but the help of a few more birds to give him the triumph which he so much desires and which every sportsman and naturalist must wish to see him achieve. I write in the hope of stimulating the brethren everywhere to be on the lookout and to avail themselves of any opportunity of helping Mr. Battelle to the birds he needs.

The prairie chicken was also reported to be untamable, but I once saw a pair of them in a show window on West Lake street, Chicago, which were as tame as barndoor fowls, and walked about and pecked at their food as unconcernedly in the presence of a crowd as any domestic bird could do. Unfortunately the proprietor of the place proved to be a brutal creature who absolutely refused to answer a single question about the birds. They were, however, silent proofs that the prairie chicken may be tamed. EBEEMEE.

THE EGYPTIAN LOTUS.

Editor Forest and Stream:

I have read in your paper of Oct. 4 a note respecting the existence in this country of the Egyptian lotus. The writer states that "only two localities are known to furnish it, and both of those are near Chicago."

There is a tide-water stream emptying from the north into the Connecticut River, five or six miles from its mouth. It is two or two and a half miles long, and is known as "Selden's Cove." It heads in a small pond.

On the south side of the stream, and, as I remember, about half way down, is a small marsh or pool, reached by boat from the river, and in which I many years ago found what I suppose to be the Egyptian lotus.

The leaves were not elevated above the water, but rested upon it, and in some cases were not less than twenty (20) inches in diameter. Their edges reflected upward. The flower, as I remember, was of a delicate cream color, and about the size and shape of an ordinary china teacup. A one quart glass fruit jar would in diameter just contain one of these flowers. If "H. P. U." and his Pelicans had lighted on the lotus there was small chance of their mistaking it for any one of the more common varieties of the lily.

I remember also that when in southwestern Missouri some twenty years ago I heard that there was upon a small hill a little pond which contained these flowers. I intended to visit it and make sure, but was unable to do so. The place named was on the Diamond Prairie, not far north of the old Moseley farm, where "Sylvan Lodge" post office was situated. I think it is in Jasper County.

I believe that it will be found that the lotus has a wider distribution than has been supposed, and some of your correspondents may give us further information on the subject.

I never think of my first visit to Selden's Cove without calling up the vision of a kindly old lady seated next me

in a sailboat. There was quite a party of us, of all ages; and as I was supposed to know more about the management of a boat than the rest it fell to my lot to steer the old tub we had up that stream, with a stiff breeze on the quarter and a strong tide and current dead against us.

The river was narrow, and it was one of the tightest pieces of navigation that I ever undertook. We were rounding a bend, and I was steering as fine as silk, and beginning to congratulate myself on the prospect of taking the boat through the river without accident, when this benevolent old lady, seeing the stiff pull I had on the mainsheet, thought to help me, and grasping the rope, gave it a yank which caused the old craft to sheer to port in a way that nearly sent us smashing on the rocks, with which that part of America is liberally besprinkled.

I gave a yell and she dropped the rope as though it had burned her fingers. Just what was the nature of my remark I cannot say, though I remember that I apologized. Dear old lady; she long since sailed in a golden bark for her home in the Isles of the Blest. KELPIE.

CENTRAL LAKE, Mich.

Editor Forest and Stream:

I think your Chicago correspondent is in error in stating that the Egyptian lotus grows at Grass Lake and on the Calumet Marsh at or near Tolleston. But though not identical with the lotus of the Nile it is still a very showy and beautiful member of the same family, growing not only in the waters mentioned but at many places in the West and South, notably at Louisana, Mo., and I think also in Reelfoot Lake. He will find a cut of the singular cup-shaped seed receptacle on page 126 of "Gray's School and Field Book of Botany," and also a description of the flower itself on page 47 of the analytical key in the back part of the same book. HARRY HUNTER.

HIGHLAND PARK, Ill.

Editor Forest and Stream:

I notice in a communication from a Western correspondent in issue of Oct. 4 he mentions the Egyptian lotus (*Nymphœa lotus*) as being found at only one place in the United States. I know it is found in at least three places in the United States, viz., the place he mentions, also at Sodus Bay in northern New York, and at Seldens Cove, Hamburgh, Conn., which is in the town of Lyme. At this latter place they bloom in August, and I have myself seen leaves as large as a hogshead picked at this place. The nearest route to this place is to come to Essex, and row across the Connecticut River to the cove, which is opposite. A. W. J.

CENTERBROOK, Conn.

THE DOOM OF THE EAGLE.—*Editor Forest and Stream:* I see it announced in a Long Island paper that a gunner near South Hampton shot and killed an eagle measuring 7ft. 10in. from tip to tip of its wings. What a pity that so noble a bird should have fallen a victim to the unerring aim of a pot-hunter? What more beautiful sight than a pair of these noble birds soaring aloft and sailing in the sunlight of a clear blue sky? Unless some means of protection be resorted to the American eagle is doomed to extermination, and that very shortly. The State of Connecticut, I believe, has been foremost in passing a law for its protection, whereby a fine of $100 is imposed upon any one wantonly killing an eagle. Would it not be well for some one of our legislators at Albany to introduce a bill to the same effect for the protection of the American eagle, and have it become a law at the session of the Legislature this winter?—D. L. GARDINER.

DEER HUNTING IN CALIFORNIA.

YOUR genial and fascinating correspondent "Forked Deer" has given my writing finger the itch. Four happy summers have I had my outing in the mountains of which he writes, lying between Lake and Mendocino counties, and though I may see them no more, they are a precious memory. I, too, have seen the low-lying, unpretentious lake, dominated by Uncle Sam, both from its shore, where it seems a commonplace pond, and from the mountains, where it shines a gleaming mirror set in the soft brown and green of the summer hills. California is the camper's paradise. Fresh cool nights, making a fire comfortable even in midsummer, absolute immunity from rain or even heavy dew, and the absence of all annoying insects, is a combination not to be despised. The best deer hunting is always away from wagon roads, a "pack" of from one to ten miles being usually necessary. The favorable conditions of camping, requiring so little luggage, are a great advantage. I have often packed upon one horse everything necessary to a week's camp for two men.

Deer hunting is practiced as your correspondent described last week, or by still-hunting. In all parts of the State where I have hunted deer are nocturnal, though they often come out of their hiding a little before sunset and remain out till half an hour or an hour after the sun rises. These are golden moments for the still-hunter, but it requires a light step and a quick eye to make successful use of them. My chief difficulty at first was to see my game before it moved. Never having hunted deer, I found it impossible to distinguish one at rest from the surrounding objects. Nothing but practice can overcome this. Another thing must be learned by experience, and that is to rightly gauge distance. All depends upon this in the use of the modern rifle. Devices for elevating the sight are practically worthless in ordinary shooting. Make allowance and blaze away; you will soon learn, especially if you use the same gun all the time. The still-hunter will, of course, sometimes "jump" a deer and may kill him, but the chances are against him. I can recall only one instance in my experience, and that was by the bare accident of a snap shot as he was waving his flag over the top of a thicket 80yds. away.

The desirable dog in these mountains is the one that will not "hound" the deer. A cross between the ubiquitous sheep dog and the hound usually produces the best result. Only rarely will a full blood hound have the virtues of Grip. To go willingly into the thickets, to endure heat without water, to run a sound deer only a few hundred yards and a wounded one all day, if necessary, and then catch and hold him, are the points.

Many incidents out of my summerings in California (over now, alas!) which might be "good readin'" for my brothers of the rod and gun who are forced to seek the fields and wood through FOREST AND STREAM occur to me as I look back. How vivid they all are! How I could spin them off if we were sitting around a camp-fire! I will take a day from the last trip. Monday, July 16, 1888, my brother, B., and I were camped in the same range of mountains of which "Forked Deer" has told you, about twenty miles north of where he had his hunt, at the head of one branch of the beautiful Russian River, sometimes heard from in the canoe department. We had hunted several days without a dog, and had seen a number of deer, but killed none. Sunday we rested, and Monday morning took a big round but saw no deer. At dinner we planned and threatened. The day was hot and our game would seek water. We would follow along the rough cañon where the little stream ran and take turns playing dog. So about 3 o'clock we started.

The weather was scorching. Two hundred yards down the gulch from our camp a deer of some sort thundered over a steep, rough point, out of sight but making a prodigious noise. We did not get a chance to see him. A little further, and two yearlings rattled up the hill, giving me a snapshot which only accelerated their retreat. Poison oak, bay bushes, scrub oak, manzanita and chemisal filled the spaces between huge boulders, giving the game an easy escape. Then we turned up the main cañon, B. toiling along the hillside and I in the bottom of the gulch. Presently he heard something and stopped to investigate, and I passed on a little ahead. As I clambered up the steep bank of a small cañon making into the main one, thump, thump went a fine, fat forked-horn from right under my nose. Catching a glimpse of him through the brush I banged away, but a twig turned my bullet, and striking the hard hillside it went screaming by B., so near that he yelled "Look out." But though the bullet came near him the deer didn't, and we saw him no more. This was getting vexatious.

We tramped out at the head of the cañon, crossed an open ridge, struck a timber belt, found a spring and sat down to rest. We were talking pretty loud, not expecting game. B. had just stretched himself on a big piece of fir bark, and was expressing his approval of it as a camp bed, when I heard the rapid rip, rip, rip of running deer. Looking up I saw two brown streaks crossing an opening a hundred yards away on lightning express time. How they did run! I jumped up, gun in hand—I now sit down out of reach of my gun—but it would have been as easy to hit a flying bird. A puff of dust near where they disappeared was my only reward. It was fun to see so many, but not much to get none of them. We wanted meat.

Night came on as we hunted further, and we turned toward camp. Just above our camp was a large thicket of chemisal (the last syllable of this word is invariably dropped in the vernacular) covering many acres, and fringed on one side by a fir grove, on the other by open pasture land. We approached on the open side. As we came over the top of the ridge I saw in the dim afterglow of sunset a red form walking along the side of the thicket on the red earth, at least two hundred yards away. No cattle here, thought I, and promptly blazed away. "It's a long shot, but you went over, my boy; I saw the dust cloud." So did my buck, and springing out into the open he threw up a fine head and looked around. Steady now. Allowing about half my ivory bead I cover him again. It was so dark my gun spit fire, but I saw by the sudden jump that my aim had not altogether failed. The deer wheeled into the brush, and I made quick time across the intervening space. There lay pieces of bone and skin, but very little blood. I stepped into the edge of the chapparal and immediately heard him go plunging down the mountain. I shouted to B., who was below, and he heard him pass but did not see him. Dark was coming rapidly. We rushed into the thicket, B. in the cañon and I on the hillside above. I scuffled to the top of a little ridge, thick with chemisal about waist high. Just as I looked on the top I saw a bush shake right in front of me, and crash, bang, thump went something down the hillside. If a deer wants to sneak he can do it, but if he doesn't choose to be quiet he can make a noise in running which the uninitiated might think produced by a rhinoceros. I squared myself, seeing he must soon cross an open point, my trusty little .38-cal. Winchester at the ready. What a show he was as he broke cover, head up with great horns black with velvet high in air, his great hams and broad back showing him to be in perfect condition. I saw by his movement that he was not the wounded one. All this went through my mind like a flash. At the same instant I swung my gun into line for a shot at the center of the swift moving bulk and its report rang out sharp and clear. The bullet seemed to paralyze every muscle, for at the instant of the report over he went, head down and heels flying, like a running hare caught by a load of shot. It is worth days of wearisome travel and hunting to bowl over an antlered monarch in such style. My nerves tingle yet at the thought of it. He tumbled into a ditch, and after waiting a moment to see if he would get up, I went in. My shot had taken him in the top of the shoulders, being from above, and had paralyzed his spine. But these fellows have wonderful vitality, and his head was up. A shot through the neck finished the work. Next morning we searched for the wounded one, but failed to find him, having no dog. We carried out the dead one. He was fat and fine, and that afternoon broke camp and returned to "boiled shirts" and civilization.

SAN DIEGO, Cal., Oct. 17. AZTEC.

RUFFED GROUSE AND BOSTON'S GILDED DOME.—North Bridgton, Me., Nov. 5.—Mr. Henry J. Thayer's report of a ruffed grouse in the city of Cambridge reminds me that in November, 1883, while employed as taxidermist by C. J. Maynard & Co., Boston, we mounted an adult ruffed grouse for a gentleman who had shot it in a yard on Pinckney street, hardly a stone's throw from "the dome." —BLACK SPOT.

GOOSE SHOOTING ON THE ROANOKE.

THAT part of the Roanoke River which flows through Warren county and between the upper portions of Halifax and Northampton counties, North Carolina, has long been a favorite feeding place for the wild geese. As soon as the first biting frosts come in October great flocks of geese take up their winter abode in these waters. Huge boulders or rocks in midstream furnish them roosting places at night without fear or danger of invasion from man or beast. These rocks are always situated between swift-running, though shallow, water, rendering their approach by night almost impossible. The river is a succession of falls for several miles. In the clefts of rock, hollowed out by long friction, lodge quantities of various berries, acorns and rich nuts, floated from up stream. There, too, is the tender watercress abundant. This—the berries and nuts—is the food of the wild goose. The river is a quarter of a mile wide, unnavigable, save for a light flat-bottomed canoe, such as is generally used by fishermen and sportsmen in small streams. There is nothing to disturb the serenity of the geese save the gun of the sportsman. They are so little hunted, that they disport themselves in the gurgling waters or sit on the rocks not heeding persons or vehicles passing along the road on the river's bank. Often they present an easy mark for a rifleshot, which is always almost sure to bring down one or more, as they are huddled so close to each other. One "sturdy old gander" stands sentry to the main flock. With vigilant eyes, one foot updrawn in his feathers, he gives notice of approaching danger by a loud *honk-honk*. They take his advice promptly and leave for another feeding place, generally in the falls, higher up or lower down stream, due entirely to the direction from which the danger comes. One great comfort to the hunter is that their flights are very rarely over a mile at the longest, and he can soon have another pop at them.

The romance of rising in the weird and misty light of the morning without any breakfast or hot punch and sneaking to the river's bank is entirely left out in our plan of goose hunting on the Roanoke River. There is no crawling through mud and briers for a half mile. The geese wait for you to get your breakfast and dinner too if you want it, before you pay them your respects in the manner which I shall presently describe. You just ride along on the bank of the river as you might if you intended going to church or a funeral on a quiet Sunday morning in the country. You try to strike the stream at the lowest part where the geese frequent and follow up the water's edge until the geese are sighted, and at some points you can see them for a mile or more. It is always necessary to have two men, and it is better to have a party of three to make a successful hunt. More than this number overloads a boat and lends a cheerful prospect of a good ducking in the rapids by stranding on a smooth, half-sunken rock.

We take a boat, usually kept just above or below where we expect to find the geese, and paddle to one of the hundreds of small islands in the river, from six feet in circumference to several acres. We select a small island, dry and full of driftwood, débris of bridges swept away in freshets and soft grass. We select a small island because the birds, wary of the shore, will not approach so close to a large one as to a small island. Here we are perfectly secreted by bushes and driftwood, not at all cramped in posture while waiting for a shot. The dry grass or a log gives choice of a seat. The man in the boat, who is to be the "driver," then scuds along the bank furthest from the grass so as not to alarm and put them to flight. As soon as he passes them sufficiently far to make them believe he has gone on some other business up the river, he heads his boat directly for them, just drifting with the stream and often whistling a merry tune so as to attract their attention without doing so too suddenly. The geese watch the bearing of the boat, and when it floats toward them they swim away from it. The man in the boat is an old hand and knows full well when he can push them. If they show signs of restlessness he paddles away, pretending not to notice them. The object, as seen at once, is to start and keep them swimming with the current. Once set them fairly to moving, and here comes a solid quarter of an acre of geese swimming gracefully with the undulations of the water right down to the muzzles of our guns.

How we tremble with excitement and impatience! You whisper through chattering teeth to your neighbor to keep quiet till you shall say fire. The distance on the water deceives an inexperienced eye, and your neighbor wants to shoot; but you beg him to hold on yet, and wait until they are within thirty or forty yards. One gives the word to fire to the right and the other to the left; two barrels in the water and two shots as they rise; and such flapping and beating the water was rarely ever seen before. You rush delighted from your hiding place to yell to the man in the boat to gather the dead and wounded birds, and there may be anywhere from four to a dozen. If there are some only wing-tipped, here is fun indeed, for a goose uses his feet for all they are worth, and aided by the rapid current, makes good time in search of a hiding place in the rushes of an adjoining island. An extra boat now comes in well. A dog is nowhere. Once carried past the island in trying to retrieve a dead or wounded goose, he cannot swim against the current.

This mode of shooting has been successfully followed for years by Col. Hamlin, and hundreds of geese have fallen to the gun of "Jim" House, the fat and typical jolly landlord of the Sillerton Hotel. If you fail in killing geese the lowlands on either bank of the river afford good bird shooting, and you have a chance for a day's sport at all events. Mr. William S. Moore, a keen sportsman, of Hawthorne, Florida, has made engagements with some friends for a goose hunt early in November on the Roanoke River, just five miles from this place.

LITTLETON, North Carolina. L. J. PICOT.

TOWANDA, Pa., Nov. 3.—Two of our sportmen brought in after a three hours' hunt, on Thursday afternoon last, eleven full grown quail. The covey consisted when first put up of about twenty birds. In years gone by fine quail shooting could be found in this neighborhood, but severe winters and deep snows have made sad havoc with the birds and only a few bevies can be found after days of faithful search with good dogs. A large flock of wild geese passed over this place on Saturday morning last going south. Our market is well supplied with ruffed grouse.—SUS. Q. HANNAH.

RIFLES FOR SMALL GAME.—IV.

Editor Forest and Stream:

There have been so many questions asked concerning the hunting rifle for small game that I have felt it my duty to once more make application for space in your valuable paper to try and answer some of them as best I can. The shooting qualities of these little guns are what we have written mostly on before and next comes the action, wearing qualities, safety, rapidity of fire, non-cleaning, and many other things also are to be taken into consideration; while last but by no means least comes the price. To be sure there are some sportsmen to whom the difference in the price of our cheapest and best rifles of American manufacture is of no consideration; but it is well to remember that a large majority of our amateur sportsmen are men of limited means, who have a few hours or days once in a while; and when these red-letter days do come, they like to take the rifle and spend a few hours in the woods, among the squirrels and other small game animals and birds, gathering nuts, etc., or else practice at a target.

The first thing we will consider is the cost of the rifles. We will suppose that the steel in all the different makes is the same—made especially for the purpose—and that the barrels are all made by special machinery, drilled, reamed, straightened, lapped, rifled and leaded to polish equally well; then of course the shooting qualities, if the same chamber and cartridge is used will be the same. Next the barrel must be attached to the frame, and here is a point to be considered. To make the rifle with any kind of a tip-up action costs more than it does to screw it solid into the frame, besides the rifle will not wear as long as it will if screwed into the frame and a movable breech block be used. Now, while we have a rifle that costs less in the movable breech block, we have also a better action. Among the rifles that answer to this description are the Ballard, Sharps, Remington, Winchester single shot and Bullard, the latter, although a good gun, we will set aside as being among the more expensive; but to out-balance this, it, like the Maynard, has interchangeable barrels, so that if several barrels of different calibers were wanted, to use by the same person, the lot would cost no more than the other one. In the first place we will take the Ballard rifle into consideration. To say that it is good in every respect will only do it simple justice. It is well made, safe, accurate, cheap, and wears a lifetime without getting out of order. The Sharps is out of the market, but was a good gun. The Remington is a good gun as regards the action, etc., but its shooting qualities are not up to the times in the .22-caliber.

The Remington-Hepburn rifle is made to take the .22-15-45 W. C. F. cartridge, and is a good gun at a moderate price; in fact, it is a little more than good when the price is considered. Next comes the Winchester single shot rifle. This gun is made now in octagon, half octagon and round barrel, and chambered for all the standard center-fire cartridges besides the .22 rim-fire cartridge for gallery shooting, etc. This rifle, when the action, wearing qualities, accuracy and safety is considered, is equal to the best; while for rapidity of loading and firing it stands at the head of all single shot rifles. This rifle, in the .22 rim-fire, has the "kicking extractor," which throws the empty shell clear of the gun; then when the action is closed the gun is cocked and is ready to fire. Next come the repeating rifles for small game. In .22-cal. we have the Colt, and Winchester, model '73. The Colt is a splendid little gun, and with the writer has always worked without a hitch and shoots well at short range. The Winchester is too heavy for this light shooting, and is a burden rather than a pleasure. The rifle works well, however, for those who like to carry so much weight. The .32-cal. Colt and model '73 Winchester are both good repeaters, but the novice can work the Colt much quicker. The Winchester cartridge, however, gives greater penetration and is full as accurate at the longer ranges.

Of course there are a great many things to be considered when a man asks us to tell him point blank what the best rifle for all around work is, or as is often asked, What is the best make of rifle? Who makes the best .22-cal. rifle, everything considered? I am sure I cannot tell. If you want a rifle for fine shooting qualities I would say get a Stevens rifle chambered for the .23-5-40 rim-fire cartridge, or, as it is usually called, the .22 long "rifle" cartridge. There is before me now a copy of a target made by Mr. G. N. Billings, of Delphos, Kansas, Oct. 22, 1888. It is a regular 50yds. standard target, center with fourteen consecutive shots placed well inside of the 10 circle, counting 140 out of a possible 140 at 50 measured yards. This shooting was done at rest and without cleaning. Now a rifle that will shoot like that you might say is the best rifle for game, etc., but the writer does not think so. Why? Because in the first place it is a Stevens "range" rifle, price $33.50; it costs too much; next, the trajectory of this target is very high, and again this rifle is on the tip-up principle, and if used a great deal may become loose and shaky with wear and tear and shoot astray, so as to make it wholly unfit for use. Let the Stevens Company give us a rifle with the action good and solid like the Ballard or Winchester single shot rifle, and with the fine shooting barrels that they fit up in them, and they will have more than their hands full to supply the demand that will be made for them.

Well, then, you ask what is the best rifle for game shooting that I can go to the market and buy at a reasonable price? one that will shoot well at all hunting ranges and one that will wear well. My advice is to get one adapted to either the .15-45 W. C. F. cartridge, or to the .10-45 Maynard, or U. M. C. .10-45, or, as it is called, the .22 ex-long c.f. cartridge. The rifles that are adapted to the .15-45 shell are Remington No. 3, Winchester single-shot and Ballard, good guns in every respect and moderate in price. For the 10grs. shell we have the Maynard (a most excellent rifle but expensive), and the Ballard, a good rifle and moderate price. Thus it will be seen that the writer, although trying to write in a spirit of fair play and justice to both manufacturer and consumer, cannot recommend all the goods that are put in the market for us to buy. There are other makes of rifles in the market that have their good points, but also have those that are undesirable. If my experience (which has cost me a great deal of time and money) will help those who are starting on the road—over which I have stumbled so much—I will be content, and feel that this has not been written in vain; and to those who wish for further information would say that I shall be pleased to answer them as best I can if they will write and ask. Our editor will give you my address, I think, if you will send him a stamp for return postage.

I see that in your last issue your correspondent "Kelpie" asks the writer's opinion regarding the .32-caliber rifle for bear. If "Kelpie" will put the 165-grain bullet in the right place he will need no explosive balls, but if he does not he will need more than one shot whether with a .32 or .50-cal. The writer would prefer the solid ball, but would take the precaution to have another cartridge ready and play the lever for all it was worth. Bruin would probably find enough to take his attention if he had a 165-grain solid bullet well planted in the brain.

I would like to add a word regarding sights for rifles and will then conclude this letter, which is already too long. I have used nearly all of the many kinds of sights that have been offered to sportsmen and the Lyman rear sight I have found to be the best for all-around use. It can be used in connection with any kind of muzzle sight, but the middle or notched sight on the barrel should always be removed. Lyman's ivory front sight is also excellent for hunting and especially in the woods or in bad light. IRON RAMROD.

SOMERVILLE, Mass.

Editor Forest and Stream:

Referring to the communications of "Iron Ramrod" and "Kelpie" in recent issues of your interesting paper, I beg leave to express my doubts as to the utility of the so-called all-around rifle. The caliber and charge should be proportionate to the work. If a rifle is wanted for small game like squirrels let it be a .22-cal. center fire; if for geese and other wildfowl, or for mid-range target shooting, choose a .32-40 or similar cartridge; but should deer or bear be the game sought, select a .40-cal., with charge sufficient to do its work with neatness and despatch, leaving the minimum number of cripples and the fewest pangs of remorse.

An all-around arm is apt to be like an all-around rod, which may prove not just the thing for trout, and a little worse for bass. Fortunately the price is now so moderate that a pair of rifles may be had for what one formerly cost.

The charge, however, may be varied considerably if it is desired to do so, particularly in those rifles chambered for an everlasting shell. My .32-cal. Maynard does accurate work with three different loads. First, 35grs. powder and a patched bullet of 165grs. Second, 35grs. powder and a five-groove naked bullet seated ½in. in shell. Third, about 28grs. powder and a three-groove bullet, seated so that the shoulder of the cylindrical part is just at the end of shell.

The last is the smallest charge I have used or think it desirable to use in a .32-caliber, but to those who want a rifle of this caliber and think this is still too powerful, I would recommend the purchase of an imported rim-fire for about $5 with checkered pistol grip and rubber butt thrown in. It will probably afford them just as much amusement and save the trouble of reloading. T. H. G.

ELIZABETH, N. J.

Editor Forest and Stream:

I am so situated that I cannot use the large bore heavily charged rifle that they use out West without danger to others. In other words, I want to shoot black ducks with the rifle. I have for the past five winters spent a good part of my time looking at brother black duck enjoying himself just out of range of the best 12-bore shotgun in this section. Of course I could get a 10 or even an 8-bore and still he would be out of range. Now will some of my fellow readers of the FOREST AND STREAM advise me what rifle to buy for the best shooting qualities? It must not be dangerous to shoot where there is nothing to stop the ball for a mile; or in other words, after killing the duck I do not want to kill a man a mile off. It seems to me a .32-cal. would be large enough. Now the questions are, which make shall I buy? Which is best, a single-shot or magazine? I have been told that the peculiar style of bullet used in the magazine guns rendered them less accurate than the single-shot. Can any one say if this is true?

Help me out of my difficulty, some one, and I may be able to give you plain sailing directions to a point where you can find plenty of ducks. Last winter I had the pleasure and torture of spending five days looking almost all day at flocks of 500 to 1,000 ducks and half as many geese all just out of range of shotguns and yet perfectly safe from a near approach. Now could not a good rifle shot, with the right kind of rifle, have killed them off pretty nicely at 150 to 200yds.? It seems to me so, and I am going to try it. Some one tell me what rifle to buy and I think I am all right. I have a Colt's 22-cal. that I can kill a single duck with nine times out of ten at 30 to 40yds., but it is too small for a greater distance if the wind is blowing. I wish to say, however, in justice to the Colt's 22-cal., that it is a little "daisy," and I do not see how anything can be more perfect for short range.

JAMES RIVER, Va. N. ORLEANS.

AMMUNITION AND BOOTY.—A Strahan, Iowa, correspondent thus describes a type of gunner in that vicinity: In the fall when the prairie chickens come from the West, he will shoulder his gun and start out across the field until he comes up within 150 to 200yds. of a flock, when they up and fly. He will then watch till they settle in a field. This time he will get within 75yds. of them, when they fly again, but not till he has had time to waste two loads on them without getting a feather. After another tramp of a mile or two he may perhaps get one if he has good luck, but as a general thing he will waste eight or ten loads on one bird. Next come the ducks. He will go to the river and stand on the bank, and when he happens to hit one, if it falls in the river (which nine out of ten do), he having no boat, loses his duck. Often he uses a pound or two of powder to the duck, which makes it a costly luxury.—H. W.

QUAIL IN NEW JERSEY.—Small bags of quail on the line of the Camden & Amboy R. R. in New Jersey were the rule on Thursday and Friday of last week. The weather was warm and windy, and the ground very dry, and the woods were full of hounds and rabbit hunters. Saturday being damp and showery at times gave better results all around, but comparatively few birds were killed. Woodcook and grouse were very scarce, but cotton-tails abound.—J. L. K. (Perth Amboy, Nov. 5).

FAILURE OF THE WOODCOCK FLIGHT.

UTICA, N. Y., Nov. 5.—*Editor Forest and Stream:* Mr. E. H. Lathrop's letter upon the failure of the woodcock flight is noticed in your issue of Nov. 1, in which he attributes this failure to the blizzard of last March. That the woodcock are destroyed and there is a failure of flight there is no doubt. Mr. Lathrop may be, as you say, a "close observer," but his "theory" as to the cause may be doubted, especially upon statistics. It is a surprise that he should be so ready to attribute it to the weather. The records of this association show a marked and gradual decrease of woodcock, more and more perceptible each year for the past five years. In limited localities there has been a seeming supply, but the sections have been small and in spots, with a general dearth or diminution. The supply in spots is, of course, dependent upon or varied by a more or less wet or dry season of the locality or elsewhere. The general average shows a marked decrease as observed by sportsmen, but especially shown by the scanty few on sale in market.

If Mr. Lathrop or others of your readers will consider the vast number of breechloading guns that have been made and sold, together with the amount of trap shooting practice carried on in the past five or more years, and once reflect that each of the owners of these new guns has become qualified with the "fever" each season to kill "a few woodcock," they will wonder that there could be any woodcock left. The failure of flight need not be attributed to the weather blizzard on theory, but may be reasonably attributed to the sportsmen's blizzard on probability. This association has foreseen this "failure of flight" for years, and has endeavored to prevent it by a law for more limited killing. Unless killing be more restricted their extermination is at hand—is possibly even now beyond remedy. Sportsmen (especially the enthusiastic of the younger men), if they would desire sport in the future would do well to reflect upon the prospects and consider how long it would take to replenish their haunts if once reduced to a few hundred pair, in view of the secret violations of law heretofore existing, with the indifference with which market men would sell the last bird. JOHN D. COLLINS,

Secretary Utica Fish and Game Protective Association.

A HUNT AT THE ADIRONDACK CLUB.

IT is barely daylight when I step out of the comfortable cottage where I am quartered at the Adirondack Club. The air is cool and still, and the white frost sparkles on the ground. It is a grand hunting morning. Already the hounds know that something unusual is going on, for they are yelping down at their kennel, where they are generally so patient and quiet.

The Senator and the Commodore soon follow me, and with our Winchesters on our shoulders we proceed to the club house for breakfast. By the time we have finished our substantial meal, of which venison and flapjacks form an important part, our hounds, eight in number, are coupled and straining at their chains. Four guides take them in charge, and after receiving their instructions from Supt. Buttles, start off for the hills to put them out, and we repair to our respective stations. Through the kindness of my host I am given the river stand, considered the best, but owing to the river being very narrow and heavily lined with thick brush, also the most difficult from which to kill a deer.

With parting instructions not to shoot at does, the rest of the party depart for their respective stations on Lake Sanford.

After hiding my boat in the bushes I climb up into my perch, which gives me a view up and down the brook as well as a glimpse of the lake beyond, to say nothing of the magnificent view I have of the glorious mountains in all directions.

It is now 8 o'clock and the sun shines out hot; though the air is perfectly still, I have not yet heard the faintest sound from the hounds, and I begin to think that it is not one of my days. A flock of wild ducks swim up the brook past me, playing and diving as they go, not 50ft. away. How little they think that their deadliest enemy is so near; but they are safe to-day; I sat quietly an hour or more perhaps, when I thought I heard a faint splash. Turning my head slowly I was startled by seeing a beautiful buck walking slowly across the stream. I pick up my rifle, but the tops of the bushes are so thick that I can hardly aim. After changing from one opening to another I pull the best I can at the deer's shoulder. At the report he bounds into the bushes like a shot out of a gun.

"I would give five dollars to fire that shot over again!" I say to myself, for the deer has vanished like a dream, and I wonder how I missed him. Then it seems to me that I ought to have heard him crashing away in his mad flight, but I did not; I listen intently and I think I hear something kicking in the bushes, but so faint and uncertain that I dare not hope, and yet it is possible that I killed him after all. I cannot stand the uncertainty any longer, so at the risk of starting him, I climb down and hunt up the spot where he left the river. "No blood, guess I missed him," and I am in despair again. "No, by Jove! Here is blood and lots of it," this I find on a tall weed a few rods from shore, and frothy blood too, a sure sign of a mortal wound, and sure enough, a few steps further on I find my buck lying stone dead on his side, in the cool dark shade of the dense woods. With a sigh of relief and satisfaction I gaze on my noble game and admire his fat sleek form and beautiful head.

After bleeding him I return to my perch, and pass a contented half hour thinking over my lucky shot, when I see something swimming down the brook. It looks like an otter, no, it is a hound; but as it comes nearer I see it is a deer, but it looks like a doe. Just then the bushes hide it from my sight as it swims close under the bank on my side of the stream. Below me some sixty yards is a shallow, and as the deer strikes that and comes into sight I see that it is a fine two-year-old buck. Up goes the Winchester as he strikes into a smart gallop, and at the report he wheels one side and bounds into the bushes with his flag hugged close; as he disappears I fire a snap-shot. He does not run far, but by his snorting and thrashing I know he is badly hit. In a minute or two he is in the river some distance down and swims across, showing only the top of his head. I fired three shots at that, but without any result, but when he tries to climb the steep bank my last shot breaks his neck and he falls back stone dead. I wipe the perspiration from my face and think that it is enough luck for one morning, so I

climb down again, launch my boat and try to get the last buck into it.

If the reader has ever tried to drag a buck into one of these light crank Adirondack boats in deep water, he knows what I had to go through. I managed to do it without upsetting after ten minutes hard work, and then paddled up to the boat house, where I left him.

On my way back a fine doe jumped into the water and swam a hundred yards ahead of me. As she left the brook she offered me a good shot, but of course I did not harm her. I dragged my first buck to the bank with much labor and rolled him into the boat. By that time the others returned without any deer, though the Senator had two does pass him within easy distance. My prize was duly admired and I congratulated, and I returned to the club house well pleased with my first hunt at the Adirondack Club.

I never heard a hound during the hunt, nor did the deer seem to be very much concerned about them. They were taking it very quietly, and I presume having heard enough to alarm them, were quietly sneaking out of harm's way. WAKEMAN HOLBERTON.

THE DARDENNE CLUB.

ST. LOUIS, Mo., Nov. 2.—*Editor Forest and Stream:* The duck shooting lakes in this vicinity are fast being taken up by clubs for game preserves, and in a little while there will be no place around about here to shoot ducks at unless a person belongs to one of the various clubs. There are now five clubs in this city that have game preserves, and in all probability there will soon be another added to the list.

The latest addition to the list is the Dardenne Fish and Game Club, and the grounds which it has leased are situated in St. Charles, this State, thirty miles from this city, in a northwesterly direction. St. Peters, on the Wabash Western Railway is the station to get off at, and then there is a four-mile trip by wagon to reach the lakes.

Fifteen years ago the Dardenne Lakes were leased by a club composed of gentlemen of this city and it was the first game preserve established in this part of the country. At the expiration of the ten year's lease the owner of the land demanded an increase in the rental, which the club considered exorbitant, and failing to come to terms with the landlord, Mr. P. D. Gallagher, the club abandoned the grounds and located on the Illinois River, about eighty-three miles above here.

After losing a few years' rent for his swamp land, which rental, by the way, was sufficient to pay the yearly taxes on the 5,000 acres of land which he owned in the immediate vicinity, he became quite anxious to entertain a proposition to lease the grounds for a fair rental, and on this fact becoming known to Capt. H. C. West, a very enthusiastic field sportsman, by the way, he interested himself in the matter and called upon several gentlemen in this city and informed them of the scheme. No trouble was experienced whatever in obtaining the necessary number to organize the club, which was promptly done, and the grounds and lakes were leased for a term of ten years, to take effect from last Monday.

A club house is to be erected immediately on a piece of land on the bank of the Mississippi River which the club has purchased. It is to be a large building and will embrace sitting-room, bed-room, dining-room, kitchen, store-room and extra sleeping quarters for the necessary help. A stable for a team of horses which are to be kept at the grounds to convey the members to and from the lakes is also to be built.

A kennel to accommodate twenty dogs will also be one of the fixtures of the place, and will be fitted up with all modern improvements as to comfort for the canines. Many of the members own valuable dogs, both bench and field trial winners.

The Dardenne Lakes are without doubt the best known of any in this vicinity, and the grounds have the reputation of having more large bags of ducks and snipe made in them than any other place within 100 miles of this city. Away back in the '60s it was quite famous, and there are many old-time field sportsmen in this city who can recall pleasant recollections of days spent up there shooting ducks and snipe when St. Louis was a mere village.

On the grounds in question there are two lakes; one covers an area of about 600 acres and the other about 200 acres. Food is plentiful in both, and they are well supplied with vegetation, which affords splendid cover for duck shooting. Wild celery in abundance is found in the lakes, and in consequence excellent canvasback and mallard shooting is had in early spring. The canvasback is a rare duck in this section, and when they do make their appearance all other kinds are shunned for the time being, and every point is strained to bag as many of them as possible. A member of the old club, in the spring of 1882, bagged fifty-six in one evening's shooting, which was the largest single bag ever made at the Dardenne preserve by any one in the last fifteen years.

Mallard shooting in the fall, if the person is fortunate enough to strike the flight, is most excellent, and some remarkably large bags of them have been made up there. In 1875 a party of three gentlemen bagged in a three-days' shoot 634 mallard ducks, besides a number of other varieties; they also had a few geese, brant, snipe and some quail. This is a matter of record, and can be seen on the record book of the club, which was kept at the club house, and in which each member was required to record the amount of game killed by him each day.

The lands surrounding the lakes are low and marshy and well adapted for snipe shooting. There is probably 2,000 acres of this kind of land, besides 1,800 acres in what is known as Bellew Swamp, which is owned by an Indiana gentleman, and which is also included in the club's preserve, it having leased it for the same length of time as the Gallagher lands.

All things considered the Dardenne's game preserve offers to its members as fine sport as can be found in this part of the country, and before the close of the present season large bags of ducks will be put on record as having been killed on the preserve.

Following is a partial list of the club's members, all of whom are residents of this city:

Capt. H. C. West, Gen. J. W. Noble, J. B. Morris, Col. Morre, Mark Taylor, C. F. Mathey, Richard Hospes, F. Bradford, A. Shapliegh, J. Delany and J. Shepley.

UNSER FRITZ.

MAINE DEER.

RANGELEY, Me., Oct. 29.—*Editor Forest and Stream:* In your issue of Oct. 25, I think that "Special" has a very good idea of the deer question. If the Commissioners will give us the month of September in addition to what we now have as open season, I do not think the guides would paddle a sportsman up to a deer in the early part of the season. And as for allowing hunting with dogs, I think, and in fact I know, it would be closely looked after, as I would shoot a dog if seen chasing a deer and let the deer go, and I have heard others say the same thing.

And as to the loggers I do not think that out of the 500 men employed for the last two years, which embraces about twenty camps, there are a half a dozen deer killed during the winter, as the men get too tired during the week to run deer Sunday. I have been a guide here for eight years, and worked in the woods in winter, and I have known positively of but one deer being killed by any of the crews.

As for fires in the month of September, the guides are very careful about their camp fires, always putting them out before leaving camp.

Deer shooting, as he says, has not been much of a success so far this season, as it has been so wet. I know of but one moose and two or three deer being killed so far, but it is not the scarcity of deer that prevents, for there are plenty of them in the woods. Last fall, in being out six days I saw nine, but did not shoot any on account of bad doing, as they would always get the start of me. I do not think any one can go a half-mile in the woods without crossing deer tracks after first snow comes. The law allows three deer to each man, but I don't think that there are more than two or three who get what the law allows them. W. A. R.

BOSTON, Nov. 5.—*Editor Forest and Stream:* Deer hunting in Maine is being followed for all it is worth this fall, and it is really worth a good deal, if we are to take in all the accounts we hear and read. But it is evident that Maine sportsmen are getting more of this noble game than outsiders. Conductor George West, of the Maine Central Railroad, has lately returned from a successful deer hunt, resulting in the slaughter of two fine bucks. A letter from Millbridge, Washington county, Maine, received by a Boston merchant yesterday, gives a brief account of a party of three Rockland, Me., hunters, who have just returned with a deer apiece, the result of a four days' hunt in the wilds of the upper Narragaugus River. From a party of Boston gentlemen, who also just returned from the same region, it is learned that a party of three Mount Desert sportsmen came out of the Narragaugus woods the day that the Boston party was going in, with three deer apiece; all the law allows them. There were also other hunters in at the time, and they had taken several deer. There is not a doubt that the number of deer killed this fall in Washington county alone will be very large. This killing is done in the open season, and hence it is entirely legal, provided that each hunter kills but three deer, and dogs are not used in their capture.

SPECIAL.

AN OCTOBER OUTING IN FLORIDA.

AT 4 o'clock of a gray October morning a sailboat darted out from the shelter of one of the many piers that line Pensacola's water front. It was sailing under jigger and foresail, and as it reached the open water and felt the full effect of the fresh breeze it bounded away o'er the billows like a thing of life. It contained two persons, the Skipper and Crew. The Skipper's experience in Floridian waters was very limited indeed, but the Crew was a walking compendium of information. The coast from Pensacola to Key West was as familiar to him as the streets of a country town to a native-born citizen. He had hunted and fished its whole length, and had been over it in the interest of science. The Crew had come on this trip in order to show the Skipper the best game resorts near the city. It was early for game, but, nevertheless, the guns were taken along. The destination was Garcon Point, nine miles to the eastward on Escambio Bay.

The wind began to freshen and hauled to the eastward. The Skipper glanced dubiously at the windy-looking sky, then at the increasing white-caps, and pictured to himself a nine-mile beat to windward in a leaky, open boat. He remembered how a few days back he had undertaken alone to sail to windward, in the same boat, with a heavy sea on. He succeeded, but he had to bail water with one hand and steer with the other for three long, weary hours. He consulted with the Crew. The Crew, old salt though he was, did not relish the beat to windward. It was decided to shape the course for the old Naval Reserve, where there was a fresh-water lake and some thick woods. The sheets were eased off, and the boat with the wind on the port quarter glided down the long swell with a speed that was decidedly exhilarating. After a run of an hour the boat was rounded to in the lee of a sand spit and anchored. A landing was made, the Skipper keeping his feet dry with his hip rubber boots. He says, however, that long boots may do for wildfowl shooting on Illinois marshes, but hereafter in Florida he will wear an old pair of shoes and leather leggings to protect his lower limbs from thorns and possible rattlesnakes.

The Crew pointed the Skipper in the direction of the lake and bade him search, which he did. Pushing his way through some dense palmetto scrub, his vision was gladdened by the view of as pretty a lake as one seldom sees, even in this land of lakes. It is one-quarter of a mile long and not over 200yds. wide at its widest part, with wooded bluffs on either side and a small stretch of marsh at each end. Its clear, crystal waters abound in fish, and it is a noted resort for ducks, especially when the weather is stormy and the birds seek refuge from the turbulent waters of the bay. One can stand on the wooded bluffs or among the flags and have good shooting as the birds fly up and down the lake.

A sharp glance over the expanse of water reveals two dusky objects near the rushes on the northern shore. The Skipper carefully retraces his steps to the beach, and, keeping the sand ridge between him and the fowl, works his way toward them. While pursuing his devious course over logs and refuse timber, he is startled by the whir of wings near him, and looking up beholds two dusky objects cleaving the gray mist of the early morning with a vigor that betokens them to be bluewing teal. His 10-bore belches forth, but they stop not. He ejaculates, "The first ducks of the season and a rank miss!" A few minutes later a boom to the south'ard is heard, and he knows that the Crew is "on to" something. Later in the day he learns that the Crew saw the teal alight on the water, and, taking advantage of a patch of grass, had crept on them and got a shot and bagged one. The Skipper continues the march, and soon discovers in the further end of the lake two waterfowl that he takes to be ducks. He carefully conceals himself in a patch of scrub palmetto and patiently waits for them to come within gunshot. A kingfisher comes and perches itself on a dead limb above his head, but soon discovers him and flies away. Several herons fly over the lake a hundred yards up, and an alligator comes to the surface a few rods off and slowly swims in a circle for several minutes and then disappears. The fowl start to swim down the lake, and as they approach the blind he notes with disgust that they are diedappers. The spirit of destruction, however, is on him, and he turns loose his breechloader and one of the birds turns its feet heavenward and the other dives to shot. Walking out on the marsh, a plover flies up and wilts before the leaden hail; a white tern ventures within gunshot and pays for its rashness with its life. Leaving the marsh he enters the pine woods, and after a walk of half a mile emerges on a clearing that shows signs of having been made many years before. A negro hut stands in one corner, half hidden in a grove of thrifty-looking orange and peach trees. As he crosses the clearing he is welcomed by the usual number of dogs, that seem to be necessary adjuncts to farming life in Florida. The sable proprietor issues forth, calls off the dogs, and presents his visitor with several fine samples of west Florida oranges. Upon being interviewed as to the game resources, he ventures to assert that there are some deer and turkeys back in the hammock. The hammock is several miles back and the day is well advanced; so, accompanied by a negro boy, the Skipper strikes back into the pines to look for doves. The doves fail to materialize, but on the way a snake is started and its head shot off. The boy maintains stoutly that it is a rattlesnake, but the Skipper doubts it, as it is devoid of rattles, although it has the diamond-shaped spots on its back and looks decidedly ugly. Soon after the Skipper and Crew meet at the boat, sails are hoisted, anchor weighed and the course laid for the city, using the red water tower on Spanish Fort as a guiding point. IVANHOE.

PENSACOLA, Florida.

CHICAGO AND THE WEST.

HUTCHINSON, Kan., Oct. 29.—The general drought of the past two years, has made havoc with sport in Kansas. All the ponds of this section of the country, with very few exceptions, are dried up; the streams run only in driblets, and even the big and turbulent Arkansas shows but a thread of water. A few weeks ago it was entirely dry. At Great Bend the bed of the Arkansas has been for weeks as dry as a floor, and the Cheyenne Flats, whose long chain of lakes usually affords the finest of wild fowl shooting, have had no water on them at all. The result of all this has been that the fall flight has not come down across this country yet, and probably will not until some very severe storm drives it across country regardless of water-courses. The Arkansas begins to show a little water, now that the use of the irrigating ditches in Kansas and Colorado is slacking up, and nearer the mountains there is always a constant, though small stream of water in its bed. Along this part of the river and so far down at least as La Junta, Col., numbers of ducks and geese have been found for some weeks back. At Hutchinson the boys have had only two good days, when a small flight came down the river, actuated by no apparent reason. On last Thursday Will Chamberlain bagged twenty ducks, several geese and a white crane. There were a few canvasbacks among the ducks, and one Canada goose among the others. The Canada goose is rare along this river. The Hutchins goose and snowy goose afford the bulk of the shooting. There are a number of splendid young sportsmen here who keep up one of the very best trap clubs in the State, and have moreover a strong leaning to wildfowl shooting. Among the inveterate ones at the latter sport, and those also most successful, are Mr. Eli Young, Mr. Miles Taylor, Mr. Sam Forsha, Mr. Fred Burslem and Mr. Will Allen. When these gentlemen like, they can string out a hundred or more goose and duck decoys along a sand bar, and many a gray sunrise finds them in the pits waiting for the "morning flight," of which they always give good account. There are no keener sportsmen or better fellows than Hutchinson's shooters, most of whom are well-to-do young business men. They are strictly modern in their ideas and practices, and a visitor must be pretty nearly a "daisy" if they do not show him something about guns and shooting.

DES MOINES, Iowa, Oct. 31.—Messrs. Thos. Yearnshaw and Scott Alexander have returned from a successful shooting trip at Roosevelt, on the D. M. & Ft. D. road, in northwestern Iowa. They were absent about a week, and during that time bagged over 250 redheads and canvasbacks. They report snipe in great plenty in that vicinity. After their return the main flight of ducks appears to have held up, and to be now stationary about thirty miles north of Spirit Lake and along the southern edge of Minnesota. Shooters in central Iowa complain that no ducks have made their appearance in any great quantities.

Mr. C. E. Yearnshaw, just returned from Missouri River marshes near Sioux City, Iowa, reports that the flats were fairly alive with jacksnipe.

Mr. C. W. Budd, known all over the country, lives here in Des Moines, and is at present home getting acquainted with his wife and family, after his long and continuous trip through the trap-shooting circuit. He had had a couple of days' rest when I met him, and expressed himself as feeling immensely better. He says shooting at the trap isn't such a picnic as it looks. Mr. Budd was just going fishing as I saw him, and declared a big bass or pickerel would please him as much as another medal.

The Des Moines river is showing more water now than in the past few months, and fair fishing has lately been had in the deeper water above the dam.

The Des Moines trap club is a large one, and comprises a lot of jolly fellows. Politics and warm weather have interfered a little with the serious business of life, and the boys have let the clay birds go more than in duty they should have done. They promise to reform now at once.

DAVENPORT, Iowa, Nov. 2,—The rifle and trap clubs

here are exceptionally strong. Particulars later. Ducks not so plentiful as they have been known, but some shooting up the river. The snow storm of a few days back sent down a scurry of ducks, but no really severe weather has yet been felt in this section.

CHICAGO, Ill., Nov. 3.—Mr. John Gillespie is absent at Fox Lake, after the ducks, which are down in sufficient numbers to tempt him. Some good bags have been made when the shooter "caught 'em right." I shall soon investigate this duck question here, and find out what's the matter with the ducks. They're not all right.

I shipped a goose from Kansas to some Chicago friends. Fearing that it might taint, I took the advice of a Kansas man and stuffed the goose with "excelsior," or fine wood shavings, saturating the latter pretty well with camphor. I learn that the goose got here all right, and so did the camphor. My friends didn't particularly like camphoretted goose, but not being very well up on such matters they ate the bird as a matter of duty, thinking it was the correct thing. As near as I can learn that goose commanded the entire respect of the insect world, and came near casting a gloom on the household that received it. I would say to fellow sportsmen that, while camphor may be very good to preserve the feathers of a goose, I couldn't recommend it for the rest of the anatomy; not as a flavoring. It has too wild and weird a tang, even for a Canada honker. E. HOUGH.

NEW YORK GAME PROTECTORS.

Editor Forest and Stream:

In your very valuable article relating to the office of Chief Game and Fish Protector, published in FOREST AND STREAM three or four weeks since, you locate Chief Fish and Game Protector Drew at Mechanicsville, and a letter mailed to that address on the 12th of October only reached this office yesterday. Mr. Drew's headquarters are in the Capitol, Albany; his residence is at Washington Mills, Oneida county. I inclose a list of the game and fish protectors, giving the address, number of district, etc., of each. Chief Game and Fish Protector Frederick P. Drew, on the 20th October, assigned to the several fish and game protectors their districts as follows:

District No. 1. Robert Brown, Jr., Port Richmond, S. I.—Counties of Richmond, Kings, Queens and Suffolk.

District No. 2. Willett Kidd, Newburgh—Counties of Orange, Rockland, Ulster, Westchester, New York and Putnam.

District No. 3. Matthew Kennedy, Hudson—Counties of Columbia, Rensselaer, Albany, Greene and Dutchess.

District No. 4. Seymour C. Armstrong, Reparius—Counties of Warren, Saratoga and Washington.

District No. 5. J. W. Pond, Malone—Counties of Franklin, Clinton and Essex.

District No. 6. Peter R. Leonard, Ogdensburgh—County of St. Lawrence.

District No. 7. George Moyer, Lowville—Counties of Lewis, Herkimer and that part of Hamilton lying north of continuation of south line of Essex county.

District No. 8. Thomas Bradley, Rockwood—Counties of Fulton, Montgomery and that portion of Hamilton lying south of continuation of south line of Essex county.

District No. 9. Francisco Wood, Schoharie—Counties of Schoharie, Schenectady, Delaware, Sullivan, Chenango and Broome.

District No. 10. Chief Protector F. P. Drew—Counties of Oneida, Madison and Otsego.

District No. 11. Wm. N. Steele, Clayton—Counties of Jefferson, Oswego, Onondaga and Cortland.

District No. 12. Henry C. Carr, Union Springs—Counties of Cayuga, Tioga, Tompkins, Wayne and Seneca.

District No. 13. John Sheridan, Penn Yan—Counties of Yates, Schuyler, Chemung, Steuben, Allegany and Cattaraugus.

District No. 14. George M. Schwartz, Rochester—Counties of Monroe, Orleans, Wyoming, Ontario, Livingston and Genesee.

District No. 15. Charles Ripon, Youngstown—Counties of Niagara, Erie and Chatauqua.

JOHN LIBERTY, Clerk.

CHIEF GAME AND FISH PROTECTOR'S OFFICE, Albany, N.Y., Nov. 1.

W. FRED QUIMBY, who is known to sportsmen not only as a crack shot at the trap, but also as the sole manufacturer of the Thomson sole leather hunting boots and shoes and other necessaries of a sportsman's outfit, is contemplating a change of quarters from his old stand at 301 Broadway, N. Y. By diligent attention to business and an artistic cultivation of the trade, he has so increased his business that this move is made imperative, particularly as he has taken the agency for a number of new specialties, of which our readers are duly apprised through our advertising columns. Just where he will locate is not yet determined, but it will be somewhere near his present stand, and when comfortably settled, it will be in order for the boys to give him a house warming.

OF AN ARITHMETICAL TURN OF MIND.—Aurora, Ill., Oct. 29.—In his article headed "A Day's Shooting in 'My Maryland'," as published in your issue of the 25th inst, "Josephus" states that he and his companion B. "got sixty-six partridges." Then he adds. "B. had three more partridges than I." As a matter of curiosity I would like to know how many partridges each had at the end of that day's shooting?—HOODOO.

WILD FOWL SHOOTING.

WILD FOWL SHOOTING. Containing scientific and practical descriptions of wild fowl; their resorts, habits, flights and the most successful method of hunting them. Treating of the selection of guns for wild fowl shooting; how to load, aim and to use them; decoys, and the proper manner of using them; blinds, how and where to construct them; boats, how to use and build them scientifically; retrievers, their characteristics, how to select and train them. By William Bruce Leffingwell. Chicago: Rand, McNally & Co., 1888. Supplied by the Forest and Stream Pub. Co. Illustrated, 373 pages. Price, in cloth, $2.50; in morocco, $3.50.

HERE is a man who, instead of outgrowing his early enthusiasm for duck shooting, or suffering his ardor to be diminished by the crowding concerns of his vocation, has cherished the sportsman's spirit, and now writes from a full heart a volume generous in scope and brimful of that sentiment which makes all sportsmen akin. William Bruce Leffingwell has gained by life long devotion to the sport of wild fowl shooting a knowledge of the ways of the game, the modes of securing it, and the thousand and one details which go to make up the pursuit of fowling; and his book has been written with the express purpose of supplying to others the practical knowledge which he himself sought for in books in vain.

"Wild Fowl Shooting" is first of all practical. It describes all the different fowl, so that from the text of this book a specimen in hand can be identified. Practical and useful also are the exact directions as to the mode of procedure in the art of circumventing, getting the better of, and as the legal phrase has, it "reducing to possession" whatever ducks are flying. Loading, choice of ammunition, dress, boats, decoys, blinds, dogs, and the tricks, devices and appurtenances of the sport, are all here set forth, and the teaching is that of experience.

If in highest degree practical, "Wild Fowl Shooting" is none the less full of sentiment—the sentiment shared by all who hunt ducks from the pure love of it, not because it is "the thing," nor because they see some one else enjoy it and vainly imagine that they will delight in it too. A duck hunter is born, not made. He must have it "born in him." To such a one the pages of this book of Leffingwell's will appeal, all the way through it, from beginning to end. He will follow the author's narration of experience and adventure with rare delight; and many a winter's evening, we predict, will be spent by the readers of this book in delightful "fireside travels" with the author.

It only remains to add that the work is handsomely bound, and properly illustrated with careful drawings of the several species of wild fowl and numerous representations of their pursuit. The following excerpts from the chapter on the wood duck will give a notion of Mr. Leffingwell's style:

The wood duck, or summer duck, is the most beautiful in color and plumage of any of the duck species. The glossy brilliancy of the soft, dense feathers, the perfect blending of all the colors—completing all imaginable shades—makes the summer duck one of indescribable beauty. We have all, time and again, seen sights that were impressed so deeply upon our minds, that time could not blot them out; still, the beautiful images carved in our memories, standing in relief, like a cameo, emblazoned on our minds, we could not impart to others; we knew they were there, we constantly see them, and yet the words at our command are inadequate to tell of the hidden splendor we see so clearly, yet cannot describe. So one feels, when he attempts to paint with words, the brilliant plumage of the summer duck. There is not a bird that visits the North in field, forest or stream, that can compare with this one in magnificent coloring. They are rightly named summer duck, they are so different from all others. We are apt to associate ducks, and perhaps correctly too, with cold and inclement weather, and when we have the one we anticipate the other. But the summer ducks come in mild weather, stay with us, breed and bring up their young along running creeks, where alders and maples, willows and birch bend fraternally toward each other across some babbling brook, their topmost limbs intertwining affectionately, exchanging friendly greetings with each other as the night and day winds of summer cause them to gently rub together.

Such are the places these pretty birds frequent and bring up their young. They love to swim in the shallow water, male and female together, surrounded by tiny forms of yellow, their young, all busily engaged in nipping tender buds, picking up seeds, or chasing some fat bug as it twinkles on the water. How happy they are in such places! Swimming at the side and under overhanging banks, that seem like huge bluffs in comparison with their diminutive bodies, turning their little heads sidewise as they watch a fly or grasshopper, as it clings to some waving blade of grass, just on the brink of the shore, and watching it with still greater interest as it flies or jumps so quickly down on some moss-covered stone, their little stomachs craving the delicacy, while their father and mother watch them with pride and solicitous interest. Then to see them when a fly or bug drops into the water; the whole flock scramble for it in haste, pell-mell, the fortunate one gulps it down, fearing no indigestion, while the others, foiled, but not discouraged, swim on more determined than before. When they reach some old sunken log, its black body anchored in the shallow water, the little ones discover a perfect horde of bugs floating at its edge. The mother clambers on to the log, and basking in the sunshine, preens herself, stands up to her extreme height, then on her tip-toes, rapidly flits her wings to sustain her body, while the sun shines warmly and brightly on her, bringing plainly to view the golden red and purple of her wings, her dusky head shaded with green, the pure white of her dainty throat, and the yellow and mottled brown of her body. We admire her beauty, and yet, when we look at her mate, as he swims about in the shadow of the trees, then emerging into the open and unobstructed light, the beauty of the female is made feeble by the comparison. He looks at his mate admiringly, as she sits on the log, her bright eyes constantly watching with maternal care the young brood at her feet. The male constantly calls with plaintive cry, *whee-whee*, commencing in a modulated quivering tone, and ending about four notes higher, dwelling on and prolonging the last note. Such a mellow call it is, so sweet and full of solicitude. Its plaintiveness has often reminded me of the mournful cry of the turtle dove,

"Sweet bird that shunn'st the noise of folly,
Most musical, most melancholy."

The drake, noticing the handsome coloring of the reflected feathers of his quiet mate as she sits so quietly in the bright sunshine, while not jealous of his spouse, at the same time, thinks he too is clothed in gaudy raiment. Suddenly he springs up and alights on the outstretched limb of an old dead tree, whose trunk is whitened with age and the action of the elements. How strange he seems up so high, resting contentedly and at home on the limb. He appears out of place, sitting so complacently in the tree, and yet he is doing nothing uncommon, nothing unusual; for not only does he and his mate alight in trees, but they often build their nests in its crotches, and raise their young until strong enough to partially care for themselves. It looks odd to see them in trees; about as strange and out of place as would a turkey or chicken be swimming in the water. As the drake alights on the tree, he settles in the full light of the midday summer's sun; the warm winds play through grass and trees; pond-lilies, in snowy whiteness or in yellow bonnets, nod gently in response to the breeze, as it moves so quietly over the rippling water, carrying to the secreted hunter delicate and sensuous perfumes. The drake gazes intently in the distance, as if his sharp eyes could penetrate woods and fields, and furtively looks around, as if anticipating the approach of an enemy. He sees nothing to alarm him, hears nothing but the faint tinkle of a bell, emitting its irregular and not unmusical sound as the bell-cow walks slowly along, grazing on the bottom-grass. He bends his head gracefully, and looks down on his mate and their progeny. Each turn of his head, every movement of his body, discloses some new brilliancy of plumage, and he appears like a tropical bird, strayed from palmettoes and fig trees, and lost amid the woods of the North. It seems to us that such as he would feel lost, in a climate like ours, even in midsummer, for never in Northern woods has his equal in beauty been seen. Looking at him as he sits there, we wonder if he really knows how exceedingly handsome he is; his clean-cut head, making a perfect outline against the blue sky; his bright, sparkling eyes inclosed with lids of deepest carmine; the long tuft descending from the back of his head, and floating in a graceful plume down his neck; the upper part of his head between the eye and bill a deep green, so gorgeous in the sun's bright rays that it looks highly polished and seems to cast off sparks of variegated colors, as it merges into purple and runs down his neck, exposing a throat of purest whiteness. Then we notice his back of reddish brown; the rump of similar color tinged with green; then greenish black, and then his plumage runs from dense black to purest white, combining all the coloring imaginable, and adding to these tinges light and dark shades and reflected shadows that are simply indescribable—I have often looked at a rainbow, with all the perfect and beautiful colors know to Nature, and yet it seems to me that a summer duck has them all. Has the reader ever seen the summer ducks at home raising their brood? If you have, and studied them unseen, or unheard, watching them in their wild freedom, showing their peculiar traits, tenderly guarding their young on a summer's afternoon, while you lay full length in the grass, securely hidden, watching with growing interest each movement, entranced by the scene, completely carried away with the changing beauty, and the brilliant plumage of the birds, you will know why I admire the summer duck.

Their flight through the woods is very swift, and at dusk, they move from place to place, darting rapidly among the trees. In marshy places, they are found in little open spots, around brush piles and muskrat houses. They are good eating, but afford me the more pleasure seeing them in the woods, and I never shoot them unless there are no other ducks to be found.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

CASTROVILLE, Cal., Oct. 22, 1888.—*Mr. J. H. Barlow, Manager Ideal M'f'g Co.:* Dear Sir: The measurer forwarded by you came to hand yesterday, and is certainly very neat and handy. I have used the tools considerably since I received them, and like them more and more as I get accustomed to them. That combined reel and de-capper, loader and extractor, and I might add, in an emergency, toothpick, nut cracker and handy billy, is a credit both to the inventor and manufacturer. Thanking you for having attended so promptly to so trivial a matter, I remain, yours truly, E. B. GREGORY.—*Adv.*

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

TROUT IN COLORADO.

CHICAGO, Ill., Oct. 31.—The last coherent recollection I have of my recent Colorada trip is that I was trying to count the trout streams on the D. & R. G. R. R. between Pueblo and Durango. It is not certain that I got them all, but such as are mentioned are genuine trout streams, which afford good fishing, where he who runs may catch trout. The following is a partial list.

The headwaters of the Arkansas, from a point twelve miles above Cañon City, are said to hold trout, though this stream is fished much more than the others mentioned. The Rio Grande is a noble stream, full of noble fish. It supplied carloads of trout for the market when the State law permitted the sale of trout, and for years it has been fished by dozens and hundreds whose individual rapacity made the only limit to the catch. The Rio Grande is also much used for irrigating purposes. There is no State law requiring a farmer or ditch owner to protect the head of a ditch by a screen, and as a consequence the trout run out into the ditches. When the water is turned off, the dead trout are shoveled out of the ditches by the wagonload. The State pays no attention to this outrage, and the grangers oppose any act toward putting in the ditch screens. There is a limit to all things, and there is a limit for even the prolific Rio Grande. This year the trout supply is perceptibly less. In a few years more the same old story will have to be told, and the Rio Grande will be a troutless stream. This stream has always furnished abundance of feed, and its fish have, in consequence, been noted for their great size. A 4lbs. trout is not unusual. One of 11lbs. weight is on record. A Mr. Pocahu once opened a beaver dam on a little tributary of the Rio Grande, and took out twelve trout whose united weight was 108lbs. This last information was given me by Mr. H. W. Morse, of Pueblo. The mountain trout of Colorado run large. Mr. L. E. Franck, of Cañon City, lately took four, each of which was over 22in. in length. This was in the Eagle River, below Red Cliff. A 5lbs. trout was once killed with a stick at Del Norte, on the Rio Grande. Alamosa, Del Norte and Wagon Wheel Gap are the points to strike for the Rio Grande fishing.

The Conejos River is a beautiful little stream, and affords good sport. So does the Las Pinas, said to be the first stream in the State to clear up for fly-fishing. The trout ascend this stream to the big gorge and fall back, lying in great numbers in the water near below.

The Chama is a broad and lovely river, such as will drive the artist and the angler wild. It is reached via the railway station of that name. The scenery along this stream is bewitching. It lies also in a game country.

The Brazos, about fourteen miles back from Chama, is a nearly virgin stream. There is no end to the trout one can take there. Here, as elsewhere in Colorado, the kind of fly is not of great importance, since the fish are uneducated. The coachman is very killing.

The Navajo is another rattling mountain river. Its best fishing is back from the railway. It is a panorama of beauty. All this, and if possible more, may be said of the San Juan, which pours a noble flood mile after mile along the railway, enough to drive a trout angler wild.

The Blanco, the Piedra, the Florida, are all entrancing mountain *rios*, at which a hundred trout a day for a task would be a mere bagatelle. The Animas, a distance up from Durango, holds good trout, and the Pine River, near La Boca and above, is a pure river of joy and utter peace.

How many other streams there are in this wonderful region I do not know. I only know that it seemed to me I had found a new country, and my chief emotion was one of absolute wonder that people will fool away time and money around the Adirondacks and Rangeleys, when this beautiful, beautiful, beautiful country is here, full of nature and nature's most exquisite work.

It was very difficult, as I believe I mentioned in an earlier column, for me to leave the big mountains, then just beginning to whiten with the early snows. The longer I talked with Jim Curry, the conductor of the train on which I traveled over the mountains, the more fully convinced did I become that it was my duty to go fishing. I even picked out a natural quaking asp fly-rod I saw growing down by the Yoltec Gorge, but the conductor would not stop the train for me to go cut it, nor did he allow me to try any of the streams which ran tantalizingly near and troutful. At last, as we rolled into sight of Blanco Peak, the big white mountain which rises up over Alamosa, Jim Curry got to telling me about a big trout that lives in a pool near his ranch house, six miles above Del Norte. This trout, it appeared, had been hooked by half a dozen different anglers, and by Mr. Curry himself a number of times, but after a tug or two he had always broken the tackle and gone away when he got ready. He was hard to raise to the surface, but when he did come up he fairly turned the river red, so bright was his vermillion. His weight was thought to be between 7 and 10lbs. He was not averse to biting at anything he liked, but decidedly averse to coming out of the Rio Grande.

The more Mr. Curry talked the worse I felt, and the upshot was I stopped at Alamosa and went up to Del Norte, a distance of thirty-one miles, and accompanied Mr. Curry out to his ranch. Taking dinner here, we had three hours and a half left free for fishing before we must take the train back to Alamosa. There were in the party Mr. Curry's friends Mr. S. C. Jones and wife, and also his brakeman, Swan, and a lineman by the name of Mr. Murphy. Not having any tackle with me, Mr. Curry very kindly supplied me with an excellent split-bamboo rod and the appurtenances thereunto belonging, including an automatic reel, a new tool for me.

The pool at which we fished was just above Mr. Curry's house, and was the one where the hoary-headed old trout above mentioned had his domicile. The Rio Grande is here a swift and noisy stream, perhaps fifty or sixty yards wide, whose volume and rapidity is such that a nervous man would be apt to lose his head and his feet too while wading, as he must, nearly waist deep in the middle of the current. Just above the pool is a rift extending

quite across the river; over this the water rushes wildly, swirling out into a pool forty by seventy yards in size, and perhaps eight or ten feet deep. The middle of this pool, just along the streak of white water, was the territory for fly-fishing. The big trout in question usually lay in the deep eddy to the right of the current, and of which the skill of mortal had not yet availed to permanently allure him.

Murphy and I waded out on the rift, and steadying ourselves up by getting our feet planted under a big stone, began to cast with the fly, using coachman and dark hackles. In a moment Murphy had a rise, and after a moment of play in the heavy current, in which his six-ounce bamboo behaved admirably, he landed a pound trout. My turn then came, and while I was untying a knot in my line, the flies hanging in the water below me about ten feet, a wild-eyed trout of about a pound's weight made a rush and ate my coachman. I let go the line and played the eager young fellow, finding that I had hold of a remarkably good fishing rod in Jim Curry's bamboo. The rod was ordered made for Mr. Curry by his friend Mr. Holabird. It is an exceptionally good fly-casting rod and a great killer. I got my trout up to my feet, and having no landing net lifted him up by the line. He tied himself up in a bow-knot, and with a sort of watch-spring wriggle slid off and back into the water, with a wild, demoniac grin on his countenance. I didn't want him, anyhow. Murphy now took a second small trout, and we then reluctantly stopped fishing and went down to a very good dinner, which Mrs. Curry had ready for us.

After dinner we all five prepared a campaign against the old trout. Mr. Curry sat on the bank and directed the hostilities, Mr. Jones caught minnows, and the rest of us carried on the active warfare. For myself, I tied on a double leader and two double-snelled, double-hooked flies, a coachman and a black-gnat. Below this I tied on a large Sproat hook, on which I hung a minnow fully as long as my finger. My apology for this horribly bloodthirsty outfit is that I had only two hours left to fish, that the trout were said to be biting at nothing but minnows at that late date, that I didn't propose coming away from that pool with any story of broken tackle if I did happen to hook the old citizen we were after.

A very polite aristocratic trout of about three-quarters of a pound obligingly took the coachman in out of the wet, and I landed him. Yet another, doubtless by accident, and while making for the fly got mixed up with my minnow, and I apologized to him out on the beach. Then I apolog zed to myself and sent the minnow swinging out over he big pool again. I struck what I thought was the foundation of the earth.

"Look out, there!" cried Jim Curry from the bank, you've got one this time." And to this the great curve of the rod and the growl of the reel surely bore testimony. I knew the fish had taken the big hook, and resolved to hold him or lose him at once, I struck him again and again, hard enough to lengthen his backbone at least four inches. A deep and pacid calm settled over the landscape, it seemed to me, when I found that the bony jaws had been penetrated and the fight was well begun.

"Gentlemen, "I've got your fish," I said with well-feigned quiet, after five minutes of rush and sulk and persistent boring to the bottom.

"Well, if you've got that trout, you've held him longer than anybody else ever did," said Jim Curry, with a large doubt in his voice.

"That's all right," said I loftily, shifting the rod from my tired right hand and letting the latter drop down into the water in which I was standing, "I'm that kind of a fisher. I was born in Fishtown, and this is my day to fish. I'm going to land him."

Nobody said anything to this, and I was soon busy with my contract. The rod was altogether lovely, and I soon learned to like the automatic reel, which never allowed the fish an inch of slack, no matter where he went. Five minutes more passed, I was using an awful strain on the rod, and this with effort to keep upright in the current, which threatened momentarily to wash me down and drown me in the eddy, tired me so that I wished something would happen. We had not yet seen the fish. These big fellows rarely leave the water as the smaller ones do, but tug and sulk for the bottom. At last I felt the old trout make a rush in and up. The reel kept up with him, and putting on another horse-power or so, I was delighted to see a swash and a swirl about forty yards below me, and an olive-green back broke above the surface of the foam. The back, it seemed to me, was about four feet long.

"Gentlemen," said I, in awe-struck tones, "that's the original trout that got away from Adam. Say, I want to get out of here. He'll eat me, sure! He's coming for me now!"

"Yes. "Pretty good fish," said Jim Curry, as the trout came close in on his hunt after me.

"Pretty good fish! What do you mean?" said I. "You don't mean to tell me that isn't your big trout!"

"Naw! T'other trout's big as three of this one. Still, this is a pretty good trout, for a fellow that never fished in the Rio Grande before."

I treated this remark with scorn.

Eighteen minutes passed after we began to time the fight till we thought it safe to try and lead him into shallow water. I was almost as tired as the fish when Murphy got the landing-net under him and bore him out on the bank, an absolutely glorious, irradiant and truly noble creature. Dark olive on the back, shading down in salmon, pink, vermilion, white, with yellow tail shot full of black dots, and with all his multifold color laid over a frame of massive strength and sympathy—there may be things more beautiful, but I do not know them.

"Tell me, isn't he the big one?" asked I.

"No, honestly, he is not," was the reply. "That trout in there will weigh seven or eight pounds, possibly nine or ten. This one will weigh about four."

"Well, this is big enough for me," said I. "I don't need any bigger trout than this in my business. I want to go home now."

At this point a faint halloa from the lower end of the pool attracted our attention, and looking up we saw Swan playing a heavy fish in the deep water. His rod, which was a cheap wooden one, was bending at an obtuse angle in the middle. We knew he had no reel, but was fishing with his line tied to the end of his pole. We ran to his assistance, and from the bank could clearly see the big trout rushing up and down in the clear green water. Swan told us the trout had followed his flies and grasshopper bait into the shore like a pickerel several times, but had refused to bite until he offered him a piece of minnow, which latter he took at once. This trout was played skillfully for several minutes, and at last landed safely. He proved to be only just smaller than the one taken by myself, being not quite so portly, though quite as long. The two made a beautiful picture. We concluded we had done enough, and therefore carried our prize down to the house and had a little jubilation. That evening, after hurried good-bys to my new-found friends, with whom I wish I could have remained four or five years, I rolled East over the twisting D. & R. G., and at length out from the solemn and majestic mountains, guardians of the well-springs of rest and peace, dignified holders of the cup of some forgetfulness.

The dimensions of my trout were, length, 19¾in.; spread of tail, 5¾in.; depth from dorsal fin down, 7¼in. We had no means of weighing him, but he must have scaled four pounds, we thought. I don't want any bigger trout than he was. I would be afraid of him. I took him with me to Great Bend, Kansas, to the coursing meet, and there a little party of us ate him up. For some time, when any one asked me if I thought the black and white dog would win in the puppy stakes, I absently answered that I would bet it would never weigh ten pounds.

This is how we didn't catch Jim Curry's big trout. That trout is alive in that pool now, and open to all the world. A dozen skillful anglers of Del Norte and Alamosa know him, and all say he will weigh over seven pounds. There is a league sworn against him. All sorts of plans are laid for him. For instance, they are scouring all Del Norte for a live mouse, to be used as bait for him, a very large trout being taken near there on that bait. Jim Curry just sits back and laughs, and lays his money on the trout. "They can't catch him," he says, "he's too big for 'em."

If they don't catch him, they will certainly try. He is an actual and established fact. Arrangements have been made whereby, if he ever is caught, full description of the tackle, bait and rod, particulars of the fight, shall be given to the readers of FOREST AND STREAM; and I for one await the result with impatience.

From these hurried words, judge whether or not there are trout in Colorado. E. HOUGH.

A TRIP TO THE "SOO."

ON Saturday morning at 5 o'clock, June 9, 1888, our party of three from Columbus, Ohio, stepped off the Wagner at Indian River, Michigan. We were kindly received by the hotel men and the mosquitoes, the last especially were quite friendly. This is a pleasant little village situated one mile from Burts Lake, and five miles from Mullet and Twin lakes. The Sturgeon, Little Sturgeon, Pigeon and Maple rivers are all grayling streams, and within a short distance of the village. At the head of Indian River, on a bluff overlooking the lake, are a number of cottages, owned chiefly by Columbus people. These were empty now, but later on they would be filled by happy ones from our own city.

At 8 o'clock we were on the road to Pigeon River, where we intended to camp for a few days and fish for grayling. A lovely drive of seven miles over a sand road and through clumps of jack-pine trees brought us to the Pigeon, where we selected a camping place and soon had our tent up and everything in shape for business. The Pigeon is a pretty stream, rocky and very rapid, just the place for trout and grayling; but alas for our hopes of catching grayling; we did not get a rise all day though we whipped the stream faithfully for a distance of two miles. Fortunately we had brought some angle worms with us, and with these we caught some chubs, which were better than no fish. That night a thunderstorm came up and it rained in torrents, but our tent was a good one and we suffered no inconvenience. The next morning at 4 o'clock Henry started afoot for Indian River, and at 9 o'clock was back again with a team to take us away from Pigeon River as there was no use of staying there if we could not catch any grayling.

Arriving at Indian River at noon we chartered a tug to take us across Burts Lake to Indian Point, seven miles distant. It began to rain soon after we started, and when we reached the Point at 3 o'clock it was pouring down. We had some difficulty in getting our traps ashore on account of the wind and rain, but we finally succeeded in making the landing with everything all right. In a very few minutes we had the tent up and our traps under cover; then around a big fire we tried to talk cheerfully and imagine that we were having fun. The mosquitoes were enjoying themselves at our expense. Toward evening it stopped raining, supper was cooked and disposed of, beds were made and then we sat around the fire smoking instead of going fishing. In the morning we all started out fishing, but after trying several hours we came back to camp without any bass. Later in the day we went to the mouth of Crooked River, where we had good success with the bass, bringing enough to camp to last us for two or three days. About a mile from the Point is an Indian village. There are about twenty families of them. They are very quiet, nice people, depending a great deal on the tourist for a living.

We broke camp Tuesday evening, and in two rowboats pulled out for Indian River, where we arrived at 8 P. M. We had covered the eight miles in just two hours. At 10 o'clock we went to bed, but not to sleep, for the bed Henry and I had was alive with bugs. We asked the landlord for another bed, but all were taken, so we sat up all night in the office playing cribbage. We boarded the 5 o'clock train in the morning and arrived at St. Ignace at 8 o'clock. It rained incessantly all day, and it was not until the following morning that we got started on Carp River, which we reached at 11 A. M. We found the river very high and a gang of men were running logs, so there was no fishing in the Carp for the present, that is for trout. There was a plenty of suckers, and big ones, too, some of them weighing 3 and 4lbs. each, and we got considerable sport taking these. Fly-fishing for suckers was something new to us, and we enjoyed it very well for a while.

The recent heavy rains had washed out the two bridges between the mouth of the river and the dam, so there was no way to get there with a team. Henry and I walked to the dam the next day, the old trail we followed led through a swamp almost the entire distance, six miles, but it seemed twelve to us. We tried the fishing at the dam but there was too much water and we did not get a rise. On the way back to camp we stopped at a small creek and caught twenty fair sized trout. These were the first trout we had taken this season and were prized a good deal, especially at the supper table. We waited here three days for the river to get clear, and becoming discouraged at the prospect we broke camp and returned to St. Ignace.

Here we took the train for Ozark, where we secured a team and started for the upper dam on the Pine River, where is located one of the lumber camps of the Mackinaw Lumber Company. The distance is ten miles and we arrived at the dam about noon. Before we let the team go back we tried the fishing and became satisfied that we wanted to stay there for a few days. In a very short time our tent and fly were put up, table and benches make, hay brought from the stable for our bed, and dinner of trout, bacon, onions, potatoes, coffee, bread and butter prepared and on the table. The weather was extremely warm but there was a little breeze stirring, and as we sat under the awning before the royal feast we felt in high spirits and would not exchange places with a king. The river here has cut its way through an immense sand bank 125ft. deep. A dam is built across with a sluice in the center. The pool below the dam is about 150ft. across and fairly alive with trout. The water from the sluice drops about five feet, and just here the water boils considerable, but a short distance away the surface of the pool is smooth and affords fine fly-fishing. The Pine River region is pretty much all sand and at one time was covered with yellow pine timber. Deer must be very abundant in this section for we saw lots of them every day. Wolves came howling around our camp every night at dark but we were always too sleepy to be kept awake by them. The trout here are rather small, running from a quarter to a half pound each, but any quantity of this size can be taken. In four days' fishing we caught two weighing one pound each. We called this Lazy Man's camp, because there was so little work to do, wood, water and trout in abundance within 100yds. of camp.

Friday afternoon the team came for us and we were taken to Alexandria, where we boarded the train and at 9 P. M. arrived at Sault St. Marie. The "Soo" is a wonderfully pretty place, and our stay of three days was scarcely long enough time to take in all its beauties. We went fishing twice in the rapids on the Canada side with fair success, but we spent most of our time watching the vessels passing through the ship canal. The view across the rapids is grand, and we were much impressed with this magnificent scene. The manner of taking whitefish from the rapids by the Indians is an interesting sight, and visitors sit for hours at a time watching them.

On the following Tuesday evening at 8 o'clock we and our traps were dumped out of a big wagon on the south bank of the Unknown River, 140 miles from the "Soo." We had come 125 miles by steamer and the remainder of the way in a farm wagon over a corduroy pike. The place we had selected for our camp was in a small clearing close to the river. In an hour we had the tent up, supper prepared and dispatched, and everything made snug for the night. The mosquitoes turned out in great numbers to greet us and were altogether too friendly for comfort. The next morning soon after daybreak found us up looking after our fishing tackle and preparing for sport if there were any to be had. We had come a long distance to fish this very river and here we were all ready to wade in and see what it would produce.

About 50yds. below camp there is a bend in the river, and the water, after jumping a lot of big boulders, makes its way to the opposite bank with a rush, and just here we tried our luck. George got the first cast and hooked something that surprised him greatly. His face was a study as he watched his line running out at a rapid rate, and it was a full minute, it seemed to me, before he got over his surprise and followed his fish down stream. In about ten minutes he shouted back that he had landed his fish. In the meantime I had fastened to one and had just landed him when George returned. The two weighed 4¼lbs. George's proved to be the heaviest by a quarter of a pound, though there seemed to be no difference in their size. We walked back to camp much elated with the prospect and wondering what we would do with all the trout if our luck kept up as it started. In half an hour one of the trout which had been watching for flies and bugs in his native element was served smoking hot to hungry fishermen, along with common things such as potatoes and bread. We found some boards at an old mill near by and after breakfast made a table and benches and three live-boxes. We did not want to waste any trout, so the live-boxes were stationed along the river at convenient places. When our work was finished we tried the fishing again and by 4 o'clock had secured 25 trout, only a few of these weighing less than 1lb. each, and two of them weighed 2½lbs. each.

We had an elegant camping place, the river was wide and shallow, just right for wading, with deep holes here and there and not a stick nor a log in it anywhere, no overhanging trees to bother and a stream full of trout ranging from one to four pounds. We did most of our fishing within two or three hundred yards of camp, and only went further away occasionally for a change. We used dark flies, as these trout would not touch a light color. There seemed to be no small trout in this river, as we rarely hooked one under a pound. One day George hooked a large trout, but it got away. We saw it several times and judged it would weigh over four pounds. The largest one we caught weighed three pounds and a half, then we got several weighing from two and a half to three and a quarter pounds each. The large one was taken the evening before we broke camp, and two days after it weighed three and a quarter pounds on grocery scales. One day of the six that we were here it rained all day, and the mosquitoes were just awful. We could not loaf a minute, for the moment we stopped they would swarm around us so thick we could hardly see. George said something emphatic to them several times, but they did not seem to mind, at least they did not go where he told them to. The six days rolled around very quickly it seemed to us, and it was with many regrets that we pulled up stakes preparatory to leaving one of the prettiest camping places and one of the best trout streams in Michigan.

When the team came for us fifty of the largest trout were taken from the live-box and packed in a box with grass, and these with our traps were put in the wagon. Taking a last look at the rapids, we bade good-by to our friends the bears, deer, porcupines, trout and mosquitoes, climbed into the wagon and were off. Arriving at the boat landing we packed the trout carefully in pounded

ice and sat down to wait for the steamer, which came about 7 P. M. We were soon aboard, feeling thankful that we had no more rides to take over corduroy roads. We had a very pleasant trip down the St. Mary's River. Arriving at St. Ignace we secured passage on the steamer Alpena for Detroit, where we arrived in due time, and seven hours by rail from Detroit brought us to Columbus, O. We had given trout to several on the way home, the Captain of the Alpena got the large one, and we brought about thirty home with us, which were divided among our friends. Our trip had been a glorious success, and if we live, and nothing happens to prevent, next June will find us on the banks of the Unknown River. JACK.

COLUMBUS, O., Oct. 31.

THE TOMAHAWK LAKES.

WAUSAU, Wis., Oct. 3.—*Editor Forest and Stream:* Some time in the spring I wrote you a letter regarding the illegal taking of fish in northern Wisconsin. In this letter I referred to the firm of Mann Brothers, of Minocquo, and condemned them for aiding in this illegal fishing.

I have since then come to the conclusion that I did them some injustice, and I desire to set the matter right so far as I can. I have met the gentlemen since I wrote you, and they tell me that they have never taken any fish illegally nor hired others to do so, and that their sole offense has been the purchasing of fish of the Indians, who live in large numbers on a reservation near by. They claim that these fish were caught by the Indians on their reservation, and that during last winter the firm dealt in these fish alone, and did not do any general buying of fish.

I presume that the Indians have the right to take fish on their reservation, and that Mann Brothers were doing nothing illegal in buying and selling the fish so caught.

I have further found that both members of the firm are very cheerfully coöperating with our game wardens in hunting up offenders against the game laws, and with their aid we expect shortly to have a game warden appointed at Minocquo who will put a stop to the destruction of fish in the Tomahawk Lakes. I have found these gentlemen as anxious as I am myself to preserve the fish and game, and I cheerfully testify to their sincerity in this regard, and I hope that their future efforts and this letter will counteract any impression that may have gone abroad to the effect that they were hostile to the enforcement of the game laws. NEAL BROWN.

THE ANGLING SEASON.

THE season of 1888 is practically closed for the angler north of Virginia. In that State the pike and bass may be taken for some time yet, while the salt water fishing is still good. Further south the fishing will be found good up to January, while in Florida it can hardly be said to close at all, for with the exception of days of rough water there is something to catch every day in the year. The laws of New York permit black bass to be taken all through December, but in most parts of the State the bass go into deep water before November and decline to take food of any kind until the waters get warm in the spring. The pike (*Esox*) will bite all winter, and are taken through the ice at such times as it is not so thick as to require too much labor to cut the holes, but this sort of fishing is mainly done by those who are looking for fish more than for sport, and does not attract the class of anglers to whom we refer.

About New York city there is still a possibility of striped bass in the Kills, or at Hell Gate, but it is uncertain and but few try it. The few country boarders still lingering on Long Island are to be seen taking the little tomcods, which have now begun their winter run into the harbors, and the boys are looking forward to the main run of this small fish, which gives them a deal of fun. The bluefish season is over, and has been quite good, and the same may be said of the striped bass, good catches of which have been made at the famous bass clubs which abound in Martha's Vineyard. Weakfish and kingfish have been fairly plentiful along the New York and New Jersey coasts.

The trouting was fair in Maine waters during the early part of the season, but the abundance of rain and the consequent rise of the streams and lakes in the fall rendered the fishing poor in the latter part of the season, a fact which promises well for next spring, for the fish are there. In the Adirondacks the trouting has not averaged as well as in former years and our informants differ as to the cause, some attributing it to the killing of so many small fish and others to various causes. From what we learn it has been an off year for trout from Massachusetts to Michigan. On the Pacific coast the trout have been taken in good numbers in most of the waters of Oregon and California, while trout fishing in Virginia and West Virginia seems to have been better this year than in any other parts of the country from which we have heard.

Now that the rods are laid away nothing remains for the angler but to look over his tackle occasionally during the winter, rejecting such parts of it as appear to be worn or weak, look fondly at the torn fly and frayed gut that played a part in landing the big fish of the season, and relate just how it was landed, and then hang the fly on the birch bark or shingle which displays the outline of the fish, to show to anglers who may drop in to swap fishing yarns and compare notes on the merits of tackle and of waters.

THAT REPORTED BIG BASS.—Belvidere, N. J., Oct. 32. *Editor Forest and Stream:* Absence from home has prevented my answering your note of Oct. 19 concerning a large bass reported caught at Phillipsburg, near here. An extraordinarily large bass was reported caught in the turbine wheel running the factory of Marsh's mill at Pillipsburg some time since, and the weight given as 9lbs. The mill is fed from the Delaware River. I have made inquiry and fail to receive definite information. A number of persons claim to have seen the fish, and some insist it was a bass while others say not; opinions vary also as to the weight. I think the case is too indefinite to put on record as a fact.—K. F. A.

KEOKUK, Iowa, March 12, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. LOWRIE.—*Adv.*

Fisheulture.

SOME PECULIARITIES OF THE OVA OF FISHES.

[From the Journal of the Cincinnati Society of Natural History, July-October, 1888.]

BY DR. JAMES A. HENSHALL.

FISHES constitute the oldest as well as the most numerous forms of vertebrate life, which might naturally be inferred when we consider that nearly three-fourths of the surface of the globe is covered with water, and that all of this "world of waters," from the vast depths of the boundless sea to the tumbling rill of the mountainside, is teeming with fish life, from the huge vampire or devilfish, measuring 20ft. across its wing-like pectorals, to the little naked, nest-building sickle-back; or from the cruel, rapacious scourge of the ocean, the man-eating shark, to the diminutive, transparent darter of the spring brook, barely an inch in length.

We might also infer from this great difference in the size, form and habits of fishes the fact that there is more diversity in the eggs of fishes than in any of the oviparous vertebrates.

While most all of the sharks and rays are viviparous, all of the true fishes, with a very few exceptions (which bring forth their young alive), are oviparous; and it is my intention to merely allude to some of the peculiarities of the ova of a few of the multitude of piscine species inhabiting the waters of the earth.

Among birds, from the ostrich of the old world to the humming bird of the new, we find a close similarity in the form and construction of their eggs. Likewise, in regard to the ova of reptiles, we observe the same general likeness—those of the turtles all resemble each other, as do those of batrachians approach more nearly those of fishes in appearance, but they still preserve a general and characteristic similarity.

The ova of all of the true fishes are spherical in form, though in some of the related or lower forms they are oval or semi-elliptical. The ova of some species, as the salmon, brook trout, shad, etc., are separate and apparently smooth on the surface, like so many pellets of shot, while those of other species are provided with minute threads or filaments, by means of which they become attached to each other or to foreign substances. Some adhere singly to weeds or other objects, some float singly, some sink to the bottom singly, while others are held together by strips and bands of masses of adhesive or glutinous material, by which they become attached to plants, sticks or pebbles, or float on or near the surface, and still others are carried about by the male fish in various places or receptacles of its body until they are hatched.

Not only do the ova of fishes differ very much in appearance, but there exists a great diversity in their size, and consequently in the number of eggs produced by the different species—thus in a marine catfish the ova are as large as robin eggs; in the salmon they are one-fourth of an inch, and in the brook trout three-sixteenths of an inch in diameter; in one of the gars they are, with their envelope, a fourth of an inch in diameter, while in the eel they are almost microscopic.

The number of eggs produced by a female fish varies according to its age and weight. In several species of familiar fishes the number of their eggs have been ascertained by careful and accurate calculations to be as follows: In the marine catfish (*G. felis*), from 10 to 30 eggs; brook trout, from 100 to 1,800; salmon, 5,000 to 15,000; black bass, 5,000 to 20,000; lake trout, average, 15,000; sea herring, 10,000 to 30,000; shad, 25,000 to 100,000; whitefish, 20,000 to 70,000; pike, average, 100,000; mackerel, 300,000 to 500,000; Spanish mackerel, 300,000 to 1,500,000; halibut, 2,000,000; striped bass, 2,000,000; carp, average, 500,000; sturgeon, as many as 7,000,000; cod, 9,000,000, while in the eel there are also several millions.

It has not been many years since all fishes were supposed to deposit their spawn upon the shoals of the seashores or upon the beds of shallow inland streams, where the ova rested until hatched; but we now know that many marine species deposit their eggs at the surface of the occan, where they float until incubation is complete.

In 1864, Prof. G. O. Sars, of Norway, first discovered that the eggs of the cod floated at the surface. Since then the investigations of Prof. Alexander Agassiz and Mr. John A. Ryder have added largely to our knowledge of floating eggs. Mr. Ryder characterizes several types of buoyant ova: 1. Those in which the specific gravity of the yolk is diminished, as in the egg of the cod; 2. Those in which large oil drops, in an eccentric position, aid in causing the eggs to float; 3. Those in which a very large oil drop causes the ovum to float even in fresh water. The other conditions are: 1. That the egg be free and not adhesive, with a thin membrane, and, 2. That it be immersed in water having a greater density than 1.014.

Among the fishes which produce floating ova may be mentioned the cod, mackerel, Spanish mackerel, bonito, cusk, haddock, many of the flounders, etc. A very curious and interesting contrivance for causing ova to float on the surface, which otherwise would sink to the bottom, is that resorted to by the beautiful paradise fish of China. The male fish constructs a floating raft by expelling from his mouth bubbles of air coated with fatty secretion, which, collecting on the surface, cling together, until a raft of viscid scum, several inches in extent, is formed. After the eggs of the female are deposited and fertilized on the bottom, in the usual manner, the male collects them in his mouth and ejects them into this frothy receptacle, which he keeps in constant repair, and preserves its buoyancy by additional fatty bubbles, until the young fry are hatched out, which occurs in about two days. Another method for floating the ova is that of the *Lophius*, or goosefish—the eggs, numbering about 50,000, are inclosed in a ribbon-shaped, gelatinous mass about a foot wide and forty feet in length, which floats near the surface.

Among the fishes which produce adhesive eggs are the little black-head minnow (*P. dromelas*) and the goldfish. The male black-head deposits the fecundated eggs singly upon the under side of leaves of water plants and watches them unceasingly until hatched. The ova of the goldfish are deposited singly upon the weeds and mosses in a similar manner.

The eggs of the yellow perch are held together in narrow strips or ribbons of a glutinous character. Adhesive eggs of other species, as the black bass, sunfishes, catfishes, etc., are deposited in masses in shallow nests or depressions on the bottom; and still others deposit their spawn in variously-shaped adhesive masses upon algæ, roots and submerged objects.

The eggs of the myxine, or hag, are oval in shape, enveloped in horny cases and provided at each end with short filaments terminating in triple hooks, by which they attach themselves to each other and probably to foreign objects.

Perhaps the most curious and bizarre of all fish ova are those of the oviparous sharks and rays, which are quadrangular horny capsules or cases, 2 or 3in. in length, with long filaments at the corners, which coil about seaweeds and other objects. These horny cases, in the Port Jackson sharks of the Pacific, are twisted into a spiral form.

In some of the flying fishes the eggs are entirely covered with delicate filaments which entwine with each other, and they are thus held together in considerable masses; and in a similar manner the eggs of the gudgeon (*Menidia notata*) of the Chesapeake Bay, are held together, there being four long and slender threads attached to one side of each egg.

You are all familiar with the polygamous, four-spined stickleback, the male of which species builds a cunning, basket-like nest between the upright stems of water plants, in which he induces his several wives to deposit their eggs, and which he watches and cares for until hatched. Some of the fishes of the Gulf Stream—notably the *Antennarius*—build a kind of nest among the floating seaweed; also the snakehead fish (*Ophiocephalus*) of India, and a small catfish (*Callichthys*) of South America, construct nests of bits of waterweeds, in which the ova is deposited and carefully tended by the male.

Among the fishes which carry the ova in various portions of the body until hatched may be mentioned the marine catfish (*Galeichthys felis*) of our Southern coasts. The female deposits, in a slight depression in the sand, ten or twenty yellowish-white eggs as large as Malaga grapes, which are fecundated by the male and then taken into his mouth and placed between the leaves of his gills, where he retains them until the young are hatched and able to take care of themselves. At this time his pharynx is enormously distended and presents a very curious and comical appearance.

Agassiz, during his journey up the Amazon, discovered a species that incubated its eggs in the mouth, and Dr. Lortet gives some very interesting observations on the similar propagation of a species (*Tilapia simonis*) belonging to Lake Tiberius, in Palestine. The female deposits about two hundred eggs in a shallow excavation, which are first fecundated by the male and then taken, one after another, into his mouth, where they are retained in the buccal cavity, distending the cheeks in an extraordinary manner. The eggs hatch in several days, and the young fishes are pressed one against the other like the grains of a ripe pomegrantae. The mouth of the father becomes so distended that his jaws cannot meet, and he presents a very strange appearance. Some of the young continue to live and develop among the folds of the gills; others have their heads turned toward the mouth of the parent and do not quit the sheltering cavity till they are about 4in. long.

Prof. Jeffries Wyman, of Boston, describes a singular contrivance of a species of armored fish (*Asprcdo*) of South America. The male fish is provided, during the breeding season, with a numerous series of little stalks on the under surface of the abdomen, upon which the eggs are received and carried until hatched.

In the well-known *Hippocampus*, or sea-horse, a pouch is developed in the male, under the tail, in which the ova are placed and finally hatched, the young escaping through a small opening in the anterior part of the pouch. In the pipefish (*Siphostoma*) a similar pouch is developed in the male for the same purpose, but is formed by a fold of skin from each side of the trunk and tail, the free margins being united in the median line. In another allied fish (*Solenostoma*) the inner borders of the ventral fins unite with the skin of the body and form a large pouch for the reception of the eggs, where they are retained by numerous filaments arranged along the ventral rays.

In another queer species called the lumpsucker (*Cyclopterus lumpus*), the male digs a pit between the stones of the bottom of shallow portions of the sea, in which the female deposits several hundred thousands of eggs, which are tenderly watched over by the male until they are hatched, when the young attach themselves by their suckers to the body of the male, who carries them about with him until they are able to care for themselves.

It is worthy of notice that, in every instance mentioned of the ova being guarded and cared for, or transported in various receptacles on the body of the parent, it is the male fish that performs these various duties. The part of the female in the reproduction of its species seems to end with the deposition of the ova.

THE WORK IN MISSOURI.

THE superintendent of the hatching ponds of the Missouri State Fish Commission, which are located in Forest Park, this city, is now engaged in draining them for the purpose of separating the various kinds of fish and placing them in store ponds, so as to be easy of access when wanted by residents of this State for the stocking of streams or lakes in this State.

It is only a few years since the establishment of a fish commission in this State, and to form an estimate of the good done would be something very difficult to do. One thing is certain, that according to the last report of the Commission, everything looks favorable and promising. Many thousands of bass, croppie and German carp are sent annually to all parts of the State, and that it has been the means of not only furnishing sport for the angler, but food for the people, there's no doubt.

The bass, during the past season, from some unexplainable reason, have not thrived as well as usual. The croppie have increased in a wonderful ratio; also is this true of the carp.

At the exposition which closed last week the State Fish Commission had a tank with a number of different varieties of fish in it on exhibition, which proved quite attractive and interesting to the many thousands of spectators who paid the show a visit.

Many were the questions asked by parties as they gazed into the water of the tank in which the fish were, wanting to know why the German carp was brought to this country, and no doubt a great many readers of FOREST AND STREAM will be asking the same question when they read this. To answer all questions pertaining to this excellent food fish the following is from the remarks of a gentleman who has traveled much in Europe and takes great interest in the propagation of fish: "There is no doubt as to the great value of the carp as a food fish. In Europe, especially in Germany, he is ranked with the salmon family as a table fish. In 1880 and 1881, I spent one year in travel in Europe with my family, making my headquarters in Paris; we made frequent visits of a month each to the various countries of Europe. I visited Germany twice, and remained some weeks at each visit. Through the American Minister at Berlin I was enabled to visit the principal carp ponds or farms, and had every opportunity of learning the reputation as to food value of the carp. I talked with persons of all classes on the subject, and heard no dissenting voice from the universal opinion, that *karpfen* was a good, sound, reliable food fish. In the lower and middle classes people were enthusiastic in his praise, each one giving his or her method of cooking a carp, and declaring it the best of all fish. In fact, a carp, properly cooked, seemed a necessity on all important occasions, as at Christmas, New Year's, family dinings and reunions, etc. If space permitted, I could give instances where I saw live carp in tubs of water at fairs and festivals, ready to be selected by the customer, cleaned and broiled in his presence and served hot, from an extempore cooking apparatus under a tent or in the open air.

"My memory now recalls especially such a scene on the Marschfeld, or drilling grounds, in the suburbs of Munich, Bavaria, during the great autumn festival, called in Germany the Volksfest. There is no place or occasion to better study the habits of a people than at their fairs or festivals. There you meet all classes commingling without restraint. In strolling through the streets of tents and temporary booths, lined with all manner of devices for amusement and profit in catering to the wants and tastes of the promiscuous throng of happy people, we found an extemporized restaurant or places where carp could be selected alive from tubs, cleaned and cooked to order. It was the first time I had seen carp alive outside of the Forest Park ponds. While looking into the tubs and admiring the fish, by some accident the temporary platform upon which the tubs were

placed were upset and the fish scattered over the ground, fluttering and floundering. The good woman in charge of the booth or restaurant turned around facing me, and in German, of which I did not understand a word, gave me a terrible scolding—at least I judged so from her gestures and angry looks. She supposed I had intentionally or carelessly upset the platform, having seen me so intently examining her fish. I was innocent but could explain nothing, looked unhappy, and imploring mercy, got out of the crowd as quickly as I could."

The breeding ponds in Forest Park cover about fifteen acres, and will average about 8ft. in depth. There are something like seven or eight of these ponds of different sizes. One is very deep and is used as a store pond for the stock fish in winter. Only the large fish are kept for stock and some of them are quite large. Bass that weigh 5 and 6lbs. are quite common. Some of the carp that have been placed in their winter quarters will weigh 16lbs. The job of handling these big fellows is no easy one, and fierce was the struggle between them and the men who were engaged in catching them in about 6in. of water which remained in the pond. These battles were useless though, as they were in all instances conquered and finally put in stretchers, in which they were conveyed to their winter quarters. Just how many fish of the different varieties the Commission will have for distribution cannot be determined just now, because all the ponds have not been drained as yet.

Next Monday the work of separating and counting will be finished and an estimate can then be made of the success of the past season. The superintendent said that he had no fears regarding the carp and croppie, but he expressed his doubts as to the bass, and why they should have fared so badly is a mystery to him, for, he said, we have given them particular attention, more so in fact, than we did to the carp and croppie. Still it may not be as bad as we suppose, and perhaps when we finish with our present work the results may be more promising than we now expect.

The following circular has just been issued by the Commissioners:

All persons in the State of Missouri desiring young German carp, bass or croppie for private ponds can get them by applying, from Oct. 10 to Nov. 25, to Phil Kopplin, Jr., P.O. Box 699, or to Elias Cottrell, St. Joseph, Mo. Give name, P. O., county, and nearest express office. Cost of can and cartage, $1.25, must be sent in advance. No fish sent C.O.D.

If you have a fish can send it prepaid, and only twenty-five cents per mail for cartage from ponds to the express office. A five-gallon can will ship safely thirty small fish. All applicants will be notified in advance of shipment.

We request all friends to the cause of fish and game protection to notify with full particulars Secretary Campbell of any known violations of the fish and game laws of Missouri.

The following gentlemen are the present Commissioners: H. M. Garlichs, St. Joseph; J. L. Smith, Jefferson City, and H. C. West, St. Louis. UNSER FRITZ.

ST. LOUIS, Mo., Oct. 27.

THE JAPANESE FISHERIES SOCIETY.—It is interesting to note the progress of fisheulture in Japan, and the interest which is being taken in all fishery subjects in that country. Three years ago the Fisheries Society was formed, and under the presidency of our friend and correspondent, K. Ito, it has made great progress. At the last annual meeting of the American Fisheries Society Dr. Sweeny, of the Minnesota Fishery Commission, manifested great interest in one of the monthly reports from Japan, a translation of which was made. We now have the 36th monthly report containing articles on a broad range of subjects, among which are: A prize essay on measures to prevent fishermem from absconding or deserting their vessels. A guano-packing mat. Meeting of the American Fisheries Society. Preserving the salmon in the river Nemuro. Price of guano at Hyogo. Fishery markets at Otaru, Hakodate, Shanghai, etc. Herring guano. Whale fisheries. Reproductive organs of fish. Temperance needed among fishermen. Profits of seal hunting. Eggs of the bonito. Preservation of fish, and other subjects of interest. The fact that so wide a range of subjects is discussed shows that Japan is already in advance of some European nations in looking after and caring for its fishery interests.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Nov. 6 to 10.—Dog Show of the Richmond County Poultry and Pet Stock Association, in connection with Augusta National Exposition at Augusta, Ga. H. Madden, Superintendent.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 450 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6666.**

PRACTICAL JUDGING.

Editor Forest and Stream:

First, please understand, everybody, that I have no intention of taking sides in the discussion between Messrs. Davey and Mason. Whether Mr. Davey's dog is a wastrel or a world beater, I have not the faintest idea, and wouldn't know if I saw him. But after where he says, "How is it, Mr. Editor, that so many of the practical dog men of the country are wholly incapable of criticising a dog, or estimating the value of points when shown to them?" (just after giving me a dig) Mr. Mason states very sound doctrine, that if carefully acted on would save as much of the interminable wrangles we have as to dog show judging. Dog show judging is of necessity a work of "fancy," and if there is a thing thoroughly unpractical, surely it is "fancy," the very name so implies. Now, while nobody detests the antics and frenzies of fancy more than I do or will go further in fighting them, still it is evident that nothing but fancy can possibly enter into the domain of dog show judging. All that can be asked is that fancy shall confine itself within the lines of usefulness in dogs laid down by the special authorities of the breed; not that the judge is to decide on the usefulness of animals submitted to him (for that is a self-evident impossibility), but to strictly carry out the standard of the breed, which is supposed to be—and practically is—founded on the use to which the breed is put. Mr. Wynn long since laid down the sound rule that a judge who allowed his individual fancies to lead him away from strict observance of the standard was simply swindling the exhibitors and the public, and the proposition seems self-evident. But how can the "practical sportsman" or "practical" fox hunter or shepherd claim that his practical knowledge has any part in deciding which dog comes nearest the ideal of perfection laid down in a standard? Doesn't he know perfectly well that dogs exhibit the highest degree of "practical" excellence, when differing almost as much as though they were of distinct breeds? Take any scratch pack of hounds and you will find the neat, trim, smooth dog as elegant as a pointer, and the ragged, rough, "baboon" type, one being fully as good in nose, speed and staying powers as the other.

Take my hobbies. The best two watchdog mastiffs I ever knew were the cowhooked, shockingly snipy Gipsey, and the neat, symmetrical, short and blunt-headed Wacouta Persephone. One would be turned out of a ring and the other would be first, and would the "practical" judge say the decision would be wrong? There is the shaggy, short-coupled, blunt-headed bobtail, Bob, and the smooth-coated, elegant, foxy-headed Dame Judith. It is a narrow squeak which has the most wisdom or usefulness, both being superlative, and would the "practical" judge put them even? With fear and trembling I mention the name of pointer, lest some "sportsman" will jump on me for posturing as an authority, but I remember something about Mr. Vandevort's Don, "the hero of many a hard-fought trial in the field, but not up to show form in conformation," and I certainly never heard that the dog's field usefulness was a factor in his show standing. I know that my setter friends used to say that Queen Alice was unbeatable on the bench, but they also said that "Ab's old sow" could knock Alice silly in the field.

Of course, the advocate of "practical judges" will say that the "practical" judge is not to decide which is best at practical work, but merely to follow such conformation as indicates practical value. In the first place, practical value does not follow form; in all animals there are specimens with but few, if any, points indicating high capability, that are tremendous performers. The ragged bag of bones, Dick Andrews, easily held the best thoroughbreds of England safe; that most grotesque of animals, Fisherman, held his own with the best of all England, and although in the same stable (crafty old Parr's) with Leamington, when a big stake was to be pulled off Fisherman did battle for it. From all I have heard and read, it seems certain to me that many great performers in the field and at field trials would be shockingly "left" in a show. Further than this, it will not do to let every "practical" man set up his idea of "practical" form. It must be left to the general consensus of admirers of the breed as formulated in a standard, and in this, the judge who relies on his "dog eye" is likely to be more successful in interpretation than he who has in mind practical performances.

In fact, all other things being equal, it is likely that the man who uses dogs for actual work will not be as good a judge of their show properties as the one who knows nothing practically of their use; for the user of the dog considers other matters than their show points, and will, unconsciously perhaps, give too much weight to what his particular hobby is in use, while the "fancy" judge, pure and simple, should know nothing but the standard he judges by, and if honest he allows the standard to take care of itself, never caring whether he is right or wrong, leaving the compilers of the standard to bear the burden of its correctness. Of course this is on the presumption that the fancy judge is not fanatic in his devotion to "fancy," and that he recognizes that fancy is only fashion after all. At the risk of again stirring up my excellent friend "Porcupine," I must again call attention to the preposterous way in which "fancy" stuffs the mouths and eyes of its votaries, so that they do not know how they are eating their own words or see how they are traversing the instructions they are supposed to go by. "Authority" tells us that mastiffs must be square in muzzle, defining "square" in horn-book style as "forming a right angle with upper line of nose," and that "hocks must be bent"; yet "fancy" puts the most frightfully undershot jaws and straightest of hocks as perfection if the muzzle is short enough, and in collies leads us to the remarkable decision that the puppy type is the correct one, not the fully matured one (I can never forgive "Porcupine" for the mischief he did by formulating this doctrine); and this, too, right in the face of a standard which says "skull of moderate width," or something to that effect.

Now I suppose that Messrs. Watson, Mason, etc., will say that standards are abominations, that the only thing is having the judge "know his work," that he must know what the "real thing" is without any standard, and must award from the guidance of his own inner consciousness. This is well enough as far as the judge being fitted for his work goes. Many a man who thoroughly knows the type of dog he wants, and at a ring side never misses in his judgment, might be badly rattled when acting in the ring, observed and criticised by many. The good judge must be confident enough to judge as though he were in the middle of a section of land, and the only man on it. His crowning qualification is to be competent to properly appreciate "quality" and "character;" not to use the words as they are generally used, as a mere bit of dog show jargon to throw dust in the eyes of disputants of his awards, but to detect and duly estimate the indescribable point of a dog, that is beyond the reach of tapes and scales, the general, harmonious balance of proportions that goes to make up the thoroughly "good-looking" dog, equivalent to what we call the "fine-looking" man. Then he must be so opinionated that he is not swerved by dread of "what will Mrs. Grundy say." The effect of this resolute course was shown in England when Mr. Wynn put Beau over The Shah. Mastiff men had been falling down at the feet of The Shah as unbeatable, until it had become a superstition that nothing could beat him. The same was the case with Ilford Cromwell here; he was knocked round as n. g., got vhe.s etc., and was commonly described as "that funny looking dog," until Mr. Mason put him over everything at New Haven, and (unless it may have been condition) the thing that pulled him through must have been quality, as he is not specially strong in any one point, but good in all, save in eyes. But allowing the necessity of these qualifications in a judge, how is he to be understood unless he confines himself to interpreting a standard? One judge puts Alonzo first, the next reverses it and puts Moses first; how are we to decide which is right unless we apply the standard to their awards? Judges will and must differ; it is impossible to form a code by which the novice may learn what is the "right thing" unless there is something put down for him to study and by which to compare awards. True, his head will swim in endeavoring to fit awards with the standard, but he learns where one judge is competent and the other failing.

Mastiffs are yet lacking a Moses to lead them out of the desert of fancy, but collies have secured a prophet to guide them in Mr. Arkwright, who, in addition to showing the folly of "fancy" as applied to collies, adds the forcible advice that "Fancy" and her devotees confine themselves purely to fancy breeds, those that have no place except as ornaments, and where fancy distinctions may have the fullest range and hurt nobody, but to let useful breeds alone. Let man milliners enlarge on the twist of a pug's tail, the amount of "stand in the sun and shiver" of a toy terrier, the length and sheen of a Yorkshire's coat, and the impossibility of determining which is the head or tail, or exact amount of bulge in a toy spaniel's eyes, but in mercy let them leave mastiffs, collies, working terriers, etc., to the decision of common sense unenlightened by the beams of "fancy."

On the other hand, let the practical dog man remember that be his dog ever so useful, that does not show that he is typical, *i. e.*, that he is strong in the best points of the breed, and be "Practicability" ever so good a shooter, shepherd, fox hunter or vermin hunter, that gives no necessary conclusion that he either knows or cares what the points of his dog are. If a sheepdog user, it is not unlikely that his favorite "shepherd" was "half one dog, other half, two dogs," and precious little does he care for type, pedigree or anything else in the dog that knew the dry cows from the milkers, that rams must not fight, and the difference in the "business ends" of horses and cows, and would call somebody to gather the eggs from a hen's nest, but paid no attention to the nest of a turkey. Doubtless some of you "go shooting" fellows can supply a fitting statement for setters and pointers.

If "practical" judging is to be the thing, I will go into the ring with my Lion against Minting, and if the judge doesn't give me first there will be such a howling about "usefulness" as will drown all the barks of a show, be Lion's muzzle ever so snipy and long.

I rather think that Mr. Fellows has the true idea as to this matter, judging from his last. I take it that the American Spaniel Club has arranged a standard in view of the very best physical requirements for work; that judges have magnified "long and low" to mean "longest and lowest," and that the dogs selected are not up to the mark in usefulness and do not comply with the standard, and the gravamen of his complaint is that the judges set up a "fancy" ideal instead of the "practical" one had in view by spaniel men when they set up their standard. This I gather entirely from the writings of Mr. Fellows, Dr. W. W. Boulton and Mr. Freeman Lloyd, and if I am correct in my inferences, their position is absolutely impregnable.

W. WADE.

THE SENSE OF SMELL IN DOGS.

Editor Forest and Stream:

In your paper of Oct. 25, 1888, under the above heading, a case is given of a Clumber following the trail of his master's buggy, and the writer asks, "What scent does he follow up? The horses? The buggy wheels? What?"

I can cite a case which would seem to show that it was probably the scent of the master, although he was riding in an open buggy.

Some years ago a man by the name of Mellert was arrested in this city for shooting another man. Mellert was placed in a horse car and conveyed to jail at a distanse of two miles. The horse car was closed except that the door in the rear end of the car was opened and shut on the way to let other passengers in and out. Mellert was placed in jail and the jail door locked. The next morning his beagle dog was found lying against the jail door. I offered Mellert $100 for that dog, but he said no money could buy from him such a friend in distress. Mellert was afterward acquitted upon the theory that the killing was justifiable under the circumstances; but he was a long while in jail before his trial came off, and his beagle was his constant companion day and night.

Now this beagle missed his master from home some time after his arrest and the next morning found him in the jail at a distance of two miles, and the dog had no doubt that his master was there, because he lay by the jail door sill, and this jail door was not the outer door of the court house, but an inner door. Now what scent did this beagle follow? It must have been the scent of his master, although the feet of that master never touched the earth for a distance of two miles; and he did not ride in an open buggy, but in a closed horse car. The horse car landed Mellert about three hundred feet from the jail, and from that point to the jail Mellert walked over flag pavements upon the sidewalk, but before his dog came to find him hundreds and perhaps thousands of other people had walked over the same flag sidewalk, and yet his dog found him and was so sure of it that he lay down by the jail door—an inner door in the court house—to receive his master when he came out. It is no wonder that money could not buy such a faithful friend. But what scent did he follow?

J. E. VAN E.

KINGSTON, N. Y., Nov. 5.

NEW JERSEY KENNEL CLUB.—*Editor Forest and Stream:* At the meeting of the board of governors of the N. J. K. C., held Nov. 1, at Taylor's Hotel, Jersey City, the bench show committee reported progress; but so far nothing has been decided as to the building in which the show is to be held. It is probable, however, that the Oakland Rink will be selected. It is centrally located and is well known all over Jersey City and the Heights. Mr. Peshall expressed his intention of handing in his resignation at the next meeting as delegate to the A. K. C. He is the oldest delegate, and, believing in rotation, wants to make room for another member of the N. J. K. C. He is of opinion that it would be for the good of the A. K. C. if delegates were elected to serve for a stipulated period, not to exceed two years. This would bring new material into the management of the A. K. C. and would help to dispel the impression, existing in the minds of many, that the club is managed by a clique. Mr. Peshall's argument is a sound one, and those present could not help indorsing his views, much as they hate to lose him as their representative.—K. E. H.

THAT COONS DO WHICKER I know to be a positive fact, as I have one in captivity that I heard several times. The coon was not more than four feet from where I was standing at the time. The coon is a youpg one from this year and was caught last August.—G. R. F. (Pittsburgh, Pa.)

THE SPANIELS.

Editor Forest and Stream:

Mr. Fellows intimates in his latest effusion that I was started in "this thing" by your "special" London reporter; but he is at fault. Away back in the early summer months I wrote in FOREST AND STREAM, agitating for spaniel field trials, and, to my surprise, my letter elicited not a single response, though the *Stock-Keeper's* correspondent wrote in that paper that "*some* (italics mine) of our spaniel men" were agitating the subject. As I have said before I expected Mr. Fellows's support in the matter and own I was disappointed in the man.

Again he rings the changes on his determination to refrain from assuming a sitting posture until "the sporting spaniel is in its proper place." In what way could that much to be desired end be so speedily achieved as by the adoption of trials in the field? Put your shoulder to the wheel, man, help us to get our field trials and then—be at rest.

By the designation of "the kids" I presume Mr. Fellows points to those gentlemen who have gone into "the fancy" since his debut "thirteen years since." Let us see how he has fared at their hands. His first serious set back, that I remember at this moment, was received through the medium of Brahmin, owned by a "boy" called Rendle. (How mad "Uncle Dick" was, too!) And now what chance has he in the varieties they have actually gone in for with "boys" Nelles, West, Oldham and Willey?

The more I think over that "little" matter the blacker it looks. In two particulars Mr. Fellows was in error as given in the list of Silk's winnings in the Buffalo catalogue. He challenged any brace of cocker spaniels, yet he claims one of the brace to be "champion field trial spaniel of America!" Mr. Fellows should be informed that in sporting matters when a challenge is made, and by no one accepted, it is *en règle* to insert the clause "by default" in quoting a title so won.

Is "the sire of champions" one of Silk's "winnings"? Really, the N. D. C. and A. K. C. should take steps for the suppression of "free ads" of this description. QUESTER.

COYOTE "COURSING."

HUTCHINSON, Kan., Oct. 27.—On Friday, Oct. 26., the meeting, as a coursing meet, was over, and there should have been public announcement of the failure to run out the stakes, and public explanation of the reasons therefor. Instead of this the management of the association saw fit, under the name of the association and ostensibly under its immediate auspices, to resort to a catch-penny scheme to which it is to be hoped neither this association nor any other will ever again resort. Two wild coyotes had been captured and general posting of the town took place to the effect that at 2 P. M. the "Reno-Barton pack of foxhounds" would engage in a "grand wolf hunt at the coursing grounds." No one had a distinct idea of what the affair would be, but several hundred people paid the admission fee to find out. At about 2:45 the "grand wolf hunt" began. The spectators were asked to take their places inside the inclosed three-quarter track. In the outside grounds, entirely inclosed by a tight wire fence through which a rabbit could not pass, let alone a coyote, the poor devil of a captive coyote was turned down and asked to obligingly run about a while before he was killed. Dr. Royce kindly consented to "shoo" the coyote along the fence a little way, and at certain points along the fence "judges" were stationed, whose onerous duty was to see whether the red or white collared dogs were ahead in this most truly novel coursing match, whose primary design was to catch quarters and whose secondary was to murder a captive animal which, given a fair chance, would have shown itself of courage and endurance. (It should be announced that Mr. Arthur Mussey, the regular judge of the meet, had no idea of the nature of the task he was asked to perform, else he would not have acted on that day.)

Mr. Allison and Dr. Royce had managed to get the coyote scared along the fence as much as half a mile when the hounds were turned loose. The poor animal was running with mouth open, panting, scared nearly beyond effort, and seeking vainly for some loophole of escape from what even a coyote could tell was an unsportsmanlike death trap. Following the cries of the pursuing—or let us rather say the "shoo-ing" horsemen—the dogs ran at full cry down the track, fifty yards off on the wrong side for wind, cut across a corner to Dr. Royce, who was riding after the "chase," and ran into the coyote at the north fence. Did that end the hunt? Not at all. The coyote was taken away from the dogs and put down to crawl around his death trap once more in this truly "grand" wolf hunt, put on foot by men professedly upholders of legitimate sport. Again the hounds galloped around the fence, and again ran into the puzzled and heartbroken creature, which panted slowly on, hunting a way out into the open, where it could have fair play and a show for its life. This time, fortunately, the hounds killed it, and put an end to the disgraceful exhibition. The representatives of FOREST AND STREAM and another sportsman's paper protested against this affair as being simply cruelty to animals, and in no wise fit to be called sport. They were told by one Muskimmons, an attache of the grounds, that if they did not like it they could leave. At this point FOREST AND STREAM'S reporter withdrew from the grounds, not caring to witness or give notice to such an affair, except to stigmatize it as a piece of abominable cruelty, and one altogether unworthy of real sportsmen's countenance.

FOREST AND STREAM has not a word to say against charging an admission fee to witness any legitimate sport, and certainly FOREST AND STREAM is the best friend the National Coursing Association has; but neither this paper nor any other respectable paper can for one moment support a phase of sport in which fair play is on the face of it entirely barred out. It is of course plainly understood by FOREST AND STREAM that this lamentable affair of the "grand wolf hunt" had nothing to do with coursing, and nothing to do with what are supposed to be the first objects of the National Association; but it has this special misfortune about it, that it brings the fair and grand sport of coursing into disrepute through the indirect relation it gains by appearing on coursing grounds and under the management of those who claim to be coursing men and managers. The association can not succeed if it covers such side show schemes with its skirts. Let it not be too anxious to make a few quarters of dollars. Let it go slowly and carefully, fostering always first the idea of fair play and working to perfect the conditions of a sport which is on the eve of a great development, and it cannot fail of a rapid and pronounced success, in which the sporting press will not only rejoice, but will assist. Let it go on with a few more "grand wolf hunts"—in a pen—and it will lose just that honest and respectable support which it cannot afford to lose. Of its position in this matter FOREST AND STREAM is absolutely sure. The right of the case dictates the position. This is further supported by the verdict of the spectators, who almost universally joined in public and vehement condemnation of a wolf hunt, in which the wolf was doomed before he ran. The public knows what sport is. It will not long pay to see a false sport. H.

A DENVER COURSING MEET.

Mr. E. R. Mason, clerk to the woolsack in Des Moines Circuit, is local headquarters for racing news. Not only is he fond of fast horses, but of that other yet more rapid animal, the greyhound, of which he has some good specimens.

Apropos of greyhounds, they tell me that the fancy exhibition rider, Miss Belle Burke, left her fastest racing greyhound, a well bred bitch, at Creston, Iowa, last summer. The bitch was sick and unfit to run or travel. She has now quite recovered, and they say is faster than anything down that country.

It is surprising how little the general public knows of the sport of coursing. When I spoke here of the meet of the American Coursing Club nobody was quite sure what kind of a thing it was. I labored patiently as best I knew to advance the intelligent interest in what is perhaps destined to be the coming American sport.

Apropos of coursing, I have a bit of news which nobody but FOREST AND STREAM knows. Denver is going to have a coursing meet, an inclosed one. Movements are this month on foot toward the purchase of the grounds, which will lie within four miles of the city and will be reached by rapid transit. Fifteen thousand dollars will be expended if necessary; nothing will be done by way of an exhibition till everything works smoothly, and when Denver does turn loose she will do it "with a meet as is a meet." The names of the gentlemen interested are known, but are withheld by their request for business reasons. It is fair to call this good news for coursing. Denver is the city to make such an enterprise go fast and furiously. Score another for coursing. In five years there will be a dozen big meets.

HEMPSTEAD COURSING CLUB.

The first meet for this season of the Hempstead Coursing Club was held at Cedarhurst, L. I., last Saturday. The polo grounds of the Rockaway Hunt Club were used as a field. Thirty-one rabbits had been provided. The day was fine in the morning, but it rained in the afternoon. August Belmont, Jr., was master of ceremonies. W. Rutherfurd dropped the rabbits. All the rabbits but one were killed.

The officers were: Judge, Mr. A. Belmont Purdy; Breed Judge, J. E. Cowdin; Field Steward, O. W. Bird; Flag Steward, J. L. Kernochan; Secretary, A. Belmont, Jr., and Slipper, German Hopkins. Summaries:

NOVICE STAKES.

An open sweepstakes for fox-terriers of 20lbs. or under, at $2 each, play or pay, with a silver cup presented by Mr. James L. Kernochan to the winner. The runner-up to receive 25 per cent. of the stake and a pewter mug. Fifteen entries:

First Round.

J. B. Kernochan nominates A. Belmont Purdy's white, black and tan dog Pincher, who beat T. B. Burnham's white, black and tan dog Jack.

L. and W. Rutherfurd's white dog Warren Spider beat S. D. Ripley's white dog Bayonet.

H. B. Richardson's white, black and tan dog Meadow Brook Jack beat E. Kelly's white and tan dog Earl Leicester.

H. P. Frothingham's white and tan dog Mugwump, C. Rathbone's white, black and tan dog Beverwyck Tippler, F. O. Beach's white, black and tan bitch Media, Blemton Kennels' white and tan bitch Tiara and O. W. Bird's white, black and tan bitch Warren Jingle had byes.

Second Round.

Pincher beat Mugwump, Beverwyck Tippler beat Warren Spider, Tiara beat Media, and Meadow Brook Jack beat Warren Jingle.

Third Round.

Beverwyck Tippler beat Pincher, Meadow Brook Jack beat Tiara.

Final Round.

Beverwyck Tippler beat Meadow Brook Jack.

ROCKAWAY CUP.

An open sweepstakes for fox-terriers of 18lbs. or under at $3 each, play or pay, with a cup presented by the Rockaway Steeplechase Association for the winner. The runner-up to receive 25 per cent. of the stakes and a pewter mug. Nineteen entries.

First Round.

L. and W. Rutherfurd's white dog Warren Spider beat T. B. Burnham's white, black and tan dog Jack.

C. Rathbone's white, black and tan dog Beverwyck Tippler beat A. T. French's white and tan dog Blemton Volunteer.

J. B. Kernochan nominates A. Belmont Purdy's white, black and tan dog Pincher, who beat F. O. Beach's white, black and tan bitch Media.

O. W. Bird's white, black and tan bitch Warren Jingle beat H. P. Frothingham's white and tan bitch Lottery.

H. V. R. Kennedy's white, black and tan dog Antic beat Blemton Kennels' white, black and tan dog Regent Vox.

Edward Kelly's white, black and tan bitch Votary a bye.

Second Round.

Warren Spider beat Votary, Beverwyck Tippler beat Pincher, Antic beat Warren Jingle.

Third Round.

Warren Spider beat Tippler, Antic a bye.

Final Round.

Antic beats Warren Spider, after an undecided.

COTTON-TAIL STAKES.

An open sweepstakes for fox-terriers of 16lbs. or under, at $2 each, play or pay, with $20 added to the winner; the runner up to receive 50 per cent of the stakes and a pewter mug. Sixteen entries.

First Round.

L. & W. Rutherfurd's white and tan bitch Warren Dainty beat H. P. Frothingham's white and tan bitch Lottery.

C. Rathbone's white, black and tan bitch Blemton Lilly beat Blemton Kennels' white, black and tan dog Dusky Trap.

A. T. French's white and tan dog Blemton Volunteer, E. D. Morgan's white, black and tan dog Tancred, L. & W. Rutherfurd's white dog Warren Discord and James Mortimer's white, black and tan bitch Suffolk Siren had byes.

Second Round.

Warren Dainty beat Tancred, Blemton Lilly beat Blemton Volunteer, Warren Discord beat Suffolk Siren.

Third Round.

Warren Dainty beat Blemton Lilly; Warren Discord a bye.

Deciding Round.

Warren Discord beat Warren Dainty.

The second day of the season is announced Thanksgiving Day and the third on Christmas Day.

CONCERNING RELIABILITY AND RECORD.

Editor Forest and Stream:

Having said all that is necessary about the "practical" of Mr. Davey's letter, I will now add a few lines anent the London fancier's very unreliable statement. It is well known to all readers of this journal that I have the honor of reporting for FOREST AND STREAM many of the large and important shows. Mr. Davey will not deny having said that the FOREST AND STREAM'S reports were ahead of all others; and it seems to me that if Mr. Davey was right, his charge of unreliable must be wrong, because very many of the reports which helped to mould Mr. Davey's unsolicited approval were written by me. He cannot claim that his approval of FOREST AND STREAM'S reports had reference only to the non-sporting dogs, because he has admitted that he only understands one breed—English setters. It would be an easy task to show that Mr. Davey considered my reports perfectly "reliable" except when the defects of his dogs were brought into public notice. I might, just for the sake of argument, ask how it was that Mr. Davey once wrote me saying that "Our Prize Dogs" would be invaluable to owners and breeders. I might also ask why he ordered a copy of that work C. O. D. For reasons already given the non-sporting part of the book would be useless to Mr. Davey, and why did he order it if the criticisms on the only breed he knows anything about were to be unreliable? And why did members of the London Kennel Club ask me to judge some of the sporting classes at their show when Mr. Davey, who is a prominent official in that club, considered me incapable of criticising the cow-hocked Locksley? Come, Mr. Davey, let you and me better understand each other. Can't we talk dog, smoke segars, take a drink and have a good time generally without either of us forgetting the duty we owe to ourselves and to others? Surely our friendship is not dependent on the Chicago conditions—that you foot the bills and I misrepresent your dogs. If we cannot be friends and at the same time be men let our friendship be severed now and for aye.

The Buffalo report on Locksley was correct. If Mr. Davey ever had any doubt on the question he can have it dispelled by consulting Mr. John Davidson, who bred the dog. I promised in my last to show Mr. Davey that I was "breeding sporting dogs before his name had been heard of in connection with the dog fancy." Mr. Davey first became known as an owner of dogs in 1877 or 1878, not as a prominent dog man, but he owned a dog. The first decent one that he showed was Liddesdale, a third-rate specimen that was bred by Mr. Davidson. Not long after having made this purchase Mr. Davey bought—or took as bad debt—that rather good-looking dog Dick Laverack, the best setter he ever owned. Then came Knight of Snowdon, a second-rater that was bred by Mr. Davidson, and lastly Locksley, a third-rater, bred by Mr. Davidson, and offered for sale by Mr. Davey at $200 or less. Dick Laverack, the only one of the lot that could score in hot competition, was not bred by Mr. Davey, but by Mr. J. Snellenburg. It will be seen from this that Mr. John Davidson has been largely instrumental in making a name for the London fancier. The dogs that were of his breeding did nearly all the winning for Mr. Davey's kennel; and the record proves that while Mr. Davey has bred several winners, more especially dogs that have won at small shows, he has never bred a good one and never owned a really high-class specimen. While this is a very much better record than men like Whitford, Goodman, the W.K.C.'s white elephant and a large number of other upstarts can lay claim to, it is not a good one, and a man must have something more substantial behind him when he rushes into print with such words as the very unreliable "reliable" and that rusty old safety valve "practical." It will be necessary in giving a portion of my own record to use the personal pronoun oftener than I care to, and in this I must ask the patience of your readers.

My name will be found in the Nottingham catalogues (sporting class) for 1871 and 1872; and I was breeding good dogs some time before that. Whoever heard of "practical" Mr. Davey in those days? I won first in the sporting class at Manchester, 1872. What was "reliable" Mr. Davey doing at that time? In 1873 I won first and champion prizes in the sporting class at a large number of shows, including Nottingham, Glasgow and Edinburgh. In 1874 I was asked to report for one of the leading dog papers in England, which shows that I was considered "reliable" before Mr. Davey owned a dog. In 1874 I bred two sporting dogs that won first and second prize in one class at Birmingham, 1876. I also bred a first prize winner in the sporting class at Birmingham, 1875, and a winner at the Crystal Palace, 1876. I have won at the Crystal Palace, Edinburgh, Belfast, etc., with setters, and an Irish setter of mine took the cup at Waterloo, 1878, for best dog in a number of the sporting classes. From 1868 to 1881 I won over 500 first prizes for pointers alone. From 1874 to 1881 I wrote reports of shows in every prominent dog paper in England, the *Field* included. In 1880 I won 42 first prizes at six shows (*vide* editorial columns of *Fanciers' Chronicle*). I was asked to judge before I was twenty-two years old. I will here remind Mr. Davey that anything that wears pants can judge at an American dog show, but that it is not the same in England, although once in a while somebody springs a white elephant on the fancy. My name is quoted in at least three standard works as a prominent breeder and exhibitor, and dogs from my kennels have been illustrated at home and abroad. "British Dogs," page 128, says: "The gentlemen that at present possess dogs nearest to my idea of the model pointer are Messrs. J. H. Whitehouse, Samuel Price, G. Pilkington, R. Lloyd Price, G. Moore, T. Statter, C. H. Mason, Heywood-Lonsdale, W. Arkwright, Barclay Field, R. P. Leeche, Viscount Downe and Lord Sefton." The "Book of the Dog" says: "Among older breeders the names of Mr. T. Statter, Mr. C. H. Mason, Lord Sefton, Lord Downe and Mr. Garth, Q. C., appear most prominently, and their blood is eagerly treasured by breeders." Add to this that my name was never on any occasion brought before a dog show committee or a kennel club under any charge, no matter how trivial, and Mr. Davey will be able to get a fair outline of my record. Is it sufficiently substantial to qualify a man to write a "reliable" report on Mr. T. G. Davey's cow-hocked English setter dog Locksley?

I now call on Mr. Davey to withdraw or substantiate his statement that my report was not "reliable." If he is a gentleman and a man of honor he will do one or the other.

CHAS. H. MASON.

TRACKING WITH BLOODHOUNDS.

I DO not think that bloodhounds are ever likely to be of much service to the police, for several reasons. As a detective—that is, to go into a house or elsewhere and pick out a murderer by the smell of blood on his clothes, or to find a dead body hidden—I do not think a bloodhound likely to be of any more use than lots of other dogs. The noted dog that discovered a body of a child in a chimney some few years ago, I believe at Blackburn, was a simple mongrel. It may have had some poodle blood in its composition, but certainly not a drop of bloodhound. I saw the dog when it was on exhibition, and studied it carefully.

To use a bloodhound as a tracker in a town is next to impossible. The best dog I ever had could not track a man through a crowd of say fifty or sixty people, if he were more than ten minutes behind—and this dog, Selim, was far and away the best I ever saw hunt. I have known him pick out a trail after two hours; but he could not go any pace then, and if the man hunted had any idea he was being tracked of course he could escape; by going faster than the dog the scent would get worse, and finally fail altogether.

In the open country a well-trained dog, in the hands of a clever keeper, would often assist the police; but a dog requires a lot of training and great natural powers to keep to one scent. Another man crossing the line would leave a fresher scent, and nine dogs out of every ten would leave the stale for the fresh scent.

I have had several bloodhounds that were no use at all; they could not hunt a man over fresh ground with any certainty or pace, unless they were familiar with him. I have noticed that bloodhounds always hunt their master or feeder with greater zest than any one else. I always tried to teach mine to hunt mute, as their voice is terrifying to people who happen to be in the line of route; but they almost always gave tongue when they were on my trail, say within ten minutes of me. Another difficulty is to get them to hunt in a line without pulling, which tires both dog and leader.

Selim was not at all a show dog, his head was a fair shape, except he had not enough peak; he was deficient in wrinkle but very throaty, and his voice the deepest I ever heard; he was a heavy, awkward dog, and a dull black with pale tan markings. I got him at about a year old, and at first thought

him an absolute failure; he declined to hunt at all, would pitch into everything he met, and misconduct himself in every possible way. After about a month, however, I found the ugly brute, as he was called, had a rare nose, and by the time he was eighteen months he would hunt any one for miles if once put on the trail.

A few hints to those who think of training a pup, may be useful. On getting a dog, buy one about a year old, as bloodhounds are very delicate dogs to rear. For hunting I prefer a dog to a bitch, as he takes more pains, and is not so rash. I also like one with a good voice. If he is not quite straight on legs the price will be lower, and he will be able to go quite as fast as necessary for tracking—about five miles an hour is the pace. I always feed at night, and prefer a good biscuit raw, with, twice a week, boiled flesh with vegetables and oatmeal, more or less flesh, according to circumstances. Boil the flesh to rags, then put in vegetables—cabbage, carrot, etc.—for half an hour, and add meal; bring up to boil, and set to cool in a wooden vessel. Treacle is useful when the dogs require an aperient.

I do not hold with using aniseed or any scent on the boots, although it, of course, helps a dog which has not a good nose. The way I begin with a pup is, after he is quite friendly and will follow anywhere, I go out into the open country, and get a man at work in the fields to hold him, say, ten minutes, while I get out of sight and have time to describe a good circle and get back to a neighboring hill, where I can see which way the pup goes. If he fails to find me, and goes off wrong, I whistle him and show myself, as he might get lost altogether; but usually he will keep trying round the place where he is let go, unless he knows the way home. It is important that the man who holds the pup should be a stranger, or the dog does not have so great an incentive to find his master.

A bloodhound used for tracking should be kept by himself, and have his kennels and surroundings scrupulously clean. I have known a dog quite useless for an hour after eating a piece of putrid meat no larger than a hen's egg.—*G. H. Fitz Herbert, in the Bazaar.*

DISTEMPER.

III.

A PECULIARITY of distemper is its tendency to induce manifestations of disease in most of the vital organs of the body. Allusion has already been made to the complications which arise from the respiratory and digestive systems in the form of pneumonia and jaundice. There are also even more serious complications with the nerve centers and with the muscular system, in the form of epileptic fits, which are usually fatal, and chorea or St. Vitus's dance, which is incurable, and often renders the dog useless.

Perhaps the most common cause of death from the distemper is that condition of blood which may be called septicæmia, or, as the popular expression runs, "blood poisoning;" and this diseased state of the blood is held by some authorities to be the cause of all forms of organic disease with which distemper is associated.

Indications of the bad state of the blood are patent enough in the advanced stage of the disease, and one of the most marked signs is the extremely fœtid odor which emanates from the animal's body, and also from the excretions. Emaciation is another sign of mal-nutrition, and the defective tone of the organism is further shown by extreme prostration, and the occurrence of ulceration of the cornea, loss of hair, and incapacity of the stomach to digest any solid food, which is either refused or rejected as soon as it is swallowed.

Epileptic fits may be said to be due to the diseased state of the blood acting as a poison to the nerve centers; but the precise nature of the deleterious action is not known. But it can easily be realized that when the circulating fluid is in a diseased state, every part of the organism is predisposed to suffer derangement from the action of comparatively slight causes, which would produce very little effect if the system were in a perfectly healthy condition.

Symptoms which are premonitory of an attack of epilepsy are at times very misleading, because the excitement, which is the immediate result of the disturbance of the central nervous system, causes the sick dog to appear much better instead of worse. It is particularly noticeable that in such circumstances a dog which had previously been lying in a half dormant state becomes alert under the stimulus of sights and sounds which suggest a favorite pursuit; thus a pointer exhibits great delight at the sight of a gun, and the fact of an animal suddenly becoming awake to external objects is naturally interpreted favorably by the owner.

The sudden improvement in the condition of a sick dog as above described is not of long continuance, and in the course of a few hours the animal may be seized with a fit and fall foaming at the mouth and champing in the manner which is so characteristic of the affection. The fit is not of long duration, and after a few minutes the dog recovers, but remains in a state of lassitude for some hours.

Two or three days may elapse before another fit occurs, but a shorter interval separates the third fit from the second, and others may follow in quick succession, until the animal dies in one of the convulsions. Practical men agree that a second fit may be taken as an indication that the chances of recovery are slight; a third attack puts a cure out of the region of probability.

In the treatment of epilepsy as a sequel of distemper various means have been tried, with a general want of success, which is discouraging. Popular treatment for a dog in a fit is a cold water douche, or cutting the membrane of the mouth with a penknife; but the best plan is to leave the dog undisturbed until it recovers, merely putting something in its mouth to prevent it from biting the tongue, and further taking measures to check its tendency to run away for some distance and hide itself as soon as the fit is over.

Quiet should be insisted on in the treatment of fits, and the first dose of medicine should be laxative—a dessertspoonful to half an ounce of castor oil. Its action may be assisted by enemas. Small doses of bromide of potassium may be administered day by day in the form of powder, with a little sugar, and better results will be gained by giving two grains twice a day, or even three times, for several successive days, than by exhibiting ten or twelve grains at one time. Setons under the ears, or blisters applied to the top of the head, are recommended by some; but we have observed that any good so gained by counter-irritation in this disease, and the excitement which is induced, is certainly unfavorable to the maintenance of the sedative action of the medicine.

Nutritious food, such as good soup free from salt is necessary in the treatment of epilepsy, which is associated with a certain degree of debility and sometimes with actual exhaustion, in combating which, stimulants and tonics may be added to the liquid food. The ammoniated tincture of quinine is a very good preparation, which may be given in doses of five to ten drops in a little cold soup twice a day with advantage.

Chorea, or St. Vitus's dance, is a result of distemper which is not uncommon. Muscular twitchings are apparent, generally affecting only a part of the body, as one hand or fore extremity, or the muscles of the head or neck; but occasionally the muscular spasm is universal.

Recent investigations have shown that the disease has its origin in the central nervous system. Disease of the nerve elements of the spinal cord have been discovered in the few cases which have been examined, and it is at least highly probable that organic derangement of the elements of the cord is always present. Such a condition explains the intractable nature of the affection. Chorea is not a fatal disorder unless the whole of the body is affected, in which case the constant action, even during sleep, exhausts the vital power and kills the animal; but when localized to one limb, the affection only causes a certain amount of annoyance, which is borne by different dogs according to temperament, and in most cases keeps the animal in poor condition.

In treating chorea, various remedies have been tried, and among them all forms of counter-irritants, setons, blisters, and stimulating liniments. Internally nerve tonics have always been advocated, and preparations containing strychnine in some form have been most in favor; but it must be evident that no cure is likely to be obtained by the use of any medicines when the cells of the spinal cord have undergone degeneration. Liberal diet, stimulating applications to the diseased part, and the internal use of such tonics as strychnine and arsenic in minute doses, may afford some relief for a time, and no more can be expected.—*London Field.*

DOG TALK.

A CORRESPONDENT of the French kennel journal *Le Chenil* recommends this method of measuring a dog's height: One of my friends, a veterinary surgeon, tells me of a method as simple and ingenious as it is sure, to take a dog's exact height at shoulder. Take hold of one of the forelegs of the animal, and the dog, forced to support itself on the other leg, holds it out stiffly and does not bend it, as is usually the case when it sees the preparations for measuring. With this precaution the height of a dog varies scarcely an eighth of an inch, while without it the difference is often considerable.

Speaking of reliability of show reports, here are some points worth noting in a pretended report of the St. Paul show, printed in a New York paper Nov. 2:

"In the open dog class Turk secured the premium." This has reference to open class of mastiff dogs. Turk did not secure the premium, or a premium at all. *Tiger Royal* won.

St. Bernards.—"A good smooth-coated one was shown in Victor Joseph, winner of the champion prize." Victor Joseph was *not shown and was not in the building.*

Greyhounds.—"Greyhounds were nothing to speak of, with the exception of Gitana, who is only fair. She is owned in your city." This is a good one, because Gitana was not at the show. First was awarded to Pearl, the only bitch that was shown.

Pointers.—"In the open class for dogs, Donald IV. was well ahead, beating Osborne Ale." Osborne Ale *was not shown* and was *not in the building.*

Irish Setters.—"In dogs, Larry S. easily held his own." Larry S. was *absent,* and the dog that held his own was Red River Glencho.

Miscellaneous.—"Sailor, a fair retriever, won in miscellaneous over 25 pounds." Sailor, a mongrel black dog, didn't get a card; the prize was withheld.

A complaint was made at the police station at Medford, Mass., recently, by Mr. P. Lennox, that a stray mastiff had entered his cellar and was holding the fort against all comers. He proposed that as there were four good fighting dogs in the neighborhood, to put all of them into the cellar, and thus, he thought, the stray animal could be "done up" in a satisfactory manner.

The *Invalide Russe* states that instructions have just been given to the commanders of the parks of field artillery to employ watch dogs to warn the sentries of the approach of an enemy. This is the first occasion upon which such a step has been taken in Russia.

"Our Prize Dogs," as will be learned from an advertisement elsewhere, Mr. C. H. Mason announces will be ready for delivery next Monday. Notice of this beautiful and valuable work will be made next week.

RHEUMATISM IN DOGS.

THIS canine ailment was recognized very early in the history of the veterinary art. Blaine, who was often quoted as the father of canine medicine half a century ago, remarks of the disease that, "except distemper and mange, there is no disease to which dogs are so liable." Youatt, who was a contemporary of Blaine, writes, in 1848: "I do not know any animal so subject to rheumatism as the dog, nor any one in which, if it is early and properly treated, it is so manageable."

It would not be expected that either Blaine or Youatt would discourse in modern terms on the pathology of the disease; neither of them thought of lactic acid as a probable cause of the disorder; but Blaine's view, that rheumatism was merely inflammation of fibrous tissue, still holds its ground, excepting that the term "rheumatic" is added as a prefix to inflammation. So far as the knowledge of the precise nature of the disease is concerned, we have not added much to the facts with which the older writers were familiar, nor are our means of diagnosis more accurate than were those of Blaine and Youatt. In fact, most modern writers have borrowed from the descriptions of the two pioneers in canine medicine.

Rheumatism in the dog assumes several forms, as it does in man—for example, it occurs in the region of the loins, and so represents lumbago in man. It affects the joints, as it does in the human subject, and a characteristic form is common to sporting dogs, and is known as kennel lameness, which is apparently due to rheumatism in the subscapular muscles arising from exposure to cold and damp in kennels. Youatt suggests that the disease may be associated with sprain, which is not unlikely, as a rheumatic tendency is certain to exhibit itself most prominently in a damaged limb, as sufferers from the affection know too well.

One chief cause of kennel lameness is exposure to damp, and the correction is the proper arrangement of the beds sufficiently above the floor. To lie high and dry is a maxim which is based on sound principles and sustained by successful practice. Causes of rheumatism are in dogs and men about the same. First, the particular habit of body must exist, and this is most probably the outcome of defective or perverted nutrition. Rheumatism is allied to gout, and both seem to be associated with digestive errors, which aid in the formation of acid products. Uric acid is the special agent in gout, and lactic acid may perhaps play the most important part in the rheumatic state. Mayhew's view, that rheumatism is one of the diseases due to high living, is not at all far-fetched, as an indulgence in flesh food is exactly what might be expected to cause the formation of such secondary organic products as uric acids and its salts.

Symptoms of rheumatism in dogs are not unlike those which are observed in rheumatic men, save that in dogs the intestines are almost invariably affected, and constipation, with swelling and heat of the belly, are present in nearly all cases.

In the form which is allied to lumbago of man, the dog is still in his movements and prefers to remain still, with the back arched. Pressure to the loins causes extreme pain, which the animal expresses by his cries. In bad cases the use of the hind extremities is quite lost, and this condition is designated by Youatt by the term "palsy;" and Blaine evidently recognizes the same state when he speaks of paralysis in the hind extremities. Acute rheumatism of the dog is accompanied with fever, increased breathing, quick pulse, and rise of internal temperature; the signs of rheumatic fever. In the chronic form the symptoms are less marked, but in any case it is admitted, by old and modern writers, that a dog which has once suffered from rheumatism is always likely to have another attack if he is exposed to cold and damp. In the treatment of rheumatism there is a difference to be observed in regard to internal remedies.

The practice of using stimulating embrocations externally was common with Blaine and Youatt, as it is with the modern veterinarian. Soap liniment was the embrocation of the earlier practitioners, and that compound is still employed although liniment of ammonia and other stimulants, all having much the same action, may be substituted. Medicines, in the time of Blaine and Youatt, were of the ordinary simple kind. No idea of counteracting the effect of a special organic poison was then entertained, and certainly salicylic acid and its compounds were then undreamt of. Blaine recommends a warm bath for a quarter of an hour, followed by brisk rubbing, and wrapping in a blanket; a dose of castor oil—an ounce for a middling-sized dog—with twenty drops of laudanum and thirty drops of sulphuric æther, is to be given at once. If the bowels do not respond, an enema is advised, and, this failing, a pill containing calomel 4 grains, opium ½ grain, with a drop of oil of peppermint, and a drachm of aloes, is to be given every four hours until some action results.

Dogs must have been stronger or aloes weaker in Blaine's time than they are now, as the above prescripsion, given during sixteen hours, would include enough calomel and aloes for a horse. Youatt touches the subject of treatment lightly, merely remarking that castor oil treatment and the use of the warm bath will get the animal well in a few days.

In common with the modern veterinary practitioner, Steel proposes to give the medicines which are accepted as the appropriate antidotes to the rheumatic poison in man, begining, however, with castor oil, to overcome the invariable constipation of the dog.

The remedies which are in common use in the treatment of rheumatism in man are salicylic acid, or, more often now, the salicylate of soda, iodide of potassium, and the carbonate or bicarbonate of potash, on which some practitioners pin their faith. Doses of these agents will vary according to the age and size of the dog, and the range is therefore likely to be considerable, varying from one grain to ten of the iodide of potassium or salicylate of soda, and from five to twenty grains of the bicarbonate of potash. Besides medical treatment, the diet must be regulated, avoiding flesh for a time, and substituting vegetables. Protection from cold and wet is absolutely essential, and this is particularly to be observed in regard to the sleeping accommodation. Nothing is gained by keeping a dog dry and warm all day, and turning it into a damp kennel at night. —*London Field.*

CONNECTICUT KENNEL CLUB.—Bridgeport, Conn., Nov. 3.—A meeting of the Connecticut State Kennel Club was held here Oct. 30, Vice-President A. R. Kyle in the chair. A number of applications for memberships were received and acted upon; constitution and by-laws were adopted and the following executive committee appointed: John White (chairman), Bridgeport; E. Sheffield Porter, New Haven; A. R. Kyle, South Norwalk; A. R. Crowell, Campville; Dr. Burk, South Norwalk; Samuel Banks, Bridgeport; Sherman Hubbard, Bridgeport. Also the following bench show committee: W. D. Peck, New Haven; A. R. Crowell, Campville; E. F. Way, Hartford; A. R. Kyle, South Norwalk; Dr. Jas. E. Hair, Bridgeport. Taken as a whole it was the most successful meeting the club has held, and from the way the applications for membership are coming in, it would seem that dog men in all parts of the State were interested in making the club a thorough success. The next regular meeting will be held at the Atlantic Hotel, Bridgeport, Conn., on Tuesday evening, Nov. 20, at 7:30 P.M. sharp.—DR. JAS. E. HAIR, Secretary.

BLACK BASS IN GERMANY.—The black bass has done so well in Germany that Herr von dem Borne, the well-known fishculturist of Berneuchen, is now offering to sell live fish for stocking other waters, and has received orders for them from England. His prices are: Brood of 1888, 12 cents each; brood of 1887, 36 cents each, whilethose of 1886 sell at 75 cents. The fish have done well in German waters.

PITTSBURGH, Pa., Oct. 27.—*Editor Forest and Stream:* The Western Pennsylvania Poultry Society's fourteenth annual bench show of dogs will be held the last week in January, 1889, at Pittsburgh, Pa.—C. B. ELBEN, Sec.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 300 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Nina T. By Geo. L. V. Tyler, West Newton, Mass., for black cocker spaniel bitch, whelped Aug. 24, 1883, by Single Sin (champion Ohio II.—Nellie) out of Slick (champion Hornell Silk—Grace).

Pilgrim and Confusion. By J. M. Fronefield, Jr., Wayne, Pa., for black, white and tan English setter dog and orange belton bitch, whelped June 21, 1888, by Racket (Rattler—Leda) out of Minnetonka (Don Juan—Petrel III.).

Tatters. By J. M. Fronefield, Jr., Wayne, Pa., for black, white and tan beagle bitch, whelped August, 1888, by Banker (champion Rattler—imported Actress) out of Dolly (Riot—Skip).

Chanticleer. By J. M. Fronefield, Jr., Wayne, Pa., for black, white and tan beagle dog, whelped July 25, 1888, by The Rambler (Marchboy II.—Lizzie) out of Woodland Maid (Skipper—Nellie II.).

Bang II. By Geo. H. Thomson, Denver, Col., for live and white pointer dog, whelped Sept. 5, 1888, by Bang (Price's champion Bang—Salter's Luna) out of Vandalia (Bang Bang—Zanetta).

Telamon. By C. L. Hopkins, Norwich, Conn., for black, white and ticked pointer dog, whelped May 22, 1888, by Parker's William Tell (A.K.R. 2640) out of Parker's Daisy A. (A.K.R. 3388).

Norseman. By Brookwood Kennels, Washington Heights, New York, for black, white and tan English setter dog, whelped Sept. 26, 1888, by Ted Llewellin (Druid—Gessie) out of Flounce.

Charlie G. By Dr. F. Brown, Mt. Morris, N. Y., for black, white and tan English setter dog, whelped June 4, 1888, by Gun (A.K.R. 1538) out of Dora Gladstone (Boss Gladstone—Vell).

Warwick Belton. By Warwick Kennels, Bridgeport, Conn., for black, white, tan and blue ticked English setter dog, whelped Dec. 22, 1888, by Belton High (Royal Sutton—Reign) out of Magnolia (champion Leicester—Sanborn's Nellie).

Royal Ranger. By C. T. Brownell, New Bedford, Mass., for black and tan Gordon setter dog, whelped July 25, 1888, by Murkland Ranger (A.K.R. 5508) out of Beaulah (A.K.R. 6491).

Trespass. By A. Perrin, Cambridge, Mass., for white, black and tan marks, fox-terrier bitch, whelped June 8, 1888, by Luke (Mixture—Lyra) out of Bacchante (Bacchanal—Trifle).

NAMES CHANGED.

Blue Prince to Prince Gladstone. By Geo. L. V. Tyler, West Newton, Mass., for English setter dog.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dinah—Surbiton. J. D. Shotwell's (Rahway, N. J.) collie bitch Dinah (champion Rutland—Heather Bell) to J. Van Schaick's Surbiton (champion Eclipse—champion Flurry), Sept. 29.

Fancy Maida—Dr. Cloud. Crystal Spring Kennels' (Duanesburgh, N. Y.) collie bitch Fancy Maida (A.K.R. 5410) to their Dr. Cloud (A.K.R. 5539), Sept. 12.

Beech Grove Duchess—Ilford Caution II. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Beech Grove Duchess (A.K.R. 3544) to F. W. Cowles's Ilford Caution II. (A.K.R. 4046), Sept. 30.

Beech Grove Gabrielle—Ilford Caution II. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Beech Grove Gabrielle (A.K.R. 3371) to F. W. Cowles's Ilford Caution II. (A.K.R. 4046), Oct. 9.

Blue Nell—Royal Albert. C. Fred Crawford's (Pawtucket, R. I.) English setter bitch Blue Nell (champion Count Howard—Sandal Queen) to his champion Royal Albert (champion Sir Allister—champion Novelty), Sept. 25.

Petrel IV.—Foreman. A. E. Davis's (Worcester, Mass.) English setter bitch Petrel IV. (Don Juan—Petrel III.) to C. Fred Crawford's champion Foreman (Dashing Monarch—Fairy II.), Oct. 6.

Countess—Warwick Belton. Warwick Kennels' (Bridgeport, Conn.) English setter bitch Countess (Prince Phœbus—Rosey) to their Warwick Belton (Belton High—Magnolia), Nov. 3.

Empress Eugenie—Warwick Albert. Warwick Kennels' (Bridgeport, Conn.) English setter bitch imported Empress Eugenie (Rocket—Moll III.) to their Warwick Albert (champion Royal Albert—Maida), Oct. 31.

Belle—Warwick Albert. F. Feller's (Bridgeport, Conn.) English setter bitch Belle to Warwick Kennels' Warwick Albert (champion Royal Albert—Maida), Oct. 24.

Floss—Warwick Obo. H. A. Savage's (West Deerfield, Me.) cocker spaniel bitch Floss (Col. Stubbs—Pet) to Warwick Kennels' Warwick Obo (imported Obo, Jr.—Black Garrie), Oct. 29.

Black Countess—Warwick Obo. S. H. Hubbard's (Bridgeport, Conn.) cocker spaniel bitch Black Countess (Black Pedro—Smutt II.) to Warwick Kennels' Warwick Obo (imported Obo, Jr.—Black Garrie), Sept. 14.

Dame—Warwick Obo. Mr. Meacham's (Stratford, Conn.) cocker spaniel bitch Dame (Bob—Daisy) to Warwick Kennels' Warwick Obo (imported Obo, Jr.—Black Garrie), Oct. 16.

Bacchante—Regent Vox. A. Perrin's (Cambridge, Mass.) fox-terrier bitch Bacchante (A.K.R. 5117) to A. Belmont, Jr.'s, Regent Vox, Oct. 23.

Forest Corinne—Aldershot. F. C. Smith's (Groton, N. Y.) Irish terrier bitch Forest Corinne (champion Bruce—Little Nell) to D. H. Rhodes's Aldershot (Chief, A.K.R. 231—Bizreena, A.K.R. 2860), Oct. 12.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Flossie Darling. Crystal Spring Kennels' (Duanesburgh, N. Y.) collie bitch Flossie Darling (Ned—Fancy Maida, A.K.R. 5410), Oct. 7, seven (two dogs), by Dr. Cloud (A.K.R. 5599).

Hebe of Nesseldown. A. R. Kyle's (South Norwalk, Conn.) collie bitch Hebe of Nesseldown, Oct. 21, eight dogs, by Sir Wallace of Nesseldown.

Bedlam. A. Perrin's (Cambridge, Mass.) fox-terrier bitch Bedlam (A.K.R. 5698), Sept. 18, four (two dogs), by Mr. Comey's Scarsdale (A.K.R. 1212).

Teaser. F. K. Berlin's (New York) fox-terrier bitch Teaser (A. K.R. 6666), Oct. 31, one dog, by J. R. Bull's Nap.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

The Rambler—Dame Trot whelp. Tricolor beagle bitch, whelped July 16, 1888, by J. M. Fronefild, Jr., Wayne, Pa., to E. I. Martin, Wilmington, Del.

Blue Boy—Mystic whelps. Beagles, whelped Aug. 15, 1888, by South Paris Beagle Club, South Paris, Me., one black, tan and white ticked dog and three black, tan and white bitches to Copeland Kell, New York.

Mystic II. Black, white and tan ticked beagle bitch, age not given, by Ross out of Spot, by South Paris Beagle Club, South Paris, Me., to E. H. Bragg, North Sidney, Me.

Dasor of Nesseldown. Collie dog, whelped May 17, 1888, by Royal Monarch out of Heather Bell, by A. R. Kyle, South Norwalk, Conn., to W. Atlee Burpee & Co., Philadelphia, Pa.

Jessie Bell of Nesseldown. Collie bitch, whelped May 17, 1888, by Royal Monarch out of Heather Bell, by A. R. Kyle, South Norwalk, Conn., to W. Yardley, Noroton, Conn.

Dr. Cloud (A.K.R. 5599)—Fancy Maida (A.K.R. 5410) whelps. Black and tan, white points, collies, whelped April 28, 1888, by Crystal Spring Kennels, Duanesburgh, N. Y., a dog to J. F. Camp, Laporte City, Ia., and a bitch to Dr. C. McFarland, Oswego, N. Y.

Drive—Bell whelps. Foxhounds, whelped June 11, 1888, by A. M. Gerry, South Paris, Me., a black, white and tan and black, tan and white dog to S. E. Smith, Bowdoinham, Me., and a black, tan and white bitch to H. N. Thomas, Utica, N. Y.

Drive—Music whelps. Foxhounds, whelped July 21, 1888, by A. M. Gerry, South Paris, Me., one black, white and tan dog and two black, tan and white bitches to H. N. Thomas, Utica, N. Y.; one black, white and tan dog to W. A. Small, Waltham, Mass., and one black, tan and white dog to M. Emmons, Greenwood, Me.

Jack—Gipsey whelp. Black and tan foxhound dog, whelped April, 1887, by A. M. Gerry, South Paris, Me., to D. A. Brown, Jamaica Plain, Mass.

Drive—Fanny whelps. Black, tan and white foxhound bitches, whelped July 11, 1888, by A. M. Gerry, South Paris, Me., one each to H. N. Thomas, Utica, N. Y.; Dr. M. F. Young, Littleton, N. H., and J. G. Percival, Portville, N. Y.

Bang II. Liver and white pointer dog, whelped Sept. 5, 1888, by Bang out of Vandalia, by Bryn Mawr Kennels, Philadelphia, Pa., to Geo. H. Thomas, Denver, Col.

Princess Royal. Blue belton and tan markings English setter bitch, whelped June 9, 1887, by champion Royal Albert out of Maida, by Warwick Kennels, Bridgeport, Conn., to V. L. Bossa, New Canaan, Conn.

Blue Prince. Black, white and tan and ticked English setter dog, whelped June, 1885, by Count Gladstone out of imported Queen Laverack, by Warwick Kennels, Bridgeport, Conn., to G. L. V. Tyler, West Newton, Mass.

Lil Laverack. Black, white and tan English setter bitch, whelped Nov. 28, 1885, by Tempest out of Lilly, by Warwick Kennels, Bridgeport, Conn., to Jos. Lewis, Cannonsburg, Pa.

Murkland Ranger (A.K.R. 5303)—Beaulah (A.K.R. 6451) whelps. Black and tan Gordon setter dogs, whelped July 25, 1888, by C. T. Brownell, New Bedford, Mass., one each to George Tobey and David A. Snell, same place, and J. W. Freeman, Millersburg, O.

Lora. Black cocker spaniel bitch (A.K.R. 6500), by O. R. Gilman, Boston, Mass., to C. T. Damon, South Framingham, Mass.

Nina T. Black cocker spaniel bitch, whelped Aug. 24, 1888, by Single Sin out of Slick, by A. McDonald, Rockland, Me., to Geo. L. V. Tyler, West Newton, Mass.

DEATHS.

Anita. Cocker spaniel bitch (A.K.R. 635), owned by E. Shirley Borden; died in August in parturition.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. T., Mendon, Mass.—Please tell me what to do for my dog. He is a setter heavily haired and is very lousy. I have washed him with whale oil soap and ammonia but it don't appear to do any good. Ans. Get the Persian insect powder. Comb or rub it in thoroughly and in half an hour wash with warm water and carbolic soap. Be careful your dog does not catch cold afterward.

According to the latest official returns, which are for 1886, 24,841 persons were killed by wild beasts in that year in British India. Of these 22,134 were killed by snakes, 938 by tigers, 232 by wolves, 194 by leopards, 113 by bears, 57 by elephants, 24 by hyenas, and 1,169 by other animals, including scorpions, jackals, lizards, boars, crocodiles, buffaloes, mad dogs, and foxes. In the same year 57,541 animals were destroyed by wild animals, but in this case the proportions are quite different, for, while snakes were responsible for the deaths of eleven-twelfths of the human beings, they only killed 2 in every 57 animals, tigers and leopards doing the greatest damage. Tigers show 23,769, leopards 22,275, wolves 4,275, snakes 2,514, hyneas 1,312, and bears 758. In the case both of human beings and animals the destruction appears to be on the increase; in the former case the number is higher than any one of the previous 10 years, and in the latter it is third in 10 years in point of numbers killed. At the same time the numbers of wild beasts killed and the rewards paid for that purpose are increasing. In 1886 22,417 wild beasts were destroyed and 417,596 snakes.—*Pall Mall Gazette.*

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers gave me the best of satisfaction. I have averaged nearly 80 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

TOPEKA RIFLE CLUB.—Topeka, Kas., Oct. 29.—Quail are reported very numerous about here. Mr. J. H. Leonard starts in about a week for his Indian Territory trip, which will probably be through the Oklahoma country. The Topeka Rifle Club held a shoot to-day, kindly extending me an invitation to attend, which I promptly accepted, being anxious to see these famous cracks at work on their own grounds. A drive of about three miles brought us to the range, which is located in a beautiful little wood, an abrupt hill affording a convenient background. The boys have a handy little club house, every feature of which seems thoroughly workmanlike. The firing over the range, 200yds., is done from the door of the club house. The system of marking and scoring adopted seems a very perfect one, and one insuring the greatest possible freedom from errors. The club's reputation at the butts is known throughout the United States. Recent scores of theirs, including to-day's are here given. As an organization the club seems marked by the most general harmony and perfect good-fellowship, and a more nearly model rifle club I do not think exists. The Messrs. Paine, who shot to-day, are both solid, square built men; Mr. McCarter is also a solid looker; Mr. Leonard is a slighter gentleman, but sure to score; Dr. Royce, a gentle and genial enthusiast at this sport, as well as that of coursing, is not nearly so nervous as he looks when it comes to shooting a close tie. Following is a full list of the present membership of the Topeka Rifle Club: E. W. Sherman (President), C. C. Trimmer (Vice-President), G. E. Morrison (Secretary and Treasurer), J. H. Leonard, L. R. McCarter, F. H. Martin, T. W. Bean, Robt. Thompson, J. T. Williams, G. I. Royce, C. R. Paine, D. N. Betts, R. R. Moore, G. J. Mulvane, J. L. Paine, J. H. Hilton, R. W. Curtis, L. S. Long, R. N. Welch.

Scores of Oct. 18, strong 6 o'clock wind:

J L Paine	8	7	6	9	10	7	9	10	10	10—83
	9	8	8	10	6	9	7	10	7	8—82
Geo E Morrison	6	7	6	10	7	9	10	6	5	10—79
	7	8	10	9	8	8	8	6	6	10—81
R Thompson	10	9	7	7	9	8	8	7	10	10—85

ST. LOUIS, Mo., Nov. 3.—*Editor Forest and Stream:* At the last shoot of the St. Louis Pistol Club held on last Wednesday night at the Laclede gallery, E. C. Mohrstadt proved himself the lucky man and will have possession of the handsome gold medal until next Wednesday. Interest as to the final winner of the medal is now considerable. Half of the shoot is over and several of the members are very close on the general average. The members have been taking more practice the past week than heretofore, and as the scores will show are much improved over those of the previous week. All the shooting is done with a Stevens .22-caliber pistol at a standard American target. The scores:

E C Mohrstadt	7	8	10	8	7	9	9	9	10	10—87
W H Bonnell	6	9	10	7	10	8	10	6	7	10—83
F A Fodde	8	8	9	7	7	4	10	8	10	9—79
L V D Perrel	9	7	7	9	9	6	7	9	9	9—78
W Bauer	7	6	6	9	7	8	8	8	10	9—78
M Summerfield	8	10	9	9	7	7	5	8	8	6—77
A E Bengel	10	5	8	10	5	7	7	7	6	10—75
G W Alexander	6	8	8	4	6	8	10	10	9	6—75
O Neuhaus	9	4	6	7	9	7	7	8	10	7—74
J Sieminski	6	7	8	7	8	10	5	7	9	7—74
W Larned	6	7	8	7	4	8	10	10	5	8—73
W H Hettel	9	10	7	6	4	6	6	9	5	7—69
W J Lord	6	6	6	4	5	10	6	10	7	7—67
L Denning	6	6	6	5	7	8	6	7	8	8—67
M C Billmeyer	7	9	8	5	7	5	6	5	6	5—66

SAN FRANCISCO, Oct. 21.—The shooting matches at Shell Mound Park to-day, although not so numerous as on previous Sundays, excited a good deal of interest. The scores made were very good. The annual shoot of the Independence Rifles was the principal match of the day, as the medals distributed are very valuable, and the rivalry existing among the members very sharp. Following is the score of the matches, 200yds.:

G Miller	44544—21	J Hensing	44433—18
H Meyer	44345—20	J Faltings	33825—18
C H Smith	34454—20	H Teige	43452—18
Dr V Chaigneau	42444—18		

The judges and inspectors of the season's rifle practice of the Independent Rifles made the following scores, 200yds.:

Capt Klein	34445—20	Dr McCarty	40454—17
L Haake	34544—20	D Drinker	33432—15
J A Kuhle	45452—20	D Spencer	33303—12
C Thierbach	44344—19		

Company F, Fifth Infantry, 200yds.

Corp Parsons	34443—18	Pvt J A Tyrell	50443—16
Sergt Hayes	25434—18	Pvt Bungle	20424—12
Pvt J Morrison	53244—18	Sergt Hunt	44552—20
Corp Witham	43433—17	Corp Cobbledich	44554—22

Independent Rifles.
Company F, Second Artillery, 500yds.

Capt White	4433443304—32	L C Arnold	2042444485—32
Sergt F S Brown	5333442433—34		

200yds.

Capt White	2443544354—38	Pvt L C Arnold	3443435354—38
Sergt F L Brown	4030404444—37	Pvt Reed	4033303333—25

German Fusiliers, 200yds.

C Battberg	4344454334—38	H Scharfenberg	3333333333—30
H Weitz	3245436423—32	W Eicker	3424333334—32

Battery A, Second Artillery, 200yds.

Capt Sime	44534—20	Lieut Berry	40240—10
W J Spotts	34420—12	Pvt Bachman	54430—16

ARMY SMALL CALIBERS.—Washington, Nov. 1.—In his annual report to the Secretary of War, General Benét, Chief of Ordnance, says that investigations have been completed to determine the charge, projectile, rifling, etc., for an arm of smaller caliber than the present service piece. It is the intention to use compressed and perforated cartridges, but as the powder makers have not yet succeeded in producing a satisfactory powder, the desired velocity being accompanied by too great a pressure, this matter is still under study and trial. The results obtained in France with the Lebel rifle seem to point to a radical innovation in the manufacture of powder for small arms.

SAN FRANCISCO, Oct. 28.—The vicinity of the shooting ranges at Shell Mound Park was crowded to-day with the admirers of the Second Artillery regiment. The lovers of target matches were out in full force. Company C was the first to enter the lists for the yearly medal. The results were unusually good, as shown by the following score, 10 shots, 200yds.:

Company C.

Lieut Lemcke	41	C Vilbrock	47
H Weigman	38	Corp Rinau	46
Sergt Huber	35	Lieut Wulberon	41
W Meyer	15	L Ridgen	39
W Munroe	15	W Wandall	37
Pvt Stansbury	18	Sergt J Siebe	35
J Hustadt	31	W Drischman	32
Sergt Ruth	40	H Meyer	32
Corp Tobin	40	O Huber	31
H Petrle	41	H Menke	24
H Brooks	42	C Wandall	30
J Koch	42		

Company H was out in full force to witness the event of the day, an attempt of Sergt. Seaman to break his previous record. He did not break his own record, but tied it and made 39 at 500yds. and 38 at 200yds. The other members of the company shot for the quarterly medals, which were won by the following marksmen, 20 out of a possible 40 being necessary to obtain the medal: Corp. Quim 31, Lou Munsen 38, Sergt. Kenney 21, John Michals 33, Pvt. Heney 35, Pvt. Behr 21, Pvt. Menter 22, Pvt. Quirk 13, Pvt. Monhaic 23.

Company D.

Chute	40	Pvt Moore	32
S Gilow	38	Pvt Giclaw	31
Lieut Ziesing	37	Pvt Jeffrys	31
Capt Jansen	33	Pvt Klipsbein	28
Pvt Landresse	33	Pvt Conlon	24

BOSTON, Nov. 3.—A good number of shooters were present at the ranges to-day, considering the unpleasant weather. Following are the best scores finished to-day:

Victory Medal Match, 200Yds.

J A Frye	8	8	10	10	8	10	10	6	7	7—84
N C Nash	5	9	10	9	7	9	7	7	10	9—82
H L Lee	10	9	6	10	7	8	8	7	9	6—80
A Maynard	6	8	5	7	8	6	8	8	5	10—71

Practice Off-Hand Match.

C Towne	8	7	10	10	8	7	7	10	8	7—82
B G Barker	7	9	8	9	6	9	8	8	7	10—81

A Stevens	5	7	10	9	10	9	7	6	10	8—81

CLINTON, Ontario, Oct. 26.—The annual match of the Huron Rifle Association was held to-day at the Atholcott ranges, Clinton. The forenoon was fine, but about noon a drizzling rain set in and the wind increased almost to a gale, which rendered it very difficult to run up high scores; yet there was some very fair shooting, as the following prize list will show: First match, 200 and 500yds., association, open to members only, 5 shots at each range:

N Robson	39	J G Wilson	32
C Wilson	38	E G Courtice	31
A Innes	34	J Young	28
A Wilson	34	J A Wilson	27

Second match, open to members, ranges 400 and 500yds., 5 shots at each:

A Wilson	43	E G Courtice	34
C Wilson	41	J A Wilson	34
James Anderson	36	H Libbatt	34
J G Wilson	35	N Robson	33

Consolation match, open to members who have not won a prize in previous matches, 200yds., 5 shots:

O Young	21	W Young	21
G Gilchrist	21	J Johnston	16

RANGE ACCIDENT.—Chicago, Nov. 1.—At the rifle range at Highwood yesterday, Co. F, of the First Regiment, was at target practice. Several shots had been fired without being marked, when one of the men was sent to find out what was the matter. On reaching the rifle butts he found that one of the shots had struck the marker, a young boy named Bolde, killing him instantly. Contrary to orders, the boy was standing behind the target, when a bullet struck the round axis about two or three feet above him, and, glancing down, entered his left breast, coming out lower. The parents of the dead boy exonerate the soldiers from all blame in the matter. Another account of this accident gives the following sensational particulars: "A very sad accident wound up the season at the range at Highwood. For the past year or more Companies F and B, of the First Infantry, have had a rifle range at Highwood, situated below the bluffs, on the lake shore, north of the regular army post. To mark for them the companies employed a young adopted son of Mr. Boldt, of Highwood. A few days ago, in order to give vitality and realism to the shooting, an exact representation of young Mr. Boldt was painted life size as a target, and it was pronounced a perfect resemblance of the young man. The target moved upon hinges, and after the shots had been fired opened outward so that the score might be recorded. On Friday a squad of men under the command of Sergeant Harmen, of Company F, were on the range of the 900yd. point. The squad fired two or three rounds into what was supposed to be the target, but strangely enough no marks seemed to have been made, and no record of the shots was announced. An investigation took place. The shooters were horrified at the result. What they supposed was the target proved to be the boy himself. Six hundred bullets had been fired into the unfortunate lad. He had swung around the target on its horizontal axis, which is about 10ft. from the bottom of the pit, and had then from fun or for the better to mark the places of the bullets, appeared in its place. Propped up by the projection of the revolving figure he had not fallen when struck, and so had been riddled with lead before the terrible tragedy was discovered."

PITTSBURGH.—J. A. Huggins, of this city, one of the best of American rifle shots, expects to take a team of twelve men to Europe next year. It will be a national team, and he expects it to win more than its share of the great European contests. He thinks that American rifle shooting is underestimated in Europe, and says: "The quality of rifle shooting in our country at present is surprisingly better to-day than it was even five years ago. Scores of men are now making averages that were considered most extraordinary a few years ago. Why, about five years ago I went out to a local range and, in the presence of several Pittsburghers, made an average of not less than 75. This was considered wonderful, but now an average of that kind amounts to nothing in a contest. There is also nearly 50 per cent. more rifle shooters in America to-day than there was a few years ago. This shows that rifle shooting is increasing more in popularity in this country than anywhere else."

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TUXEDO PARK, N. J.—Tuxedo is always foremost with its pigeon shoot announcements and easily collect large fields of entries. The season at Tuxedo opened Nov. 3 with a good programme of cup handicaps for members and guests, and the first day's trial for the club cup, open to members only and to be shot for on each succeeding Saturday until won three times by the same entry. Mr. William Kent, the secretary of the Tuxedo Club, also makes the following announcement of the rules to govern the Tuxedo Club pigeon grounds: "Hereafter all cups must have ten entries to fill. Duplicate entries may be made in all cups if made before beginning of second round. All ties in cups to be shot off miss and out, unless otherwise stated. All strangers shooting for the first time in any cup on the Tuxedo Club grounds to shoot at twenty-seven yards, except those already handicapped at another club, who must shoot at their club handicap, after which they may receive a handicap from this club. All allowances to run on ties. Shooting will begin, unless otherwise stated, on the arrival of the 8:55 A. M. train from Twenty-third street, New York." The crack pigeon shots at Tuxedo are Messrs. Pierre Lorillard, Pierre Lorillard, Jr., Walker Breese Smith, William Kent and T. B. Baldwin. Mr. James L. Breese, who is a remarkable field shot, has steadily adhered to a resolution never to shoot pigeons.

KANSAS CITY, Oct. 26.—The James Elliot Second Annual Tournament is going on at Exposition Park with great success. To-day the weather was perfect, and each contest had from fourteen to thirty-two entries. There was a large number of strangers present. Among those who arrived yesterday were Ben Weir of Weir City, G. H. Smith of Cameron, W. S. Ferguson of Atchison, W. T. Irwin, of Abilene, Tug Nichols of Rich Hill, S. W. Forsha of Hutchinson, and Lewis Erhardt of Atchison. Before the first regular contest began seven men shot a sweepstake of 6 birds at 30yds. rise with the following result:

E Miless	101011—4	A Smith	011011—4
E Meier	011110—4	I Scott	101011—4
H Dixon	011101—4	F Dueser	111110—5
J Nichols	101111—5		

J. Nichols and F. Deuser divided first money. E. Miles, E. Meier, A. Smith and L. Scott were tied for second. After shooting twice Miles and Meier were still tied and divided without any more shooting. The first regular contest of the day was at 10 single Peoria blackbirds and at 4 pairs. Mr. James Elliott, who has charge of the tournament, did some splendid shooting in this contest, breaking 13 out of 14 birds. Mr. W. T. Irwin, of Abilene, who entered the contest under the name of Smith, also did good work. He broke all the pairs, but missed two singles. He took second money. J. Nichols won third money, and E. Miles and J. T. West divided fourth. The score was as follows:

L Scott	010111	10 10 00 11—	8
Ben Weir	011101	01 00 10 10—	7
F Deuser	111110	10 00 10 01—	8
W Mensing	011111	00 10 11 01—	9
J Nichols	111111	10 10 11 10—11	
E Miles	111011	10 10 10 10—10	
H Dixon	100110	00 00 10 00—	4
E Meier	101110	01 10 11 10—	9
"Smith"	110011	11 11 11 11—12	
J T West	110110	01 10 11 11—10	
Wm White	011110	10 00 10 11—	8
A E Thomas	111101	00 11 00 10—	8
W A Skinner	111101	11 01 11 11—12	
J Elliott	111111	11 11 11 10—13	

The second regular contest of the day was exciting, and was the best of any in the tournament. The shoot was at 10 live pigeons, 30yds. rise, use of both barrels, a kill with the second barrel to count but one-half. Mr. W. A. Anderson won the first money, killing all the birds and using the second barrel but once. Mr. W. A. Skinner and Mr. E. W. Williams divided second money, each having a score of 8½.

Ben Weir, Ed. Bingham and a young man who gave the name of "Lone Jack," divided third money, and Jesse Reeves and H. Maxey divided fourth. The score was as follows:

W T Irwin	1 1 ½ 1 1 0 1 1 1 0	—7½	
W Anderson	1 1 1 1 ½ 1 1 1 1 1	—9½	
S A Tucker	1 1 ½ ½ 1 1 0 0 0 ½	—5½	
F C Hall	0 0 0 0 1 1 1 0 ½ ½	—4	
A F Thomas	0 1 1 1 0 1 1 1 0 ½	—6½	
W Mensing	½ 1 1 1 0 ½ ½ ½ 0 ½	—5½	
J M Clark	0 ½ ½ 1 1 ½ 1 ½ 0 1	—6	
F Deuser	1 0 1 1 1 0 0 1 1 1	—6	
G H Smith	½ 1 0 1 1 1 1 1 1 1	—9½	
Ben Weir	½ 1 1 ½ 1 1 0 1 1 1	—8	
E Miles	1 1 1 1 0 1 1 0 1 0	—7	
W A Skinner	1 1 ½ 1 ½ 1 1 ½ 1 1	—8½	
J Nichols	1 1 1 ½ 1 ½ 0 1 1 0	—7	
Geo Wasson	1 ½ 1 1 1 0 0 1 ½ 1	—7	
Geo Mock	0 0 1 ½ 0 1 0 1 0 0	—3½	
L Ehrhardt	1 1 1 0 1 ½ 1 ½ 0 1	—7	
S W Forsha	1 1 1 0 ½ 1 ½ ½ 1 0	—6½	
W S Furgeson	½ 0 ½ 0 0 ½ 1 0 0 0	—2½	
E Meier	1 1 1 1 0 0 0 1 1 0	—6	
J Reeves	1 0 1 1 ½ 1 ½ 1 ½ 1	—7½	
L Scott	0 0 0 1 0 1 0 1 1 ½	—4½	
H Maxey	0 ½ 1 1 1 1 1 1 1 0	—7½	
"Lone Jack"	½ 1 1 1 1 1 1 1 1 ½	—8	
J G Young	1 ½ 1 0 0 1 0 1 1 0	—5½	
D Underwood	1 ½ 1 1 1 ½ 1 ½ 1 0	—7½	
J Riley	½ 0 ½ 1 ½ 1 ½ 1 1 ½	—6½	
J A Bolan	0 0 0 0 0 1 0 ½ ½ 0	—2	
F J Smith	0 ½ 0 ½ 0 ½ 0 1 1 1	—4½	
E W Williams	1 1 1 ½ 1 1 1 ½ 1 ½	—8½	
J Savage	½ 0 1 1 1 ½ 1 ½ 0 ½	—6	
E Bingham	1 1 1 1 0 1 0 1 1 1	—8	

The third regular contest of the day was another good one. It was at four pairs of live pigeons from plunge traps, 18yds. rise, ties at 21yds., the gun to be held below the elbow until the birds were on the wing. Drury Underwood, Captain Ditsch and S. A. Tucker killed every bird and divided first money, and J. M. Clark and Ben Weir divided second money. There were several ties for third money and J. E. Riley won the shoot off. W. A. Anderson took fourth money. The score was as follows:

J F Riley	10 01 11 11—6	F C Hall	11 01 00 11—5
D Underwood	11 11 11 11—8	J Reeves	11 11 11 00—6
E Bingham	11 11 10 01—6	J K Guinotte	11 01 10 11—6
W T Irwin	10 11 11 01—6	S A Tucker	11 11 11 11—8
E W Williams	10 10 01 11—5	W A Skinner	11 11 01 11—7
W A Anderson	10 11 01 01—5	F Deuser	10 00 10 10—3
R J Holmes	11 11 11 01—7	C Ditsch	11 11 11 11—8
"Lone Jack"	00 11 10 01—4	Ben Weir	11 10 11 11—7
J M Clark	11 10 11 11—7	W V Rieger	10 10 11 10—5
George Mack	11 11 10 11—7	E Meier	10 10 10 10—4
F J Smith	10 10 11 10—6	S W Forsha	01 10 10 10—4
W Everhart	10 11 11 10—6		

Twenty-four men entered a sweepstakes shoot at 10 Peoria blackbirds, 30yds. rise. J. Nichols, "Lone Jack" and E. Meier shot without a miss and divided the first money. A. Dixon and E. Miles took second. J. G. Young won third and W. S. Ferguson took fourth. The score:

A Dixon	1110111111— 9	L Scott	1111011110— 8
Ben Weir	0110111100— 6	W T Irwin	1111110101— 8
J Nichols	1111111111—10	W S Forsha	0101111111— 8
J West	0101011110— 6	F C Smith	1010001001— 4
A Knight	0101011111— 7	J Murphy	1100011111— 7
W A Skinner	0011111111— 8	M White	1111110110— 8
E Meiser	1111111111—10	"Lone Jack"	1111111111—10
W S Furguson	1110111010— 7	J Maxey	1010011001— 5
N Turner	0010101111— 6	F Smith	1001010111— 6
E Miles	1111111101— 9	B Holmes	0010
J M Clark	1111001111— 8	J A Bolan	0111011111— 8
W B Thomas	1010111001— 6	J G Young	1111011110— 8

Another sweepstakes was shot with 17 contestants. The conditions were to shoot at live pigeons, 30yds. rise, use of both barrels, miss and out. Mr. W. A. Skinner won the match. If a bird which has been shot at lights inside the grounds, the referee always calls it a "dead bird." If any of the contestants think that it is able to get over the bounds they challenge and a man must go out and catch the bird.

An interesting sweepstakes was shot at 4 live birds, 30yds. rise, use of both barrels. Five men were tied for first money, and W. A. Anderson won the shoot off, L. Smith and W. A. Skinner divided second money. W. Mensing won third and J. Reeves fourth. The score follows:

L Smith	0111111—9	W Anderson	1111111—7
L Scott	1110111—6	W A Skinner	0111111—6
F Deuser	1001111—5	T Nichols	1010111—5
W Mensing	1111100—5	E Miles	1111111—7
Thomas Knight	0011111—5	George Wasson	1111111—7
H Maxey	0111111—6	W S Ferguson	0000001—1
E Meier	1110111—6	G H Smith	1011111—6
F C Hall	1111111—7	J Reeves	1101000—3
Ben Weir	1101110—5	S A Tucker	1111111—7

Oct. 27.—To-day was the last day of Elliott's second annual shooting tournament. The day was cold and a strong wind blew, making fine shooting impossible. During the tournament, which has been very successful, 2,600 live birds were killed and about 1,000 Peoria blackbirds broken. The first contest of yesterday was a sweepstakes at 7 Peoria blackbirds, 18yds. rise. J. K. Guinotte, J. Nichols and Lone Jack won first money, Ben Weir took second, and F. C. Hall won third, latter shooting off a tie for that money with four others. The score was as follows:

E Mills	1010010—3	J White	0000000—0
G Scott	1101111—6	F Deuser	0110001—3
J K Guinotte	1111111—7	B Weir	0111111—6
H Dixon	1101101—5	J Meads	1111111—7
F C Hall	1111000—5	C Hagerdon	1100011—4
B L Taylor	1110111—5	"Lone Jack"	1111111—7
H Maxey	1101111—6	Frank Jones	1101110—5
J M Clark	1111011—6	A D Wetzell	1101011—5
N Moyer	1001110—4	C Ditsch	0000000—0
A Dixon	0101111—5		

Another sweepstakes at four pairs of Peoria blackbirds was shot and A. D. Wetzel, Ben Weir and J. Nichols divided the first money, Mr. W. H. Skinner took second and "Lone Jack" won third. The score:

"Lone Jack"	10 11 10 00—4	H Maxey	01 11 11 00—5
H Hyman	00 00 01 10—2	B L Taylor	10 11 00 01—4
L Scott	01 10 10 10—3	S A Tucker	00 10 10 01—3
J S West	11 10 10 00—4	H Dixon	11 10 10 01—5
A Dixon	11 00 00 00—2	F Deuser	00 10 00 10—2
J M Clark	10 11 01 10—5	J Nichols	11 10 11 01—6
J Underwood	10 10 00 01—3	J E Riley	11 00 10 10—4
D Williams	00 00 10 00—1	W H Skinner	11 00 10 11—5
A D Wetzel	11 01 10 10—5	F Megley	11 01 01 10—5
B Weir	10 01 11 11—6		

The first regular contest of the day had 17 entries. It was at 10 single live pigeons, 30yds. rise, use of both barrels. Mr. Al Munger was the only man who shot without a miss, and he took first money. H. Maxey, "Lone Jack," L. Scott and H. P. Hall were tied for second money and they divided without any further contest. J. M. Clark and G. W. Hanna divided third money, and Fred Deuser won fourth. The score follows:

H Maxey	1111111011—9	A D Wetzel	1011101011— 7
B Weir	0110100111—6	Fred Deuser	0011101111— 7
C Hagedorn	0011101010—5	Al Munger	1111111111—10
"Lone Jack"	1110111111—9	J M Clark	1001111111— 8
L Scott	1101111011—9	W Mensing	0111111001— 7
B L Taylor	1100111001—6	M Hymann	0100011001— 5
H P Hall	1111110111—9	F Jones	1001111110— 7
G W Hanna	1111011011—8		

There were but three moneys in the next contest and twenty-five men entered. It was at 10 single Peoria blackbirds, 6 of them at 18yds. and 4 at 21yds. rise. W. H. Skinner, E. Miles, "Lone Jack," J. T. West and A. D. Wetzel divided first money. H. Hyman, A. Dixon and Ben Weir divided second, and A. C. Thomas, J. G. Young, F. J. Smith, H. Deubert, J. M. Clark and S. Scott divided third. The score was as follows:

F Deuser	0111000111—6	J E Riley	1010000111—5
W A Skinner	1011111111—9	"Lone Jack"	1111011111—9
S Scott	1111110001—7	Ben Weir	1100111111—8
W M Anderson	0111110111—8	J T West	0111111111—9
H Hyman	0001001111—6	F J Smith	1101110011—7
J Nichols	1111110000—6	A D Wetzel	1111110111—9
H Maxey	0111011000—5	J Bolan	1111110000—6
J M Clark	0011111101—7	C Hagedorn	0100111010—5
J Underwood	0110010110—5	A C Thomas	1101110011—7
H Deubert	1111100011—7	J G Young	1110110110—7
A Dixon	1110101111—8	Fred Heinze	100000
E Miles	1111110111—9		

Thirty men entered the regular contest of the tournament, which was at 7 live pigeons, 30yds. rise, use of one barrel only. Mr. W. Mensing killed six birds out of the seven and won first money. W. H. Skinner, F. Bridges and B. L. Taylor divided second money. J. E. Riley won third in the shoot-off and Ben Weir won fourth. The score follows:

W H Skinner	1010111—5	J K Guinotte	0001011—3
J M Clark	1101100—4	A E Thomas	1010001—3
W M Anderson	1001010—3	W Mensing	1110111—6
M Hyman	0110111—5	A Bombeck	0111000—3
D Underwood	0011111—5	F J Smith	0100010—2
F Deuser	0010101—3	J A Bolan	1000011—3
J E Riley	1100110—4	H Maxey	0101011—4
S A Tucker	1100001—3	A D Wetzel	0000110—2
F Bridges	1101011—5	B J Holmes	0101110—4
J Underwood	1111010—6	W B Thomas	0001101—3
C Ditch	0010111—3	B Weir	1100010—3
Al Munger	0101101—4	B L Taylor	1110101—5
U A Quail	0101101—4	H P Hall	0011000—2
S A Tucker	0110001—3	F Heinze	1011001—4
F Bridges	1101011—5	G W Hanna	0001001—3
J Underwood	1111010—6	L Scott	1100111—6

Two miss and out sweepstakes were then shot. There were 13 entries in the first one, and Ben Weir and W. M. Anderson divided first money. Fifteen were entered in the next and Messrs. Maxey, Holmes, Bridges, Smith, Thomas and Williams divided the money. It was dark when the last men shot and every pigeon on the grounds had been killed.

WALNUT HILL, Oct. 31.—About the usual number of contestants faced the traps to-day, and in spite of the strong wind put up some creditable scores. The following summary shows the result of the competitions in the various matches.

Gold Coin Match, 10 clay-birds from 5 traps and 10 standard targets from 3 traps:

	Clays.	Standards.
Snow	1110111110—8	1111011111—9—17
Chase	1011111110—8	1111011010—7—15
Knowles	1110111111—9	1010101011—6—15
Crown	0011101111—6	1110111110—8—14
Curtis	1001110011—7	1100110111—7—14
Perham	0110101111—7	1110101101—7—14
Grimes	0001111111—7	1010101112—7—14
Nichols	1111010111—8	0111001010—5—13
Wardwell	0101111111—8	0001110101—5—13
Nelson	0010001111—5	1101111010—7—12
Lee	1100001111—6	1101001010—5—11
Houghton	0111110001—6	1000101000—3— 9
Bert	0010010000—2	1010011101—6— 8

The sweepstake shooting resulted as follows:

First event, 5 clay-pigeons from 5 traps—Nichols, Crown and Houghton first with 5; Knowles second with 4; Wardwell third with 3.

Second event, 6 standard targets from three traps—Wardwell and Nichols first with 5; Crown and Knowles second with 4; Perham third with 3.

Third event, 5 clay-pigeons from 5 traps—Perham and Knowles first with 5; Houghton and Wardwell second with 4; Nichols third with 3.

Fourth event, 6 standards from 3 traps—Nichols first with 6; Chase second with 5; Knowles third with 4.

Fifth event, 6 Macomber targets—Snow and Curtis first with 5; Nichols and Chase second with 4; Wardwell and Crown third with three.

Sixth event, 5 clay-pigeons from 5 traps—Chase, Houghton and Wardwell first with 4; Crown and Perham second with 3; Snow third with 2.

Seventh event, 3 pair Standard targets—Knowles first with 5; Chase, Perham and Wardwell second with 4; Houghton third with 3.

Eighth event, 5 clay-pigeons from 5 traps—Curtis and Chase first with 5; Houghton, Knowles and Wardwell second with 4; Nichols and Perham third with 3.

Ninth event, 5 clay-pigeons from 5 traps—Chase first with 5, Nichols second with 4, Perham and Snow third with 3.

Tenth event, 5 clay-pigeons from 5 traps—Chase and Crown first with 5, Nelson and Lee second with 4, Perham third with 3, Curtis fourth with 2.

Eleventh event, 6 Macomber targets—Wardwell first with 5, Knowles second with 4, Snow third with 3.

Twelfth event, 6 standard targets—Curtis and Knowles first with 5, Nichols and Wardwell second with 4, Chase third with 3, Lee fourth with 2.

Thirteenth event, 10 clay-pigeons from 5 traps—Knowles first with 9, Wardwell second with 8, Curtis and Perham third with 7, Crown, Houghton and Lee fourth with 6.

Fourteenth event, 10 standard targets from 3 traps—Snow first with 9, Crown second with 8, Chase and Perham third with 7.

Fifteenth event, 3 pair standard targets—Nichols first with 5, Perham, Snow and Wardwell second with 4, Crown third with 3.

Sixteenth event, 5 clay-pigeons from 5 traps—Crown and Perham first with 5, Nichols, Houghton and Wardwell second with 4, Lee and Snow third with 3.

Seventeenth event, 5 clay-pigeons from 5 traps—Knowles and Perham first with 5, Houghton and Nichols second with 4, Lee and Snow third with 3.

Eighteenth event, 6 Macomber targets—Houghton, Snow and Wardwell first with 5, Nichols, Knowles and Perham second with 4, Curtis third with 3.

Nineteenth event, 5 clays from 5 traps—Houghton and Knowles first with 5 Perham second with 4, Lee and Snow third with 3.

Twentieth event, 6 standard targets—Wardwell first with 6, Lee second with 5, Houghton and Knowles third with 4.

Twenty-first event, 6 Macomber targets—Knowles first with 5, Snow and Lee second with 4.

Twenty-second event, 5 clay-pigeons from 5 traps—Lee and Perham first with 5, Knowles and Wardwell second with 4.

Twenty-third event, 6 standard targets—Perham and Lee first with 6, Crown and Wardwell second with 5.

Twenty-fourth event, 5 clays from 5 traps—Wardwell first with 5, Lee second with 4.

Twenty-fifth event, 6 standard targets—Nichols first with 6, Lee second with 5.

The next competition in the current series of matches will be held Nov. 14, when, in addition to the Gold Coin match and the regular sweepstake events, will occur the sixth shoot for the Climax diamond badge, now held by Mr. Knowles, of Lowell. The above matches are open to all New England sportsmen, without entrance fee, and all are cordially invited to come and compete.

MISS ANNIE OAKLEY.—This famous female wing shot last week defeated Fred Kell, a well-known butcher of Baltimore, at Frank Starr's Driving Park, by a score of 25 to 21 birds. It was agreed that the match should be for a purse of $100, 50 birds each, the one who shot the most birds to take the pot. At the park the birds were reduced to 25. Miss Oakley was to shoot at 25yds., and Mr. Kell was to shoot at 30. Miss Oakley was attired in a close fitting skirt of seal brown cloth, with a braided panel that reached to her ankles. She wore a loose sailor waste of the same material as the dress, to give her arms and body free action. On her head was pinned a light brown, wide-brimmed hat that sat coquettishly on her dark, braided hair. Dark brown ostrich tips, a brown band and a steel star made the trimming. At the word of the referee, Mr. Peacock, of New York, Miss Oakley stepped to the stake and called for her bird. The trap flew open and she fired. She missed with the first barrel, but soon had the bird fluttering on the ground with the second. Kell also brought his first bird down with his second barrel. Out of the 25 birds Miss Oakley killed 21, while Kell killed only 15. A second match against Kell, 25 birds each, was shot at Hagerstown, resulting as follows:

Oakley	2121111112111111121112—25
Kell	2110211212101012102111121—21

Miss Oakley used a Lancaster hammerless, 12-gauge, 6lbs. in weight, 3 drams Schultze powder, 1oz. shot, and stood at 25yds.; Kell shot a 10-gauge Greener, 10½lbs., loaded with 5 drams black powder and 1⅛oz. shot, standing at 30yds. In a sweepstake afterward, at $5 entrance, 7 entries, Fred Quimby won first money, Peacock, of Westville, N. Y., taking second money. Second sweepstake, 13 entries, $5 each, miss and out, money divided between Miller, Ducker and Annie Oakley, who all killed 11 straight. Darkness compelled a division. Miss Oakley shot at 28yds. rise for the first time, the 10-gauge guns being put at 30yds. During the day Miss Oakley shot at 36 pigeons and killed all. She will remain in Maryland and shoot in the field for two weeks, in order to get needed rest and recreation combined.

WELLINGTON, Mass., Nov. 3.—The regular Saturday shoot of the Wellington Gun Club to-day had a fair attendance, and some good scores were made, although the weather conditions were unfavorable for fine shooting. The following scores were made in the merchandise match at 20 birds, 10 clay-pigeons and 10 bluerocks—Schaefer 18, Snow 12, Conant 12, Perry 18, Edwards 15, Bond 17, Bradstreet 14, Wardwell 13, Melcher 11, Sanborn 15, Swift 18, Chase 15, Lee 10, Scott 16, Nichols 14. The scores in the individual badge match were—Schaefer 13, Snow 15, Conant 10, Perry 14, Edwards 15, Bond 17, Bradstreet 10, Wardwell 17, Melcher 13, Sanborn 14, Swift 13, Chase 11, Lee 8, Nichols 15, Scott 14. Following are the winners of the sweepstake matches: Six bluerocks—Wardwell. Six clay-pigeons—Swift, Edwards and Chase. Six bluerocks—Chase. Six clay-pigeons—Chase, Snow and Melcher. Six bluerocks—Edwards. Six bluerocks—Snow. Six clay-pigeons—Wardwell and Schaefer. Six bluerocks—Schaefer. Ten clay-pigeons—Perry. Ten bluerocks—Swift. Ten clay-pigeons—Wardwell. Ten bluerocks—Bond. Six bluerocks—Wardwell, Edwards and Scott. Six bluerocks—Scott. Six bluerocks—Wardwell, Nichols and Bond. Six clay-pigeons—Jim. Six bluerocks—Chase, Scott and Perry.

MONTREAL, Oct. 27.—The third match of the Horsley gun series was shot on the Dominion Gun Club grounds to-day. The unpromising state of the weather all the morning led a good many to believe that the match would be postponed. However, the steady downpour of rain ceased when the match was called, and the best contested match ever held on the grounds resulted, showing first-class scores despite the unfavorable conditions of a high wind, etc. Mr. Ferguson, of the D. G. C., won the match with the splendid score of 19 out of 20, closely followed by C. Horsely with 18. The next shoot for this gun will be held on Thanksgiving Day at 1:30 P. M. sharp. The Dominion Club will also hold an all-day shoot, consisting of a series of sweepstakes, on this day, open to all, to which a cordial invitation is given to shooters and spectators to attend. The following is the score of to-day's match:

Ferguson	1111110111111111101—19
C Horsely	1110111111111111011—18
J Smith	1110101111111111101—17
Robertson	1011001111111101011—15
Thackw'l	1111010101111111101011—15
Cameron	1111011011100011101—14
Dr Tolley	1001000111001011111—12

THE COUNTRY CLUB.—The shooting committee of the Country Club, Messrs. Oliver Iselin, P. H. Adee and Charles D. Ingersoll, have announced that the season of 1888-89 will open on Tuesday, Nov. 6, shooting to begin promptly at 11 o'clock, all events to be open to members and their guests. The shooting on that day to consist of the Country Club Cup at five birds, a subscription cup at five birds, an experts' cup at three singles and three pairs and the continuance of the contest for the Special Handicap Cup postponed from last season. Thursdays and Saturdays will, as heretofore, be the regular club days, shooting to begin promptly at 2 o'clock on Saturdays and 11 o'clock on Thursdays and holidays.

SAN FRANCISCO, Oct. 20.—A jovial crowd of sportsmen met at San Leandro yesterday morning, the occasion being a pigeon pigeon shoot and al fresco luncheon arranged by Mr. Chas. Holtz. Unfortunately he was disappointed of the number of birds he required, so many being held at high prices at the call of city dealers that only about fifteen dozen were forthcoming, and the day's massacre had to be eked out with clay-birds. They made up in quality for the deficit in quantity, and in every instance left the trap like a flash the moment the word "pull" was given, and a good percentage returned to their dove-litter a trifle scared, otherwise as safe and sound as when they left them. The shooting began at 10 A. M. with a 12 bird shoot at live pigeons under Hurlingham rules, $5 entrance. Carter started in with a miss, and putting three more duck eggs to his credit left off with 8. Browne, who, by the by, got some hard birds, only managed to score 7. Holtz fell all to pieces, the birds being just a trifle too good for him. He, like Browne, quitted with 7. Schraeder wound up his string with 10 good kills, his tenth bird falling dead a few yards outside the 100yds. boundary. Lambert did some excellent work, but met with poor luck, no less than 2 out of the 3 counted against him falling dead just outside. Cooke captured the leather medal with 6, scoring an equal number of clean misses. Harper did a trifle better, and had he not got a little bit rattled on his fourth and fifth birds, through his gun, a hammerless, missing fire three times, he might have given a better account of himself. The stakes were divided, Schraeder $20 and Lambert $15.

The score, 12 birds, 30yds., rise, 80yds. boundary, follows:

Carter	020112012012— 8	Lambert	112010220211—9
Browne	100212010001— 7	Cooke	200102001210—6
Holtz	211020012020— 7	Harper	121001102021—8
Schraeder	021121011012—10		

Then followed a similar pool; same money, shooters and division, at 10 birds. Carter shot in his old form and won with 9, letting his second cross the fence, Holtze obtaining second place with one less. The latter made the best showing up to the eight round, but then broke badly and got left.

Carter	1022112122—9	Lambert	1210291200—6
Browne	2100101210—6	Cooke	0121002112—7
Holtz	1211221010—8	Harper	1201022002—6
Schraeder	2102101021—7		

The two shoots which were contested were each at 15 single clays, each competitor putting up $2.50. The pots, $15 each, were won by Lambert and Holtz, both making 13 in the matches they won. Added are the clay-pigeon scores. 15 clay birds, at 18yds.:

Shrader	110111011110111—12	Lambert	111111011111011—13
Holtz	111101011101011—11	Carter	011101011111001—10
Browne	001101100011001— 7	Harper	110101100011000— 7

Fifteen clay birds, at 18yds.:

Shrader	101100111001111—10	Lambert	111101111111100—12
Holtz	111111011110111—13	Carter	110110011101111—11
Browne	100111110110010—10	Harper	110111011011110—11

Charley Holtz has been challenged by Frank Lewis, a shooter from Calaveras, for a $50 a side match at 50 birds each, Hurlingham rules. The shoot will probably come off within a week.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio,
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Boussield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y.
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..W. R. Huntington..E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div..W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jeroleman St., Brooklyn.
Eastern Div..H. E. Rice, M. D....Maxton Holmes.....H. D. Marsh, Springfield, Mass.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application seat to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

MONTGOMERY SAILING CLUB.

NORRISTOWN, Pa., Oct. 29.—Our racing season closed yesterday with another win for the tuckup Frank and Willie Playford. She wins the champion pennant for the season, having fairly distanced the remainder of the fleet. She carried her 27yd. sail in every race without reefing, and has no capsizes to her credit. The tuckups, duckers and canoes have raced in one class throughout the season, over a five-mile course; the tuckups, with 165ft. of sail, allowing the duckers, with 110ft., and the canoes, with 80ft. of sail, ten minutes start. The canoes Sadies and Starlight, carrying 103ft., were set back 4m. 40s. at the start. The skiff Gracie, with 84ft., was set back 40s., and the tuckup Priscilla, with 203ft., was set back 6m. 40s. The handicap for extra sail area is 2s. per foot per mile of the course. The record of the boats for the season is as follows. The first boat to finish in each race was awarded ten points, the last one point, the remaining points being awarded according to the number of boats in the race.

	Races.	Points.	Wins.
F. and W. Playford, tuckup, J. Grisdale	22	185.03	10
G. W. Bowers, tuckup, C. DeHaven	19	114.70	2
Gracie, skiff, E. A. Leopold	18	96.40	4
Sadie, canoe, Geo. Ritter	14	87.12	4

CANOEING ON A FRESH-WATER OCEAN.

THE Great Lakes are oceans in all but name—in the sweep and violence of their winds, the size of their seas, and the dangerous character and the greater proportionate extent of coast line. A trip through one of them is to be dreaded, even by a navigator experienced in sailing all waters, much more than a sea voyage.

Men will continue to do foolhardy things as long as the opportunity exists, and the younger the adventurer, and the less his knowledge of much that bears on his enterprises, the greater his recklessness. It was ignorance coupled with a natural taste for outdoor recreation that led me to undertake and accomplish in my nineteenth year a trip through Lake Ontario from the Niagara River to the Thousand Islands, entirely alone, and in no larger vessel than a 14×26 canoe. A year of hard study at college culminated in a violent outburst of suppressed desires for unrestrained outdoor life that would be satisfied with nothing less than a long trip crowded with danger and excitement. I got what I wanted—enough to make its repetition on that plan something that would not now be undertaken by yours truly for a prize of the most alluring nature.

It was my intention to meet a party at Clayton within a week of the time of my starting. In this short time, with muscles soft by long disuse, I must paddle, unaided, the 200 odd miles that intervened. It was accomplished at the average rate of thirty miles a day, but I am even now paying for that bit of boyish folly and enthusiasm. The vast expanse of the "Blue Lake" never seemed larger to any one that ever cut its waters than it did to that solitary canoeist who hour by hour so unremittingly plied the paddle along the American shore. The heavy ground swell rose and fell; the scorching mid-summer sun mounted to the meridian, still the flashing blades dashed off the drops; twilight took the place of day, the sea-gulls screeched overhead, but the sharp, smooth bow of the trim little craft continued to slice the water; darkness settled down, the moon mingled its liquid light with the hardly less liquid and transparent element over which, to the accompaniment of the insect chorus along the shore, where the navigator had for the last twelve hours not seen a single human face, the sole occupant of the cockle-shell kept on until his watch indicated midnight, and his tired arms could no longer hold the paddle. Then the canoe would be drawn ashore at the first practicable landing, and spreading out a blanket anywhere on the hard beach, after lying down and pulling another over him, the tired, well-nigh exhausted boy would instantly be wrapped in a sleep so sound as to make the direct glare of morning's sun the only evidence of the passage of time since he ceased his labors the night previous.

As he traveled so he ate, pausing only long enough from his work to dip up a cup of water and take a few hasty mouthfuls of food requiring no preparation. He was most undeniably lonesome, and to the effort to drive it off as much as his limited time must be ascribed his hasty and uncomfortable progress. He soon became more inured to continued exertion; but, as his capacity increased so did the amount of his work, the result being that he traveled later each night in his absorbing desire to cut off the miles.

For the first few days the weather was calm, unusually so. The big lake was disturbed by hardly a ripple; the sky was like a huge, polished, inverted kettle; and days and nights followed each other without a variation.

The spell was at last broken. One day about sunset, when some twelve miles from Oswego, reverberations which had been heard for several hours now showed their origin in rapidly approaching thunder caps. Being very anxious to make the city that night, the voyager stopped cutting across the wide bays, and, keeping nearer to the shore, determined to go ahead until the storm burst, when, should it prove too severe, he would pull up ashore.

The first blast was terrific. The wind and the rain were upon him in an instant. The waves almost immediately rose so high as to positively prevent a landing without the assurance of a wrecked boat. The storm shortly abated, the clouds moved aside and revealed the rim of the sun sinking into the lake with a background of clear sky. Though the wind had fallen, the waves rolled as high as they are often seen on the Atlantic coast. The canoe was now pushed ahead with renewed vigor. Several hours passed, darkness had settled down, the moon only occasionally shot a ray through an unguarded opening in the clouds. There could be no doubt that the wind was rising, and the traveler was horrified to notice that it came straight from Canada, giving a sweep of the whole breadth of the lake. If his life should become imperilled he felt confident that he could struggle through the roaring surf to the shore; but in such an attempt his canoe must inevitably be crushed.

Struggling on, a safe distance out from any possible shoals or rocks, he was amazed to suddenly find the long, heavy waves break up into numberless points and irregular angular masses of water, causing what is known as a black sea. Waves of this character are exceedingly dangerous, and the canoe assumed without any warning the most unexpected positions, plunging into deep, aqueous abysses and sending solid masses of water over the rounded decks with such force as to make the frail bark tremble as if struck with a hammer. The boat was entirely decked with the exception of a small hole in the middle for the lone navigator to sit in. This was its salvation. Nobly did the little craft do its duty, and, though plunging down under impending waves, rose immediately to shake the water impatiently from its decks.

A half mile further and the occupant found that the unusual commotion was caused by the breakwater which is built for several miles in front of the city of Oswego, making the harbor accessible only through one very narrow opening marked by two small lights. The wind all this time increasing, he saw that it would be impossible to continue along so close to the breakwater. A capsize there or an attempt to land on the high, perpendicular masonry meant certain death. Realizing the emergency he deliberately and laboriously worked his way in the teeth of the gale right out into the open lake two miles from land. The broken swells were now no longer noticeable; but the shore was invisible save for the two lights that shone in the distance like glaring eyes. The sea was constantly rising, the desperate fellow's strength was fast ebbing from the long continued strain; he knew that unless he soon reached a haven he would furnish an interesting news item.

Slowly forging ahead, meeting each wave by the proper dip of the paddle or the incline of the canoe, he forced his exhausted body from succumbing by singing and shouting. At last, opposite the beacons, he turned his bow shoreward,, and with the stiffening gale at his back made straight for the narrow channel, to miss which was fatal. He was soon again in the back water. As he neared where the sea-wall terminated under the glare of the Government lanterns, he saw every wave wash directly over the high projecting masonry. A man stood by one of the light towers with a coil of rope in his hand. The lad heard his would-be rescuer shout, but continued to watch each wave, keeping a steady course for the harbor. A tug steamed out in the entrance to meet him. He avoided it. The man on the breakwater now followed along the shoreward projection of the Government walls, and constantly shouted directions which, from the deafening roar of the furious surf, were entirely lost on the occupant of the canoe. On account of creeping in to the windward of the protecting masonry, the waves thereby growing constantly less as he proceeded, he was soon enabled to turn up a lateral canal-like abutment. The man whom he had seen had reached here before him, and having given an alarm to the life saving station, a boat with several men awaited him to conduct him up to the house.

Once arrived and the canoe hauled up into view inside the captain said: "Well, young fellow, I should just as soon have expected you to have walked in on the water as to have floated in in that a night like this. I would not have taken another's word for it that it could have been done. That's about as narrow an escape as any man ever had."

And so it seemed to the exhausted lad. Although it was now 1 o'clock in the morning, a bed was at once got down, and he was made comfortable. He heard the wind sweep furiously against and around the house, and breathed a prayer of gratitude as he thought of what might have been.

The next day he was the hero of the hour, and was besieged by reporters. He started in the afternoon, but was now ahead of time and took the rest of the trip more easily, stopping as occasion required, and making no more night runs.

RALPH K. WING.

OTTAWA C. C.—The club has held a series of monthly races, both sailing and paddling, a challenge cup being given to the winner in each series. The paddling race resulted:

	1st Race.	2d Race.	3d Race.
W. H. Cronk	9 48	12 00	9 33
F. H. Gisborne	10 25	10 18	9 34
C. de Lanaudiere	Time not taken.		
C. G. Rogers		10 15	9 30 Fouled Cronk.
A. O. Wheeler	10 48	12 30	

Mr. Cronk therefore wins the cup; the 1887 cup was won by Mr. Wheeler. The results of the sailing races were:

	1st Race.	2d Race.	3d Race.
White Wings, Capt. King	Did not finish.	Upset.	2
Iolanthe, W. McL. Mainguy	3	2	3
Musette, Henri Roy	1		4
Dolphin, P. A. Mainguy	4	Did not finish.	5
Dulcie, W. Hatch	6		
Asticou, F. H. Gisborne	5	Upset.	
Lillie, C. T. Gibos	Did not finish.		
Irene, R. W. Baldwin	2	1	1

Mr. Baldwin therefore takes the cup; the 1887 cup was won by Mr. C. A. Thompson.

PEQUOT CANOE ASSOCIATION.—The annual dinner was held at Cowell's Café, New Haven, Conn., Oct. 31. Important business was transacted and the election of officers took place. Art. III. of the Constitution was so amended that cruisers as well as canoeists are eligible to membership. Three new members were elected and the following were elected as officers for 1889: Com., W. A. Borden; Vice-Com., F. P. Sherwood; Sec'y-Treas., F. P. Lewis; Meas., E. C. Bogart; Chaplain, Rev. A. N. Lewis. The dinner was a very successful one, and was served in a hall handsomely decorated with club colors and floral burgees. The association now numbers nearly half a hundred, and is growing steadily; 1889 promises us a good year, and we expect to accomplish a great deal.—F. P. LEWIS, Sec'y-Treas.

Yachting.

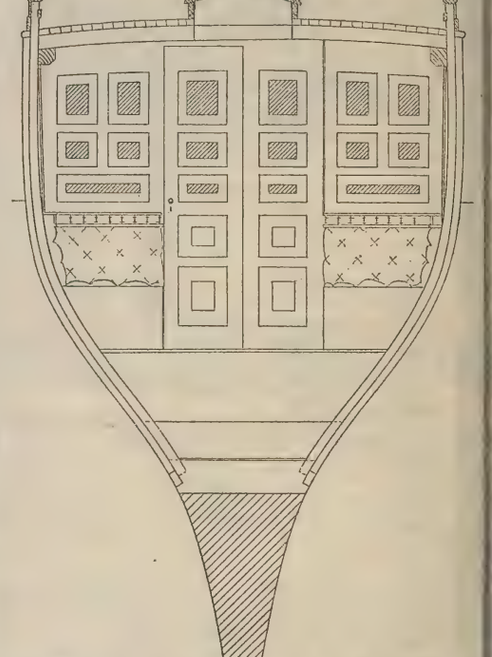
Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $5. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

CLARA.

IN OUR previous article we have spoken only of Clara's model and speed, but apart from these features she presents a most interesting study as one of the best examples of the composite build, as well as of the accommodation that is possible in the extreme narrow type. Built specially for racing, almost the first requirement was a light hull, and this has been obtained without too great a sacrifice of strength, as her safe passage across the Atlantic, together with much hard work about the coast on both sides of the ocean has thoroughly proved. The keel is of elm, with stem and sternpost of oak, each sided 6in. The frames are of steel angles, 2×2×¼in., spaced 30in., and between each pair are two steamed oak frames sided 2½in. and moulded 2in., thus making the spacing 10in. The planking, 1½ to 1¾in. thick, is bolted to the steel frames and through-fastened with copper to the wooden frames. Diagonal straps of 3½×¼in. steel are run across the frames, the planking being scored down over the straps. The stem is well backed by two knightheads, 2¼in. thick and 18in. deep, taking the place of an apron, and projecting, as shown, above the bulwark, being cut away for the bowsprit. The planksheer is 1½×7in., of mahogany, the deck 1½×2¼in., tapering toward the ends. The stanchions are 2×2in., elm rail 3¼×1½in., and bulwarks of Spanish cedar.

The ironwork and deck fittings are all of the lightest and yet substantial build. The channels are of ¼in. steel plate, stiffened by half-round bars 1¾×¾in. riveted on top abreast of each of the three chainplates. Inside the frames a heavy plank, 4ft. 7×9in. is bolted, to take the chainplate bolts, as shown in the longitudinal section, over the sail 9in. The shrouds are set up in the usual manner, with deadeyes and lanyards.

The gammon iron is over the center of the stem, with eye for forestay on top; while on the starboard side is a sheave for the cable, the latter leading in directly under the starboard side of the bowsprit through a score cut in the deck. The bitts are of steel plate, ¼in. thick, the lower edge of each plate being flanged to bolt to deck. A 1 1/16in. rod runs from each side of the bitts to the knightheads. Over the heel of the bowsprit is a 3in. roller of hard wood. The Cantelo capstan is shown in the plans; abreast it is the funnel for galley, while just abaft it is a neat compressor for the cable, which leads down through the captain's room to the chain locker beneath the floor, being boxed in, as shown.



The mast is octagonal below the spider bands, the lower of which carries the main gooseneck and the upper a patent winch and the spinaker gooseneck. Abaft the mast are heavy bitts, with a side sheave on each post, as shown. The bowsprit spreaders are hinged, with a brace on after side.

While an extra foot or two on deck would undoubtedly add to the ease of working the larger spars and give more room for stowing a boat, there is at the same time no lack of deck room, nor is the width below unduly limited. Though more beam would give increased room in some ways, as shown in the plans published Dec. 9, 1886, it is doubtful whether any more economical arrangement of space is possible than is shown here.

Beginning at the bow there is a large and airy forecastle, 17ft. long from after bulkhead to the closet at fore end, and with clear headroom all the way, the height being 6ft. 4in. A small stove is next the after end, while on the port side is a dresser and pantry, the coal locker being below the floor. The forecastle is entered by an iron ladder from a hatch on deck. The inside is very handsomely paneled in Spanish cedar, giving it a rich and elegant finish.

Abaft the forecastle is the captain's room, 6ft. long and 6ft. 5½in. under deck beams. The advantage of a separate room for the captain apart from his crew are too plain to require any comment, and the room here provided is as far superior to that on most sloops of Clara's class as the head room of over 6ft. in the forecastle is to the 4ft. 6in. of the average sloop. On the port side of the captain's room is a large sail bin, with a closet over its forward end. On the starboard side is a locker, with closet at the after end and a folding table against the fore bulkhead, the captain's berth being folded back against the wall by day. An iron ladder and a hatch give access to the deck, the hatch being used for the sails, the whole apartment making a sail room when racing. Like the forecastle, the sides are paneled with Spanish cedar.

The main cabin is 8ft. 9in. long, 6ft. 6in. under beams, and over 8ft. wide; a pleasant and well-proportioned room, and of good size for a small yacht. It is fitted in light mahogany throughout, having a wide sofa on each side, with stand and four drawers at the head. That on the port side has but two drawers, the upper part forming a cellaret locker. Above the sofas the sides are paneled with mahogany, the inner border of each panel being of

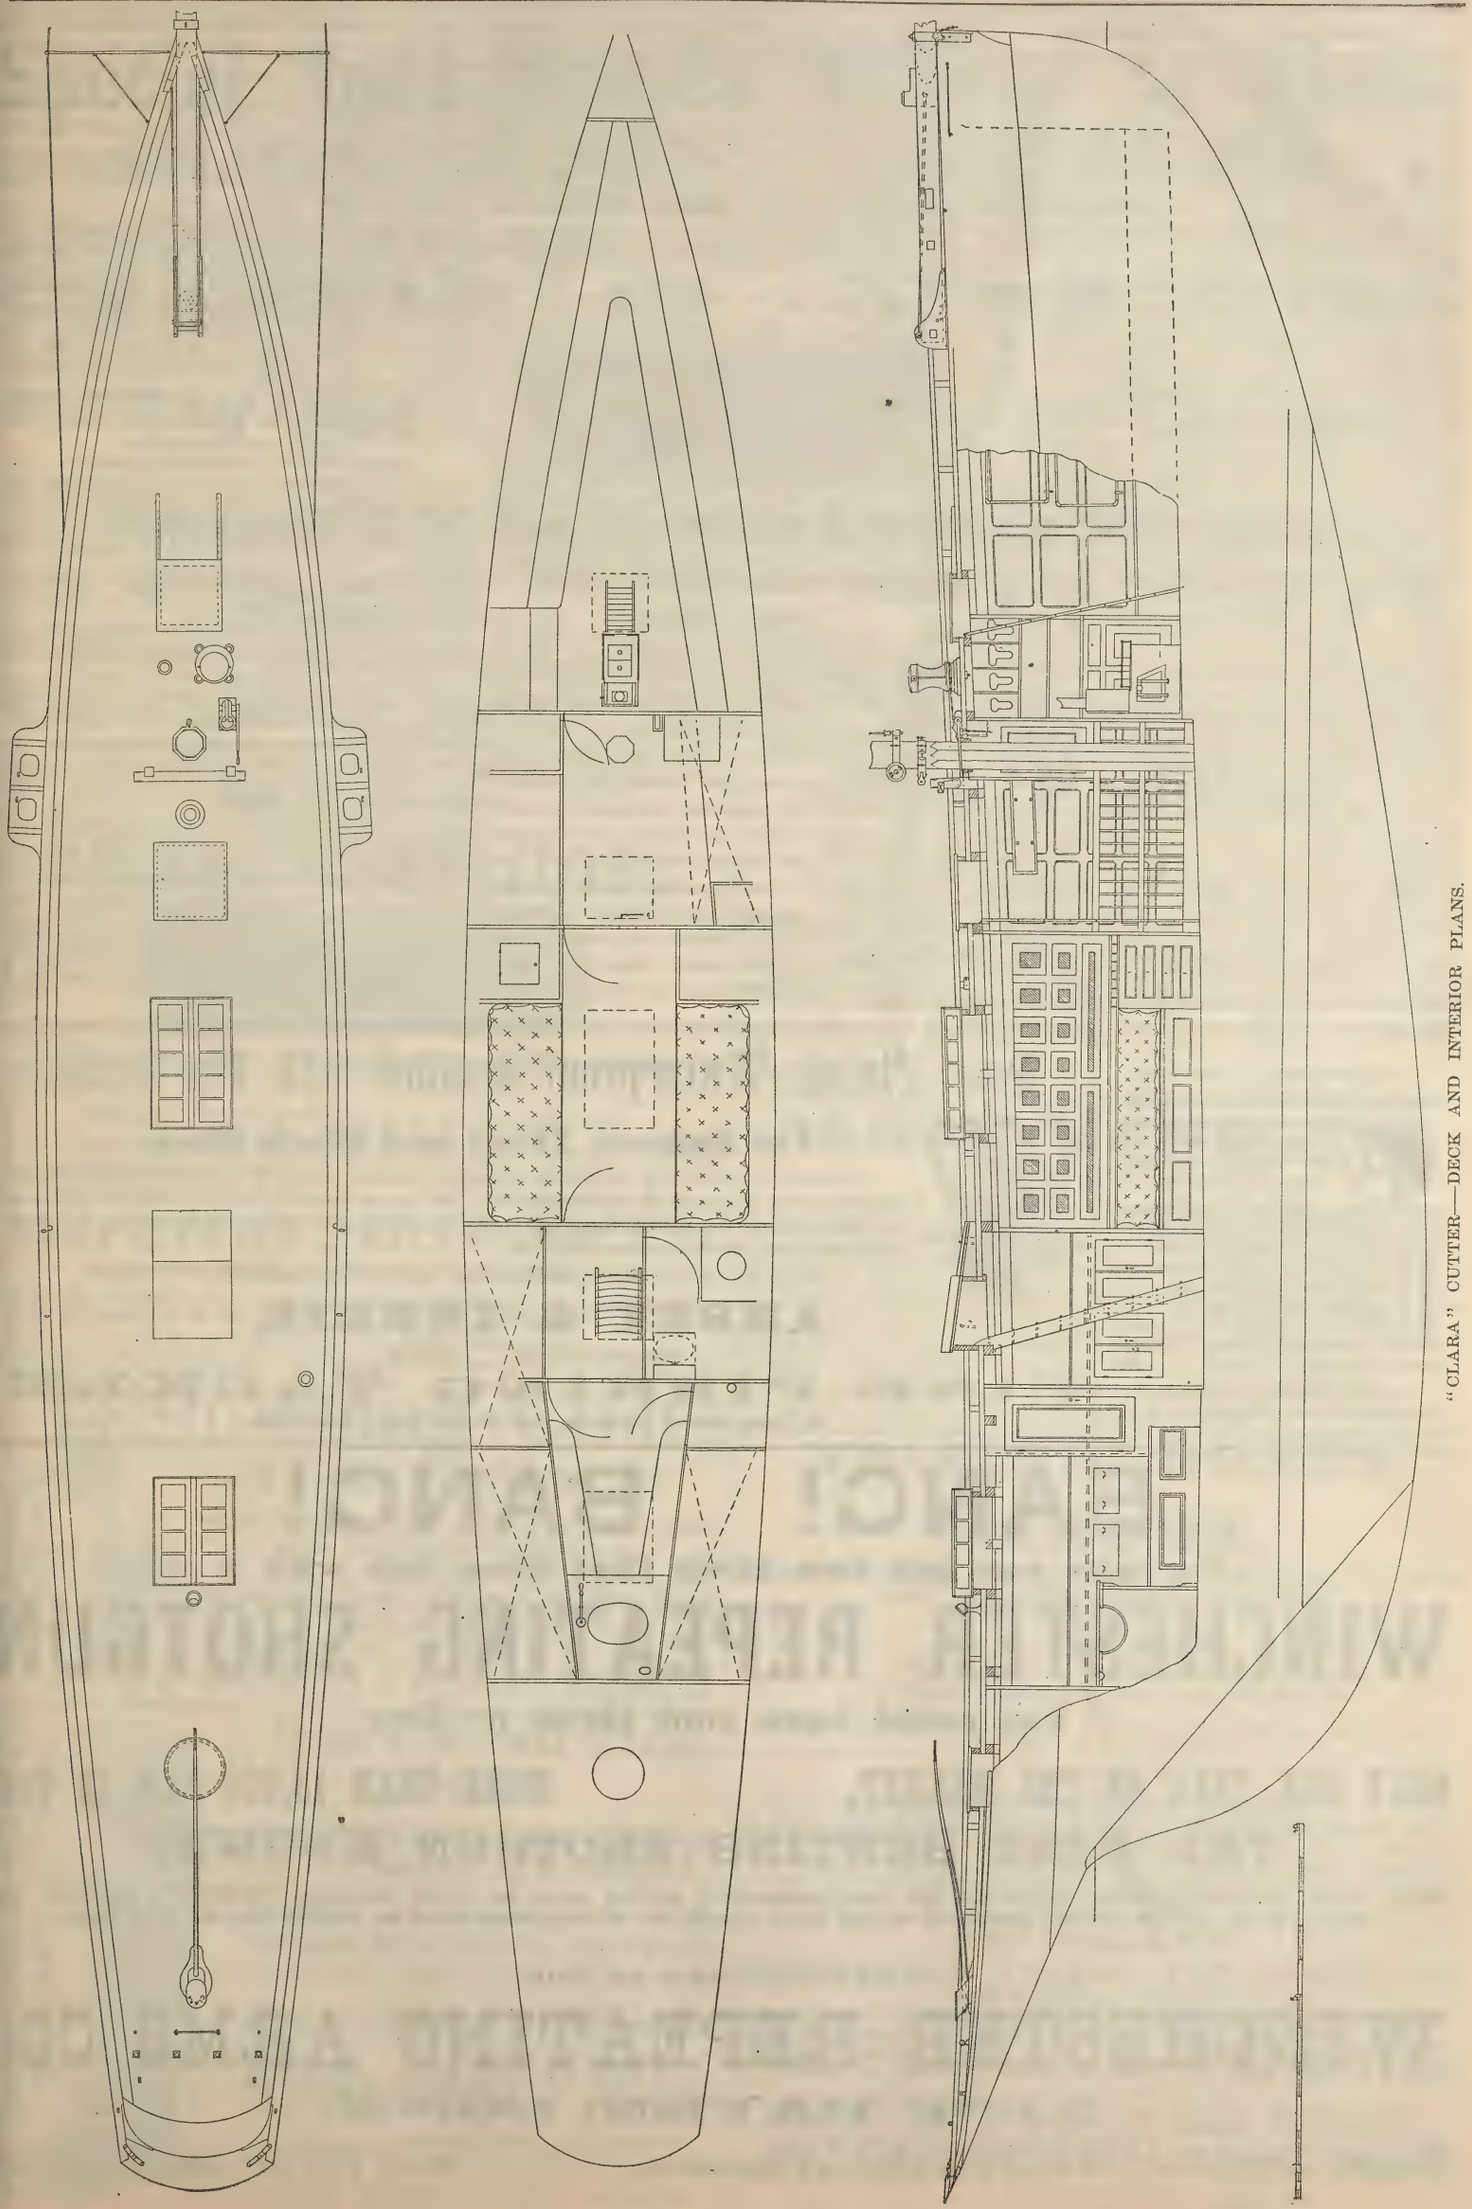
birdseye maple, with a center of figured chintz, making a very clean and neat finish. A swinging table occupies the center of the cabin.

The steerage is 4ft. long, the port side being given up to a berth, with drawers beneath, the end of the berth extending into the closet in the after cabin, as shown. On the starboard side of the companion ladder is a large toilet room, containing a w.c. and one of the compact folding lavatories found in many British yachts.

Abaft the steerage is the after cabin, 8ft. 9in. long and 6ft. 4in. high. It has two large berths with a wide closet at the foot of each, part of the port closet being given to the extra berth, as mentioned above. There is also a large washstand with bowl and pump. The bilge pump leads from the deck down through the starboard closet. The after cabin is painted white, all the other woodwork below being mahogany or Spanish cedar. While the woodwork is handsome and rich, there is no attempt at any elaborate display, the work all being in very good taste, and the absence of heavy hangings and of upholstery that will retain the dampness, is a great improvement on the style of decoration once popular in this country. Clean hardwood and the best of workmanship make the only proper finish for all work that is to be exposed to salt air and to occasional wettings.

YACHTS FOR SOUTHERN CRUISING.

NEW YORK, Nov. 3.—*Editor Forest and Stream:* In a recent number of the FOREST AND STREAM I noticed a suggestion signed "Vidette" that as he proposed going South this winter in his yacht and others might be contemplating a similar cruise in that direction, it would be a good idea to sail in company, constituting a sociable little fleet, cruising along together, taking it easy and fraternally.



The suggestion is a good one, and deserves the attention of all bound South this season for a cruise in Southern waters. Being somewhat familiar with those latitudes and the coast of Georgia and both coasts of Florida I can readily appreciate the pleasures of a winter South but must warn all contemplating the trip, not to indulge in a keel boat, or any craft of greater draft than 3ft. It is true as much as 4½ can be carried through the inside passages as far as St. Augustine, but if Indian River is contemplated, or rounding the Cape, and the west shore is to be taken in, a great deal of pleasant cruising and charming waters will be lost. The Inlet to Indian River (Jupiter) is not safe for keels or draft of over 4ft. and that is 2ft. too much after getting inside for any extended cruising, so let one contemplating the cruise abandon the idea of having much fun out of a keel or deep draft boat, but this fact is probably too well known to all yachtsman to make the suggestion of much value, and cutter men will not be likely to undertake it, it being one of the delights of owning a cutter that when the owner wants to go where there is any fun to be had, he must beg, borrow or charter a "skimming dish," as all centerboard boats seem to have been dubbed by cutter men—a term that is as badly played out and as hackneyed as "speckled beauties."

Then for rig, if owners of yachts under 50ft. want to save expense and labor and go comfortably, let them adopt the yawl rig; especially the San Francisco style, where every sail takes care of itself, working automatically, dispensing with at least two men on a 50ft. boat sloop rigged. A craft of 45ft. carries but one good sailor and a boy, who should be capable of cooking, the owner being able presumably to relieve the wheel. The New York sloops with their heavy spars require a strong crew, and what greater nuisance than a long heavy boom in a rolling sea, especially before the wind, or in a calm, when it generally takes possession of the quarterdeck. Whereas a yawl, having a short boom extending only to the after end of the cockpit, enables the mainsail to be easily reefed, but with this rig is seldom necessary. If it blows requiring a reduction of sail, lower the mainsail, let it run down in the spilling lines and go on your way with driver and jib, they balance perfectly, and a boat with properly proportioned sail will handle equally well under jib and driver or mainsail alone. Moral, rig southern cruising boats as yawls, saving labor and expense as well as danger of too much of a good thing in the way of a breeze, for even in those latitudes it often blows hard enough to endanger the hair of the proverbial yellow dog, and it is a comfortable thing to be all snug. Again, under such short and perfect handling sail the yacht can be worked into narrow reaches and snug berths, and what can be more comfortable and cosy than to be in such a snug berth and all safe and hear it piping great guns outside as one lies curled up in his bunk and mutters to himself, "Let her rip, who cares!"

I have strayed from my subject, this proposition of "Vidette's," which is a good one and to be commended, and having in contemplation a cruise in that direction, I say to "Vidette" in the words of the poet, "shake." PODGERS.

YACHT THIEVES.—On Oct. 30, before Justice Welde at the Harlem Court, Mrs. Caroline Amend and her son, Charles Amend, were held in $2,000 bail each for burglary. Articles stolen from the yachts Peerless, Idler and Torment, of the Harlem Y. C., were found in Mrs. Amend's house. The bail of "Farmer" Glynn, arrested for the same offense, was withdrawn, and he was locked up

BABOON.—Messrs. Adams, the owners of Baboon, are now in England on a tour around the world. According to the *Field*, they propose to take Baboon to England next year, provided there is a good prospect of races in the 20 rating class.

"CLARA" CUTTER—DECK AND INTERIOR PLANS.

GOSSIP ABOUT GAFFTOPSAILS.

HAVING been a water rat ever since I could walk, and taking to yachting almost from the same time, the gafftopsail has been more or less a thorn in my side ever since. I am writing about small yachts sailed singlehanded or by Corinthian crews. I have gone through all the varieties of sprit, club, jibheaders, etc. The clubtopsail only belongs to the racing yacht, being too unwieldy and too much in the way generally for singlehanded yachtsmen or Corinthian crews to bother with. The sprit topsail has many of the same bad qualities; if left bent on the spar when taken in, it is a nuisance on deck, being unstowable; if unbent from the spar, the trouble of gotting it out of the sail locker, bending on to spar, etc., often deters one from setting it when out for a short sail. If you take the other horn of the dilemma, and use a working topsail set flying on upper and lower halliards, you have the same nuisance of hunting the sail from locker, in addition to which the topsail set in this manner lies off from the topmast; so will not stand to windward when it breezes at all, and if carried too long is an ugly sail to handle if not taken in just right.

Now, several years ago when I had got through experimenting with numerous variations of the above modes of setting topsails, I happened to take a trip to New York and of course had to take a look round among the yachts. Well, I noticed many of the smaller ones with standing topsails, aping (as I thought) their larger sisters. I just had a good laugh at those fellows. "Stupids, hayseed yachtsmen, duffers," etc., I said to myself, "for attempting to make a big boat out of a small one," etc. After I returned home, in deliberating over this, I thought it possible that, while there might be duffers, hayseeds, etc., around, instead of living in and about New York, they might by the greatest chance live—in Talbot county, "Eastern Sho'" of Maryland.

Thereupon I proceeded to experiment with the standing topsail, my great objection to it being the necessity of some one having to go aloft to stow it after it was clewed up. Now remember, I am writing for the benefit of singlehanders and Corinthian crews. Of course, when you have Jack, Jim and Tom before the mast, it is very easy to say, "Lay aloft and stow topsail," and you have no further trouble, but when you give that order to yourself the case is decidedly different. To overcome this necessity of climbing heavenward I got a long gaspipe, put a set of iron hoops on it, bent my upper and lower topsail halliards to it, putting the rigging on my topsail to clew aloft, and thought I had solved the difficulty; and so I had in a measure, being able to clew up as well as any topsail, and also being able to bring all on deck when necessary. This may all have been an old idea, but as I had never seen it I felt quite proud of my invention. After using it a couple of seasons, I found several objections to it. The "jackstay" (gaspipe) was quite a weight aloft. You would be surprised to find what a heavy one I had to use to keep the luff of topsail from springing away from topmast. I had, of course, to take the whole rig down before I could house my topmast; then again, and the greatest objection of all, when I went to send my "gaspipe jackstay" aloft from the deck, with all its clew lines, topsail sheet, tack, etc., in place, if there was any sea on the way that gaspipe, topsail clew lines, sheets, etc., would dance a german on the way up, and the confusion the rigging would get into, was amazing. After it was in place it worked splendidly, but to get it there without fouling was hard to accomplish in a "doddle"; when it was perfectly smooth it all worked to a charm.

After studying this problem over last spring while overhauling my ship for her summer work (she is in commission all the year round) I had a brilliant idea—why not use snap hooks and snap my topsail to the hoops (galvanized iron ones) on topmast? No sooner said than done, and now I think I have a good rig for a standing topsail on small yachts.

It is true that I have still to go aloft to stow topsail, but with the clews and buntlines rigged as I have them it is not necessary to do so except when it blows "great guns" and you want to snug everything down, or when you want to be especially neat in port, in either case all you have to do is to clew up topsail, then shin up, tie a small stop round sail, close to the hoops, and settle sail to the deck by halliard, unsnap halliard and sheet and stow sail in locker, there you are with all clear aloft for a blow, and the topsail as rigged above is in the sail locker before you, or your friend, as the case may be, would have the sail half made up for a neat "stow" aloft. So in setting again, hook on your halliard, haul up to masthead, shin up again, which you would have to do in any event if topsail was stowed aloft, snap sail to hoops, cast off single stop 'round sail, slide down on deck and you will have topsail set and drawing, if under way, before your friend on the "Nancy Jane," cruising in company, has got his gasket off the sail. I think this a far better plan than the hook plan figured in the FOREST AND STREAM some time since, as that involved going aloft every time your topsail was set, whereas in the way I work mine, clewing it up is all you want ordinarily. I sailed some six miles to windward in the N. W. zephyr we had last Wednesday topsail set and drawing, if under way, before your friend on the "Nancy Jane," cruising in company, has got his gasket off the sail. I think this a far better plan than the hook plan figured in the FOREST AND STREAM some time since, as that involved going aloft every time your topsail was set, whereas in the way I work mine, clewing it up is all you want ordinarily. I sailed some six miles to windward in the N. W. zephyr we had last Wednesday under single-reefed mainsail and No. 3 jib, staysail and mizen stowed. My topsail was clewed up and not stowed, and I had no trouble with it. A few years ago all our small craft, working sloops, schooners, pungies, etc., used a sprit, or flying topsails, now they universally set standing ones.

What I claim for my idea is that when it is necessary to stow a standing topsail it is done better and quicker, and quicker shaken out and set, by my plan than if bent to the hooks permanently.

EASTON, Maryland. SINKBOAT.

THE VOYAGE OF THE LIBERDADE.

A DEEP water cruise that few would care to undertake will come to a successful end very soon when Capt. Joshua Slocum of the Liberdade anchors his strange craft off Washinton, D. C., after a voyage of 4,000 miles, from Rio Grande del Sul. Two years since Capt. Slocum sailed from Baltimore, Md., for Buenos Ayres, in the bark Aquidneck, 326 tons, having with him his wife and two sons, aged 10 and 14 years. After several voyages between South American ports, the bark was wrecked at the mouth of Rio Grand del Sul harbor, being condemned and sold for a small sum. Declining the offer of the American Consul to send him and his family home, Captain Slocum at once went to work to build a boat, of canoe model, 30ft. long, 5ft. beam and 3ft. draft, with a rocker keel, and three masts with lateen sails. The hull was decked, with a house aft. Last spring the Liberdade was completed, and Capt. Slocum with his family sailed from Rio Grande del Sul, reaching Santos about the end of June. From Santos to Rio Janeiro the Liberdade was towed by the steamer Finance, Mrs. Slocum and the boys going on the steamer. From Rio they sailed for Pernambuco, running 2356 miles in 19 days. Capt. Slocum was last spoken by the steamer Planter, off Cape Romaine, with all well on board, his great wish being to get home in time to vote.

A FAST CATBOAT.

THE following excellent record was made this year by the catboat Mabel, of Boston, owned by Mr. F. C. Dunne. She was built by Pierce Bros., and is 22ft. over all, 19ft. l.wl. and 9ft. beam. Her record for 1888, as given in the Boston *Globe*, is as follows, summing up 13 firsts to 15 starts, the best ever made in her class:

June 23—Hull Y. C., good breeze, first; winning by 3m. 48s., two competitors.

June 30—Dorchester Y. C., breeze moderate, first; winning by 9m. 18s., three competitors.

July 4—City of Boston (open), stiff breeze, first; winning by 2m. 6s., six competitors.

July 8—Match race vs. Amy, wind moderate, first; winning by 1m. 47s., one competitor.

July 14—Hull Y. C., light breeze, first; winning by 1m. 43s., four competitors.

July 15—Match race vs. Amy, wind moderate, first; winning by 59s., one competitor.

July 28—Hull Y. C., two reefs, first; winning by 47s., three competitors.

July 20—Quincy Y. C., light breeze, first; winning by 3m. 38s., three competitors.

Aug. 4—Hull Y. C., two reefs, second; losing by 1m. 36s., two competitors. Defeated by Niobe.

Aug. 11—Quincy Y. C. (open), stiff breeze, first; winning by 33s., ten competitors.

Aug. 25—Beverly Y. C. (open), moderate breeze, first; winning by 6m. 42s., ten competitors.

Aug. 27—Quincy Y. C., stiff breeze, first; winning by 3m. 55s., four competitors.

Aug. 28—Dorchester Y. C., two reefs, first; winning by 26s., three competitors.

Sept. 1—Hull Y. C. (open), moderate breeze, first; winning by 1m. 37s., eight competitors.

Sept. 8—Hull Y. C., two reefs, second; losing by 1m., one competitor. Defeated by Niobe.

Winning 13 first prizes out of 15 races sailed; winning average, 2m. 53s.; losing average, two races, 1m. 18s.

Defeated only by Niobe; winning average over Niobe 4m. 19s.; losing average to Niobe, 1m. 18s.

In the city of Boston Fourth of July race Mabel defeated all boats in her class and in the corresponding class of keels, also all the jib and mainsail class and centerboards and keels in the class above, in all a total of 33 boats.

CRUISE OF THE BRUNHILDE.—On Nov. 3 the schooner Brunhilde, owned by Mr. J. J. Phelps, sailed from New York with her owner and his wife on board, bound on a long cruise. Her first port will be Bermuda, after which she will call at Barbadoes and other West India islands, and she may ultimately make a cruise around the world before she sights Sandy Hook again. This is Mr. Phelps's second long cruise, as he left New York in 1885, shortly after the Brunhilde was built, and made a cruise of two years, visiting England, Egypt, Ceylon, India, China, Japan and San Francisco, returning by way of Cape Horn. Since his return he has married and his wife accompanies him. The Brunhilde is a keel yacht, 102ft. l.w.l., 25ft. beam, and 11ft. draft. She carries besides her sailing master a mate, boatswain, two stewards, cook and ten seamen.

DOLPHIN—NYMPH.—On Nov. 1 the steam yachts Dolphin, W. B. Wetmore, and Nymph, W. S. Webb, raced on Lake Champlain over a 6½ mile course, Dolphin winning in 34m. 8s., with Nymph 34m. 40½s.

ANSWERS TO CORRESPONDENTS.

CAPT. J. F. F., Negaunee, Mich.—You will have to pick up a second-hand rifle of the make wanted, as the arms are no longer manufactured. Correspond with the dealers in sportsmen's goods.

A. C. D., Jr.—For the price you are willing to pay you can buy a perfectly reliable and serviceable gun of any one of the makes named; and beyond that you may be guided by your own taste in the matter.

CONSTANT READER.—You will find no deer hunting in northern Vermont, as the law will protect them until 1890. There is wild fowl shooting on Lake Champlain, accessible from Burlington. Take shotgun instead of rifle.

R. D. K., Connecticut.—1. In the FOREST AND STREAM'S rifle trajectory test the trajectory of the Winchester .45-.75-350 at 100yds. was 11.979 in. 2. We cannot give you the largest recorded growth of antlers of the Virginia deer.

R. W. C., Vineyard Haven, Mass.—Will you kindly give me a few names of the best writers on trout culture? Ans. Livingston Stone's "Domesticated Trout," Slack's "Trout Culture," and papers in the reports of the Fish Commission and the American Fisheries Society.

E. N., New York.—There are trout in the streams near San Diego, California, and the list of sea fishes caught with the hook includes halibut, barracuda, Spanish mackerel (*Sharda chilensis*) rock cod, smelt, croakers and kelp-fish, which include several esteemed varieties. The best season is from April 30 to Sept. 1.

M. L. L., Traverse City, Mich.—What is the best method of treating a skunk skin, intended for mounting as a museum specimen, so as to cleanse it from the unpleasant odor? Ans. Permanganate of soda might be sprinkled on it. Some recommend chloride of lime. Trappers sometimes pack their skunk-infected clothes in fresh hemlock boughs. Time is the great remedy.

T. M. C., Lock Haven, Pa.—1. Will you please give me the names of our present Pennsylvania Fish Commissioners? 2. Is there an instance on record of the capture in any of the waters of the Eastern States of a California salmon as a result of the planting of that fish in our streams about ten years ago? Ans.—1. Henry C. Ford, 524 Walnut street, Philadelpha. James V. Long, 75 Fifth avenue, Pittsburg. H. C. Demuth, Lancaster. S. B. Stilwell, Scranton. A. S. Dickson, Meadville. W. L. Powell, Harrisburg. 2. No.

Dead Finish Waterproof Braided Silk Fly Lines.

For Salmon, Trout and Black Bass.

These lines, which have given such general satisfaction, have been subjected to the most severe tests during the past two seasons, and are now made better than ever. They do not crack, chip or become tender, but remain soft and pliable; they are waterproofed through and through not merely on the surface, and are decidedly the best lines for fly-fishing ever offered to anglers.

Send 10 cents to cover postage, and we will mail you our 140 double page illustrated catalogue.

PETERS CARTRIDGES.

No. 550 is loaded with the new No. 0, 554 and 533 in Nos. 1 and 2 Quick Shot Powder, two felt wads cut very large and perfectly lubricated by our own formula; 1⅛oz. Tatham's Shot No. 8 and astened by the Peters Patent Indentations.

Proved by their Record to be Unequalled.

The Cartridges have won the largest number of prizes at the tournaments throughout the West, and are very extensively used by professional and most successful amateur sportsmen. Their great velocity enables the shooter to "hold on" to the bird.

Book Publishing.

Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

YACHTS, BOATS AND CANOES,

WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.

BY

C. STANSFELD-HICKS.

AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM.

NUMEROUS ILLUSTRATIONS AND DIAGRAMS

AND

WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.

Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50

In the Stud.

AT STUD. FEE $50.
The Champion Mastiff
WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended: for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

9 & 11 Granite Block, Bangor, Me.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 15, 1888.

VOL. XXXI.—No. 17. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

CONCERNING CONTENTMENT.

THERE is no happier frame of mind attainable than that which makes one satisfied with what he has or can get; and happy is he who, going to the field with gun or to the stream with rod in these days of depleted woods and waters, has become philosopher enough to accept thankfully the little or nothing he is likely to shoot or catch.

He must have overcome the natural savage desire for mere slaughter and the mean ambition to kill more than another; he must have schooled himself to contentment with the small visible results of a day's outing; have learned to laugh with others at his own light bag or empty creel; to be satisfied with intangible proofs of success and to have faith that what he only sees shall abide with him in more enduring comfort than the immediate result of a good shot or a skillful cast or the memory thereof.

More spiritual than sensual, this enjoyment of the field is the better part of what goes to the making up of what we call the love of sport, and the sportsman who cultivates this to the overgrowth of the baser sense enjoys the finer pleasure, suffers the fewer pangs of regret and the ess self-condemnation. Every kind-hearted sportsman and paradoxical as it may seem, almost every sportsman s kind-hearted) is sorry for the wounded object of his pursuit and feels a twinge of remorse for the taking of a happy life. If we examine our feelings in the moment of triumph over the conquest of one of our lesser brethren, we detect a sort of savagery that as civilized men we are ashamed of. What poor lords of creation we are to exult n the death of those which we have been set above, we with our cunningly contrived implements and transmitted lore, glorying to have done to death our poor vassal, outfitted only with the means of defense that he was born with, his instinct and few acquired wits, and to revile him when he escapes our assaults as if he had wronged us in not suffering death or capture at our will.

Desirable as it may be for humanity's sake that we should rid ourselves of this propensity to kill, it is hardly probable that the millennial day when the sportsman craves not fur, feather nor fin, will come while wild beast runs, wild bird flies or free fish swims. Generations of our race will be born and pass away and become dust of the earth before the old instinct of slaughter shall die out of men's desires, but is not the tendency even now toward its eradication? The shot at the inanimate flying target, the competitive cast of the fly on blank waters are becoming more and more in vogue, and many a sportsman satisfies himself with the thought of what he might have done if the glass ball or clay-pigeon had been a hurtling grouse, a woodcock dodging among the alders, a swift-winged duck speeding down wind; or with imagining what might have been if a trout or bass had been lured by his skillful cast.

Year by year more men go afield, with gun and rod as only a handy excuse for gathering in what shot never brought down nor hook ever caught. Who shall say that by and by it may not become the common usage of sportsmen to go hunting without a gun and fishing without a rod?

THE CRUELTY OF PIGEON SHOOTING.

THERE is a diversity of opinion respecting the merits of shooting live pigeons at the trap. While the champions of the practice contend that there can be no more cruelty in shooting a pigeon after it leaves the trap than in shooting a quail in the field after it leaves the ground, there are other equally sturdy champions who, while ardent followers of field shooting, cannot approve the trap. In so far as these holders of divergent opinions are honest and sincere in their convictions, they are entitled to the respectful consideration which is ever the due of sincerity. Sometimes it happens that a professed humanitarian rises up to denounce pigeon shooting not because he honestly thinks there is anything wrong in it, but because he hopes by turning the anti-cruelty crank to grind his own little axe. Two instances of this character are perhaps worth making note of.

At the time of the last appearance of Dr. Carver at the trap in New Jersey, it was understood by a certain clique that the match was all cut and dried in advance. They were given to understand by one of the principals that the match was to result in a victory for one of the contestants named in advance. Acting on this supposed reliable information these virtuous gamblers set out to pluck their fellows not in the secret by laying heavy wagers which they believed themselves certain to win, because they were "betting on a sure thing." As it turned out they were the ones sold. Their information had been given in order to hoodwink them. They had been stuffed before being roasted. The match resulted in a manner just opposite to what they imagined they knew it would and had wagered on. The biters were bitten. The next thing was for one of these chagrined New Jersey gamblers, posing as a gentleman and a humanitarian, to proclaim that pigeon-shooting was cruel and must be abolished from New Jersey. He has done what he could to abolish it; and will probably persevere in his efforts until he has accomplished his end, or has made friends with some other shooter who will let him into the secret of a proposed selling out and keep faith with him until the match is over, for there is said to be honor even among hippodrome trap-shooters and their gentleman gambler hangers-on.

The second case is that recent one where the shooting of live birds at the tournament of the New York Suburban Shooting Grounds Association was severely criticised by some of the reporters. The facts in the case are interesting. The grounds were not in complete readiness for the tournament, and it happened that some of the pigeons, instead of being retrieved and killed at once, as is the rule, were perforce permitted to escape. It was an unforeseen exigency, but the best was made of it under the circumstances, and no harsh criticisms would have appeared had there not been present one of the editors of a New York paper chiefly devoted to matters of the turf. This man had failed to secure some advertising from one of the parties prominently connected with the tournament. He saw in the pigeon incident an opportunity to gratify his spite. This he did by expatiating to one of the daily paper reporters on the cruelty of all pigeon shooting in general and the aggravated form of inhumanity here exhibited. Not only this, but he caused the matter to be brought to the attention of the local branch of the Society for the Prevention of Cruelty to Animals, with the result of setting on foot a prosecution, which may have been proper enough so far as the Society is concerned, for we have no reason to believe that the Society did not act in perfect good faith, but it was in effect only an employment of the Society's agency to gratify individual meanness. The transaction thus savors of blackmail all through. It had its origin in no tender heart, jealous of the rights of the lower animals; it was the expression of a mean and petty personal ill will. If a man honestly believes that pigeon shooting is cruel, let his opinion be respected; if he poses as a reformer when actuated by base ulterior motives, his actions are likely to have little credit attached to them.

THE SMALL BIRD PROBLEM.

ESSAYS have been written to demonstrate the foolishness of small bird destruction, laws have been passed to protect the useful species, societies have been organized and tens of thousands of members enrolled pledged against the fatuous fashion of wearing bird skins as dress; arguments, pleas, appeals to reason and appeals to sentiment have been urged; and what is the outcome of it all? Fashion decrees feathers; and feathers it is. The headgear of women is made up in as large degree as ever before of the various parts of small birds. Thousands and millions of the *disjecta membra* of birds are displayed in every conceivable shape on the hats and bonnets. This condition of affairs must be something of a shock to the leaders of the AUDUBON SOCIETY, who were sanguine enough to believe that the moral idea represented by their movement would be efficacious to influence society at large. Moral suasion is a potent force, but it operates within very narrow limits only. A very small section of humanity is capable of being a law unto itself and regulating its conduct by the dictates of conscience; but for the great majority self-restraint can only be secured by the dictates of fashion, which are stronger than penal legislation.

It is quite possible, as has been urged by the AUDUBON SOCIETY, that the wholesale destruction of wild birds which has been indulged in since the introduction of feather millinery, threatens the extinction of useful species and genera, and that if persisted in, it will disturb the balance of life, fostering the increase of noxious insects and proving in other ways inimical to human well-being; but these conclusions are regarded with indifference so long as the milliners make feathers the mode.

Meantime the reintroduction of feather millinery in no way derogates from the value of the work done by the AUDUBON SOCIETY. It has called attention to the ethical and economic aspects of the question and has educated a very respectable minority to organized action. In the face of this minority thoroughly convinced that indulgence in feather millinery is wrong in itself, or conducive to consequences inimical to human well-being, the arbiters of fashion cannot achieve that complete success they have been accustomed to look for.

DEATH OF "SPICEWOOD."

THERE were some touching incidents connected with the recent death of Mr. Lewis A. Riley, of Centralia, Pa., who was a frequent contributor to these columns over the signature of "Spicewood." It was in the afternoon; the party were engaged in the favorite sport of quail shooting; and Mr. Riley was separated for a moment from his son-in-law, when the latter was approached by one of the dogs, which, whining and barking, urged him to follow. Led by this brute guide the son came upon the form of his father lying prostrate on a bed of moss, dead, while the three faithful dogs were sitting by him, one licking his face. It had been only a half hour before this that Mr. Riley had said that they would "go on a little further and then go home." What a strangely significant and exalted meaning such expressions assume, when the unlooked for realization of the intent expressed is so tremendously different from the commonplace and expected. Mr. Riley's death resulted from heart failure. Known to the readers of this journal as a pleasing writer of angling and shooting sketches, Mr. Riley was a highly respected citizen, esteemed for his integrity and happy in the attachment of many warm friends.

The Sportsman Tourist.

OUR LAKE.

LOCH LOMOND'S depths are dusky brown,
Purple her hills with heather,
From shore to shore her bare peaks frown
In mild and stormy weather.

Green are the slopes of Windermere,
All pure her limpid waters,
A liquid gem, without a peer
To Britain's sons and daughters.

But thou art all, oh, lake of lakes!
Lake George, thou art unequalled;
Thy beetling crags the storm cloud breaks,
With elves thine isles are peopled.

The mighty eagle rests his wing
Where rear thy rocky shoulders,
The tiniest harebells shyly cling
Among thy shore-bound boulders.

As in a boat I rock and swing,
By summer scenes enraptured,
No lake the old world poets sing
Has thus my senses captured.

AMELIA KEMPSHALL.

NOTES ON WESTERN FLORIDA.

II.—DOWN THE APALACHEE.

FROM Chattahoochee we retraced our way a mile or so to the mouth of the Flint River, and ascended it thirty-eight miles to a little place called Bainbridge, arriving about six o'clock in the afternoon. It is a quiet, sleepy old Georgia town, with a lazy, *dolce far niente* air very enchanting and rare after the general hum and bustle of the more progressive world. Everything here takes life easily; the "razor-back" hogs that sleep in the streets will scarcely move out of your way; the dozing dogs will open one eye to squint at you, then snap at an obtrusive fly and go to sleep again, too "tired" to bark; the very horses nod in the sunshine, as they stand hitched to the racks that are in front of every store. All is peace and quiet and the inhabitants sit around in front of their shops and whittle, whittle, whittle, the live long day. But it is a lovely old Southern town, with glorious avenues of moss-grown oaks, through which the sun comes in a softened light. There are pretty old homes, and the loveliest of flowers everywhere. The very stupidity of the place is its chief attraction. It is a spot where one can sleep and eat and do nothing else without being any different from most around him. It would be rather a good place for "Ouida" to found another novel, if her highness would ever admit that there is anything poetic in America; she would find her ever-present lizard sunning itself on a rock, and perhaps some of her other accessories, but the pale languid hero with muscles of steel would, I fear, have to be (as usual) invented.

We did not leave Bainbridge until after midnight, and the next morning found us once more in the main river some miles below the junction.
